City of Carpinteria
City Council Regular Meeting Agenda
Monday, March 28, 2022
Council Chamber, 5775 Carpinteria Avenue

5:30 p.m. Regular Meeting
In-Person and Virtual Participation Options

Attendance/Viewing Options:

- Attend the in-person meeting in City Council Chambers at City Hall (5775 Carpinteria Ave.).
- View the meeting live through the City's website (https://carpinteria.ca.us/city-hall/agendas-meetings) on your computer, tablet or smartphone.
- View the meeting on Government Access Television Channel 21 (broadcast live and rebroadcast on the Wednesday and the Saturday following the meeting at 8:00 p.m. and 5:00 p.m., respectively).
- Call 669-900-9128 (and enter Webinar ID 889 0390 2262) to listen to the meeting on your phone.
- Join the City's Zoom webinar from your computer, tablet, or smartphone by CLICKING HERE. Alternatively, you can join the Zoom webinar by logging on to www.zoom.us, downloading the application, selecting "Join Meeting", and entering Webinar ID 889 0390 2262.

Public Comments

- Provide a live public comment during the in-person meeting in City Council Chambers at City Hall (5775 Carpinteria Ave.). Please note the City has the discretion to limit both the overall and individual speaker time for any meeting or agenda matter. Typically, the Council's practice has been to limit each speaker to three minutes.
- Provide a live comment through the City's Zoom webinar platform (through the link provided above). To make public comments through this platform please use the "raise your hand" feature to notify staff that you would like to make a public comment during designated public comment times. Once it is your turn to provide a public comment, staff will unmute your microphone and you will be given a designated amount of time to provide your comment (typically, the practice has been up to 3 minutes per speaker on each item). At the end of your comment, staff will once again mute your microphone.
- Submit a written comment (as either a general public comment or on a specific agenda item) to be distributed to Council Members by **12:00 P.M. on the day of the meeting** by either submitting your comment via (1) email to PublicComment@ci.carpinteria.ca.us, or (2) the **eComment** link on the City's

agenda website (https://carpinteria.ca.us/city-hall/agendas-meetings). Please reference the agenda item to which your comment pertains.

Please note that the City will make every effort to make the meeting accessible virtually; however, if one of the above virtual attendance/viewing or public comment options is unavailable due to technological issues, you are invited to take advantage of one of the other participation options outlined above (including attending and providing public comment in-person in the City Council Chambers). Additional options may be made available at the meeting.

Also, please note that Spanish interpretation will be available at the in-person meeting (but will not be available through the City's Zoom webinar).

CALL TO ORDER

ROLL CALL

PLEDGE OF ALLEGIANCE

INTRODUCTIONS, PROCLAMATIONS AND PRESENTATIONS

1. Proclamation Honoring Mrs. Mary Ota on Her 103rd Birthday.

2. Proclamation Designating the Month of April 2022, as "Carpinteria Beautiful Month".

3. Proclamation Designating April 2022 as DMV/Donate Life Month.

4. Annual Member Agency Update Presentation from Central Coast Community Energy.

PUBLIC INFORMATION REPORTS AND ANNOUNCEMENTS

This may include updates on law enforcement activity within the City from a Sheriff's Office representative.

CITY MANAGER'S REPORT

The City Manager will report to the City Council regarding various City and/or community events and/or matters of interest. There will be no City Council discussion except to ask questions or refer matters to staff; and no action will be taken unless listed on a subsequent agenda.

PRESENTATIONS BY CITIZENS / PUBLIC COMMENT

This is a time for public comments on matters not otherwise on the agenda but within the subject matter jurisdiction of the City Council. The Public Comment period is limited to 15 minutes and divided among those persons desiring to speak. No person shall speak longer than three minutes; however, the Mayor may establish shorter periods based on the time available and/or the number of persons waiting to speak. Persons wishing to speak on a specific item will be recognized at the time the agenda item is considered. The audio-visual system in the Council Chamber is not available for speaker use during the general Public Comment period.

Please be aware that items on the consent calendar are considered to be routine and are normally enacted by one unanimous vote of the Council. If you wish to speak on a consent calendar item, or on a matter scheduled for consideration in a closed session at the end of the agenda, please do so during the Presentations by Citizens/Public Comment portion of the meeting.

The City and the City Council are not responsible for the content of statements made during the public comment period, or the factual accuracy of any such statements.

AGENDA MODIFICATIONS: The City Council may modify the regular agenda by tabling items, adding urgency items to the agenda, or changing the order in which items are considered. Changes to the Consent Calendar are considered at the time the Consent Calendar is considered.

CONSENT CALENDAR:

5. Receive and file the Expenditures for the period beginning March 5, 2022 and ending March 18, 2022.

6. Receive and file the Monthly City Treasurer's Report on Compliance with Statement of Safekeeping and Investment of Public Funds.

7. Receive and file the Contracts Executed by the City Manager on behalf of the City for the Period of February 22, 2022 through March 21, 2022.

8. Adoption of Resolution No. 6113, Directing the Preparation of a Street Lighting District No. 1 Report as a part of Consideration of Continuing the District for Fiscal Year 2022-23.

9. Adoption of Resolution No. 6114, Directing the Preparation of a Lighting, Landscaping and Right of Way Improvement District No. 3 Report as a Part of Action Necessary to Continue Lighting, Landscaping and Right of Way Improvement District No. 3 for Fiscal Year 2022-23.

10. Adoption of Resolution No. 6115, Directing that the Required Report Be Prepared as a Part of the Process to Continue Parking and Business Improvement Area Assessment District No. 4 for Fiscal Year 2022-23.

11. Adoption of Resolution No. 6116, Directing the Initiation of Procedures to Continue Winter Protection Berm Assessment District No. 5 for Fiscal Year 2022-23.

ADMINISTRATIVE MATTERS:

12. Adopt Resolution No. 6117, Approving an Appointment to the Tree Advisory Board.

    Recommendation: Adopt Resolution No. 6117, approving an appointment to the Tree Advisory Board.

    Staff Presenter: Brian C. Barrett, City Clerk

    a. Staff Report
    b. Public Comment
    c. City Council Determination

13. Authorization to issue a Notice Inviting Bids for the 2022 Pavement Maintenance Project (Project No. 15131).

    Recommendation: Authorize the Public Works Director to advertise the Notice Inviting Bids for the 2022 Pavement Maintenance Project (Project No. 15131).

    Staff Presenter: John L. Ilasin, Public Works Director

    a. Staff Report
    b. Public Comment
    c. City Council Determination

14. Resolution No. 6112, establishing an updated and revised flag display policy.

    Recommendation: Adopt Resolution No. 6112, establishing an updated and revised flag display policy.

    Staff Presenter: Dave Durflinger, City Manager

    a. Staff Report
    b. Public Comment
    c. City Council Determination

PUBLIC HEARING:

15. (1) Review of two draft City Council District Maps (A2 and A3) and selection of a final District Map; and, (2) Adoption of Ordinance No. 752, (first reading) approving the final City Council District Map and scheduling for second reading on April 11, 2022.

    Recommendation: Selection one of the two draft District Maps to be used for District Elections beginning in November 2022. Adopt Ordinance No. 752, (first reading) approving the final City Council District Map and schedule for second reading on April 11, 2022.

    Staff Presenter: Dave Durflinger, City Manager

    a. Staff Report
    b. Public Comment
    c. City Council Determination

16. Adoption of Ordinance No. 753, (first reading) approving the sequencing schedule for district elections concerning the five Council districts in the City of Carpinteria.

    Recommendation: Adopt Ordinance No. 753, (first reading) approving the sequencing schedule for district elections concerning five Council districts in the City of Carpinteria.

    Staff Presenter: Dave Durflinger, City Manager

    a. Staff Report
    b. Public Comment
    c. City Council Determination

17. Pursuant to Carpinteria Municipal Code (“CMC”) § 14.78.040, the City Council will hold a public hearing to consider appeals of the Planning Commission’s decision to accept and certify an Environmental Impact Report (“EIR”) and grant approval of a Conditional Use Permit and Coastal Development Permit for Project 19-2015-CUP/CDP, a proposal to construct the 850-foot long portion of the approximately 2,800-foot long multi-use Rincon Trail project filed by: (1) Karl Cameron; (2) Stan Barankiewicz of Orbach Huff & Henderson LLP, on behalf of the Santa Barbara Soaring Association (“SBSA”); and (3) Helen O’Neill. The project location spans from the eastern terminus of Carpinteria Avenue in the City of Carpinteria to the western terminus of the Rincon Beach County Park parking lot, located in unincorporated Santa Barbara County, and involves City and Caltrans rights-of-way and Assessor’s Parcel Nos. 001-220-032, -092, -100 and -101.

Recommendation: Consider the filed appeals in a public hearing, and deny the appeals, thereby upholding the Planning Commission's acceptance and certification of the EIR and approval of a Conditional Use Permit ("CUP") and Coastal Development Permit ("CDP") for the Rincon Trail project through Resolution No. 6111 (Attachment A).

Staff Presenter: Nick Bobroff, Principal Planner

a. Ex Parte Disclosures
b. Staff Presentation
c. Appellant Presentation (up to 30 minutes)
d. Public Comment
e. City Council Determination

OTHER BUSINESS:

18. Review of the Mid-Year Budget Report and making related adjustments to appropriations.

Recommendation: Accept the Mid-Year Budget Report and approve adjustments to the budget as summarized in Attachment D. *(This motion requires a roll call vote.)*

Staff Presenter: Licette Maldonado, Administrative Services Director

a. Staff Report
b. Public Comment
c. City Council Determination

19. Response to the 2021 Santa Barbara County Grand Jury report, "The Keys to Housing The Homeless, Two State Programs Offer Rooms and Homes".

Recommendation: Approve the letter to the subject Santa Barbara Grand Jury Report.

Staff Presenter: Dave Durflinger, City Manager

a. Staff Report
b. Public Comment
c. City Council Determination

LEGISLATIVE UPDATE: The City Council will discuss local, state and/or federal legislation under consideration and decide whether to direct staff to place a matter(s) on a future City Council agenda for consideration.

COMMITTEE REPORTS, INQUIRIES AND OTHER MATTERS PRESENTED BY COUNCILMEMBERS

Informational reports from Councilmember representatives on the committees, commissions and organizations listed below. This is also an opportunity for Councilmembers to request information from staff or seek support from fellow Councilmembers for future agenda items.

1. Representatives to Regional Agencies and Committees

    a. Beach Erosion Authority for Clean Oceans and Nourishment (BEACON) (Clark/Alt. Carty)

c. COVID-19 Communications Committee (Clark & Nomura)
d. COVID-19 Recovery Committee (Carty & Lee)
e. Racial Equity and Social Justice Program Planning Committee (Nomura & Alarcon)
f. Harbor Seal Advisory Committee (Clark & Lee)

4. City Representatives on other Committees

a. Community Media Access Center (Gary Dobbins)
b. Santa Barbara Mosquito and Vector Management District (Joe Franken)
c. Santa Barbara Metropolitan Transit District (Chuck McQuary)
d. County Library Advisory Committee (Gail Marshall)

ATTENDANCE OF COUNCILMEMBERS FOR FUTURE MEETINGS

ADJOURNMENT

The next regular meeting of the City Council will be held April 11, 2022 at 5:30 p.m.

In compliance with the Americans with Disabilities Act, if you need assistance to participate in this meeting, please contact the City Clerk's Office at 755-4403 or the California Relay Service at (866) 735-2929. Notification two business days prior to the meeting will enable the City to make reasonable arrangements for accessibility to this meeting.

Materials related to an agenda item submitted to the City Council after distribution of the agenda packet are available for public review at the City Clerk's Office.

This agenda was posted on Wednesday, March 23, 2022, in the City Clerk's Office, on the City Hall Public Notices Window, and on the Internet.

PROCLAMATION

A PROCLAMATION OF THE CITY COUNCIL OF THE CITY OF CARPINTERIA HONORING MRS. MARY OTA ON HER 103RD BIRTHDAY

WHEREAS, *Mary Ota was born on March 21, 1919 in Los Angeles, California and is celebrating her 103rd Birthday; and*

WHEREAS, *Mary spent a wonderful childhood in the City of Sierra Madre and moved to Arizona for her high school years; and*

WHEREAS, *on January 20, 1950 she married Tom Ota; and*

WHEREAS, *Mary and Tom later moved to Carpinteria and raised their two children, Marvin and Marsha; and*

WHEREAS, *in addition to being a devoted and loving wife and mother, Mary volunteered for many years for the Carpinteria Historical Society and the Carpinteria Community Church in many capacities; and*

WHEREAS, *Mary and Tom were avid Trojan fans for over fifty years and had season tickets on the fifty-yard line; and*

WHEREAS, *when Mary retired from Sansum Clinic she enjoyed the many handicrafts that she had acquired over the years, especially quilting in her later years; and*

WHEREAS, *Mary has loved living in Carpinteria for seventy-two years; and*

WHEREAS, *during a long and productive lifetime, Mary has demonstrated in countless ways her dedication to the well-being of others and has earned the respect and affection of people from all walks of life and all ages; and*

WHEREAS, *longevity of life is a blessing for an individual and for a community which benefits from the knowledge, creativity and experience an individual brings to all; and*

WHEREAS*, Mary was honored by family and friends on the occasion of her 103rd birthday on March 21, 2022.*

NOW THEREFORE BE IT RESOLVED *that I Wade T. Nomura and the City Council of the City of Carpinteria congratulate Mrs. Mary Ota on her 103rd birthday and honor her for her long life and contribution as a volunteer and senior citizen of our community.*

IN WITNESS WHEREOF, *I have hereunto set my hand and caused the official seal of the City of Carpinteria, California to be affixed this 28th day of March, 2022.*

Wade T. Nomura, Mayor

ATTEST:

Brian C. Barrett, City Clerk

PROCLAMATION

A PROCLAMATION OF THE CARPINTERIA CITY COUNCIL DESIGNATING THE MONTH OF APRIL 2022, AS "CARPINTERIA BEAUTIFUL MONTH"

***WHEREAS**, the month of April is recognized nationwide as Keep America Beautiful Month; and*

***WHEREAS**, since 1992, the month of April has additionally been proclaimed as Carpinteria Beautiful Month and celebrated by the downtown display of the Carpinteria Beautiful banners; and*

***WHEREAS**, on April 29th cities across America will observe National Arbor Day, and Carpinteria will participate by renewing our commitment to maintaining a vigorous and beneficial urban forest; and*

***WHEREAS**, on April 22nd, the 52nd anniversary of Earth Day will be celebrated through a renewal of our dedication to preserving a healthy environment; and*

***WHEREAS**, throughout the month of April, Carpinteria Beautiful volunteers will continue their year-round efforts to remove graffiti and fill the doggie bag dispensers, and the Adopt-a-Spotters and Trash Mob will redouble their already considerable efforts to keep Carpinteria litter-free.*

***NOW, THEREFORE**, the City Council of the City of Carpinteria hereby designates April 2022, as **"CARPINTERIA BEAUTIFUL MONTH"** and urges all residents to share in the observance of this month by making a personal commitment to enhance the beauty of their own properties and neighborhoods for the benefit and enjoyment of all.*

***IN WITNESS WHEREOF,** I have hereunto set my hand and caused the official seal of the City of Carpinteria, California to be affixed this 28th day of March, 2022.*

_____

Wade T. Nomura, Mayor
City of Carpinteria

ATTEST:

_____

Brian C. Barrett, City Clerk

A PROCLAMATION OF THE CARPINTERIA CITY COUNCIL DESIGNATING APRIL 2022 AS DMV/DONATE LIFE MONTH

WHEREAS, *organ, eye, tissue, marrow and blood donation are life-giving acts recognized worldwide as expressions of compassion to those in need; and more than 106,000 individuals nationwide and more than 20,000 in California are currently on the national organ transplant waiting list, and on average, 17 people die each day while waiting; and, the need for donated organs is especially urgent in Hispanic, Latino, and African American communities; and*

WHEREAS*, a single individual's donation of the heart, lungs, liver, kidneys, pancreas and small intestine can save up to eight lives; and donation of tissue can save and heal the lives of more than 75 others; and*

WHEREAS*, deceased organ donors saved more than 40,000 lives last year, the most ever; and any person can register to be an organ, eye and tissue donor regardless of age or medical conditions; and*

WHEREAS*, over seventeen million Californians have signed up with the state-authorized Donate Life Donor Registry to ensure their wishes to be organ, eye and tissue donors are honored; and, California residents can sign up to be an organ, eye and tissue donor when applying for or renewing their driver's licenses or ID cards at the California Department of Motor Vehicles; and*

WHEREAS*, California residents can sign up with the Donate Life California Donor Registry online at any time by visiting www.donateLIFEcalifornia.org or, for Spanish-speakers, www.doneVIDAcalifornia.org and, California residents interested in saving a life through living kidney donation may visit www.LivingDonationCalifornia.org.*

NOW, THEREFORE, *that in recognition of National Donate Life Month, April 2022 is hereby designated as "DMV/Donate Life Month" in the City of Carpinteria and in doing so we encourage all California to check "YES!" on line, or when applying for or renewing their driver's license or I.D. card at the DMV.*

IN WITNESS THEREOF*, I have hereunto set my hand and caused the official seal of the City of Carpinteria, California, to be affixed this 28th day of March, 2022.*

CCCE ACCOMPLISHMENTS

Local Choice

- 3Cchoice – clean & renewable offering
- 3Cprime – 100% renewable offering
- 94% enrollment

Economic Vitality

- $50+ million – Customer benefits
- Over $14 million set aside for FY 21/22 Energy Programs

Local Support

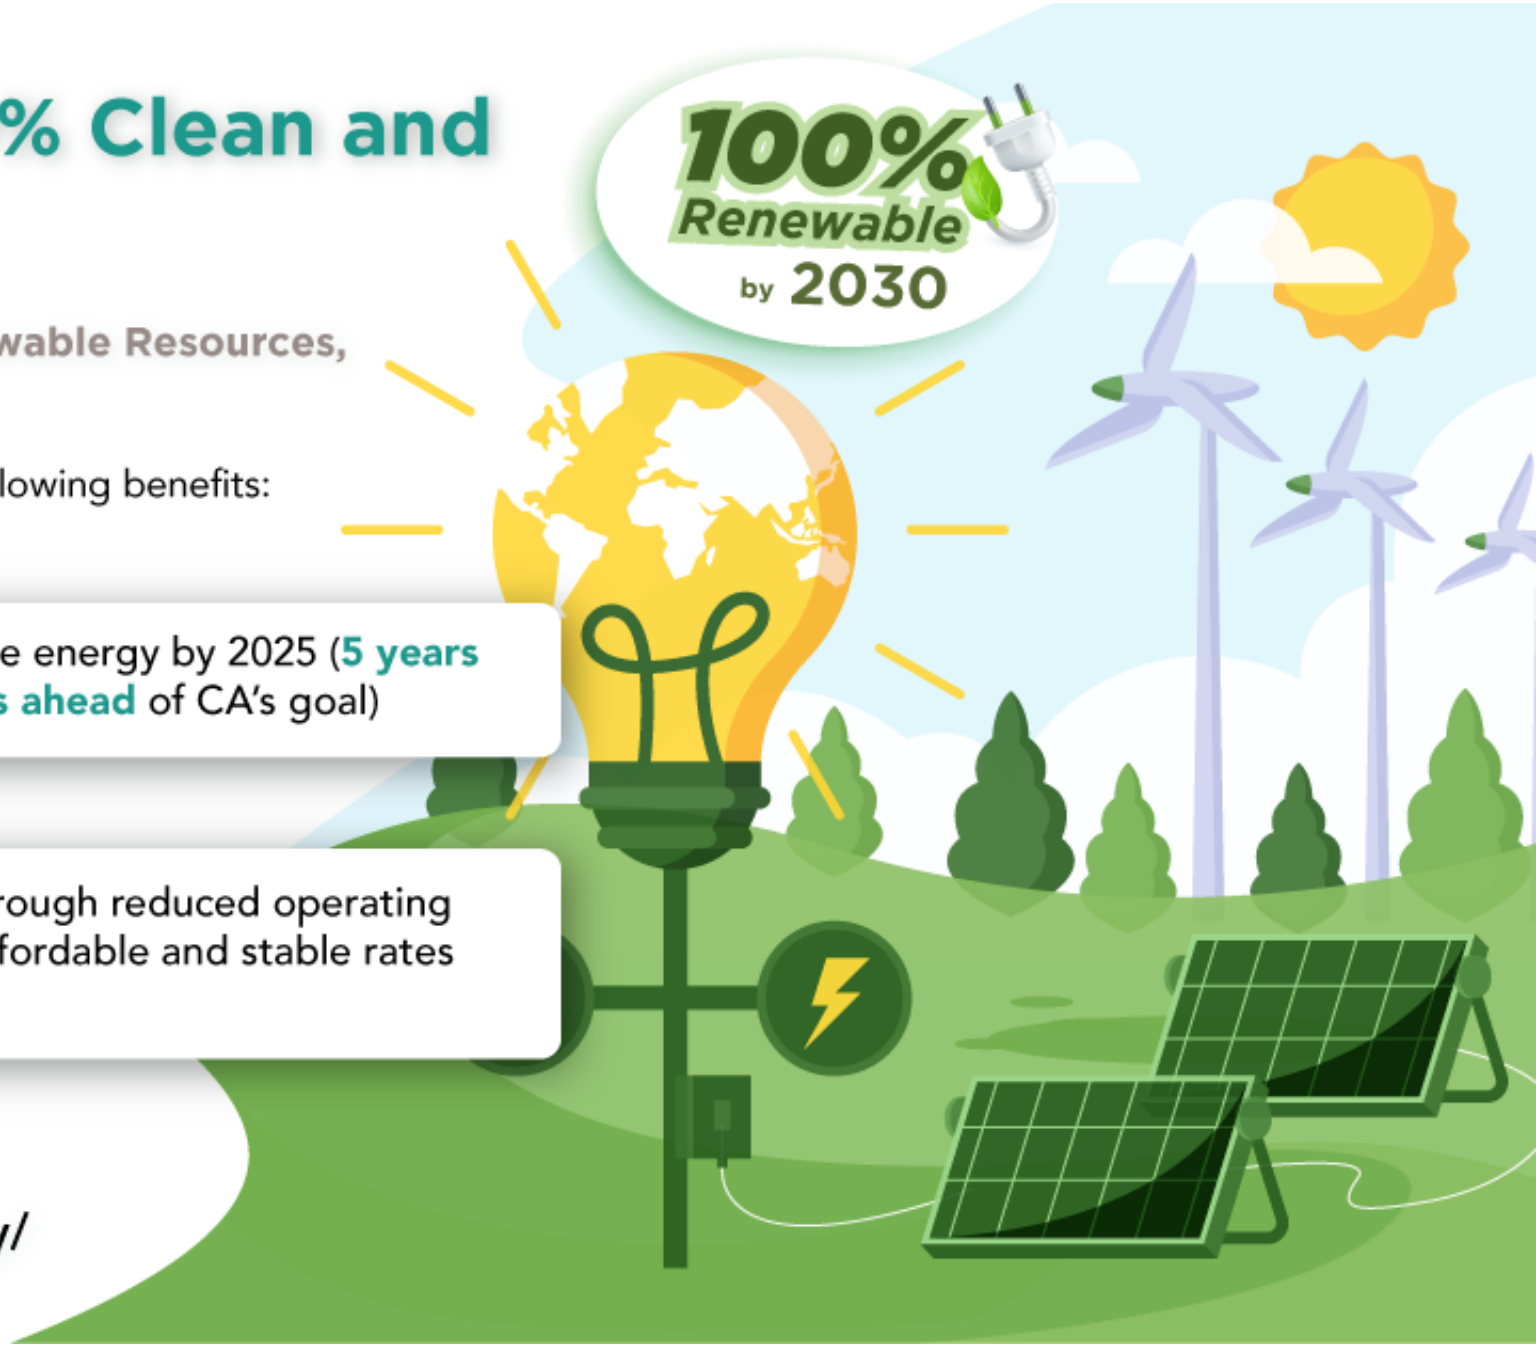
- Contracts with Local Vendors Over $1,000,000
- 38 full time employees
- 2 offices – Monterey & San Luis Obispo

Financial Stability

- Received an A rating with S&P
- Over $140 Million in Rate Stabilization Fund
- Service and Loans Paid Off

Clean Energy

- 889 MWs of Renewables – solar, wind, geothermal
- 261 MWs of battery storage
- Pathway to 100% clean & renewable



Central Coast Community Energy

CCCE's Pathway to 100% Clean and Renewable by 2030

Supporting Affordable Rates, Increasing Renewable Resources, and Accelerating Greenhouse Gas Reduction

CCCE's new energy-supply strategy will provide the folllowing benefits:

- CCCE's goal is to reach 60% clean and renewable energy by 2025 (**5 years ahead** of CA's goal) and 100% by 2030 (**15 years ahead** of CA's goal)
- Financially beneficial to customers and CCCE through reduced operating costs of **$8-15 million/year** allowing for more affordable and stable rates while supporting economic development

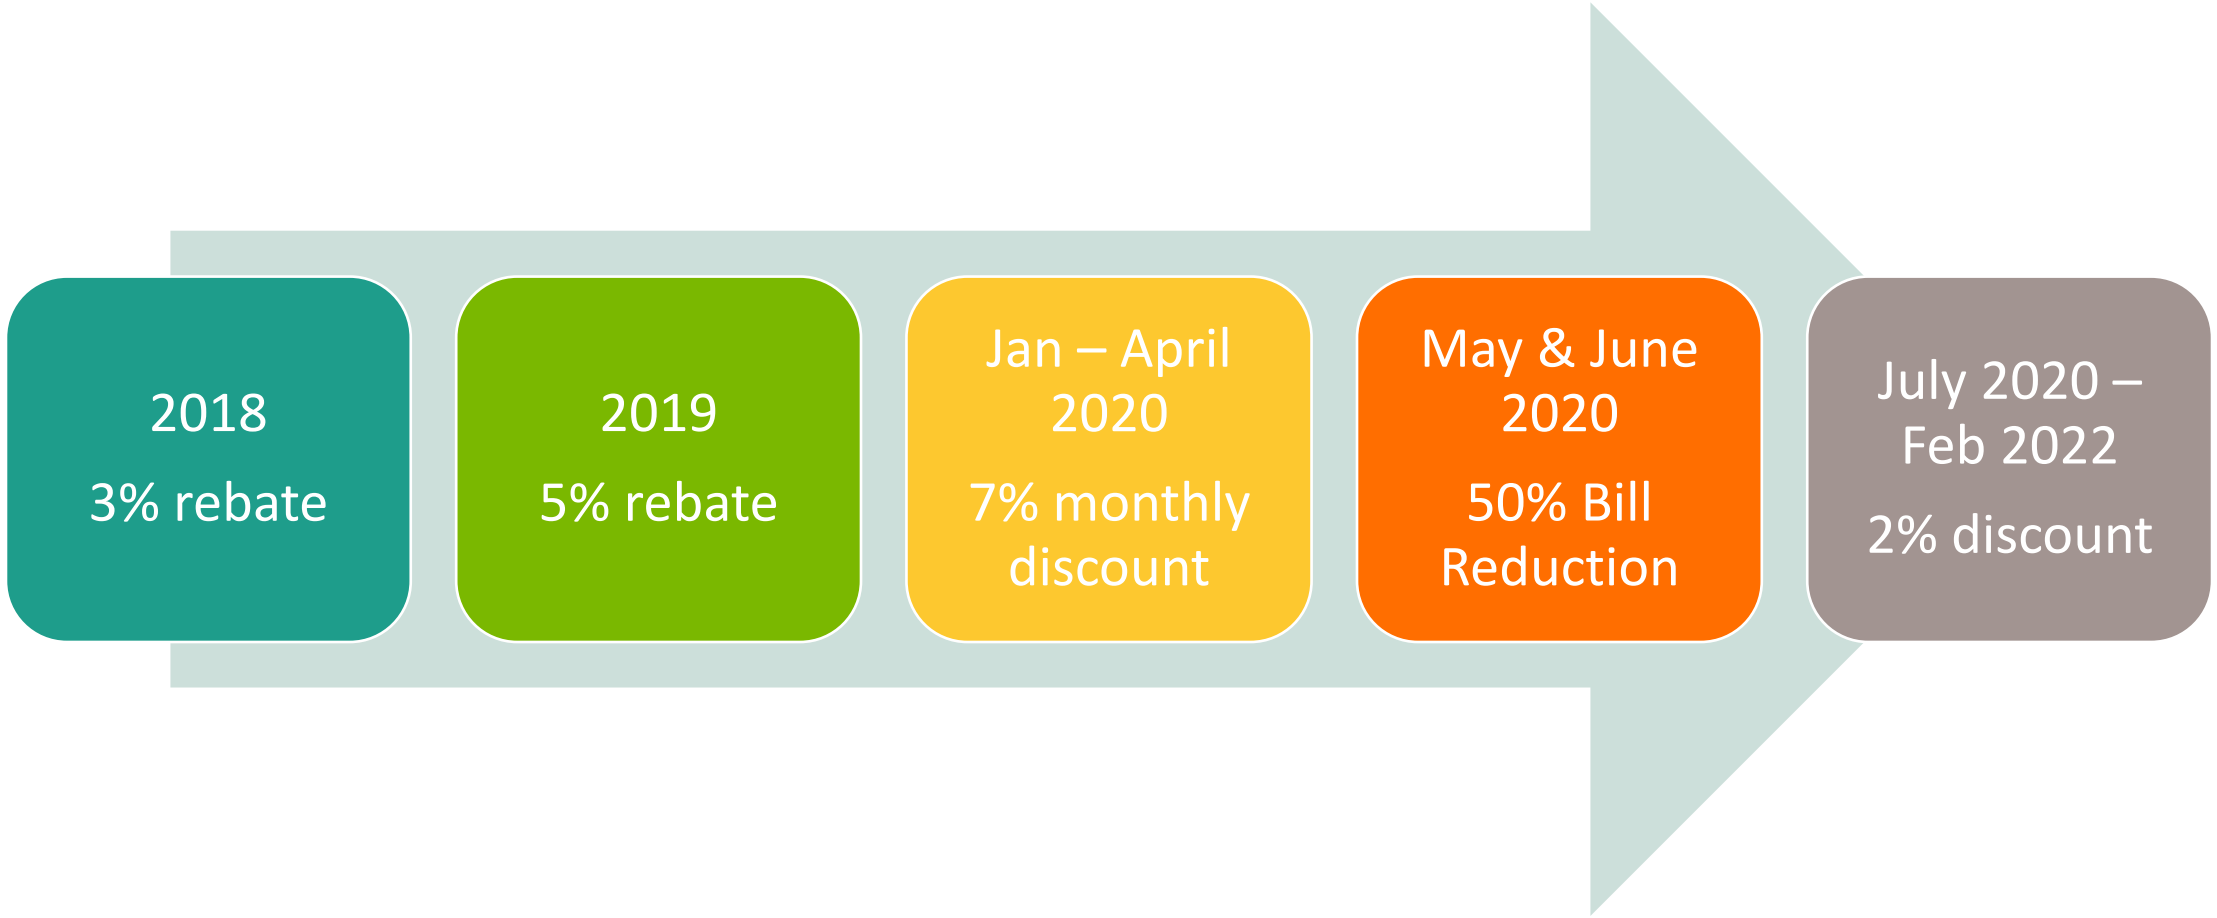
These projects will serve about 61% of CCCE's retail load when all are online, expected in 2025.

Central Coast Community Energy

FY2021-22 Our Key Accomplishments

Reducing Grid Emissions Through Utility Scale Procurement

- 889MW Renewable Energy + 201MW Energy Storage
  - Signed 13 long-term agreements to date
  - Enough to meet 60% of CCCE electricity demand in 2025



- Receiving Resource Adequacy (RA) from a new 60 MW energy storage system within CCCE's service area.

- Founding member of California Community Power (CC Power) with other CCAs to leverage CCA purchasing power of energy products such as long duration energy storage.

- Negotiating agreements for 100 MW of new renewable energy + 110 MW of energy storage located within CCCE's service area.

Central Coast Community Energy

CCCE HISTORIC RATES & COVID-19 RESPONSE

Central Coast Community Energy

CCCE Energy Programs

Overview:

- $1.3 million in FY 18/19
- $5.4 million in FY 19/20
- $6.2 million in FY 20/21
- Estimated $14.1 million in FY 21/22
  - 4% of operating revenue in FY 21/22

Electrification in building and transportation sectors could result in $3 billion of untapped revenue market wide

FY 21/22 Energy Programs

- Electrify Your Ride - $2.8 million – NOVEMBER 2021
- School Bus Electrification - $1 million - OCTOBER 2021
- Agriculture Electrification - $600k - OCTOBER 2021
- Residential Electrification - $1.6 million
- New Construction Electrification - $1.5 million – OCYOBER 2021
- Reach Code - $60k
- Battery Energy Storage Pilot - $350k
- Summer Readiness - $400k
- Energy Education, Workforce Development and Innovation Grants - $1 million
- Greenhouse Gas Inventory - $64k

CLEAN ENERGY. LOCAL CONTROL.

ELECTRIFY YOUR RIDE

on Electric Vehicles and Chargers

REDUCE EMISSIONS

Reducing emissions, getting more electric vehicles (EVs) on the road and building more charging stations will increase local and regional adoption rates to meet state and regional climate action goals

EQUITABLE ACCESS

Providing extra funding for disadvantaged communities and low-income customers will tighten up gaps in equitable access to clean-energy resources

ELECTRIC VEHICLE REBATES

$2,000 - $4,000 in rebates available for purchase or lease of new or used electric vehicles, including motorcycles and e-bikes. Additional stackable funds available, including up to $15,000 for income-qualified customers

EV CHARGER REBATES

$2,400 - $10,000 available for Level 2 electric vehicle chargers at home or workplace. Includes the labor and material costs for installation, including electrical panel upgrades or replacments

Learn more and apply at 3cenergy.org/electrify-your-ride-program

Medium and Heavy-Duty Vehicle Electrification Program

- Intended to support the electrification of Member Agency medium and heavy-duty fleet vehicles
- Potential applications include street sweepers, refuse trucks, dump trucks, and first response vehicles
- CCCE will reserve funds for qualifying projects and funds will be dispersed once purchases and/or projects are completed
- Intended to work in coordination with city/county purchasing schedules and policies
- Incentives likely to be tied to increased cost of electric models from standard internal combustion options

Central Coast Community Energy

City of Carpinteria by The Numbers (97.64% Enrollment)

- 5,709 total enrolled customers

- 4,787 Residential
- 921 Commercial
- 1 Agricultural

City of Carpinteria

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Expenditures for the period beginning March 05, 2022 and March 18, 2022.

STAFF RECOMMENDATION

That the City Council accept this report concerning the current list of warrants pursuant to Carpinteria Municipal Code 2.08.150(F).

DISCUSSION

As part of each regular City Council agenda, a list of all checks (attached) dispersed since the last reporting period is presented to the City Council pursuant to C.M.C. 2.08.150(F). The report is provided for City Council and public information and serves as Staff's verification that the expenditures have been reviewed and are within budgeted appropriations.

FINANCIAL CONSIDERATIONS

The warrant register included as an attachment is designed to communicate fiscal activity since the prior reporting period. No action is requested as part of this report.

ATTACHMENTS

Attachment A: Warrant Register for the period beginning March 05, 2022 and ending March 18, 2022 .

City of Carpinteria

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Monthly City Treasurer's Report on Compliance with Statement of Safekeeping and Investment of Public Funds.

STAFF RECOMMENDATION

Receive and file the report

Sample Motion: None required

BACKGROUND / DISCUSSION

The City Council is the City of Carpinteria trustees and authorized to make investment decisions concerning public funds that are subject to the prudent investment standard. The Prudent Investor Standard of the California Government Code Section 53600.3 states, "when investing, reinvesting, purchasing, acquiring, exchanging, selling or managing public funds, a trustee shall act with care, skill, prudence and diligence under circumstances then prevailing, including, but not limited to, the general economic conditions and the anticipated need of the City, that a prudent person in a like capacity and familiarity with those matters would use in the conduct of funds of a like character and with like aims, to safeguard the principal and maintain the liquidity needs of the City." The standard or prudence to be used by investment officials shall be applied in the context of managing the overall portfolio.

Trustees are those persons authorized to make investment decisions on behalf of a local agency. Trustees or City Investment officials, acting in accordance with investment policy and exercising due diligence, shall be relieved of personal responsibility for an individual security's credit risk changes or market price changes, provided deviations from expectations are reported in a timely manner and appropriate action is taken to control adverse developments.

The purpose of this agenda matter is to provide the City Council with the required monthly Treasurer's Report.

POLICY CONSISTENCY

The City is in compliance with the adopted Statement of Safekeeping and Investment of Public Funds.

FINANCIAL CONSIDERATIONS

Cash Statement: At February 28, 2022, the City held cash and cash investments as shown in the table below.

Table I

CASH ACTIVITY FOR THE MONTH:	
Cash and Investment Beginning of the Month	$ 17,838,655.07
Cash Receipts	2,748,606.71
Cash Disbursements	(2,458,516.72)
Cash and Investment End of the Month	$ 18,128,745.06

Investments:

Changes in the market value of treasury securities are inversely proportional to changes in interest rates demanded in the open market, i.e., when rates rise market values fall, when rates fall market values rise. The sensitivity of a portfolio's market value to these changes in market rates is a function of its days to maturity and its coupon rate. Securities with longer maturities and/or lower coupon rates are more sensitive to changes in market interest rates. As a security matures, changes in its value become less sensitive to market rate changes.

At February 28th the portfolio's average days to maturity was 2.22 years, the average coupon rate was 1.59%, the average yield to maturity was 1.33%, the par value was $7,491,000 and Market Value was $7,428,891.96.

The City does not intend to sell nor does it have any foreseeable need to sell any securities. The intention of the City's investment policy is to hold all securities to maturity; and securities so held are redeemed at par value resulting in no net market gain or loss.

Attached for City Council review is the Treasurer's Report that details a listing of all the investments and cash activity during the month.

The City of Carpinteria will be able to meet all expenditure obligations that might reasonably be anticipated for the next six-month period September 1, 2022.

LEGAL

This report has been prepared in compliance with California Government Code Sections 53600 and 53646.

REPORT ON COMPLIANCE WITH STATEMENT OF SAFEKEEPING AND INVESTMENT OF PUBLIC FUNDS

The City is in compliance with the adopted Statement of Safekeeping and Investment of Public Funds.

REPORT OF ABILITY TO MEET REQUIRED EXPENDITURES FOR THE NEXT SIX MONTHS

Based upon currently budgeted revenues and expenditures, the City currently has sufficient liquid financial resources to meet anticipated expenditures during the period 3/01/22 through 9/01/22.

WEIGHTED AVERAGE MATURITY OF PORTFOLIO

As of February 28, 2022 the weighted average days to maturity of the City's investment portfolio is 2.22 years.

FOOTNOTES TO REPORT/DEFINITION OF TERMS:

(1) The market value of U.S. Goverment Securities was provided by the custodial agent, Charles Schwab.
For the Local Agency Investment Fund the market value represents the contract value.

For all other investments, the market value is equal to book value.

(2) Book value of demand deposits equals the bank balance minus outstanding checks plus deposits-in-transit.

Yield to Maturity (YTM): The percentage rate of return for the note assuming that the City holds the asset until its maturity date. It is the sum of all its remaining coupon payments.
Par Value: Equals face value of security (value of the security when it reaches maturity).
Market Value: The last price for which a security was bought or sold. In this case, the value as of the last day of the month of this report.
Book Value: The amount at which the security is carried in the City's accounting records (adjusted at year-end for GASB 40 reporting purposes).

City of Carpinteria

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Contracts Executed by the City Manager on behalf of the City for the Period of February 22, 2022 through March 21, 2022.

STAFF RECOMMENDATION

Receive and file Report of Contracts Executed by the City Manager for the Period of February 22, 2022 through March 21, 2022.

DISCUSSION

The City Manager is delegated authority by the Carpinteria Municipal Code (CMC), §2.08.150B, to execute contracts on behalf of the City in the amount of $30,000 or less. Pursuant to CMC §2.08.150C, a list of all contracts executed by the City Manager is provided for City Council information and appended to this Staff Report as Attachment A. Attachment A lists all contracts entered into on behalf of the City for goods, construction and services for the Period of February 22, 2022 through March 21, 2022.

FINANCIAL CONSIDERATIONS

All contracts entered into are within the appropriated budgeted amounts.

COUNCIL AGENDA STAFF REPORT
MARCH 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Adoption of Resolution No. 6113, Directing the Preparation of a Street Lighting District No. 1 Report as a part of Consideration of Continuing the District for Fiscal Year 2022-23.

STAFF RECOMMENDATION

Adopt the attached Resolution No. 6113, as read by title only, directing the City Manager to prepare an assessment report for the consideration of continuing Street Lighting District No. 1 for the Fiscal Year 2022-23.

Sample Motion: I move adoption of Resolution No. 6113, as read by title only, directing the City Manager to prepare an assessment report for the consideration of continuing Street Lighting District No. 1 for the Fiscal Year 2022-23.

BACKGROUND/DISCUSSION

Street Lighting District No. 1 (District) is legally an independent special district governed by the City of Carpinteria. In 1977, the District was established to finance street lighting costs and continues to date. Due to the fact that this District was formed before Proposition 13 and is a property taxing district, the District is entitled to a very small share (less than 1%) of the basic one percent property tax rate.

The purpose of this agenda matter is for the City Council to consider the first step of continuing Street Lighting District No. 1 for Fiscal Year 2022-23 by ordering the preparation of the District report.

POLICY CONSISTENCY

The maintenance of public street lighting, formerly supported by the subject District, can be found consistent with various City policies including the General Plan's Community Design policies for the Downtown area. The work is also consistent with the City's interest in protecting public health and safety.

FINANCIAL CONSIDERATIONS

Failure to continue the District would result in a loss of approximately $200,000 in revenues to finance the cost of street lighting in the district and general fund. These funds have been used in the past to finance capital projects such as new or replacement street lights, etc. The fund balance as of June 30, 2021, is $334,264.

LEGAL AND RISK MANAGEMENT CONSIDERATIONS

It has been determined that continuation of this District is not subject to the conditions of Proposition 218.

The following is the sequence of events for continuing the District:

March 28, 2022 - Adopt a resolution ordering the preparation of a report describing the status of the District, which provides street lighting for the City and to provide projections for Fiscal Year 2022-23.

April 25, 2022 - The report is presented by staff with recommendations.
Adopt a resolution accepting the report.
Adopt a resolution of intention to continue the District for next fiscal year and set for public hearing.

May 23, 2022 - Conduct a public hearing on the proposal to continue the District.
Adopt a resolution continuing the District and levying the tax for fiscal year 2022-23.

OPTIONS

1. Adopt the attached Resolution No. 6113, as read by title only, directing the City Manager to prepare an assessment report for the consideration of continuing Street Lighting District No. 1 for the Fiscal Year 2022-23.
2. The City Council could choose not to order the preparation of the Annual Report; however, by omitting this step, the District would not be continued for Fiscal Year 2022-23.

PRINCIPAL PARTIES EXPECTED AT MEETING

There are no principal parties expected at the meeting.

Resolution No. 6113

RESOLUTION NO. 6113

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CARPINTERIA ORDERING THE CITY MANAGER TO PREPARE AN ASSESSMENT DIAGRAM, PLANS, SPECIFICATIONS, ESTIMATE AND REPORT, PURSUANT TO THE PROVISIONS OF DIVISION 14, PART 1, CHAPTER 8.5 STREETS AND HIGHWAYS CODE, STREET LIGHTING ACT OF 1919, AS AMENDED, FOR THE FURNISHING OF ELECTRIC CURRENT, FOR THE MAINTENANCE OF CERTAIN LIGHTING FIXTURES AND APPLIANCES IN ALL PORTIONS OF THE CITY IN STREET LIGHTING DISTRICT NO. 1 FOR THE PERIOD BEGINNING JULY 1, 2022, AND ENDING JUNE 30, 2023

WHEREAS, the continued public convenience and necessity require, and it is the intention of the City Council of the City of Carpinteria to order the furnishing of electric current, and the maintenance of lighting fixtures and appliances in said Street Lighting District No. 1 in the City of Carpinteria for the period beginning July 1, 2022 and ending June 30, 2023; and

WHEREAS, proceedings for such proposed improvements will be taken pursuant to the provisions of Division 14, Part 1, Chapter 8.5, Streets and Highways Code, Street Lighting Act of 1919, as amended; and

WHEREAS, the provisions of said Division 14, Part 1, Chapter 8.5, require a written report concerning such proposed improvements.

NOW, THEREFORE BE IT RESOLVED as follows:

SECTION 1. That the City Manager is hereby ordered to prepare a written report pursuant to the provisions of Section 18160 and 18161, Streets and Highways Code for the furnishing of electric current and the maintenance of certain lighting fixtures and appliances in all portions of the City that are within Street Lighting District No. 1 in said City for the period beginning July 1, 2022 and ending June 30, 2023.

PASSED, APPROVED AND ADOPTED on this 28th day of March, 2022, by the following called votes:

COUNCIL AGENDA STAFF REPORT
MARCH 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Adoption of Resolution No. 6114, Directing the Preparation of a Lighting, Landscaping and Right of Way Improvement District No. 3 Report as a Part of Actions Necessary to Continue Lighting, Landscaping and Right of Way Improvement District No. 3 for Fiscal Year 2022-23.

STAFF RECOMMENDATION

Adopt the attached Resolution No. 6114, as read by title only, ordering the preparation of a report describing the financial status of the District and recommending assessments for Fiscal Year 2022-23 for Carpinteria Lighting, Landscaping and Right of Way Improvement District No. 3.

Sample Motion: I move adoption of Resolution No. 6114, as read by title only, directing the City Manager to prepare, or have prepared, a report describing the financial status of the District and recommending assessments for Fiscal Year 2022-23 for the Carpinteria Lighting, Landscaping and Right of Way Improvement District No. 3.

BACKGROUND/DISCUSSION

This assessment district was formed on June 8, 1985 by Resolution No. 1474, superseding Street Lighting District No. 2, providing funding for the maintenance of rights of way including repairs to curbs, gutters, sidewalks, tree removal and planting and the tree management program. Like the former Street Lighting District No. 2, this District may also make assessments for street lighting, but such assessments are not made since the overlapping Street Lighting District No.1 provides funding sufficient to meet any street lighting needs.

This District encompasses the entire City and assessments are made on a parcel by parcel basis depending on use, location and need for services. District revenues are currently used to pay for one Maintenance Worker I and one Maintenance Worker II positions as well as general right of way maintenance, and water and electric utilities costs.

POLICY CONSISTENCY

The City General Plan/Local Coastal Plan includes policies that address the maintenance of street corridors in the City. Specifically, Policies CD-8a, CD-8b, CD-9a, CD-9b, CD-9c, CD-9d and CD-9f address pedestrian and bicycle pathways. The Carpinteria Lighting, Landscaping and Right of Way Improvement District No. 3 is the financial means by which the City can, in part, implement these policies.

FINANCIAL CONSIDERATIONS

The attached exhibit is a summary of revenue and expenses for the District providing past years, current year and projected data for next fiscal year.

The income stream for this District is fixed at levels set in 1985 when the District was first established. The General Fund subsidized the District by $29,673 last year. The current year subsidy is estimated at $81,300 ($51,300 from the General Fund and $30,000 from Measure X Fund).

The District has also historically received payment from the Gas Tax fund for Gas Tax related work, i.e. street maintenance work that has been assigned through the City's budget system for payment from the Gas Tax Fund, performed by District employees. It is anticipated that the Gas Tax fund balance, which also receives a mostly static income stream, will be exhausted in the next few years. Should this occur it is expected that the General Fund subsidy would need to be increased to support the lost Gas Tax revenue. At some point, increasing assessments and/or reducing levels of service must be considered unless it is determined to continue to use General Fund revenue sources to supplement the District's revenue.

LEGAL AND RISK MANAGEMENT CONSIDERATIONS

The following is the sequence of events for continuing the District:

March 28, 2022 - Adopt a resolution ordering the preparation of a report describing the financial status and recommending assessments for Fiscal Year 2022-23.

April 25, 2022 - The report is prepared and presented by staff with recommendations.
Adopt a resolution accepting the report.
Adopt a resolution of intention to continue the District and to levy assessments for next fiscal year and set for public hearing.

May 23, 2022 - Conduct a public hearing on the proposal to continue the District. Adopt a resolution continuing the District and levying assessments for Fiscal Year 2022-23.

OPTIONS

1. Adopt the attached Resolution No. 6114, as read by title only, ordering the preparation of a report describing the financial status of the District and recommending assessments for Fiscal Year 2022-23 for Carpinteria Lighting, Landscaping and Right of Way Improvement District No. 3.
2. The City Council could choose not to order the preparation of the Annual Report; however, by omitting this step, the District would not be continued for Fiscal Year 2022-23.

PRINCIPAL PARTIES EXPECTED AT MEETING

There are no expected parties at the meeting.

Resolution No. 6114

RESOLUTION NO. 6114

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CARPINTERIA ORDERING THE CITY ENGINEER TO PREPARE AND FILE A REPORT IN ACCORDANCE WITH CHAPTER 3, PART 2, LANDSCAPING AND LIGHTING ACT OF 1972, COMMENCING WITH SECTION 22620, CALIFORNIA STREETS AND HIGHWAYS CODE, FOR THE PURPOSE OF CONSIDERING THE LEVY OF AN ASSESSMENT FOR CARPINTERIA LIGHTING, LANDSCAPING AND RIGHT OF WAY IMPROVEMENT DISTRICT NO. 3 FOR FISCAL YEAR 2022-23

WHEREAS, Chapter 3, Part 2, Landscaping and Lighting Act of 1972, commencing with Section 22620 of the California Streets and Highways Codes specifies the process for the levy of annual assessments after formation of an assessment district pursuant to the Landscaping and Lighting Act of 1972; and

WHEREAS, the City Council desires to consider an assessment for Fiscal Year 2022-23; and

WHEREAS, the Carpinteria Lighting, Landscaping and Right of Way Improvement District No. 3 includes the entire City of Carpinteria, including those parcels created within the City subsequent to the establishment of said District, unless any such parcel is exempt from assessment as provided by law; and

WHEREAS, it is the intention of the City to continue to service and maintain street lights, landscaping and right of way in the City.

NOW, THEREFORE BE IT RESOLVED as follows:

SECTION 1. The City Manager shall have the City Engineer prepare and file a report in accordance with Chapter 3, Part 2, Landscaping and Lighting Act of 1972, commencing with Section 22620 of the California Streets and Highways Code for the purpose of consideration of the levy of an assessment for the Carpinteria Lighting, Landscaping and Right of Way Improvement District No. 3 for Fiscal Year 2022-23.

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Adoption of Resolution No. 6115, Directing that the Required Report Be Prepared as a Part of the Process to Continue Parking and Business Improvement Area Assessment District No. 4 for Fiscal Year 2022-23.

STAFF RECOMMENDATION

Adopt the attached Resolution No. 6115, ordering a report by the Downtown "T" Business Advisory Board for the purpose of continuing assessments for the Carpinteria Parking and Business Improvement Area Assessment District No. 4 for Fiscal Year 2022-23.

Sample Motion: I move to adopt Resolution No. 6115, as read by title only, ordering a report by the Downtown "T" Business Advisory Board for the purpose of continuing assessments for the Carpinteria Parking and Business Improvement Area Assessment District No. 4 for Fiscal Year 2022-23.

BACKGROUND

This District was formed in 1986, pursuant to the Parking and Business Improvement Area Law of 1979 (Streets and Highways Code 36500, et. al.) to provide a means of funding downtown promotion, revitalization efforts and public parking within the District. Typically, all businesses within the District pay a flat annual assessment of $119.25, as was the case in Fiscal Year 2019-20. However, due to the COVID-19 pandemic, the Downtown "T" Business Advisory Board recommended and the City Council approved continuing the District for Fiscal Year 2020-21, but not levy the general business assessment as a way of supporting Downtown businesses during the pandemic.

The District area includes several sub-areas that were formed historically as a part of funding capital parking projects. See Attachment C. None of the sub-areas are currently active.

Sub-Area "A" – Parking Lot No. 1

Parking Lot No. 1 is located on Ninth Street between Yucca Lane and Elm Street. The funding program for this parking lot, which was financed through the sale of serial bonds,

was paid off in 1988 by means of property assessments on the individual property owners. In FY 1996-97 an assessment fee was levied on businesses adjacent to Parking Lot No. 1 to reimburse the City for half of the costs incurred for resurfacing the parking lot. Final payments on this assessment were completed in June 2006.

Sub-Area "B" – Parking Lot No. 3

Parking Lot No. 3 is located at the Amtrak Station on Linden Avenue and Fifth Street. Parking Lot No. 3 was completed in FY 1989-90. SB 959 Grant monies were used on this project and, since this lot was intended to benefit both the Downtown and the beach area, a portion of the cost was funded through the Tidelands Trust Fund as well as the City's General Fund. Businesses located in the proximity of Parking Lot No. 3 were levied an assessment fee. The debt was retired in June 2017.

Sub-Area "C" – Parking Lot No. 2

Parking Lot No. 2 is located on Cactus Lane. The funding program for this parking lot was established in FY 1987-88. SB 959 Grant monies were used to fund a portion of the cost and funding of the balance was equally shared by the City and the businesses adjacent to Parking Lot No. 2. The business share of the assessment was paid off in June 1997.

Most recently, Parking Lot No. 2 was completely rebuilt with new pavement, storm water capture system, and lighting and landscaping improvements. This project was paid for by various City funds including Measure A, Measure X, Road Maintenance & Rehabilitation Account, and the Parking Business and Improvement Area Fund.

The Downtown "T" Business Advisory Board provides oversight and budget recommendations for spending the general business promotion assessments. Examples of expenditures are funding of downtown promotions, such as the two holiday parades, the Halloween Safe Trick or Treat event, as well as the Downtown banner program and a courtesy map.

DISCUSSION

The Downtown "T" Business Advisory Board (DTBAB) has a duty to prepare and present an Annual Report to the City Council that addresses all matters relating to the Assessment District, including the methods and basis of levying the assessments and recommendations on the use of funds collected by the District. Additionally, the Board makes recommendations to the City Council for general promotion of business activities, economic growth, and stability of the District, and general maintenance issues within the Downtown "T". The ordering, preparation and presentation of the Annual Report are also required steps in the process for renewal of the District.

POLICY CONSISTENCY

The District funds work that is consistent with the City's intent in supporting the local economy, in particular, the Downtown Business District. This item is in conformance with the requirements laid out in Chapters 3 and 4 of the "Parking and Business Improvement Area Law of 1989" of the California Streets and Highways Code.

FINANCIAL CONSIDERATIONS

Any financial impact to the City is incidental staff time in working with the Downtown T" Business Advisory Board to prepare the Annual Report of Assessment District No. 4. The financial condition of the District is shown on Attachment B.

LEGAL AND RISK MANAGEMENT CONSIDERATIONS

Assessments for District No. 4 are made on businesses located within the improvement area; not on property owners. As such these assessments are not subject to the provisions of Proposition 218. It is possible to establish a district that is property based making collections through the County property tax roll. Such a district and assessments would; however, be subject to Proposition 218 requirements.

The following is the sequence of events for continuing this District:

March 28, 2022 - Adopt a resolution ordering the preparation of the Annual Report.

April 25, 2022 - Staff presents Annual Report with recommendations.
Adopt resolution accepting report.
Adopt resolution setting the matter for a public hearing.

May 23, 2022 - Hold public hearing on proposal to continue District.
Adopt resolution continuing District and levying assessments for Fiscal Year 2022-23.

OPTIONS

1. Adopt the attached Resolution No. 6115, ordering a report by the Downtown "T" Business Advisory Board for the purpose of continuing assessments for the Carpinteria Parking and Business Improvement Area Assessment District No. 4 for Fiscal Year 2022-23.
2. The City Council could choose not to order the preparation of the Annual Report; however, by omitting this step, the District would not be continued for Fiscal Year 2022-23.

PRINCIPAL PARTIES EXPECTED AT MEETING

There are no expected parties at the meeting.

RESOLUTION NO. 6115

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CARPINTERIA ORDERING THAT A REPORT BE PREPARED IN ACCORDANCE WITH CHAPTERS 3 AND 4 OF THE "PARKING AND BUSINESS IMPROVEMENT AREA LAW OF 1989" OF THE CALIFORNIA STREETS AND HIGHWAYS CODE, AS AMENDED, COMMENCING WITH SECTION 36500, FOR THE ACQUISITION, CONSTRUCTION OR MAINTENANCE OF PARKING FACILITIES AND OTHER ELIGIBLE IMPROVEMENTS AND BUSINESS PROMOTION ACTIVITIES IN THE CENTRAL BUSINESS DISTRICT OF THE CITY OF CARPINTERIA, FOR THE FISCAL YEAR COMMENCING JULY 1, 2022 AND ENDING JUNE 30, 2023 CARPINTERIA PARKING AND BUSINESS IMPROVEMENT AREA DISTRICT NO. 4

WHEREAS, the Carpinteria City Council did form an assessment district pursuant to the "Parking and Business Improvement Area Law of 1979", being Division 18, Part 6 of the Streets and Highways Code of the State of California, commencing with Section 36500; and

WHEREAS, said formation of the Carpinteria Parking and Business Improvement Area District No. 4 was accomplished by adoption of Ordinance No. 393 on September 8, 1986, following public hearings as prescribed by the Parking and Business Improvement Area Law of 1979; and

WHEREAS, said District No. 4 has been continued in full force and effect in subsequent fiscal years; and

WHEREAS, effective January 1, 1990, said Parking and Business Improvement Area Law of 1979 was repealed by the State of California and replaced by the Parking and Business Improvement Area Law of 1989, being Division 18 of Part 6 (commencing with Section 36500) of the California Streets and Highways Code; and

WHEREAS, Article 3 of Chapter 1 of said 1989 Improvement Area Law (Section 36515) provides that any Parking and Business Improvement Area created prior to January 1, 1990, under the prior 1979 law, continues to be in full force and effect, subject to certain conditions, under the 1989 law; and

WHEREAS, Chapter 3 (Assessments) and Chapter 4 (Modification of Boundaries) of said 1989 Improvement Area Law (commencing with Section 36530) prescribes the process for levying assessments, including appointment of an advisory board and requires said board to make a report to the City Council on all matters relating to said Improvement Area prior to the City Council taking any action on said assessments or boundaries for the next fiscal year starting July 1, 2022 ; and

WHEREAS, it is necessary for the public safety, convenience and economic health of the City that efforts to provide off-street public parking and other improvements and business promotion activities within the central business district be continued; and

WHEREAS, the City Council wishes to consider continuing the existing Parking and Business Improvement Area District No. 4 for Fiscal Year 2022-23 including the various programs and assessments associated therewith.

NOW, THEREFORE BE IT RESOLVED as follows:

SECTION 1. The Carpinteria City Council does hereby resolve, determine and order that a Report be prepared by the Downtown "T" Business Advisory Board pursuant to Chapters 3 and 4 of the California Parking and Business Improvement Area Law of 1989, being Part 6 of Division 18 (commencing with Section 36530) of the California Streets and Highways Code, for the fiscal year starting July 1, 2022 and ending June 30, 2023, including programs for the acquisition, construction or maintenance of off-street public parking and such other eligible improvements and business promotion activities, including proposed assessments and boundary adjustments, if any.

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Adoption of Resolution No. 6116, Directing the Initiation of Procedures to Continue Winter Protection Berm Assessment District No. 5 for Fiscal Year 2022-23.

STAFF RECOMMENDATION

Adopt the attached Resolution No. 6116, as read by title only, ordering the preparation of a report describing the Winter Protection Berm Program and associated assessment and continue the Winter Protection Berm Assessment District No. 5 for Fiscal Year 2022-23.

Motion: I move to adopt Resolution No. 6116, as read by title only.

BACKGROUND / DISCUSSION

The Winter Protection Berm Assessment District No. 5 (District) was formed by Resolution No. 3061, dated December 14, 1992. The District funds the annual construction and removal of the winter protection berm along Carpinteria City Beach. The annual construction and removal are necessary to provide storm wave and coastal flooding protection to the public and private improvements within the District. The District includes all properties immediately adjacent to Carpinteria City Beach from Linden Avenue to Ash Avenue.

The attached Resolution No. 6116 orders staff to prepare the District report pursuant to Streets and Highways Code 10200 et seq. in which will then be presented at a subsequent public meeting. The preparation of the Engineer's Report is the first step in a process to consider the annual renewal of the District. The District report is scheduled to be heard at the City Council Meeting of April 25, 2022, based on the adoption of Resolution No. 6116.

POLICY CONSISTENCY

The City's winter protection berm is an important public safety project that protects public and private property improvements from winter storm waves along Carpinteria City Beach.

FINANCIAL CONSIDERATIONS

There is no financial analysis included as a part of this staff report.

LEGAL

There are no legal issues presented as a part of this report.

OPTIONS

1. Adopt the attached Resolution No. 6116, as read by title only, ordering the preparation of a report describing the Winter Protection Berm Program and associated assessment and continue the Winter Protection Berm Assessment District No. 5 for Fiscal Year 2022-23.
2. The City Council could choose to not approve the recommendation and direct staff as determined appropriate. However, by omitting this step, the District would not be continued for Fiscal Year 2022-23.

PRINCIPAL PARTIES EXPECTED AT MEETING

There are no principal parties expected at the meeting.

RESOLUTION NO. 6116

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CARPINTERIA INITIATING PROCEEDINGS FOR THE CONTINUATION OF ASSESSMENT DISTRICT NO. 5.

WHEREAS, The Carpinteria City Council proposes to set the amount of the annual assessment to be collected for fiscal year 2022-23 pursuant to the Municipal Improvement Act of 1913 (section 10000 and following, Streets and Highways Code) for the purpose of constructing the following improvements:

> The annual installation and removal of the Carpinteria Beach Winter Protection Berm project located along the entire length of the Carpinteria City Beach between Linden Avenue on the east to Ash Avenue to the west. The annual winter sand berm project benefits the public and private improvements within the District's boundaries by providing a measure of protection from winter ocean waves and ocean flooding, and

WHEREAS, the funds collected by the proposed assessment are specifically to be used for the Assessment District Number Five project costs, in the City of Carpinteria, Santa Barbara County, California and shall be collected from all the benefitting land shown inside the District's boundaries on the map designated, " Assessment Diagram, Assessment District No. 5, City of Carpinteria, Santa Barbara County, California," which map is on file with the City Clerk and is hereby approved.

NOW, THEREFORE, BE IT RESOLVED as follows:

SECTION 1. The Public Works Director of the City of Carpinteria is hereby designated Engineer for the purpose of these proceedings.

SECTION 2. The City Council hereby directs the Public Works Director to prepare and file with the City Clerk a report in accordance with §10204 of the Municipal Improvement Act of 1913, Streets and Highway Code.

SECTION 3. The Report shall be filed with the City Clerk and shall be presented to the City Council for consideration on April 25, 2022, at 5:30 pm or as soon thereafter as the matter may be heard.

PASSED, APPROVED AND ADOPTED on the 28th day of March, 2022, by the following vote:

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Adopt Resolution No. 6117, Approving an Appointment to the Tree Advisory Board.

STAFF RECOMMENDATION

Adopt Resolution No. 6117, approving an appointment to the Tree Advisory Board.

Sample Motion: I move to adopt Resolution No. 6117, as read by title only, approving the appointment of _____ to the Tree Advisory Board.

BACKGROUND

The Tree Advisory Board (Board) consists of five members with the qualifications for membership being residency within the Carpinteria Valley and a composition of a mix of lay citizens and professionals form a pertinent discipline. Carpinteria Municipal Code Section 12.28.080A provides examples of some of the characteristics or attributes that may serve as guidelines in making appointments to the Board. Such characteristics/attributes include the following:

1. Members of the public interested in trees as a major component of Carpinteria's physical and aesthetic environment;
2. Arborists, ornamental horticulturists, and landscape architects and designers, or those with a technical background in a related field. At least two members of the Board shall have such a professional background;
3. Other qualified and interested persons from garden clubs, conservation and beautification organizations; and
4. Members of the academic community with training in the biological or other natural sciences.

DISCUSSION

The role of the Board is to act in an advisory capacity to the City Council, City Manager, and staff in the administration of Carpinteria Municipal Code Chapter 12.28 (Street Trees, Shrubs, and Plants) with regard to all street tree matters. The Board meets

quarterly and also holds an annual "Tree Tour" in October. The term of office for members of the Board is two years which expires on January 31st in odd-numbered years. Longtime member Julie Broughton retired from the Board effective January 19, 2022 which created the current vacancy. Pursuant to said code, a successor shall be appointed for the unexpired portion of the term ending January 31, 2022.

Staff received three applications from the following interested individuals (see Attachment B):

- Natasha Elliott
- Patrick R. Crooks
- Michael Hutch

POLICY CONSISTENCY

This item is consistent with Carpinteria Municipal Code Section 12.28.080 which established rules for the appointment to the Tree Advisory Board. The City Council has the authority to determine the makeup of the Board pursuant to said code. There are no proposed changes to the responsibilities of the Tree Advisory Board.

FINANCIAL CONSIDERATIONS

There will be no effect on any City fund with the appointment to the Tree Advisory Board.

LEGAL AND RISK MANAGEMENT CONSIDERATIONS

Pursuant to Carpinteria Municipal Code Section 12.28.080, the City Council has full discretion in the composition, qualifications, and selection of the Tree Advisory Board members. Appointments to the Board are made by the Mayor with the consent of the City Council.

In accordance with the Maddy Act, the City Clerk posted a notice of the unscheduled vacancy at City Hall and on the City's website on February 7, 2022 and a blurb was published in the Coastal View News on February 10, 2022 and on social media. The Maddy Act also requires that appointment to the vacancy must be made at least 10 working days after the posting of the notice of unscheduled vacancy.

OPTIONS

1. Adopt Resolution No. 6117, approving an appointment to the Tree Advisory Board.
2. Not adopt Resolution No. 6117 and provide further direction to staff as determined appropriate.

PRINCIPAL PARTIES EXPECTED AT MEETING

Applicants have been advised of the meeting date and invited to attend.

RESOLUTION NO. 6117

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CARPINTERIA, APPROVING AN APPOINTMENT TO THE TREE ADVISORY BOARD FOR THE TERM ENDING JANUARY 31, 2023

WHEREAS, under the provisions of Section 12.28.080 of the Carpinteria Municipal Code, a Tree Advisory Board composed of five members exists to advise the City Council on street trees and other tree and planting matters; and

WHEREAS, one vacancy exists on the Tree Advisory Board due to the retirement of Julie Broughton; and

WHEREAS, said vacancy has been duly noticed and advertised as required and all interested persons have been invited to submit an application for consideration for appointment to fill said vacancy; and

WHEREAS, applications to the Tree Advisory Board were received; and

WHEREAS, the City Council has reviewed and considered persons who have indicated an interest in serving and the Mayor has recommended that a certain person be appointed to the Tree Advisory Board.

NOW, THEREFORE, BE IT RESOLVED as follows:

SECTION 1. The above recitals are true and correct.

SECTION 2. The Carpinteria City Council hereby resolves that the following appointment is approved and confirmed effective March 28, 2022, and that such appointment is to continue in effect at the pleasure of the City Council for the term ending January 31, 2023.

APPOINTED TO THE TREE ADVISORY BOARD

_____

SECTION 3. The appointment is made subject to and contingent on those terms and conditions established as a part of Carpinteria Municipal Code Chapter 12.28.

Carpinteria, CA 93013

BOARD, COMMISSION OR COMMITTEE APPLIED FOR:

Tree Advisory Board

APPLICANT: Natasha Elliott
Name

[redacted] [redacted]
Address Email

[redacted] [redacted]
Business Address Phone Number(s)

Are you a resident of the City of Carpinteria? Yes

EXPERIENCE/ BACKGROUND:

BFA in Sculpture from Cal State Long Beach, Horticulture program SBCC
Education

I currently am the owner of the landscape design studio Sweet Smiling Landscape as well at teach Landscape design at Santa Barbara City College. I also hold my C-27 landscape contractors license. I have previous experience working in regenerative agriculture and restoration ecology.
Present Occupation (Please describe any relevant past work experience)

I am a board member for the Central Coast Green Building Council and am on the AIA COTE (Committee On The Environment) committee.
Memberships in Organizations

Reasons why you believe you should be appointed (attach additional sheets if necessary):

I have a good deal of experience and passion for landscape design, construction, maintenance and ecology. I believe that well thought out, well designed, well maintained cities are the back bone of health and happy communities as well as powerful tools for improving local ecology. The way we manage or trees can mitigate the effects of climate change such as fire resiliency, the heat island effect, carbon sequestration and flooding. I would like to use my knowledge and expertise in this field to aid this community in being the healthiest, most resilient and most beautiful it can be.

Please list City Commission/Committee/Board (including dates) you are currently serving on or have served on:

Central Coast Green Building Council regional meeting 2nd Wednesday of the month 5:30-8pm
Central Coast Green Building Council board meeting 2nd Thursday of the month 4:00-5:30 pm
AIA COTE meeting meeting 3rd Thursday of the month 5:30-7:00 pm

I, the undersigned, hereby certify that all the statements contained herein above, are true and correct to the best of my knowledge and belief. I understand that false statements in my application will disqualify me from service on any Commission/Committee/Board of the City of Carpinteria. **If appointed, I understand I will be responsible for filing an annual Statement of Economic Interests and fulfilling ethics training, and failure to do so in a timely manner may be cause for termination of position.** This application is a public document and is available for review.

To whom it may concern:

I am following up to the written application for the vacant spot on the City Tree Advisory Board. I have included a resume as well to look over my background and would value a meeting in person to discuss the role in further detail.

Tree Advisory Board could mean many things, just as a few lines on a short handwritten application could be hard to grasp many things about the applicant applying for the role. Hoping this short note can help to atleast open the window of who I am, and why I would love the conversation. Would love to see if I could help this great community and learn more of what the position entails.

My name is Michael Huth, I am not a Carpinteria lifetime citizen, I am 34 years young, and I have only been living here for just over a year. I know those things can often go against someone in a position or role like this, in a community with deep roots. I understand. My goal in applying for a position like this aligns simply with my goals to finally take up the offer of some of my greatest friends who have been Carp lifers, and have deep roots of their own in this great community. They were gracious enough to through COVID give me the final push I needed to finally stop being a visitor on weekends, and take the plunge. 2020 changed a lot for everyone and I was no different. It aligned people with what is important and balanced the way we work.

As you can see from my resume I have been a talent agent and manager for many years and have been lucky enough to call myself quite successful. That is not my path, but it is a skillset I have realized is real. The art of wearing many hats, understanding all personalities, and how to bring people together to achieve a common goal... it is a skill. It stretches more beyond a gift of gab, or putting out fires... and I assure you I am a midwest man who does not swindle or lie.

So COVID pushed me to the bluffs of Carpinteria, to finally relieve myself of the grind talent management can be and focus on my passion, and what my purpose I feel is. I have been working frivolously with the network I have and creating a new one here in the area. This effort is to try and use what I have learned as an agent and put those efforts into helping create environmental education, awareness, and protect what we have. I realized marketing, sales, management is all similar if you are the right type of person. I can sell anything and I can seamlessly blend from the kid who grew up on a farm, to the politicians I play golf with. The dream is to use those powers, those acquired skills of agenting people and be the agent the people need for the environment. The bridge that is missing. Not interested in donating 1% of profits to environmental causes, I am interested in learning what needs to be done and how we can implement positive change that generations of Carpinteria residents can benefit from.

So, Tree advisory board... I do not know what it means and yes I love trees. I think to me it means helping be a part of something that can easily get swept under the rug of agendas. For me it can help someone here to be a sponge continue to soak in experience and expertise. I have always been able to help in whatever role I am thrust into. Would love to continue the conversation and try to be part of the helping community here as well. Thank you

2/24/22

MICHAEL S. HUTH

EXPERIENCE

FormeLife Creative — **Los Angeles, CA**
Business Affairs: Talent Relations Manager — May 2021– Present

- Oversea all contract negotiations, creating and implementing our current standard contracts and renewals
- Reduced monthly spending by 8% within the first two months and saved the company over $100,000 to date
- Cultivate relationships within the brand, and with outside brands. Navigating potential conflict areas to resolve issues
- Instrumental in the implementation of talent development system. Training and offering growth for our userbase
- Facilitate communications between multiple department heads while managing 30+ on camera talent
- Provide leadership and guidance for the marketing team when creating and launching new marketing campaigns

Sports & Lifestyle Unlimited (SLU Agency) — **Hollywood, California**
Head of On Camera Department — January 2015-- April 2021

- Booked 250+ On Camera projects in 2019 and over 430+talent, contributing to a 6% commercial dept increase in sales
- Service a client list of 300+ talent in Los Angeles, and over 1200 nationwide in procuring and managing bookings
- Increasing yearly sales and reach allowed for company to hire two new full time employees below my position
- Demonstrate ability to shift in a fast-paced market to successfully launch influencer division and maintain revenue
- Support other agency offices with ideas and media best practices to win new business from top industry clients such as ICON, Skechers, Tone it Up, Mirror, Hyperice, and multiple influencer-based startups

Sports & Lifestyle Unlimited (SLU Agency) — **West Hollywood, California**
On Camera Booking Agent — January 2012-- January 2015

- Steadily grew On Camera sales by 12% yearly for the first two years, creating a full service On Camera Department
- Implemented a more streamlined booking process in the first 60 days of being hired that directly correlated in driving company sales volume, and enhancing workers time efficiency
- Maintain a direct professional relationship with major advertising agencies, casting directors, and productions, generating 50% of weekly revenue while negotiating and fulfilling all on camera contracts
- Provided leadership daily when managing multiple roles and training employees in a high turnover position

11th Hour Agency — **Marina Del Rey, California**
Agent Assistant/ Marketing Assistant — May 2011-- January 2012

- Influential in helping orchestrate the relocation process of Playboy's Accts Payable Department Managers
- Spearheaded the organization of over six years in Universal Music's Royalties Department records
- Consistently received high reviews for a vigorous work ethic and ability to hit the ground running
- Garnished real-time experience while assisting publicists, personal managers, and department representatives

Creative Artists Agency (CAA) — **Century City, California**
Desk of Jeff Frasco — April 2011-- May 2011

- Acknowledged for excellent phone demeanor and professionalism in the face of a 40% increase in call volume
- Gained hands on experience from industry professionals while being present for all calls and meetings
- Docketed a daily schedule always in flux, for a desk directly responsible for millions of dollars in company revenue
- Capitalized on learning the music touring model from the booking of all American Idol performance tours

Legacy Entertainment — **North Hollywood, California**
Executive Assistant/ Events Specialist — May, 2010 -- April 2011

- Eliminated waste and redundancies, resulting in a 60% increase in product placement for the Vice President
- Managed the hosting of over 25 corporate events, with budgets ranging from $500-- $50,000 dollars
- Generated 20% increase in sales and marketing leads within my first three months, covering 40 plus scripts

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Authorization to issue a Notice Inviting Bids for the 2022 Pavement Maintenance Project (Project No. 15131).

STAFF RECOMMENDATION

Authorize the Public Works Director to advertise the Notice Inviting Bids for the 2022 Pavement Maintenance Project (Project No. 15131).

Sample Motion: I move to authorize the Public Works Director to advertise the Notice Inviting Bids for the 2022 Pavement Maintenance Project (Project No. 15131).

BACKGROUND

On March 4, 2022, the Public Facility Site Acquisition/Development Committee (Council Member Carty and Mayor Nomura) received a presentation from staff about the City's pavement management system and related methodology for determining pavement project priorities. The 2022 Pavement Maintenance Project is the next pavement project, and the following streets are proposed:

Street Name	Begin Limit	End Limit
Ash Avenue	Seventh Street	Fifth Street
Calle Arena	Calle Ocho	Concha Loma Drive
Eighth Street	Elm Avenue	Holly Avenue
Fifth Street	Holly Avenue	Ash Avenue
Holly Avenue	Fourth Street	Third Street
Holly Avenue	Third Street	Sandyland Road
Holly Avenue	Sandyland Road	End
Limu Drive	Malibu Drive	Nipomo Drive
Linhere Drive	Malibu Drive	Nipomo Drive
Ninth Street	East end	Seventh Street
Ogan Road	Casitas Pass Road	El Portal Street
Ogan Road	El Portal Street	Vallecito Road
Ogan Road	Vallecito Road	Linden Avenue
Pacific Village Drive	West end	Ogan Road

Reynolds Avenue	Carpinteria Avenue	Seventh Street
Rose Lane	Mark Avenue	West end
Tomol Drive	Malibu Drive	Nipomo Drive

Via Real between Sandyland Reef Inn (4200 Via Real) and Cravens Lane was initially proposed and presented in said meeting of the Public Facility Site Acquisition/Development Committee; however, staff reevaluated the pavement condition of this street segment, and it is now beyond maintenance treatment and requires more significant pavement rehabilitation, which is not a part of this project. This segment of Via Real will be proposed for the next pavement rehabilitation project scheduled for this coming fall and winter.

A map of the street locations is included with this staff report as Attachment A. The general scope of work consists of crack treatment, asphalt concrete pavement replacements, and the application of microsurfacing. Based on the City's pavement management system, these streets are currently rated at the lower range of the fair condition rating in which, without pavement maintenance treatment, are anticipated to further decline into the poor condition rating in the next year. With the proposed pavement treatment, the existing asphalt concrete pavement surface would be rejuvenated and see an increased pavement condition rating to, at minimum, the middle of the fair condition rating that would last for at least 5 years until pavement rehabilitation. This approach allows the costs for more expensive pavement rehabilitation work, which involves the complete rebuilding of the pavement structural section, to be spread out over a period of time that is manageable while also maintaining adequate road condition, given the available annual budget.

The purpose of this agenda matter is for the City Council to authorize the Public Works Director to advertise the Notice Inviting Bids for the 2022 Pavement Maintenance Project.

DISCUSSION

The estimated construction schedule is as follows:

Open Bids	April 2022
Award Contract	May 2022
Construction	June 2022

POLICY CONSISTENCY

The recommendation is consistent with the 2022 Annual Work Plan and the many goals, objectives, and policies in the Circulation Element of the General Plan and Local Coastal Land Use Plan including establishing and maintaining a roadway system capable of providing for the safe and efficient movement of goods and people through the community.

FINANCIAL CONSIDERATIONS

There is no cost in approving the recommendation. The project anticipates a combination of revenue sources including Measure A, Measure X, and Senate Bill 1 [Road Maintenance & Repair Account (RMRA)]. Once the bids are received and analyzed by staff, a recommendation will be presented to the City Council at a future date.

LEGAL AND RISK MANAGEMENT CONSIDERATIONS

The recommendation is consistent with the formal bidding procedures of the Uniform Construction Cost Accounting Act (Public Contract Code Section 22030 et al.).

OPTIONS

1. Authorize the Public Works Director to advertise the Notice Inviting Bids for the 2022 Pavement Maintenance Project (Project No. 15131). (Staff recommendation)
2. The City Council could choose to not approve the recommendation and direct staff as determined appropriate; however, non-action would delay the project.

PRINCIPAL PARTIES EXPECTED AT MEETING

There are no principal parties expected at the meeting.

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Resolution No. 6112, establishing an updated and revised flag display policy.

STAFF RECOMMENDATION

Adopt Resolution No. 6112, establishing an updated and revised flag display policy.

Sample Motion: I move to adopt Resolution No. 6112, as read by title only, establishing an updated and revised flag display policy.

BACKGROUND

The City of Carpinteria, consistent with existing law, displays the United States and California State Flags, and the City of Carpinteria Flag on flagpoles at Carpinteria City Hall and at other City-owned and City-managed facilities and locations. The City also displays the United States flag in other public places, such as Memorial Park and on segments of Linden Avenue and Carpinteria Avenue parkway sidewalks in the Downtown.

The display of flags is currently guided by Resolution Nos. 10 and 192 (attached).

The purpose of this agenda matter is to allow for the City Council to consider establishing a revised and updated flag display policy.

DISCUSSION

The revised and updated policy proposed would, in part, clarify the City's intent with regard to flag displays, including that such displays be made in the City Council's sole discretion, consistent with federal and state law. The policy would cover all flag displays at City-owned and City-managed facilities and locations. Also, in addition to guidance with regard to flying the United States, California and City of Carpinteria Flags, the policy would establish guidance concerning flags that the City wishes to display that identify with a

historical event, cause, nation or group of people that the City Council chooses to honor or commemorate.

POLICY CONSISTENCY

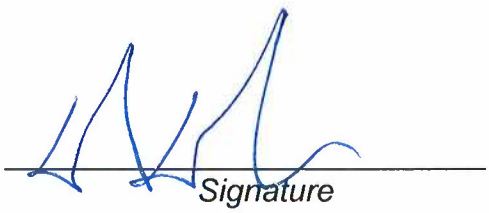
The establishment of an updated and revised flag display policy is consistent with the City's interest in complying with federal and state law, transparency and accountability, and establishing administrative procedures that can be effectively and consistently implemented.

FINANCIAL CONSIDERATIONS

The establishment of an updated and revised flag display policy does not have financial ramifications.

LEGAL AND RISK MANAGEMENT CONSIDERATIONS

The City Attorney's Office has assisted in the drafting of Resolution No. 6112. An updated policy concerning flag displays can help to avoid claims associated with such displays.



PRINCIPAL PARTIES EXPECTED AT MEETING

None

RESOLUTION NO. 6112

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CARPINTERIA ESTABLISHING A POLICY FOR THE DISPLAY OF FLAGS ON CITY PROPERTY

WHEREAS, the City of Carpinteria ("City"), consistent with existing law, displays the United States and California State Flags, and the City of Carpinteria Flag on flagpoles at Carpinteria City Hall and at other City-owned and City-managed facilities and locations; and

WHEREAS, the City of Carpinteria's current policy for the display of national and state flags on City property is contained within Resolution No. 192; and

WHEREAS, the City of Carpinteria also displays the United States Flag on City-owned or City-managed property in certain public places, such as Memorial Park and portions of Linden and Carpinteria Avenues, commonly known as the "Downtown T", on certain patriotic days consistent with Resolution No. 10; and

WHEREAS, the City Council desires to clarify and update its policies regarding the display of national, state, City and commemorative flags on City-owned or City-managed flagpoles and at other City-owned and City-managed facilities and locations; and

WHEREAS, the City Council desires to supersede its current flag policies to establish a flag policy for the display of national, state, City and commemorative flags on City-owned or City-managed flagpoles and at other City-owned and City-managed facilities and locations; and

WHEREAS, it is the purpose and intent of this resolution to establish a standard policy for the display of said flags.

NOW, THEREFORE, BE IT RESOLVED as follows:

SECTION 1. Recitals Incorporated. The recitals above are true and correct and incorporated herein by this reference.

SECTION 2. Resolution. The City Council hereby adopts the Policy for the Display of Flags on City Property attached hereto as Exhibit A and incorporated herein by this reference.

SECTION 3. Repeal of Prior Policy. This Resolution hereby repeals and supersedes Resolutions Nos. 10 and 192 in addition to any other City policies relating to its subject matter.

SECTION 4. Effective Date and Term. This Resolution shall take effect immediately upon its adoption, and shall be in effect thereafter, unless repealed, amended or extended by further action of the City Council.

SECTION 5. Severability. If any section, subsection, sentence, clause, phrase or word of this Resolution is for any reason held to be invalid by a court of competent jurisdiction, such decisions shall not affect the validity of the remaining portions of this Resolution. The City

Council hereby declares that it would have passed and adopted this Resolution, and each and all provisions hereof irrespective of the fact that one or more provisions may be declared invalid.

SECTION 6. Environmental Determination. The City Council finds that the adoption and implementation of this Resolution is exempt from the provisions of the California Environmental Quality Act ("CEQA") under CEQA Guideline section 15061(b)(3) in that the City Council finds there is no possibility that the adoption and implementation of this Resolution may have significant effects on the environment.

PASSED, APPROVED, AND ADOPTED on this 28th day of March, 2022, by the following vote:

City Attorney of the City of Carpinteria

Exhibit A to Resolution No. 6112

CITY OF CARPINTERIA
POLICY FOR THE DISPLAY OF FLAGS ON CITY PROPERTY

I. Purpose

A. The City of Carpinteria ("City") City Council desires to establish clear guidelines regarding:

1. The display of the United States Flag, the California State Flag, and the City Flag at City-owned or City-managed facilities, locations and/or flagpoles; and

2. The display of Commemorative Flags, as defined in Section II.B.2.j of this Policy, at City-owned or City-managed facilities, locations and/or flagpoles.

3. The temporary display of the United States Flag on City-owned or City-managed property in certain public places on certain patriotic days.

B. In adopting this Policy, the City Council desires to reflect the dignity of the flags flown on flagpoles or displayed at City-owned or City-managed property, as well as the role of the Carpinteria City Hall and other public spaces as inclusive gathering locations and local symbols of democratic governance.

C. In adopting this Policy, the City Council declares that flag displays and flagpoles owned or managed by the City of Carpinteria are not intended to serve as a forum for free expression by the public, but rather as a non-public forum for the display of the United States, State of California and City of Carpinteria flags, and any Commemorative Flag authorized by the City Council as government speech to express the City Council's official sentiments.

II. Policy

A. Conformance with Federal and State Regulations. Flags shall be displayed in accordance with Federal and State statutes and regulations, including, but not limited to, United States Code, Title 4, Chapter 1 and California Government Code section 430 et seq., and this Policy.

1. Per California Government Code section 431(a), the Flag of the United States and the Flag of the State of California shall be prominently displayed upon or in front of public buildings of the City.

2. Per California Government Code section 434.7, any Flag of the United States or Flag of the State of California that the City purchases must be made in the United States.

3. The United States Flag shall only be flown at half-staff in accordance with the guidelines and standards set forth by the United States government. The State of California Flag shall be flown at half-staff if the United States Flag is flown at half-staff or on order of the Governor.

B. Carpinteria City Flag Displays.

1. Carpinteria City Flagpoles.

a. The Carpinteria City flagpoles shall fly the following flags: Flag of the United States, Flag of the State of California, Flag of the City of Carpinteria, and any approved Commemorative Flag.

b. The City of Carpinteria Flag shall fly at half-staff if either the United States Flag or California Flag is at half-staff. The Mayor may order the City of Carpinteria Flag to fly at half-staff at the death of a current or former City Council Member or current City staff member or a historically significant member of the community.

2. Commemorative Flags.

a. The City's flag displays are not intended to serve as a forum for free expression by the public. The City shall display Commemorative Flags at Carpinteria City Hall and other City Council designated locations only if authorized by the City Council as government speech to express the City Council's official sentiments. Any such authorization shall be given at a duly noticed meeting of the City Council.

b. The City Council may consider a request to display a Commemorative Flag when it is made by a City Council member and another City Council member agrees to place the discussion to authorize the display of the Commemorative Flag on the agenda for a subsequent regular or special City Council meeting.

c. At a noticed City Council meeting, a majority of Council Members must agree to display the Commemorative Flag during consideration of the matter on the agenda.

d. The City shall not solicit or accept requests to fly a Commemorative Flag by members of the public nor shall the City Council entertain such a request that it receives during a public meeting.

e. Commemorative Flags shall be displayed for a period of time that is reasonable or customary for the subject that is to be

commemorated, but generally no longer than thirty-one (31) consecutive days.

f. Commemorative Flags shall be displayed on the City Hall flagpoles and any other City-owned or City-managed facilities, locations, and/or flagpole(s), as directed by the City Council.

g. Commemorative Flags displayed on City flagpoles shall be displayed in the last position of honor beneath the City of Carpinteria Flag, unless otherwise directed by the City Council and to the extent such display does not conflict with federal law, state law, or this Policy.

h. Commemorative Flags shall be either purchased by the City or temporarily donated for the City's use and must be clean, without holes and tears, and be made of an all-weather fabric. Commemorative Flags must be the same size or smaller than the United States Flag and California Flag that are flown. The City shall not be responsible for the condition of the Commemorative Flag once flown.

i. If any other flag is flown at half-staff, the Commemorative Flag also shall be flown at half-staff.

j. A "Commemorative Flag" as defined in this Policy shall mean a flag that identifies with a specific historical event, cause, nation or group of people that the City Council chooses to honor or commemorate consistent with the City's mission to promote themes of diversity, equality, and inclusion. The following are not allowed as Commemorative Flags and shall not be considered by the City Council:

    (i) Flags of a particular religious movement or creed to avoid the appearance of City government endorsing religion or a particular religious movement or creed;

    (ii) Flags of a political party to avoid the appearance of City government endorsing a political party; and

    (iii) Flags advocating a certain outcome in an election.

    (iv) Flags that conflict with the City's policy to promote Racial Justice and Social Equity as stated in Resolution No. 5981, and/or any program intended to implement Resolution No. 5981.

C. Display of the United States Flag on City Property on Certain Patriotic Days. The City may erect temporary flag displays for the United States Flag on City property in certain public places on certain patriotic days.

1. The City may erect temporary flag displays on City-owned or City-managed public property, including without limitation, Memorial Park and portions of Linden and Carpinteria Avenues, commonly known as the "Downtown T", where the City has installed specific holders for temporary flag displays.

2. For the purpose of this Policy, patriotic days shall include, but not be limited to:

   a. Martin Luther King Jr. Day, Third Monday of January

   b. President's Day, Third Monday of February

   c. Memorial Day, Last Monday of May

   d. Flag Day, June 14

   e. Independence Day, July 4

   f. Labor Day, First Monday of September

   g. Patriot Day, September 11

   h. Veterans Day, November 11

   i. Special occasions of Federal, State, and local proclamation

3. Temporary flag displays installed on patriotic days shall be removed within one (1) business day of the patriotic day.

4. Temporary flag displays shall be installed consistent with federal law, state law, and this Policy.

III. Procedures

A. No other flag shall be placed be above the United States Flag and no other flag shall be larger than the United States Flag. Other flags may be flown at the same height and in the same size, in accordance with this Policy. Where both the United States Flag and the California State Flags are flown, they shall be of the same size.

B. Flags should be hoisted briskly and lowered ceremoniously. The United States Flag should be hoisted first and lowered last.

C. Flags may be displayed twenty-four (24) hours a day as long as they are illuminated during darkness.

D. Flags may not be displayed during inclement weather, unless all-weather flags are used and are illuminated during darkness.

E. When flags are displayed on a single pole, the order from top to bottom shall be the United States Flag, the California State Flag, the City of Carpinteria Flag, and, if displayed, a Commemorative Flag, unless otherwise directed by the City Council and to the extent such display does not conflict with federal law, state law, or this Policy.

F. When the flags are flown from adjacent flagpoles, the United States Flag shall be flown at the highest point of honor, which is the furthest point to the left from the standpoint of the observer.

G. When a flag is displayed at half-staff, it shall first be hoisted to the peak for a moment and then lowered to half-staff position. Before being lowered at the end of the day or when taken down, the flags shall again be hoisted to the peak for a moment and then fully lowered.

ATTACHMENT B

RESOLUTION NO. 10

A RESOLUTION AUTHORIZING THE USE OF CITY PARKWAYS FOR THE PURPOSE OF DISPLAYING THE AMERICAN FLAGS ON PATRIOTIC DAYS

WHEREAS, it is customary for cities to have displayed upon the public parkways the American flag on certain patriotic days, and

WHEREAS, it is the desire of the City Council of the City of Carpinteria to encourage acts of patriotism and love of country, and

WHEREAS, the Francis Frederick Hebel Post of the Veterans of Foreign Wars, Post Number 5656, has regularly performed this patriotic duty prior to the incorporation of the City of Carpinteria, and

WHEREAS, the holders for flags have already been installed in the parkways and ready for continued use, and

WHEREAS, the flags are in the possession of the Veterans of Foreign Wars and available for continued use, and

WHEREAS, the Veterans of Foreign Wars has expressed a desire to continue performing the patriotic duty,

NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of Carpinteria commend the VFW for its past service and authorize the use of city parkways for the continued use of displaying the American flag in the existing standards on the following patriotic days: November 11, June 14, July 4, Labor Day, May 30, Loyalty Day, February 22 and February 12.

BE IT FURTHER RESOLVED, that the Francis Frederick Hebel Veterans of Foreign Wars Post be authorized to continue this service at no cost or liability to the City.

PASSED, APPROVED AND ADOPTED this 8th day of November, 1965.

ATTEST:

H. K. Hunter
Clerk of the City of Carpinteria

Allan R. Coates
Mayor of the City of Carpinteria

STATE OF CALIFORNIA)
) SS.
COUNTY OF SANTA BARBARA)

I, H. K. HUNTER, Clerk of the City of Carpinteria in the County of Santa Barbara, State of California, do hereby certify that at a meeting of the City Council held November 8, 1965, the foregoing RESOLUTION was adopted by vote of the City Council as follows:

Ayes:	Allan R. Coates, Jr. James E. Gray Margaret M. Mills Ernest C. Wullbrandt Robert (Olly) Olivas
Noes:	None
Absent:	None

H. K. Hunter
Clerk of the City of Carpinteria

RESOLUTION NO. 192

A RESOLUTION OF THE CARPINTERIA CITY COUNCIL ESTABLISHING CITY POLICY FOR THE DISPLAY OF NATIONAL AND STATE FLAGS ON CITY PROPERTY

WHEREAS, there has been some confusion regarding the display of National and State Flags in the City of Carpinteria, and

WHEREAS, it is the intent of this resolution to establish a standard policy for the display of said flags,

NOW, THEREFORE, IT IS HEREBY RESOLVED THAT the following shall constitute the official City policy for the display of National and State flags on City property and shall provide guidance for other persons or public agencies desiring to follow such policy.

1. The standard references for the display of National and State flags shall be the United States House of Representatives Document Number 104, 1st Session, 88th Congress and Sections 430 through 440, Chapter 3, Division 2, Title 1 of the California Government Code, and shall remain on file in the Clerk's office.

2. The flags shall be displayed from a suitable flag pole in front of City buildings and on City parks between the hours of sunrise and sunset when such places are open for business. In case of inclement weather the flags shall be lowered.

3. The flags shall be displayed on all Government Code holidays.

4. Nothing in this resolution shall be deemed to revoke the permission granted to the Veterans of Foreign Wars to display flags on public streets as provided in Resolution No. 10 .

5. Flags shall be flown at half-mast during periods of national, state or local mourning as proclaimed by the President of the United States, the Governor of California, the Santa Barbara County Board of Supervisors, or the Mayor of the City of Carpinteria.

6. Periods of local mourning shall be determined by the Mayor and shall normally be limited to the day on which the funeral is held. The Mayor shall respect the advice of Council Members and other citizens regarding the propriety of proclaiming a day or period of mourning.

RESOLVED FURTHER, that copies of this resolution shall be forwarded to all local public agencies, civic, patriotic and religious organizations in the City of Carpinteria.

PASSED, APPROVED AND ADOPTED THIS 13th day of January 1969.

Allan R. Bates

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

(1) Review of two draft City Council District Maps (A2 and A3) and selection of a final District Map; and,
(2) Adoption of Ordinance No. 752, (first reading) approving the final City Council District Map and scheduling for second reading on April 11, 2022.

STAFF RECOMMENDATION

Select one of the two draft District Maps to be used for District Elections beginning in November 2022. Adopt Ordinance No. 752, (first reading) approving the final City Council District Map and schedule for second reading on April 11, 2022

Sample Motion: I move to approve District Map _____ as the final District Map for the City Council District Elections and Ordinance No. 752, on first reading (as read by title only) and schedule the second reading for the City Council meeting of April 11, 2022.

BACKGROUND

This is the fifth of five noticed public meetings required as a part of the City's process for drawing City Council District Maps, which will culminate with the scheduled adoption of the Council District Map by the City Council. At the last noticed hearing, the Council reviewed four draft maps (A, A2, B, C), and voted to elevate Map A2. At the March 14th City Council meeting, at the request of Vice Mayor Clark and Councilmember Alarcon, the Council reviewed and authorized map A3 to also be included for consideration as the final map along with map A2[1].

The purpose of this meeting is to discuss draft Maps A2 and A3 produced by the City's consultant and based on City Council deliberation, to date, public input concerning communities of interest, draft maps submitted by the public, and parameters for map drawing included in the California Voters Rights Act. Pursuant the City's schedule for drawing and adopting a District Map in time for use in the November 2022 municipal

[1] Data on District Maps A, A2, A3, B and C are a part of the complete District Map Plans that can be found with the maps on the City's District Election website at https://carpinteriaprojects.com/district-elections/, and are referenced in more detail later in this report.

election, the City Council has the opportunity to take action to approve and adopt a final District Map at this meeting.

More information about the Carpinteria City Council Districting process can be accessed through the City website home page here: www.carpinteriaca.gov or by contacting the City at (805) 684-5405. This information includes (1) all maps created by members of the public and/or consultant, (2) all public comments received regarding the district mapping process, and (3) all prior staff reports, minutes, and presentations from prior district election public hearings, meetings and workshops.

Mapping Process

In April 2019, the City Council approved by resolution the formation of a District Elections Ad hoc Committee (Committee), on which Councilmembers Alarcon and Clark were assigned. The City subsequently entered into a consultant services agreement in October of 2019 with Redistricting Partners to assist the City with the process of drawing district boundaries. A primary purpose of the Committee's work included working with the consultant to develop a schedule and a public engagement plan consistent with the California Voting Rights Act (CVRA). The Committee concluded its work on October 20, 2021.

To date, the City Council has held meetings on this matter on July 31, 2017; August 14, 2017; April 8, 2019; June 28, 2021; July 26, 2021; November 8, 2021; December 13, 2021; January 24, 2022; and February 28, 2022.[2] The City Council also considered an agenda item related to District Elections on March 14, 2022, during which it elevated an additional map for consideration of final adoption. In addition to these meetings, the City held District Mapping public workshops on September 20, 22, and 26, 2021, where approximately 20 residents participated. The workshops were conducted to allow for both in person and remote testimony via the Zoom virtual meeting platform and 20 members of the public attended in total.

The City made two processes available to the public to provide potential District Maps, including digitally drawing a map via a portal on the City's District Mapping website and creating and submitting to the City a hardcopy map.[3]

The City's schedule for drawing and adopting district maps for the November 2022 municipal election currently includes City Council consideration of final plan adoption at this meeting of March 28, 2022. In order to comply with statutory deadlines, the final adopted map must be submitted to the Santa Barbara County Registrar's Office no later than April 22, 2022. Complying with this schedule is necessary in order for the City to remain in compliance with Resolution No. 5743, declaring its intention to transition from at-large to district-based elections by November of 2022, and to fulfill the Conditional

[2] Public Hearings required by law included: November 8, 2021; December 13, 2021; January 24, 2022; February 28, 2022 and March 28, 2022.
[3] All submitted hardcopy maps returned by February 28th have been uploaded on the City's website for ease of detailed viewing by the public.

Settlement Agreement and Release of August 14th of 2017, which the City entered in to in response to the July 3, 2017 Notice of Violation of California Voting Rights Act. Based on the above time constraints, staff believes that the latest the Council could consider and act on a final map is March 28, with second reading at its regular meeting of April 11, 2022. By adopting the proposed Ordinance No. 752, on first reading tonight and second reading on April 11, this schedule will be met.

DISCUSSION

The City Council began the process of reviewing draft District Maps at its regular meeting of January 24, 2022. The City's consultant drafted a total of five-district plans for City Council and public review. All draft plans presented to the City Council were based off of the maps submitted by community members, whose robust engagement resulted in 161 community of interest and district boundary maps submitted to date.[4] The consultant has also confirmed that all draft plans presented to the City Council comply with the criteria required by the Fair Maps Act, including that districts are of relatively equal size, contiguous, maintain "communities of interest", follow city and census designated place boundaries and keep districts compact. Map A2 and Map A3 incorporate feedback provided by members of the City Council at the January 24, 2022 Council meeting and at the February 28, 2022 Council meeting, respectively.

At its January 24 meeting, the City Council reviewed Maps A, B and C. The Council unanimously voted to elevate Map A for further consideration and asked that the boundary of one of the Map A districts (District D) be adjusted to not fall below the freeway. That change was made by the consultant and became Map A2. Map A2 was presented along with Maps A, B and C, at the Council meeting of February 28. At the February 28 meeting, Councilmembers Alarcon and Vice Mayor Clark commented about further changes they wished to see to Map A2, aimed at reducing the 9.6%[5] population disparity between the largest and smallest Districts, and adjusting the common boundaries between Districts A and B, and B and D. Ultimately, only Map A2 was approved for consideration as the final Map. Subsequently, at its March 14 meeting, the Council elected to reconsider this decision. In response to the Council deliberation on February 28, revisions to Map A2 were made and presented and considered as Map A3 on March 14. The Council then determined to elevate Map A3 along with Map A2 for consideration as the final Map on March 28.

All maps and plans have been published on the City website. An ad was placed in the Coastal View News for two weeks (publication dates of March 17, 2022 and March 24, 2022) to announce that the maps and plans were available to the public online. Posters of Maps A2 and A3 were also created and have been displayed at City Hall. Staff has also made large printed versions of both draft Maps available for members of the public.

[4] Our consultants have worked with 25 cities including the 10 largest in California, and we received the most map submissions by the public. For comparison, the City of Los Angeles, a city of 3,970,219 received 157 map submission.

[5] Under the CVRA, the difference between smallest and largest districts by population cannot exceed 10%.

After a final district Map has been selected, a discussion about election sequencing will also be required and is presented as a separate agenda matter.

Comparing Maps A2 and A3

As discussed above, the City Council directed that Maps A2 and A3 (attached) be considered for final Map approval. Both of these Maps are derivatives of Map A that was first presented and considered on January 24, 2022. Map A was one of three Maps prepared by the City's District Elections consultant based on Community of Interest and draft maps submitted by members of the public. As such, Maps A2 and A3 are similar. Both maps have in common a general District organization where the freeway defines the boundary between three Districts on the north side of the freeway and two Districts on the South. The boundaries of the five Districts are also similar. Both Maps have also been prepared and analyzed by the City's consultant to ensure compliance with the Voting Rights Acts.

The following is a review of the criteria used by the City's consultant in the creation of the draft Maps with discussion of each in the context of Maps A2 and A3. This comparison is provided to assist the Council in deliberating on a choice between the two Maps; however, once again, the City's consultant has determined that both Maps A2 and A3 can be found to meet these criteria.

1. Districts are of relatively equal size. The threshold used to meet this criterion is that the population difference between the largest and smallest districts not exceed 10%. For Map A2, the deviation is 9.2% and for Map A3 the deviation is 8.2%. Again, both Maps meet the criteria.
2. Districts must be Contiguous. All Districts on both Maps are contiguous and meet this criterion.
3. Maintain Communities of Interest. This determination is subjective. Identification of Communities of Interest can be derived from the Maps submitted by the public. The City's consultant has determined that either map may be found to appropriately represent Communities of Interest reflected in both the Community of Interest and draft maps submitted by the public.
4. Follow City and US Census designated place boundaries. All Districts that are part of Maps A2 and A3 respect these boundaries.
5. Keep Districts Compact. Arguably, Map A3 may be more compact than Map A2 if evaluating geometric shape. In particular, Districts A, B and D may be found to be more compact in Map A3.

POLICY CONSISTENCY

This hearing is a part of the City Council district mapping process being followed in compliance with Federal and State Voting Rights Act during this transition to district-based council elections.

FINANCIAL CONSIDERATIONS

Cost associated with this work includes a consultant service agreement, which is a part of projected expenses included in the adopted Fiscal Year 2021-22 budget.

LEGAL AND RISK MANAGEMENT CONSIDERATIONS

The City Attorney's Office is supporting the District Mapping process and will be available to answer questions concerning this matter.

DESCRIPTION OF DISTRICTS

District A.

All of that portion of Santa Barbara County bounded and described as follows: Beginning at the point of intersection of the Toro Canyon/Carpinteria census designated place/city line and the Carpinteria city line, and proceeding northerly along the Toro Canyon/Carpinteria census designated place/city line to the Carpinteria city line, and proceeding southerly along the Carpinteria city line to Santa Ynez Ave, and proceeding southerly along Santa Ynez Ave to el Carro Ln, and proceeding easterly along el Carro Ln to Azalea Dr, and proceeding southerly along Azalea Dr to Aragon Dr, and proceeding westerly along Aragon Dr to Chaney Ave, and proceeding southerly along Chaney Ave to Eleanor Dr, and proceeding easterly along Eleanor Dr to Sterling Ave, and proceeding northerly along Sterling Ave to Malibu Dr, and proceeding easterly along Malibu Dr to Franklin Crk, and proceeding southerly along Franklin Crk to el Camino Real, and proceeding westerly along el Camino Real to nonvisible boundary, and proceeding southerly along nonvisible boundary to the Carpinteria city line, and proceeding westerly along the Carpinteria city line to the point of beginning.

District B.

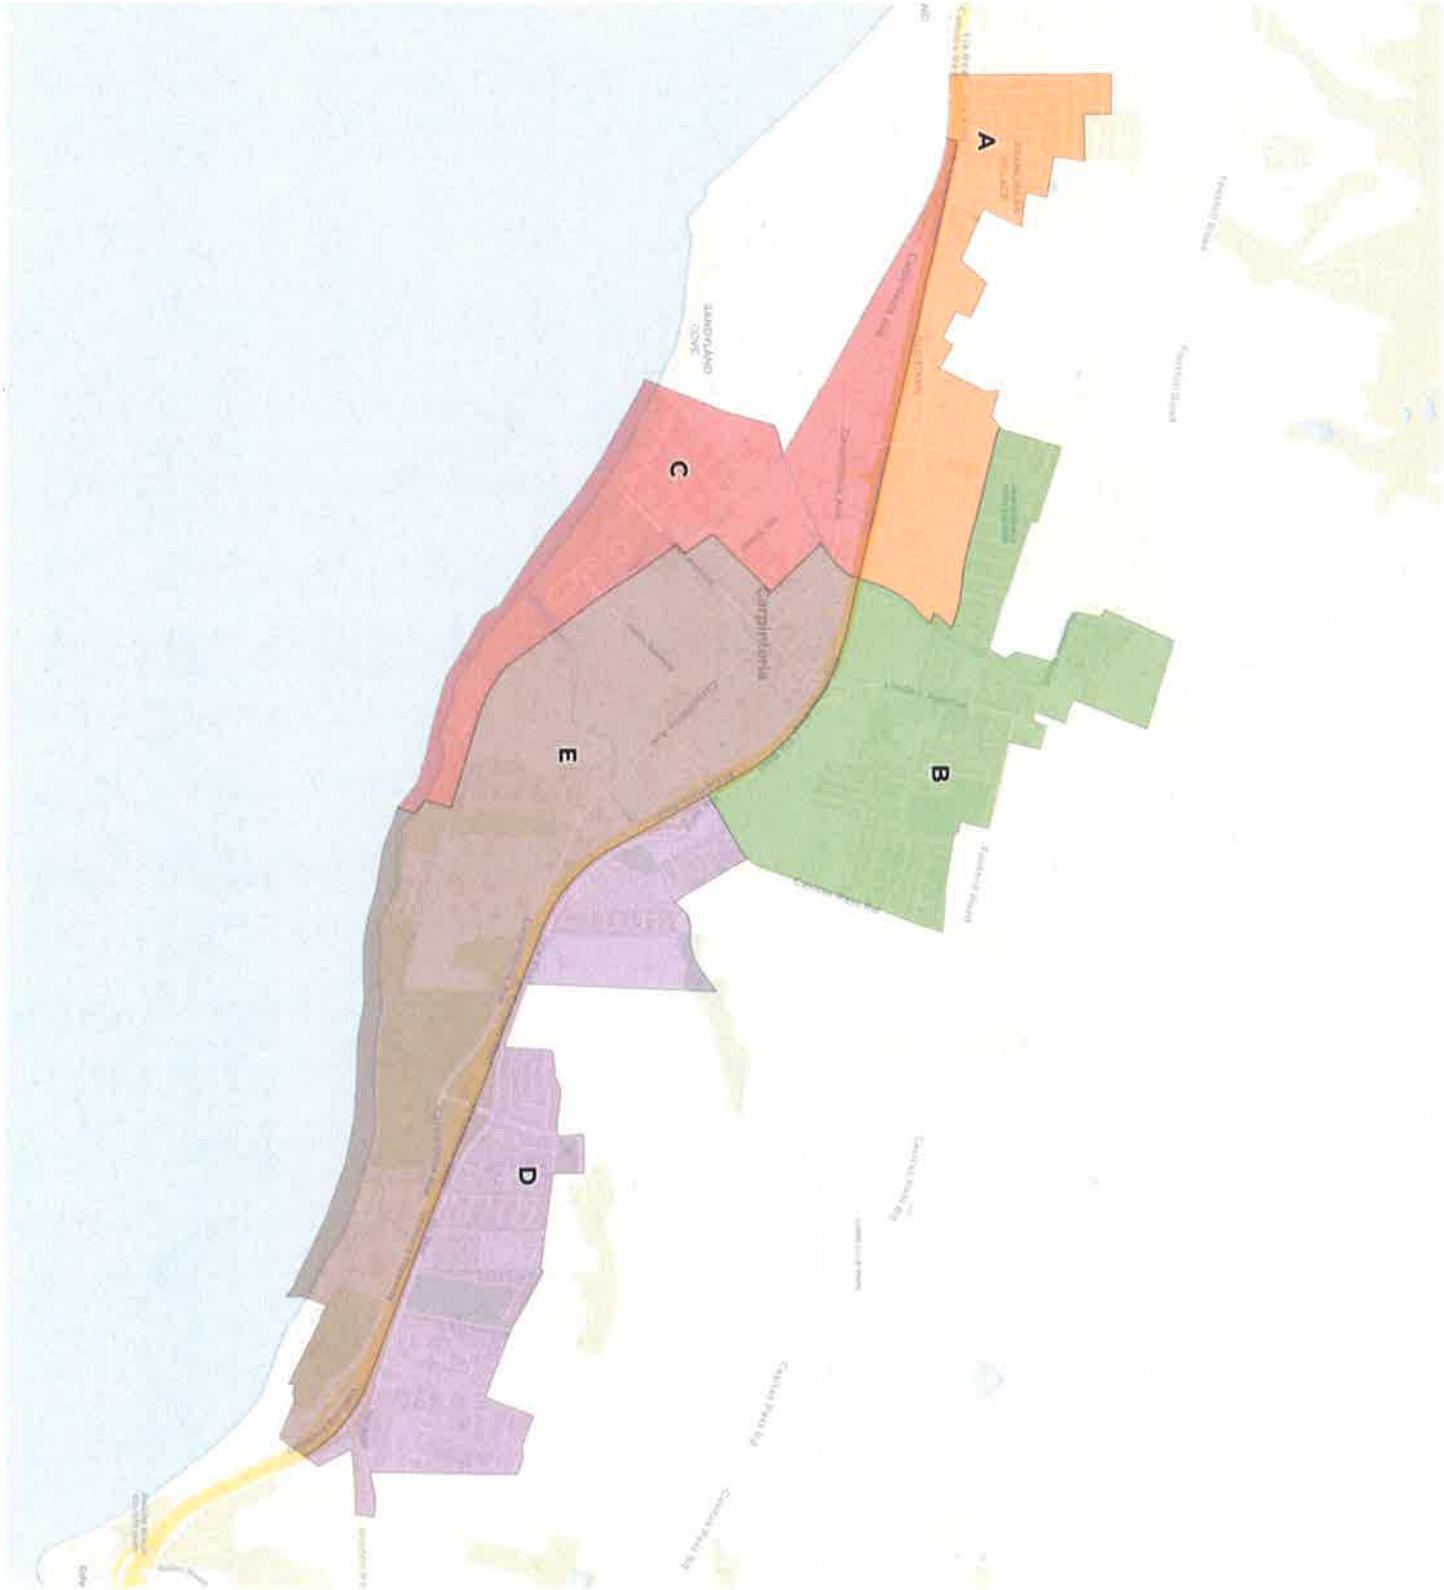
All of that portion of Santa Barbara County bounded and described as follows: Beginning at the point of intersection of Santa Ynez Ave and el Carro Ln, and proceeding northerly along Santa Ynez Ave to the Carpinteria city line, and proceeding easterly along the Carpinteria city line to nonvisible boundary, and proceeding westerly along nonvisible boundary to Star Pine Rd, and proceeding westerly along Star Pine Rd to Vallecito Rd, and proceeding northerly along Vallecito Rd to Ogan Rd, and proceeding westerly along Ogan Rd to Pacific Village Dr, and proceeding northerly along Pacific Village Dr to Linden Ave, and proceeding southerly along Linden Ave to el Camino Real, and proceeding westerly along el Camino Real to Franklin Crk, and proceeding northerly along Franklin Crk to Malibu Dr, and proceeding westerly along Malibu Dr to Sterling Ave, and proceeding southerly along Sterling Ave to Eleanor Dr, and proceeding westerly along Eleanor Dr to Chaney Ave, and proceeding northerly along Chaney Ave to Aragon Dr, and proceeding easterly along Aragon Dr to Azalea Dr, and proceeding northerly along Azalea Dr to el Carro Ln, and proceeding westerly along el Carro Ln to the point of beginning.

District C.

All of that portion of Santa Barbara County bounded and described as follows: Beginning at the point of intersection of nonvisible boundary and the Carpinteria city line, and proceeding northerly along nonvisible boundary to el Camino Real, and proceeding easterly along el Camino Real to Franklin Crk, and proceeding southerly along Franklin Crk to 9th St, and proceeding easterly along 9th St to Elm Ave, and proceeding westerly along Elm Ave to 5th St, and proceeding southerly along 5th St to Linden Ave, and proceeding westerly along Linden Ave to Union Pacific RR, and proceeding southerly along Union Pacific RR to nonvisible boundary, and proceeding southerly along nonvisible boundary to Pacific, and proceeding easterly along Pacific to nonvisible boundary, and proceeding southerly along nonvisible boundary to the Carpinteria city line, and proceeding northerly along the Carpinteria city line to the point of beginning.

District D.

All of that portion of Santa Barbara County bounded and described as follows: Beginning at the point of intersection of Linden Ave and el Camino Real, and proceeding northerly along Linden Ave to Pacific Village Dr, and proceeding easterly along Pacific Village Dr to Ogan Rd, and proceeding easterly along Ogan Rd to Vallecito Rd, and proceeding southerly along Vallecito Rd to Star Pine Rd, and proceeding easterly along Star Pine Rd to nonvisible boundary, and proceeding easterly along nonvisible boundary to the Carpinteria city line, and proceeding southerly along the Carpinteria city line to el Camino Real, and proceeding northerly along el Camino Real to the point of beginning.



District E.

All of that portion of Santa Barbara County bounded and described as follows: Beginning at the point of intersection of Elm Ave and 5th St, and proceeding northerly along Elm Ave to 9th St, and proceeding northerly along 9th St to Franklin Crk, and proceeding easterly along Franklin Crk to el Camino Real, and proceeding easterly along el Camino Real to the Carpinteria city line, and proceeding southerly along the Carpinteria city line to nonvisible boundary, and proceeding westerly along nonvisible boundary to Pacific, and proceeding westerly along Pacific to nonvisible boundary, and proceeding northerly along nonvisible boundary to Union Pacific RR, and proceeding westerly along Union Pacific RR to Linden Ave, and proceeding easterly along Linden Ave to 5th St, and proceeding northerly along 5th St to the point of beginning.

ATTACHMENT B

ORDINANCE NO. 752

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF CARPINTERIA ESTABLISHING DISTRICT-BASED ELECTIONS FOR COUNCILMEMBERS BY AMENDING TITLE 2 OF THE CARPINTERIA MUNICIPAL CODE TO ADD A NEW CHAPTER 2.06 ("CITY COUNCIL DISTRICT ELECTIONS") AND BY ADOPTING THE COUNCIL DISTRICT MAP

WHEREAS, the City of Carpinteria ("City") is a general law city and municipal corporation that uses an at-large method of election for its five council members to a four-year term, including its mayor, who is selected by his or her fellow council members; and,

WHEREAS, in response to a Notice of Violation alleging the City's method of election violates the California Voting Rights Act ("CVRA"), the City adopted a resolution of intention to transition to district elections in time for the November 2022 election, thereby avoiding the high cost of litigation and furthering the City's commitment to diversity and inclusion; and,

WHEREAS, in conformity with Elections Code section 10010, the City Council has held public meetings on this matter on July 31, 2017; August 14, 2017; April 8, 2019; June 28, 2021; July 26, 2021; November 8, 2021; December 13, 2021; January 24, 2022; February 28, 2022, March 14, 2022, and March 28, 2022, in addition to public workshops that were held on September 20, 22, and 26, 2021, in both remote and in-person formats due to the coronavirus (COVID-19) pandemic; and,

WHEREAS, at its regular meeting on March 28, 2022, the City Council held a public hearing at which the public was invited to provide input regarding the content of the draft Council District Maps and the potential sequence of elections; and,

WHEREAS, the Council District Map adopted as part of this Ordinance complies with the legal criteria and order of priority established by Elections Code Section 21601; and,

WHEREAS, this Ordinance is intended to provide for the district-based election of the five Councilmembers of the City; and,

WHEREAS, the City Council has considered all information and public testimony related to this matter, as presented at the public meetings of the City Council and published on the City's District Elections webpage, including any supporting reports by City staff.

NOW THEREFORE, the City Council of the City of Carpinteria does hereby ordain as follows:

SECTION 1. INCORPORATION OF RECITALS

The above recitals are true and correct and are incorporated herein, and are

each relied upon independently by the City Council for its adoption of this Ordinance.

SECTION 2. AMENDING TITLE 2 OF THE CARPINTERIA MUNICIPAL CODE TO ADD A NEW CHAPTER 2.06 ("CITY COUNCIL DISTRICT ELECTIONS")

New Chapter 2.06, titled "City Council District Elections," is hereby added to the City's municipal code as follows:

"**2.06.010 – Declaration of Purpose**.
Pursuant to Government Code Section 34886, the City Council of the City of Carpinteria intends to change from an at-large election system used since the City's incorporation to district based elections for city councilmembers. Said change is being made in furtherance of the purposes of the California Voting Rights Act of 2001. A district based election system is one where the City is divided into separate geographical areas making up the districts and voters residing within the district elect a representative who also resides within the district.

2.06.020 – City Council Districts Established.
Five City Council districts are established in the City of Carpinteria. The boundaries and identifying numbers of each district shall be as described on the Council District Map approved by the Council and maintained by the City Clerk in the official records of the City and the County Elections Office. The Council District Map may be amended from time, such as following the decennial U.S. Census, to ensure that the districts are in compliance with all applicable provisions of law.

2.06.030 – Election of Members of the City Council by-District.
(a) Upon commencement of "by-district" election in the order established in section 2.06.040 of this Code, members of the City Council shall be elected "by district" as defined in California Government Code Section 34871 and/or any successor statute. Any candidate for City Council must have been a resident and registered voter of the district in which he or she seeks election for at least thirty days before the time he or she files nominating papers or equivalent declaration of candidacy for such office, or such person's appointment to fill a vacancy therein as established in the California Government Code Section 34882. The mayor and vice-mayor shall be selected by their fellow councilmembers. No term of any member of the City Council that commenced prior to the effective date of this ordinance shall be affected by the adoption of this ordinance.
(b) Registered voters signing nomination papers or voting for a member of the City Council shall be residents of the geographical area making up the district from which the member is to be elected.
(c) The terms of office of each member elected to the City Council shall be four (4) years.
(d) Termination of residency in a district by a Councilmember shall create a vacancy for that City Council district unless another residence within the district is

immediately declared and established within thirty (30) days after the termination of residency.

2.06.040 – Reserved.

2.06.050 – Vacancies for the Office of Councilmember.
(a) A vacancy in an office filled by at-large election shall be filled by appointment or election from the city at-large in accordance with California Government Code Section 36512.
(b) A vacancy in an office of a "by district" councilmember shall be filled by a person who resides in and is a registered voter in the district."

SECTION 3. COUNCIL DISTRICT MAP APPROVED AND RECORDED

The City Council hereby approves and adopts the Council District Map for the District-Based election system for five Councilmembers, attached hereto as Exhibit 1 and incorporated herein by reference. The Council District Map shall be updated as necessary following the decennial U.S. Census, and recorded and maintained by the City Clerk in the official records of the City and by the County Elections Office.

SECTION 4. IMPLEMENTATION

If necessary to facilitate the implementation of this Ordinance, the City Council hereby authorizes the City Manager, or his or her designee, to make technical adjustments to the district boundaries adopted in this Ordinance that do not substantively affect the populations in the districts, the eligibility of candidates, or the residence of elected officials within any district. The City Manager shall consult with the City Attorney concerning any technical adjustments deemed necessary and shall advise the City Council of any such adjustments required in the implementation of the districts.

SECTION 5. CEQA

The City Council finds that the actions authorized by this Ordinance are not subject to the requirements of the California Environmental Quality Act ("CEQA") pursuant to CEQA Guidelines Sections 15060(c)(2) and 15061(b)(3) since the actions will not result in a direct or reasonably foreseeable indirect physical change in the environment.

SECTION 6. SEVERABILITY

If any section, sub-section, subdivision, paragraph, clause or phrase in this Ordinance, or any part thereof, is for any reason held to be invalid or unconstitutional by a decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining sections or portions of this Ordinance or any part thereof. The City Council hereby declares that it would have passed each section, subsection, subdivision, paragraph, sentence, clause or phrase of this Ordinance, irrespective of the fact that any one or more sections, sub-sections, subdivisions, paragraphs, sentences, clauses or phrases may be declared invalid or unconstitutional.

SECTION 7. CERTIFIED COPY TO COUNTY BOARD OF SUPERVISORS AND DEPARTMENT OF ELECTIONS

The City Clerk is hereby directed to forward without delay to the Board of Supervisors and to the County Department of Elections each a certified copy of this Ordinance.

SECTION 8. EFFECTIVE DATE

This Ordinance shall become effective thirty (30) days following adoption.

PASSED, APPROVED AND ADOPTED on March 28, 2022, by the following vote:

AYES: COUNCILMEMBER(S):

NOES: COUNCILMEMBER(S):

ABSENT: COUNCILMEMBER(S):

ABSTAIN: COUNCILMEMBER(S):

_____
Mayor, City of Carpinteria

ATTEST:

_____
Brian C. Barrett, City Clerk
City of Carpinteria

I hereby certify that the foregoing Ordinance was duly and regularly introduced and adopted at a regular meeting of the City Council of the City of Carpinteria held on March 28, 2022.

_____
Brian C. Barrett, City Clerk
City of Carpinteria

APPROVED AS TO FORM:

_____
Jena Shoaf Acos, on behalf of Brownstein
Hyatt Farber Schreck, LLP acting as
City Attorney of the City of Carpinteria

Map A2

Map A3

Maps A2 and A3 will be considered by the City Council at its meeting on:

Monday, March 28
5:30 p.m.
City Hall

The final map will define how we elect our future City leaders.

Learn more about these two options at the website below or by visiting City Hall, 5775 Carpinteria Ave.

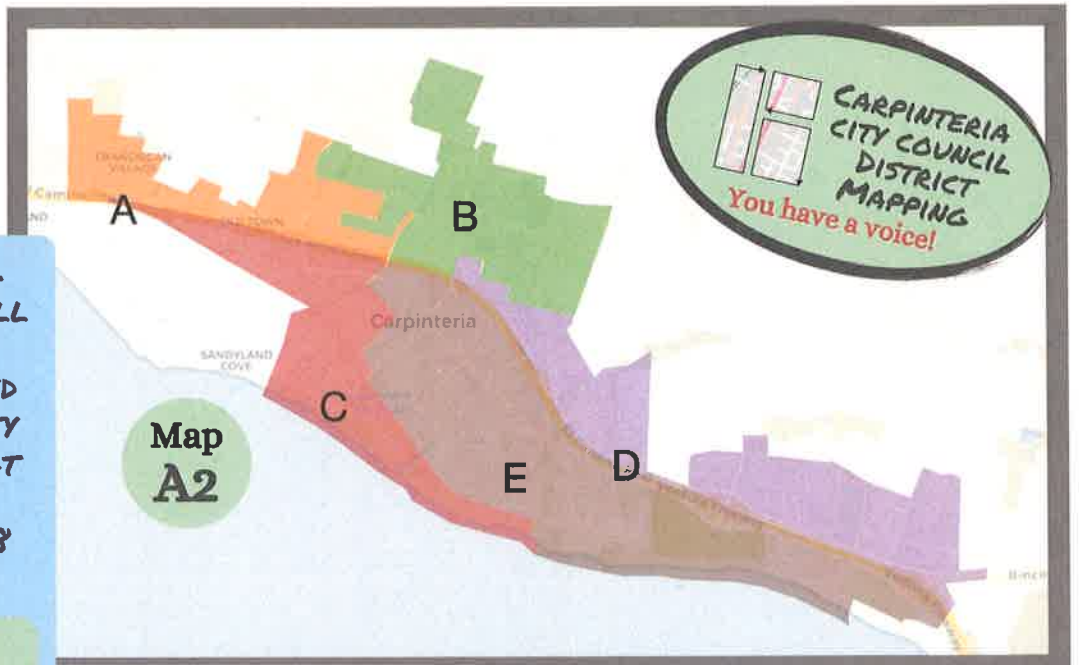
DrawCarpinteria.com

How can I share my thoughts?

Please share your input on the draft maps above before the City Council meeting on March 28th by emailing CarpinteriaDistrictElections@ci.carpinteria.ca.us or calling (805) 685-5405.

What is district mapping?

Starting in the November 2022 election, City Council members will be elected from five districts that are being created now.



These districts will define who can run for a City Council seat and who you will be able to vote for.

The goal is to create election districts that are balanced in size and protect the interest of the communities within those districts.

What is District Mapping?

Starting in the November 2022 election, City Council members will be elected from five districts that are being created now.

The goal is to create election districts that are balanced in size and protect the interest of the communities within those districts.

The City Council will hold a District Elections public hearing on Monday, Feb. 28 at 5:30 p.m. in the Carpinteria City Council Chamber, City Hall, 5775 Carpinteria Avenue, Carpinteria.

The goal of the hearing is for the City Council to select a single map that will go to a Council vote at the final public hearing.

A recommended plan or plans would need to be posted at least 7 days prior to the meeting under the provisions of CVRA Safe Harbor. The full agenda and associated staff report will be available on Thursday, March 24, 2022 at https://bit.ly/CityCarpAgendas.

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact Brian Barrett, Acting City Clerk at brianb@ci.carpinteria.ca.us or (805) 755-4446. Notification of two business days prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

City of Carpinteria

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Adoption of Ordinance No. 753, (first reading) approving the sequencing schedule for district elections concerning the five Council districts in the City of Carpinteria, and amending the approved District Map by applying numeric District designations consistent with the sequencing schedule.

STAFF RECOMMENDATION

Adopt Ordinance No. 753, (first reading) approving the sequencing schedule for district elections concerning five Council districts in the City of Carpinteria, and amending the approved District Map by applying numeric District designations consistent with the sequencing schedule.

Sample Motion: I move to adopt Ordinance No. 753, on first reading (as read by title only), thereby establishing the sequencing schedule for district elections concerning five Council districts, amending the approved District Map by applying numeric District designations consistent with the sequencing schedule, and setting the second reading for the Council meeting of April 11, 2022.

BACKGROUND

The City of Carpinteria City Council is a general law City with five elected City Council seats. Council members are elected to four-year staggered terms. Elections are held biennially with three Council seats decided on off-year elections and two seats decided on Presidential election years.

During the public hearing process for developing and adopting a City Council Districts map, the City Council must also establish which three Districts will be a part of the November 2022 election and which two will be a part of the 2024 elections (the "sequencing schedule").

The Council has discretion to establish the sequence of elections based on state law. The Council's decision concerning sequencing is guided by section 10010(b) of the California Elections Code Section, which states that the City Council shall "give special consideration to the purposes of the California Voting Rights Act," and "take into account the preferences expressed by members of the districts."

Additionally, Elections Code Section 21606 provides that the term of office of any council member whose term of office has not expired shall not be affected by districting. As such, no matter how sitting Councilmembers places of residence relate to the new Districts, all Councilmembers will finish their respective at-large terms.

DISCUSSION

During the mapping process, both draft maps and the districts within them were identified alphabetically, e.g., Map A, district A, etc. The Final City Council Districts are to be identified numerically 1 through 5. Odd and even numbered districts are up for election in separate years. Districts 1, 3, and 5 are to be considered at the City's first district election, in November 2022, and Districts 2 and 4 in the November 2024 election.

Staff recommends, regardless of whether Map A2 or A3 is chosen, that the City Council consider Districts be numbered according to the below table. Attachment A to this Report illustrates this sequencing schedule numbering for Maps A2 and A3.

Former District Label	New District Label	1st Election Cycle Year
District C	District 1	2022
District A	District 2	2024
District B	District 3	2022
District D	District 4	2024
District E	District 5	2022

If Map A2 is adopted by the Council, the above recommended district sequencing allows the two incumbent Councilmembers whose terms expire in 2024 (Alarcon and Nomura) to finish their terms to completion prior to an election occurring for the District in which they reside. If Map A3 is adopted, one councilmember whose term expires in 2024 (Nomura) would reside in a District that would come up for election in November 2022.

The above sequencing schedule also ensures, no matter if the Council approves map A2 or A3, that the incumbent Councilmembers up for reelection in 2022 will be in a District that is a part of the 2022 election.

Notwithstanding the above sequencing schedule described, the Council has the discretion to adopt a sequencing schedule as it sees fit. However, once again, the Council should be cognizant that the districts numbered as 1, 3, and 5 will be put to election in 2022 and districts 2 and 4 will be put to election in 2024.

In addition to the sequencing considerations set forth in Elections Code section 10010(b) and 21606, summarized above, the City Council may take other considerations into account when making decisions about how to sequence districts, including:

(1) Prioritizing districts with high Latino CVAP percentages for an earlier election or for a Presidential election year.
For example, the Council may wish to consider a sequencing schedule that prioritizes having one or more of the higher percentage Latino Citizen Voting Age Population ("CVAP") districts be a part of the earliest election, i.e., 2022. Alternatively, the Council could choose a district sequencing schedule that prioritizes putting higher CVAP percentage districts up for election during Presidential election years since studies have shown that voter participation is higher in those years. These are both common considerations city councils have used in determining a sequencing schedule.

The table below illustrates Latino CVAP percentages for Maps A2 and A3.[1] In both Map A2 and A3, there are three districts with a CVAP greater than 30% (shaded in the table).

	Former District Label				
	A	**B**	**C**	**D**	**E**
Map A2	37.4%	20.3%	33.6%	32.4%	22.6%
Map A3	37.5%	18.9%	33.6%	35.3%	22.6%

(2) Prioritize districts that do not have a current resident council member.
Another factor for the council's consideration in modifying the staff sequencing recommendation is prioritizing District C (proposed District 1 under the City's recommendation) for the 2022 election since it does not currently have a resident council member. For example, the Cities of Woodland and Davis prioritized districts that had never had an elected representative to be a part of the first election after establishing Districts.

(3) Avoid Sequencing Schedule that would preclude incumbents from candidacy at the end of their current at-large terms.
It is common practice as part of the approval of a sequencing schedule for city councils to take into consideration the potential candidacy of incumbents in the next election. In Carpinteria's case, there are three Councilmembers (Clark, Lee and Carty), who's seats are up for election in 2022. The sequencing schedule described above would allow for all three to run for office in 2022, should they choose. The sequencing schedule would also allow for Councilmembers whose terms expire in 2024 to run for office; either as an incumbent candidate in 2024, or as a candidate in a District up for election in 2022.

[1] This and other data on District Maps A2 and A3 are a part of the District Plans that are a part of each map and can be found with the maps on the City's District Election website: https://carpinteriaprojects.com/district-elections/

Information Concerning Any Sequencing Schedule Scenario.
Councilmembers whose terms expire in 2022 may continue to serve the City at-large for the remainder of their elected terms and will have the opportunity to run for district-based seats in November 2022, provided they reside in one of the three districts scheduled for that election.

Councilmembers whose terms do not expire until 2024 may continue to serve the City at-large for the remainder of their elected terms, and will have the opportunity to run for district-based seats in November 2024, provided they reside in one of the two districts scheduled for that election.

If multiple incumbents live in the same councilmember district, and an election is held in that district in 2022, the incumbents are eligible to run for election in that district along with any other candidates. The person who receives the most votes will win the seat for that district (and the four-year term that goes with it). Any losing incumbent will drop off the City Council, either immediately (if their elected term expires in 2022) or in 2024 (if their elected term expires in 2024). In other words, even if a current councilmember whose elected term ends in 2024 runs for and is defeated in a bid to win a district-based seat in 2022, that councilmember will continue to serve on the City Council as an at large councilmember until their elected term expires.

If a current councilmember whose elected term ends in 2024 wins a district-based seat in 2022, then they would resign the at-large seat. The council can fill the vacancy pursuant Section 36512 of the California Government Code, by appointment or by a special election.[2]

After the sequencing schedule is adopted, if no councilmember resides in a district scheduled for the November 2022 election, then only non-incumbents will be qualified to run for election in that district. If no councilmember resides in a district scheduled for the November 2024 election, that district will continue to be represented by the remaining at-large councilmembers until 2024 when its first district-based election will be held.

POLICY CONSISTENCY

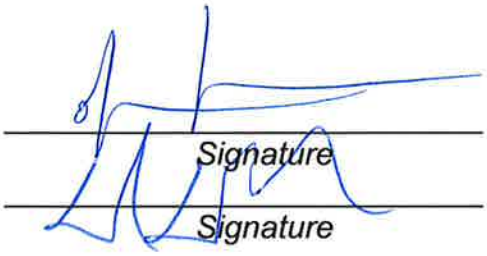
This hearing is a part of transition to district-based council elections and as such follows compliance with Federal and State Voting Rights Act.

FINANCIAL CONSIDERATIONS

Cost associated with this work includes a consultant service agreement, which is a part of projected expenses included in the adopted Fiscal Year 2021-22 budget.

LEGAL AND RISK MANAGEMENT CONSIDERATIONS

[2] Section 36512 of the California Government Code provides that if a vacancy occurs in an elective office provided for in this chapter, the council shall, within 60 days from the commencement of the vacancy, either fill the vacancy by appointment or call a special election to fill the vacancy."



The City Attorney's Office is supporting the District Mapping process and will be available to answer questions concerning this matter.

ORDINANCE NO. 753

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF CARPINTERIA AMENDING TITLE 2, CHAPTER 2.06 ("CITY COUNCIL DISTRICT ELECTIONS"), BY ADDING REGULATIONS ESTABLISHING THE SEQUENCE OF ELECTIONS FOR COUNCILMEMBER DISTRICTS

WHEREAS, the City of Carpinteria ("City") is a general law city and municipal corporation that uses an at-large method of election for its five council members to a four-year term, including its mayor, who is selected by his or her fellow council members; and,

WHEREAS, in response to a Notice of Violation alleging the City's method of election violates the California Voting Rights Act ("CVRA"), the City adopted a resolution of intention to transition to district elections in time for the November 2022 election, thereby avoiding the high cost of litigation and furthering the City's commitment to diversity and inclusion; and,

WHEREAS, in conformity with Elections Code section 10010, the City Council has held public meetings on this matter on July 31, 2017; August 14, 2017; April 8, 2019; June 28, 2021; July 26, 2021; November 8, 2021; December 13, 2021; January 24, 2022; February 28, 2022, March 14, 2022, and March 28, 2022, in addition to public workshops that were held on September 20, 22, and 26, 2021, in both remote and in-person formats due to the coronavirus (COVID-19) pandemic; and,

WHEREAS, at its regular meeting on March 28, 2022, the City Council held a public hearing at which the public was invited to provide input regarding the content of the draft Council District Maps and the potential sequence of elections; and,

WHEREAS, the Council District Map adopted as part of this Ordinance complies with the legal criteria and order of priority established by Elections Code Section 21601; and,

WHEREAS, the City Council transitioned to district-based election of the five Councilmembers of the City and added Chapter 2.06 ("City Council District Elections") to the Carpinteria Municipal Code; and,

WHEREAS, the City Council has considered all information related to this matter, as presented at the public meetings of the City Council and published on the City's District Elections webpage, including any supporting reports by City staff.

NOW THEREFORE, the City Council of the City off Carpinteria does hereby ordain as follows:

SECTION 1. INCORPORATION OF RECITALS

The above recitals are true and correct and are incorporated herein, and are each relied upon independently by the City Council for its adoption of this Ordinance.

SECTION 2. AMENDING TITLE 2, CHAPTER 2.06 ("CITY COUNCIL DISTRICT ELECTIONS"), OF THE CARPINTERIA MUNICIPAL CODE TO ADD SECTION 2.06.040

New section 2.06.040 shall be added to Chapter 2.06 ("City Council District Elections") as follows:

> "**2.06.040 – Commencement and Sequence of District Elections.**
> (a) The district-based election system established by this chapter shall be first implemented for the general municipal election in November 2022 and every two years thereafter.
> (b) Beginning November 2022, and every four years thereafter, the voters in districts 1, 3, and 5 shall elect members of the City Council by district for four (4) year terms. At the general municipal election in 2024 and every four years thereafter, the voters in districts 2 and 4 shall elect members of the City Council by district to four (4) year terms.
> (c) The term of office of any council member who has been elected and whose term of office has not expired shall not be affected by any change in the boundaries of the district from which he or she was elected."

SECTION 3. COUNCIL DISTRICT MAP AMMENDMENT

Exhibit 1 of Ordinance 752, District Map, consistent with the sequencing schedule, appended is hereby amended by replacing the alphabetic district labels with numeric district labels as included in Exhibit 1 attached hereto.

SECTION 4. IMPLEMENTATION

If necessary to facilitate the implementation of this Ordinance, the City Council hereby authorizes the City Manager, or his or her designee, to make technical adjustments to the district boundaries adopted in this Ordinance that do not substantively affect the populations in the districts, the eligibility of candidates, or the residence of elected officials within any district. The City Manager shall consult with the City Attorney concerning any technical adjustments deemed necessary and shall advise the City Council of any such adjustments required in the implementation of the districts.

SECTION 5. CEQA

The City Council finds that the actions authorized by this Ordinance are not subject to the requirements of the California Environmental Quality Act ("CEQA") pursuant to CEQA Guidelines Sections 15060(c)(2) and 15061(b)(3) since the actions will not result in a direct or reasonably foreseeable indirect physical change in the environment.

SECTION 6. SEVERABILITY

If any section, sub-section, subdivision, paragraph, clause or phrase in this Ordinance, or any part thereof, is for any reason held to be invalid or unconstitutional by a decision

of any court of competent jurisdiction, such decision shall not affect the validity of the remaining sections or portions of this Ordinance or any part thereof. The City Council hereby declares that it would have passed each section, subsection, subdivision, paragraph, sentence, clause or phrase of this Ordinance, irrespective of the fact that any one or more sections, sub-sections, subdivisions, paragraphs, sentences, clauses or phrases may be declared invalid or unconstitutional.

SECTION 7. CERTIFIED COPY TO COUNTY BOARD OF SUPERVISORS AND DEPARTMENT OF ELECTIONS

The City Clerk is hereby directed to forward without delay to the Board of Supervisors and to the County Department of Elections each a certified copy of this Ordinance.

SECTION 8. EFFECTIVE DATE

This Ordinance shall become effective thirty (30) days following adoption.

PASSED, APPROVED AND ADOPTED on March 28, 2022, by the following vote:

AYES: COUNCILMEMBER(S):

NOES: COUNCILMEMBER(S):

ABSENT: COUNCILMEMBER(S):

COUNCIL AGENDA STAFF REPORT
March 28, 2022

ITEM FOR COUNCIL CONSIDERATION

Pursuant to Carpinteria Municipal Code ("CMC") § 14.78.040, the City Council will hold a public hearing to consider appeals of the Planning Commission's decision to accept and certify an Environmental Impact Report ("EIR") and grant approval of a Conditional Use Permit and Coastal Development Permit for Project 19-2015-CUP/CDP, a proposal to construct the 850-foot long portion of the approximately 2,800-foot long multi-use Rincon Trail project filed by: (1) Karl Cameron; (2) Stan Barankiewicz of Orbach Huff & Henderson LLP, on behalf of the Santa Barbara Soaring Association ("SBSA"); and (3) Helen O'Neill. The project location spans from the eastern terminus of Carpinteria Avenue in the City of Carpinteria to the western terminus of the Rincon Beach County Park parking lot, located in unincorporated Santa Barbara County, and involves City and Caltrans rights-of-way and Assessor's Parcel Nos. 001-220-032, -092, -100 and -101.

STAFF RECOMMENDATION

Consider the filed appeals in a public hearing, and deny the appeals, thereby upholding the Planning Commission's acceptance and certification of the EIR and approval of a Conditional Use Permit ("CUP") and Coastal Development Permit ("CDP") for the Rincon Trail project through Resolution No. 6111 (Attachment A).

Sample Motion: I move to adopt Resolution No. 6111 to deny the appeals, and accept and certify the EIR and approve the Conditional Use Permit and Coastal Development Permit for the portion of the Rincon Trail project located in the City of Carpinteria.

BACKGROUND

Project Description Summary

The Rincon Trail is a public multi-use trail that would connect the eastern end of the City of Carpinteria to Rincon Beach County Park located in unincorporated Santa Barbara County near the Ventura County line. The proposed trail would originate from Carpinteria Avenue in the City of Carpinteria, just east of the intersection with State Route ("SR") 150, and proceed easterly for approximately 2,800 linear feet, terminating at the western terminus of the Rincon Beach County Park parking lot. The proposed trail would be finished in a concrete pavement and feature a usable width of fourteen (14) to

sixteen (16) feet (comprised of a four-foot or five-foot wide "travel lane" in each direction and three-foot wide shoulders on each side). A six-foot wide shallow concrete v-ditch would run along the inside of the trail length for the purposes of capturing and conveying stormwater to onsite drainage facilities. Protective fencing would be provided along the trail alignment to keep trail users on the improved path. The trail project also includes a new 14-foot wide, 160-foot clear-span pre-fabricated bridge crossing over the Union Pacific Railroad ("UPRR") alignment. New bridge abutments and wingwalls would be constructed on each side of the UPRR alignment to anchor the bridge in place.

Grading and earthwork quantities necessary to cut the new trail bench, stabilize slopes, and control stormwater runoff through the project area are estimated at 95,919 cubic yards ("CY") of cut. Approximately 10,519 CY of the cut material would be used for fill onsite; the remaining 85,400 CY of cut material would be exported offsite. Approximately 45% of the estimated earthwork (equivalent to ~43,200 CY of cut) is expected to occur on the inland side of the UPRR alignment, and the remaining 55% (~52,800 CY) on the ocean side of the UPRR alignment. A storm drain collection system is proposed for the trail alignment, which would utilize a combination of repaired existing and new piped storm drains on the bluff face and drain outlets onto the sandy beach below the bluff. A habitat restoration plan is included to restore areas disturbed during construction and to mitigate for permanent removal of vegetation to accommodate the new trail.

The westernmost approximately 850 linear feet of the trail, running roughly parallel to U.S. Highway 101 from the trailhead just east of the Carpinteria Avenue/SR 150 intersection and north of the UPRR alignment falls within the jurisdiction of the City of Carpinteria. Although the City as lead agency must certify the EIR for the entire project, the City's approval of the Conditional Use Permit/Coastal Development Permit (19-2015-CUP/CDP) only approves this portion of the project. The remainder of the trail alignment (approximately 1,950 linear feet), including the new bridge over the UPRR alignment, would fall within the permitting jurisdiction of the County of Santa Barbara. As part of the project, the City will obtain an easement or other approvals from UPRR for the bridge crossing over, and trail improvements within, the UPRR alignment. The City also anticipates the acquisition of right-of-way from the California Department of Transportation ("Caltrans") to accommodate portions of the trail alignment.

The purpose of the Rincon Trail project is to close an existing critical gap in the California Coastal Trail ("CCT") between the Carpinteria Bluffs and the Pacific Coast Bikeway (i.e., bike path from Bates Road to just south of Mussel Shoals along U.S. Highway 101), that would serve to enhance opportunities for public coastal access and recreation, and support alternative means of transportation. The Rincon Trail project also is intended to provide a safe, convenient, scenic and attractive alternate route for vertical beach access to the existing unsanctioned, informal use trails connecting the Carpinteria Bluffs to Rincon Beach County Park, which trespass through UPRR property, and reduce the use of the unprotected U.S. Highway 101 shoulder between SR 150 and Bates Road by cyclists. With the recent acquisition by the City of

Carpinteria of the majority of the Bluffs III area for the new Rincon Bluffs Preserve, the proposed trail would also function as a critical connection between existing public recreation amenities in the area. Completion of the Rincon Trail also is a condition of approval for the City's approval of the Linden Avenue and Casitas Pass Interchanges and Via Real Extension Project (No. 09-1522-CUP/CDP) and Local Coastal Plan Amendment (LCP-4-CPN—15-0018-1), which was required as a balancing provision to offset unavoidable wetland impacts through completion of two regionally important alternative transportation projects to increase access to coastal resources for the public.

A more complete project description in included in the January 18, 2022 Planning Commission staff report and supporting attachments, included with this report as Attachment B. The proposed trail alignment is depicted in the project plans included as Exhibit 2 to Attachment A of this staff report.

Environmental Impact Report Summary

Pursuant to the California Environmental Quality Act ("CEQA"), the City of Carpinteria is acting as the Lead Agency in accordance with CEQA Guidelines[1] Sections 15050-15051, and is responsible for preparing this environmental document for the Rincon Trail project. The purpose of the CEQA analysis is to determine whether the proposed project may have significant effects on the environment, to identify possible mitigation measures to reduce the severity of any significant effects, and to disclose the findings of this analysis to the public and decision makers. The prepared Proposed Final Environmental Impact Report ("EIR") for the City Council's consideration provides the factual basis for finding that the project will not have a significant effect on the environment with the inclusion of the identified mitigation measures.

The Draft EIR identified no Class I (significant, unavoidable) impacts associated with the project. However, Class II impacts (significant, but feasibly mitigated) were identified in the following categories: *Aesthetics, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Tribal Cultural Resources, and Utilities and Service Systems*. With the incorporation of identified mitigation measures, all of these impacts would be reduced to a less than significant level. Class III (less than significant) impacts were also identified for *Aesthetics, Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hydrology and Water Quality, Noise, Public Services, Recreation, Transportation, and Utilities and Service Systems*.

In addition to disclosing the potential environmental effects of the proposed project, the EIR also evaluated four potential project alternatives which were identified as potentially meeting all or most project objectives to determine if any of these alternatives could further reduce the significance of identified potentially significant environmental effects. The four evaluated project alternatives were:

[1] References to the CEQA Guidelines in this Staff Report and attachments refer to Sections 15000 et seq of Title 14 of the California Code of Regulations.

- Alternative 1. "No Project/No Build" Alternative, which would maintain the existing conditions;
- Alternative 2. "Maximize Existing Benchwork/Topography" Alternative, which largely followed the alignment and design of the original 2015 version of the project;
- Alternative 3. "Steeper Slopes/Reduced Earthwork" Alternative, which is substantially similar to the proposed project, but utilizes a slightly narrower trail width and steeper trail surface slope for a segment of the trail south of the UPRR crossing to further reduce earthwork quantities; and
- Alternative 4. "Freeway Adjacent Trail Avoiding Bluff Face" Alternative, which utilizes the same alignment as the proposed project up to and including the UPRR crossing, but then shifts the trail to the north side of the ocean front ridge south of the UPRR alignment, roughly parallel and adjacent to the U.S. Highway 101 corridor.

Figure 6-1 (pp. 6-27) of the Draft EIR (Attachment C, Exhibit 2) depicts the proposed trail alignment overlaid with the trail alignments considered in Alternatives 1 through 4.

Alternative 3, "Steeper Slopes/Reduced Earthwork Alternative," was identified in the EIR as the environmentally superior alternative as it was found to meet all of the project objectives while resulting in the same or slightly less severe environmental effects as compared to the proposed project by further reducing the quantity and extent of earthwork necessary to construct the project.

The City Council, on appeal from the Planning Commission, is responsible for considering the appeal and for approving, conditionally approving or denying the appeal. Approving or conditionally approving the appeal results in reversal or modification of the Planning Commission's decision to accept and certify the Proposed Final EIR. Whereas, denying the appeal affirms the Planning Commission's decision to accept and certify the Proposed Final EIR as having: (1) adequately and accurately described and disclosed all potential project impacts; (2) satisfactorily reduced all identified potentially significant environmental effects to less than significant levels through the implementation of appropriate mitigation measures; and (3) satisfied the procedural and statutory requirements of CEQA. As part of the action in approving or conditionally approving the appeal in order to reject or modify the EIR, the Council also must select the preferred project from amongst the proposed project or project alternatives. Alternatively, the City Council can deny the appeal and affirm the Planning Commission's selection of a preferred project.

The EIR under consideration is included with this report as Attachment C, Exhibits 1 through 3.

Planning Commission Action

On January 18, 2022, the Planning Commission held a public hearing to consider acceptance and certification of the EIR for the Rincon Trail project and approval of the CUP and CDP for the portion of the trail project located within the City's jurisdiction. As noted above, a copy of the Planning Commission staff report and attachments is included with this report as Attachment B.[2]

The Planning Commission voted 3-1 (Callender dissent; La Fevers absent) to accept and certify the project EIR, selecting Alternative 3 as the preferred project; and to approve the CUP and CDP for the project, as presented. A copy of the Planning Commission Action Letter and adopted Resolution are included with this report as Attachment D.

Commissioner Callender's dissenting vote against the certification of the EIR and project approval was based upon a disagreement with the conclusions of the EIR with respect to the severity of the anticipated impacts to soaring activities resulting from the project. The EIR concluded that impacts to recreation, including soaring activities, would be less than significant, as horizontal and vertical wind speeds in the project area that soaring pilots rely upon for their flights would be reduced by less than thirty percent (30%), which may reduce the number of days with favorable wind conditions for flying but would not ruin or otherwise preclude continued flying activities in the project area.

Commissioner Callender disagreed that the impacts to airflow were less then significant and argued that the described impacts to soaring activities merited classification as a significant impact requiring mitigation to reduce impacts to less than significant levels, or if said impacts could not be mitigated to less than significant levels, then compelling City decision-makers to select a project alternative that avoids unmitigable significant impacts or otherwise make findings associated with a statement of overriding considerations . City staff clarified what thresholds are required to be considered for recreational impacts on the environment under CEQA, and responded that impacts to soaring opportunities are not properly classified as an environmental impact under CEQA, but are instead more appropriately classified as a social impact, and thus are outside of the realm of CEQA.

The majority of the Commission present agreed with staff's analysis and voted to approve the project and certify the EIR. A copy of the adopted Planning Commission meeting minutes from the January 18, 2022 hearing are included as Attachment E. Public comment letters submitted to the Planning Commission are included as Attachment F to this report.

---

[2] Please see the Planning Commission staff report (Attachment B) for a detailed project description, accounting of the project's permit review history up to Planning Commission review, and zoning/policy consistency analysis. Attachments to the Planning Commission staff report include both the Draft and Proposed Final EIRs.

The Planning Commission's decision to certify the EIR and approve the project was subject to a 10-calendar day appeal period, which commenced on January 19, 2022 (the day following the Planning Commission hearing). Prior to the end of the 10-calendar day appeal period, three separate appeals of the Planning Commission's decision to the City Council were filed with the City Clerk. The respective appeals were filed by: (1) Karl Cameron; (2) Stan Barankiewicz of Orbach Huff & Henderson LLP on behalf of SBSA; and (3) Helen O'Neill. All three appeals were filed on or before Friday, January 28th, prior to the close of the appeal period at 5:00 p.m. Copies of the respective appeals are included as Attachment G, Exhibits 1 through 3, to this report.

City Council Appeal Process

Carpinteria Municipal Code ("CMC") § 14.78.040 provides that the decisions of the Planning Commission may be appealed to the City Council by persons or entities that appeared, either in person or in writing before the Planning Commission, or by an "aggrieved person" as that term is defined in CMC § 14.08. The appellant must state specifically in the appeal wherein the decision of the Planning Commission is not in accord with the purposes of the City's Zoning Code, or wherein it is claimed that there was an error of discretion by the Planning Commission. (CMC § 14.78.040(3).)

A copy of the Planning Commission report, and all attachments, is to be provided to the Council. The Council's consideration of any appeal is considered de novo, which means that the Council may consider all aspects of the project and is not limited to consideration of only the grounds stated in the appeal(s).

Pursuant to CMC §14.78.040(5), because this project is subject to the Coastal Appeals ("CA") Overlay district and is appealable to the California Coastal Commission ("CCC"), the City Council must consider the appeal(s) at a public hearing, and approve, conditionally approve, or deny the appeal(s). Notice of the time and place of said hearing shall be given at least ten (10) calendar days before the hearing. Consistent with this requirement, the City noticed the public hearing for the City Council to consider the appeals on March 17, 2022 through: (1) publication in the Coastal View News; (2) mailed notice to property owners within 300 feet and occupants within 100 feet of the project location; and (3) direct email correspondence to interested parties.

DISCUSSION

Summary Analysis of Appeals

The City Clerk received three separate appeals of the Planning Commission's decision. While the three appeals raise myriad points in opposition to the project as approved by the Planning Commission and/or in support of another project alternative, the most salient points that are common across the three appeals can be generally summarized as follows:

1. Mischaracterization of Certain Environmental Effects. Various comments in the appeals assert that certain potential environmental effects of the project on aesthetics, biological resources, geological resources, and water quality have been mischaracterized and/or are insufficiently mitigated.

   In particular, appeal statements argue that the aesthetic impacts of the trail construction across the bluff face should be characterized as a potentially significant aesthetic impact and cannot be mitigated solely by design review with the City's and County's respective design review boards. The appeals claim potential biological impacts to environmentally sensitive habitats and sensitive plant species must be avoided as they cannot otherwise be feasibly mitigated. Concerns are also raised about the geologic stability of the area, and the affected bluff face in particular, including concerns over an abandoned oil well in the project area, ongoing erosion of the bluff face, and beach erosion impacts from the storm drain outfall pipes.

2. Safety of Trail Terminating in County Park Parking Lot. A number of statements contained within the appeals suggest that terminating the east end of the trail into the Rincon Beach County Park parking lot and directing trail users to continue their travels through the Park's parking lot would pose increased safety hazards for cyclists, pedestrians, and drivers. Concerns are raised about poor sight lines through the parking lot and at the Bates Road intersection and the steep slope through the east end of the parking lot.

3. Use of the Area for Soaring Activities. Numerous statements included within the appeals assert that soaring activities conducted in the area are fully compliant with applicable Federal Aviation Administration ("FAA") regulations and free flight pilots have federal permission and legal authority to use the airspace in the area as recognized by both the FAA and the United States Hang Gliding and Paragliding Association ("USHPA"). The appeal also claims that the lack of property rights and unsanctioned use of private property for launching of flights should have no bearing in the City's decision-making.

4. Incomplete and Erroneous Analysis of Wind Flow Impacts. Numerous statements in the appeals claim that the expert wind flow analysis relied upon in the EIR is incomplete and erroneous, and does not accurately reflect the true nature or severity of the potential project impacts on soaring activities. Appellants reference the expert testimony of free flight pilots at previous City hearings on the subject project, and a letter prepared by Dennis Pagen, whose work is cited in the City's wind flow analysis, as evidence of an incomplete study that they claim fails to include generally accepted scientific and soaring principles in its calculations and analysis of the potential impacts of wind reduction on free flight. The appellants claim the letter from Mr. Pagen demonstrates that the City's wind flow analysis is inaccurate, as it does not fully capture the larger context of the site or properly account for real world conditions, related to the depth and length

of the entire ridge, the wind gradient, the creation of turbulent rotor zones and venturis, and changes in thermal patterns. Appellants also dispute the City's wind flow analysis' reliance upon operating wind speeds information from the Torrey Pines Gliderport in determining acceptable wind speed margins for free flight activities.

5. Significance of Impacts to Soaring Activities. Statements in the appeals describe the unique topographical and geographical characteristics of the area that have made it a popular and accessible site for recreational free flight activities for the past several decades. Appellants disagree with the findings of the expert wind flow analysis relied upon by the City in preparation of the EIR, and believe the extent of landform modifications described for the proposed project would destroy or severely reduce free flight use of the site. As a result, appellants suggest that any impacts to the bluff face that may reduce or alter flight conditions through disruption or reduction of uplift and/or airflow must be characterized as a potentially significant recreational impact under CEQA. Appellants state that the City must develop a threshold of significance for the project's potential impact on wind in order to conduct a proper impact assessment. Appellants also state that testimony from free flight pilots describing the severity of these impacts to soaring activities in the area should be considered "expert" testimony and given the same consideration as the analysis provided by the City's consulting wind flow expert in classifying the significance of project-related wind flow impacts.

6. Preference for Alternative 4. Appellants disagree with the City's identification of Alternative 3 in the EIR as the "environmentally superior" alternative and its selection by the Planning Commission as the preferred project, and instead, advocate a preference for Alternative 4, which would route the trail along the north side of the ridge overlooking U.S. Highway 101. The appellants assert that Alternative 4 would have fewer potential environmental impacts when compared to Alternative 3 in conjunction with any future extension of the trail through Rincon Beach County Park. They also claim that Alternative 4 is the only alternative that avoids what they believe should be properly characterized as significant recreational impacts to soaring activities by routing the trail on the north side of the ridge and avoiding what the appellants describe as large scale earthwork and landform modifications to the ocean-facing ridge relied upon for free flight.

   The appellants also argue that the termination of the proposed trail into the Rincon Beach County Park parking lot poses pedestrian and cyclist safety risks, and that Alternative 4 would avoid these safety hazards, and offer cyclists a more direct and convenient route.

Copies of the respective appeals in their entirety are included as Attachment G, Exhibits 1 through 3, to this report.

Staff offers responses, below, to each of the appeal elements described above. Further, it should be noted that staff did not identify any issue raised in the appeal documents that is new to the City Council appeal hearing. All of the issues raised in the appeals have been previously raised to varying degrees in past public hearings and/or in public comment letters submitted to the City. Accordingly, many of these appeal statements have been previously addressed in the Responses to Comments, included in the Proposed Final EIR (see Attachment C), and/or in the Planning Commission staff report (see Attachment B).

1. Mischaracterization of Certain Environmental Effects. The EIR prepared for the project objectively evaluates the potential significance of identified environmental effects, using the thresholds contained in Appendix G of the CEQA guidelines, in addition to the respective adopted CEQA thresholds of the City and County. The analysis contained in the EIR concluded that there would be no Class I (potentially significant unavoidable impacts), but that there would be various Class II (potentially significant but mitigable impacts) to Aesthetics, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Tribal Cultural Resources, and Utilities and Service Systems. The EIR also demonstrated that all of the potentially significant impacts could be feasibly mitigated to less than significant levels through incorporation of the prescribed mitigation measures.

   With respect to some of the specific examples cited in the appeals, the aesthetic impacts of cutting a new trail bench across a manufactured slope and slightly laying back the slope without affecting the overall height or length of the ridge formation would not constitute a significant aesthetic change to the primary visual features of the project area. Man-made benches already traverse the slopes in the project area such that adding an additional bench and/or replacing the existing bench with a new bench slightly higher in elevation on the slope face is not considered a significant change to the area's visual character. Trail improvements, such as fencing, railings and the new bridge crossing over the rail corridor would be reviewed by the City and County design review boards to ensure consistency with respective design policies and that said improvements appropriately fit the character of the setting. Review by the City ARB and County BAR, respectively, is a standard mitigation measure used to address and resolve potentially significant aesthetic impacts. Mitigation Measure BIO-5, which requires revegetation of all disturbed areas within the project footprint would also help to address aesthetic concerns by revegetating the area with appropriate native plantings.

   Impacts to biological resources are also mischaracterized in the appeals. The Biological Resources analysis in the EIR found that while there are several sensitive plant species known to occur in the project area, the affected plants do

not have individual local classifications as being rare, or high enough rankings by the California Native Plant Society's "California Rare Plant Ranks" to constitute a significant impact under CEQA, and therefore do not require species-specific mitigation. Rather, the presence of these species contributes to the overall quality of identified Environmentally Sensitive Habitats (ESH) in the area; the removal of which will require compensatory mitigation and restoration of the affected habitat types. This requirement is already included in the Mitigation Measures to address anticipated Biological Resource impacts to ESH.

Concerns related to geologic hazards and water quality raised in the appeals have already been addressed in the EIR. Both the proposed project and the preferred project alternative were designed to avoid known areas of particular geologic instability (e.g. ancient landslide). Likewise, the proposed project and contemplated project alternatives all rely upon site specific geologic and engineering studies to understand the underlying geologic conditions of the area and to design a trail that would be safe, sustainable and easily maintained, accounting for both potential bluff face erosion and continued sea cliff retreat due to current conditions and projected sea level rise.

The concerns raised in the appeals over the abandoned oil well in the project area have proven to be unfounded as the subject "well" is a dry hole that never produced oil and was immediately abandoned, likely by simply backfilling the pilot hole, and as such does not pose an environmental or liability hazard (see the detailed response to comment A1-5 in Attachment G for additional information). Finally, concerns over beach erosion from the storm water outfalls was intentionally addressed as part of the initial design. By replacing existing failed storm drains and augmenting those with additional new storm drains, the amount of runoff conveyed to any one outfall location is reduced. Further, the new storm drains would be buried on the bluff face and the outfalls would be outfitted with energy dissipaters to further reduce potential erosive impacts.

2. Safety of Trail Terminating in County Park Parking Lot. Staff asked the City's consulting traffic engineer, Tom Mericle of TKM Engineering, to review the proposed trail plans, parking lot layout, and appellant statements, and provide an analysis of the potential safety risks associated with terminating the east end of the Rincon Trail into the Rincon Beach County Park ("County Park") parking lot. A copy of the memorandum is included with this staff report as Exhibit 3 to Attachment H.[3]

   Mr. Mericle found that due to the generally flat or even slightly uphill slope of the approximately 350-foot easterly section of the trail leading to the terminus at the County Park parking lot, the relatively flat grade approach would not significantly change the speed of a cyclist approaching the trailhead, which terminates into a

[3] Mr. Tom Mericle also provided an Evaluation of Rincon Multi-Use Trail Preliminary Design to support preparation of the Draft EIR. (See Attachment C, Exhibit 3- Draft EIR, Appendix J.)

cul-de-sac at the west end of the parking lot. Further, the westerly ~600 feet of the County Park parking lot is also relatively flat, such that by the time a cyclist reaches the downhill slope at the east end of the County Park parking lot leading to Bates Road, the cyclist has had sufficient time to become integrated into the slower speed mixed-vehicle environment of the parking lot. Mr. Mericle also found the parking lot dimensions (drive aisle width, etc.) to be sufficiently wide near the trailhead to provide more than enough room for maneuverability to reduce negative interaction between vehicles and cyclists.

Further, such slow speed mixed-vehicle arrangements are common in the greater Santa Barbara area, and have not posed safety risks for cyclists, pedestrians, and/or drivers. In fact, such arrangements are considered preferable to routing cyclists or pedestrians onto streets with higher speed vehicle traffic. Examples include, but are not limited to, Butterfly Beach and the Ledbetter Beach parking lots in Santa Barbara, and the termination of the Pacific Coast Bikeway at Oil Piers Beach in unincorporated Ventura County. Instead, sufficient signage, striping and similar routine traffic control measures warn both cyclists/pedestrians and drivers of the mixed-traffic environment, and the general slow travel speeds used in parking lots further mitigates risk.

3. Use of the Area for Soaring Activities. Staff provided information about the legality of soaring activities in the project area as context for existing environmental setting and the baseline conditions for the CEQA analysis, and to demonstrate that the use of the area for free flight is informal in nature, and has not been officially sanctioned by the City or County. Staff is concerned that appellants' arguments that the activity is sanctioned at this location could lead to the public's belief that it is safe for soaring activity. Staff has further investigated the matter in response to the statements made in the various appeals and a request from Mr. Aaron LaPlante, a member of the Soaring Community to evaluate the viability of a flight park, staff has confirmed that free flight activities in the area are not sanctioned, and may be in violation of various local and federal regulations, as further described below:

    - Typical launch points for free flight in the area occurs either on private property owned by Rincon Bluffs Group, LLC near the east end of Bluffs III or, as pilots approach the bluff edge, on private property owned by UPRR. While Rincon Bluffs Group, LLC recently recorded a "Notice of Consent to Use Land" ("Notice") granting pilots a revocable right to use their private Bluffs III property for launch activities, subject to control by the owner, UPRR has granted no such permissions and requested the City submit information sufficient for it to consider pursuing a cease and desist order. See Attachment H for a copy of the Notice.

    - Pursuant to County Code Sec. 26-22. - Landing Aircraft, flights, landing or launching of any aircraft, including hang gliding or other flying apparatus,

on or within any county recreation area, is prohibited except in case of an emergency or with the prior written permission of the director of community services or deputy. County staff has provided written confirmation that this Code section prohibits soaring or free flight activities in County recreation areas, including above the portions of the proposed trail alignment and surrounding areas located within the Rincon Beach County Park (see Attachment I).

- Based on correspondence between staff and FAA officials, hang gliders, paragliders and similar flying apparatus are characterized by FAA as ultralight vehicles and are subject to FAR Part 103, Ultralight Regulation, which among other requirements stipulates that:

    - 103.9(a). Hazardous operations. *No person may operate any ultralight vehicle in a manner that creates a hazard to other persons or property*; and
    - 103.15, Operations over congested areas. *No person may operate an ultralight vehicle over any congested area of a city, town, or settlement, or over any open air assembly of persons.*

  FAA officials also confirmed that ultralight vehicles are subject to the requirements of CFR Title 14 § 91.119 Minimum safe altitudes: General, which states:

    - (b) *Over congested areas. Over any congested area of a city, town, or settlement, or over any open air assembly of persons, an altitude of 1,000 feet above the highest obstacle within a horizontal radius of 2,000 feet of the aircraft*; and
    - (c) *Over other than congested areas. An altitude of 500 feet above the surface, except over open water or sparsely populated areas. In those cases, the aircraft may not be operated closer than 500 feet to any person, vessel, vehicle, or structure.*

The appellants have not provided substantial evidence to refute that these regulations do not apply to their free flight activities, or that they have authorization from the County and/or UPRR for launching/landing on their respective properties.[4]

4. Incomplete and Erroneous Analysis of Wind Flow Impacts. Numerous comments have been submitted by free flight pilots claiming that the proposed project would significantly degrade or entirely eliminate free flight activities in the project area. However, most commenters failed to provide any empirical data to demonstrate that the proposed project or Alternative 3 would destroy free flight in the area.

[4] See staff's response to the appeals in Appendix H for further analysis.

Even the most complete response (from Mr. Dennis Pagen) to the objective, site-specific wind flow analysis commissioned by the City for the EIR, acknowledges that the analysis contained within the City's wind flow study is "reasonable and accurate, except for a few caveats..." Mr. Pagen indicates some assumptions in the study that he believes should be adjusted to more accurately predict a change to the wind flow patterns from the project, but he neither identifies the manner to improve the assumptions, nor the outcome of conclusions of the analysis were other assumptions to be employed instead. Further, the City's wind flow consultant prepared a response letter to Mr. Pagen's letter, in which he refutes the arguments presented by Mr. Pagen. The soaring community has therefore not provided substantial evidence that the City's wind flow analysis is flawed, nor has the soaring community directly refuted the air flow analysis or EIR conclusions drawn from it.

5. Significance of Impacts to Soaring Activities. The EIR examines the proposed project's effects on the physical environment, including impacts to air quality and air flow (i.e., wind), and concluded such impacts would be less than significant. The appellant's assertion that the EIR must consider alterations to opportunities for free flight as a potential recreational impact is not supported by CEQA. The CEQA Guidelines do not designate "recreational activities," such as free flight activities, as part of the "environment." Rather, "environment" refers to "the physical conditions which exists within the area which will be affected by a proposed project, including land, air, water, minerals, flora, fauna, noise, or objects of historic or aesthetic significance." (Pub. Res. Code, § 21060.5; CEQA Guidelines, § 15360.) CEQA does not require an analysis of the proposed project's social or economic impacts on activities, like free flight, and such social impacts alone do not constitute substantial evidence that the project will have a potentially significant impact on the environment.[5] As such, impacts to recreational activities alone that do not result in a corresponding impact to the "environment" do not constitute a potentially significant environmental impact for the purposes of CEQA.[6]

   Notwithstanding the above, the EIR analyzed the potential severity of any reductions to horizontal or vertical wind speeds or uplift resulting from the proposed project to evaluate whether regrading would cause a significant impact on free flight above the trail alignment and on the environment. The City's environmental consultant commissioned an objective, site-specific analysis of

[5] *Preserve Poway v. City of Poway* (2016) 245 Cal.App.4th 560, 566, 579-580; *Chico Advocates for a Responsible Economy v. City of Chico* (2019) 40 Cal.App.5th 839 (reasoning that loss of convenience is merely an example of a social problem, and without an accompanying physical change to the environment, CEQA does not require its analysis); CEQA Guidelines, §§ 15064(e), 15064(f), 15131(a), 15384.

[6] *Save Our Access-San Gabriel Mountains v. Watershed Conservation Auth.* (2021) 68 Cal. App. 5th 8, 25, review denied (Dec. 15, 2021) ["Under CEQA, a project's social impacts need not be treated as significant impacts on the environment."; *Preserve Poway v. City of Poway* (2016) 245 Cal.App.4th 560, 566, 579-580; CEQA Guidelines, § 15064(e).

airflow patterns resulting from the project and the effects of those changes on free flight in the area. (Attachment C, Exhibit 3 EIR, Appendix I.) The City then used the analysis to evaluate the proposed project potential recreation impacts in accordance with CEQA in the Recreation Section and concluded that while the proposed landform modification could be expected to result in up to a 30% reduction in vertical wind speed above the affected ridge, said reduction would not eliminate or otherwise drastically alter wind or uplift conditions in the project area to the extent that it would constitute a significant impact on the environment.

Further, the EIR analyzed the potential severity of any reductions to horizontal or vertical wind speeds or uplift resulting from the proposed project, and for impacts on flora and fauna in the Biology Section. The EIR analysis concluded that the changes to airflow result in a less than significant impact to biological resources, including avian species and the Monarch butterfly.

6. Preference for Alternative 4. The appellants assert that Alternative 4 should have been selected as the "environmentally superior" alternative and that it has the least potential impacts on the environment compared to the proposed project or the other considered alternatives. However, staff finds that this statement is not supported by the analysis contained within the EIR.

   As part of this assertion, the appellant's suggest that the EIR must consider conceptual future improvements to the Rincon Beach County Park to compare Alternative 4 with the proposed project and Alternative 3. The analysis in the EIR is not obligated to consider speculative impacts of a possible future project to route a new trail through Rincon Beach County Park. Speculative future improvements to the County Park, which may include a trail extension, are not designed, planned or funded, nor are they required to be a part of the proposed project. Thus, these potential improvements are too speculative for meaningful analysis and comparison of the relative impacts of the proposed project (or Alternative 3) plus a hypothetical future trail extension project through the park, to the Alternative 4. Further, as summarized above in responses 4 and 5, the appellants have failed to demonstrate the basis for classifying impacts to soaring activities as a potentially significant impact under CEQA. Therefore, selecting an alternative alignment to avoid impacts to soaring activities is not required by CEQA.

   The appellants' concerns with the safety of terminating the trail into the Rincon Beach County Park has been addressed in response 2, above. Given this arrangement does not pose a potentially significant safety hazard or transportation impact, there is no compelling safety reason to route the trail to avoid the County Park by locating it adjacent to U.S. Highway 101. Further, such an alignment would not meet the intent of the proposed trail or best serve the wide range of expected trail users.

The proposed trail is not intended to be solely a cyclist trail connecting cyclists from Carpinteria Avenue to the Pacific Coast Bikeway. Rather, the proposed trail is envisioned as a multi-use trail that will benefit multiple user groups, including pedestrians, beach goers, park visitors, and walkers/hikers, *in addition to* cyclists. By routing the trail on the ocean side of the ridge, as currently proposed, the trail presents a safe, attractive, convenient and pleasant alternative to the public's current practices of trespassing through the UPRR rail corridor and/or using the unprotected shoulder of U.S. Highway 101 to travel between the Rincon area and the City of Carpinteria. A new trail routed along U.S. Highway 101 may better serve dedicated cyclists, but is unlikely to best fit the needs of the other expected trail user groups. Routing the trail on the coastal side of the ridge also meets the intent of the CCT, to place the trail as close to the coastline as feasible, affording highly scenic views of the Pacific Ocean, Santa Barbara Channel, the Carpinteria Bluffs and the Santa Ynez Mountains.

Staff has also prepared a comprehensive point-by-point response to all of the statements raised in the respective appeals. This comprehensive appeals response is included with this report as Attachment H.

For the reasons explained above, staff believes the filed appeals do not successfully demonstrate that the decision of the Planning Commission was not in accord with the purposes of the City's Zoning Code or that there was an error of discretion by the Planning Commission. (CMC § 14.78.040(3).) Therefore, staff recommends the Council deny the appeals, thereby upholding the Planning Commission's decision to accept and certify the project EIR and grant a CUP and CDP for the portion of the trail located in the City's jurisdiction.

POLICY CONSISTENCY

General Plan/Coastal Land Use Plan

Completion of the Rincon Trail achieves several key Circulation Element and Open Space/Recreation/Conservation Element objectives and policies of the City's General Plan/Coastal Land Use Plan that specifically call for improvement of alternative transportation infrastructure and enhanced public trail and coastal access opportunities, including specific references to a public trail connection between the City of Carpinteria and Ventura County. Relevant objectives and policies include, but are not limited to:

- **Objective C-6:** *Provide adequate safe railroad crossings and to effectuate community design of buffers that will attenuate rail-related noise.*

- **Policy C-8a:** *Integrate the development of bicycle routes and pedestrian pathways in additional areas of the city, and encourage the utilization of such routes for commuting as well as recreational purposes.*

- **Policy C-8h:** *Encourage a bike trail link from Carpinteria to Summerland along the railroad right of way and a coastal link to Ventura paralleling U.S. 101.*

- **Policy OSC-14a:** *Increase coastal and recreational access for all segments of the population, including the disabled and elderly, while protecting natural resources, particularly environmentally sensitive habitat areas.*

- **Objective OSC-15:** *Maintain the existing trail system and provide additional recreation and access opportunities by expanding the trail system.*

- **OSC-15-Implementation Policy 70:** *Continue the development of a coastline trail to extend from Carpinteria City Beach to Rincon Beach Park with vertical access points placed as frequently as possible to encourage public access.*

Likewise, the project has been designed to be consistent with all relevant resource protection policies of the City's General Plan/Coastal Land Use Plan. A comprehensive analysis of the project's consistency with all applicable General Plan/Coastal Land Use Plan objectives and policies is included in the January 18, 2022 Planning Commission staff report, which is included with this report as Attachment B.

Transportation Corridor Wetland Overlay District

Completion of the Rincon Trail would achieve one of the required development standards of the City's Transportation Corridor Wetland Overlay ("TCWO") District, which was adopted specifically to accommodate the projects associated with the US Highway 101 widening and interchanges reconfiguration projects currently underway. Completion of two regionally important alternative transportation projects (Rincon Trail; and Santa Claus Lane Trail) are required as a "balancing" provision to offset unavoidable coastal resource impacts to wetlands and prime agricultural soils resulting from the US Highway 101 widening projects in the Carpinteria area.

Completion of the Rincon Trail also is a condition of approval for the City's approval of the Linden Avenue and Casitas Pass Interchanges and Via Real Extension Project (No. 09-1522-CUP/CDP) and Local Coastal Plan Amendment (LCP-4-CPN—15-0018-1), which was required as a balancing provision to offset unavoidable wetland impacts through completion of two regionally important alternative transportation projects to increase access to coastal resources for the public. The Linden Avenue and Casitas Pass Interchanges and Via Real Extension Project was conditioned to require completion of the Rincon Trail prior to completion of the interchanges reconfiguration work. While the timing requirement will not be met due to unforeseen delays resulting from project redesign, the intent of the required condition would be achieved by completion of the Rincon Trail project.

California Coastal Trail

The California Coastal Trail ("CCT") is "*an interconnected public trail system being developed along the California coastline that will span over 1,230 miles from Oregon to Mexico*." The CCT is "*designed to make the coast more accessible, foster appreciation and stewardship of the scenic and natural resources of the coast, provide recreational opportunities, and encourage non-motorized transportation. The CCT is developed as close to the ocean as possible, and where feasible, within sight, sound, and smell of the ocean.*"[7]

In Carpinteria, portions of the primary CCT route are in place through the Carpinteria Bluffs area and again from Rincon Beach County Park to points south. The proposed Rincon Trail (along with the separate Rincon Bluffs Preserve trail network project currently in the planning stage) would fill in a critical missing gap in the local segment of the CCT. The proposed trail alignment and design has been developed in a manner that is consistent with the vision for the CCT as articulated in Senate Bill 908.

FINANCIAL CONSIDERATIONS

Appeals Process

Due to the project's location within the CA Overlay District, no appeal fees are required to accompany the filing of an appeal. As such, all staff and consultant time spent preparing for the appeal hearing is billed to the project. In this case, ultimate financial responsibility for delivering the project lies with Caltrans, with project funding administered on their behalf through the Santa Barbara County Association of Governments ("SBCAG").

Project Funding

Completion of the Rincon Trail project is a condition of approval required of Caltrans as part of the Linden Avenue and Casitas Pass Road Interchanges and Via Real Extension Project (Project 09-1522-CUP/CDP). SBCAG is responsible for administering the funds for the project on behalf of Caltrans as part of the larger suite of U.S. Highway 101 improvements underway in the region. SBCAG is the recipient of an Active Transportation Program ("ATP") grant that was intended to pay for design, permitting and construction of the project. However, delays due to the need for a project redesign and related permitting/environmental review revisions have threatened the ability to deliver the project within the timeframe allotted by the ATP grant. Potential for additional delays related to appeals further reduce the likelihood of having a construction-ready project by the grant deadline. Significant increases in materials and construction costs have also far exceeded the awarded grant amount, necessitating the sourcing of additional funding for construction.

[7] California Coastal Conservancy (2022) *California Coastal Trail.* Retrieved March 22, 2022 from www.scc.ca.gov/projects/California-coastal-trail/

In light of the uncertainty to deliver the project on time and estimated cost overruns, the SBCAG Board voted at their January 20, 2022 meeting to fund the remaining "pre-construction" work needed to advance the project to a state of "construction readiness" and defer action on the commitment of construction funding until all necessary permitting and environmental clearances have been completed. More than likely, this will mean Caltrans/SBCAG will need to fund construction costs from other sources, including pursuing grant funding in future ATP cycles or from other funding programs.

LEGAL AND RISK MANAGEMENT CONSIDERATIONS

Project opponents have made previous verbal and written threats of additional appeals and/or legal challenges if the City continues forward with certification of the EIR and approval of the CUP/CDP for the project as presently described. Subsequent appeals or legal challenges of the City Council's actions on the project would follow one, or more, of the following processes:

Coastal Appeals ("CA") Overlay District

The subject property is located in the appeals jurisdiction of the California Coastal Commission ("CCC") as shown on the CCC's "Post-LCP Certification and Permit and Appeal Jurisdiction" Map, and is therefore subject to the requirements of CMC § 14.48, CA Coastal Appeals Overlay District, and the appeals procedures outlined in CMC §14.78.050, Appeals to the Coastal Commission. For projects located in the CCC's appeals jurisdiction, the City's final local action shall be appealable to the CCC. Appeals may be filed by the applicant, an "aggrieved person," as defined in CMC § 14.08.020, or by any two members of the CCC. Appeals must be filed within the 10-working day appeal period, which commences following receipt by the CCC of notification of the City's final local action. The grounds of appeal for any development appealable under this section shall be limited to findings that the development is not in conformity with the City's certified Local Coastal Program ("LCP"). There is no required filing fee for appealing a final local action to the CCC.

If the project is appealed to, or by, the CCC, the City's final local action will be held in abeyance until the pending appeal has been resolved with the CCC. The CCC could find that the project raises no substantial issues, in which case, the appeal would not be heard at a public hearing, and the City's final local action would stand. If, on the other hand, the CCC finds there to be one or more substantive issues, based on inconsistencies with the City's certified LCP, the appeal would be scheduled for a future public hearing in front of the CCC. An action taken by the CCC as part of such an appeal hearing would supersede the City's final local action. In such a scenario, the CCC could require further changes to the proposed project description and/or mitigation measures that are found to be necessary in order to ensure consistency with the City's certified LCP and the California Coastal Act.

Environmental Impact Report Certification

Following certification of the EIR, the City must file a Notice of Determination ("NOD") with the County Clerk of the Board, accompanied by the required filing fees, within five days of project approval. The County Clerk must then publicly post the NOD within twenty-four hours of receipt. Posting the NOD starts a thirty-day statute of limitations period for parties intending to challenge the City's decision under CEQA.

County of Santa Barbara Permitting

Following certification of the EIR, the County of Santa Barbara, acting as a Responsible Agency under CEQA, must rely upon the certified EIR in the consideration of the required Development Plan, Conditional Use Permit, and Coastal Development Permit for the portion of the trail located in the County of Santa Barbara's jurisdiction. Similar to the City's permit process, a decision of the County Planning Commission on the subject project can be appealed to the County Board of Supervisors. Likewise, the final local action by the County can be appealed to the CCC.

OPTIONS

The Council can:

- Decide to deny the appeal, thereby affirming the Planning Commission's decision (staff's recommendation); or
- Decide to approve the appeal, thereby overturning the Planning Commission's decision; or
- Decide to conditionally approve the appeal, thereby modifying the Planning Commission's decision.

PRINCIPAL PARTIES EXPECTED AT MEETING

Karl Cameron, appellant
Santa Barbara Soaring Association ("SBSA") members, appellant
Stan Barankiewicz, legal counsel for SBSA
Helen O'Neill, appellant
Matt Roberts, Parks and Recreation Director, applicant
John Ilasin, Public Works Director, project manager
Jonathan Leech, Dudek, project environmental consultant
Fred Luna, SBCAG
David Emerson, Caltrans District 5
Jeffrey Lindgren, Santa Barbara County Parks Division

Resolution No. 6111

Rincon Trail Project Appeal
19-2015-CUP/CDP
City Council Hearing, March 28, 2022

RESOLUTION NO. 6111

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CARPINTERIA DENYING THE APPEALS OF THE PLANNING COMMISSION'S DECISION, AND AFFIRMING THE PLANNING COMMISSION'S ADOPTION AND CERTIFICATION OF THE ENVIRONMENTAL IMPACT REPORT PREPARED FOR THE RINCON TRAIL PROJECT; AND APPROVAL OF THE CONDITIONAL USE PERMIT AND COASTAL DEVELOPMENT PERMIT 19-2015-CUP/CDP TO ALLOW THE CONSTRUCTION OF THE 850-FOOT SEGMENT OF THE CLASS I MULTI-USE PATH LOCATED IN THE CITY OF CARPINTERIA

WHEREAS, in October 2015, the California Coastal Commission certified City of Carpinteria Local Coastal Plan Amendment (LCPA) LCP-4-CPN-15-0018-1 / City Project 09-1522-LCPA/ORD to establish the Transportation Corridor Wetland Overlay (TCWO) District, which required completion of the 2,800-foot class I multi-use path between the east end of the City of Carpinteria and Rincon Beach County Park ("Rincon Trail Project") as a condition of approval for the Linden Casitas Interchanges and Via Real Extension Project, as a balancing provision to offset unavoidable wetland impacts through completion of one of two regionally important improvements to alternative transportation modes for the purpose of increasing access to coastal resources for all members of the public; and

WHEREAS, the City of Carpinteria Planning Commission previously certified a Mitigated Negative Declaration (MND), and considered and approved a Conditional Use Permit and Coastal Development Permit for an earlier iteration of the Rincon Trail Project in May 2015; and

WHEREAS, in May 2017, the previously granted entitlements for the Rincon Trail Project expired due to failure to initiate construction within the allotted two-year timeframe from project approval because construction drawings and specifications were still in development; and

WHEREAS, a new application for a Conditional Use Permit and Coastal Development Permit filed by Matt Roberts, City of Carpinteria Parks and Recreation Department, was submitted to the City on October 17, 2019 to allow for the construction of the 850-foot segment of the Rincon Trail Project which runs through the City of Carpinteria; and

WHEREAS, the current application was subsequently deemed complete and accepted by the City as being consistent with the applicable submittal requirements on November 15, 2019; and

WHEREAS, the Planning Commission accepted and certified a Subsequent Mitigated Negative Declaration (SMND) for the project in January 2020; and

WHEREAS, the acceptance and certification of the SMND by the Planning Commission was appealed to the City Council, and while the appeal was never taken up by the City Council, in September 2020 the Council directed staff to proceed with the preparation of an Environmental Impact Report (EIR) in order to allow for a more in-depth analysis of key issue areas identified during consideration of the SMND; and

WHEREAS, in response to direction received from the City Council, and in accordance with the California Environmental Quality Act (CEQA), an EIR dated December 2021 was prepared for the Rincon Trail Project, and was noticed and subject to public review as required under CEQA; and

WHEREAS, the City of Carpinteria Architectural Review Board considered the proposed project at their October 28, 2021 meeting wherein the project was recommended for preliminary approval; and

WHEREAS, the Planning Commission conducted a public hearing on January 18, 2022 and reviewed and considered the application for the Conditional Use Permit and Coastal Development Permit and EIR, together with any comments received during the public review process and the entire administrative record (to that date), including supporting staff reports, exhibits and appendices prepared for the public review process; and

WHEREAS, the City of Carpinteria Planning Commission accepted and certified the EIR prepared for the Rincon Trail Project as having fulfilled all procedural and statutory requirements of CEQA; and approved the Conditional Use Permit and Coastal Development Permit for the project at their January 18, 2022 hearing; and

WHEREAS, three separate appeals of the Planning Commission's acceptance and certification of the EIR, and granting of the Conditional Use Permit and Coastal Development Permit to the City Council were filed with the City Clerk prior to the close of the 10-day appeal period; and

WHEREAS, the Community Development Director has provided public notice of the intent of the City Council to consider the appeals; and

WHEREAS, the City Council has reviewed and considered the application for the Conditional Use Permit and Coastal Development Permit and EIR, together with any comments received during the public review process and the

entire administrative record, including supporting staff reports, exhibits and appendices prepared for the public review process; and

WHEREAS, the City Council has conducted a public hearing and received evidence regarding the EIR and application for the Conditional Use Permit and Coastal Development Permit; and

WHEREAS, the City Council has reviewed the policies of the General Plan/Coastal Land Use Plan and the Zoning Code standards that are relevant to the Rincon Trail Project.

NOW THEREFORE, BE IT RESOLVED as follows:

SECTION 1. The foregoing recitals are true and correct and are incorporated herein by reference.

SECTION 2. The appeals filed by: 1) Karl Cameron; 2) Stan Barankiewicz of Orbach Huff & Henderson LLP, on behalf of the Santa Barbara Soaring Association ("SBSA"); and 3) Helen O'Neill are hereby denied; thereby affirming the Planning Commission's decisions to certify the EIR and to approve the Conditional Use Permit and Coastal Development Permit for the Rincon Trail Project, making the Findings outlined in Exhibit 1.

SECTION 3. The City Council affirms the Planning Commission's decision to accept the EIR prepared for the Rincon Trail Project and certify it as having satisfied the requirements of CEQA.

SECTION 4. As required by law, the City Council has noticed and held a public hearing and has reviewed and considered the EIR, together with any comments received during the public review process and the entire administrative records, including supporting staff reports, exhibits and appendices prepared for the public review process before the Architectural Board of Review, Environmental Review Committee, Planning Commission and the City Council.

SECTION 5. The City Council finds that the EIR reflects the City of Carpinteria's independent judgment and analysis.

SECTION 6. The City Council affirms the Planning Commission's selection of Alternative 3, Steeper Slopes/Reduced Earthwork Alternative, as the preferred project in the EIR.

SECTION 7. The Conditional Use Permit and Coastal Development Permit for the project shown in Exhibit 2 are approved subject to the conditions of approval set forth in Exhibit 3.

PASSED, APPROVED AND ADOPTED this 28th day of March 2022, by the following vote:

AYES: COUNCILMEMBER(S):

NOES: COUNCILMEMBER(S):

ABSENT: COUNCILMEMBER(S):

ABSTAIN COUNCILMEMBER(S):

_____
Mayor, City of Carpinteria

ATTEST:

_____
Brian C. Barrett, City Clerk
City of Carpinteria

I hereby certify that the foregoing Resolution was adopted at a regular meeting of the City Council of the City of Carpinteria held on March 28, 2022

_____
Brian C. Barrett, City Clerk
City of Carpinteria

APPROVED AS TO FORM:

Rincon Trail Project Appeal
19-2015-CUP/CDP
City Council Hearing, March 28, 2022

CITY COUNCIL HEARING
APPEAL OF PLANNING COMMISSION'S APPROVAL OF
THE RINCON TRAIL PROJECT
PROJECT 19-2015-CUP/CDP
MARCH 28, 2022

EXHIBIT 1: FINDINGS FOR APPROVAL

FINDINGS PURSUANT TO GOVERNMENT CODE, LOCAL COASTAL PLAN, GENERAL PLAN, AND TITLE 14 OF THE CARPINTERIA MUNICIPAL CODE

1.0 Administrative Findings

The City Council hereby incorporates by reference as though set forth in full all staff reports and attachments thereto presented to the City Council, City Planning Commission, City Environmental Review Committee, Architectural Review Board and all comments made or received either orally or in writing at the public hearings on this project and the associated Environmental Impact Report.

1.1 Procedures

Pursuant to the California Coastal Act, the Administrative Regulations of the California Coastal Commission and the City of Carpinteria's ("City") Local Coastal Program, the City Council finds that the process for public review of the subject Local Coastal Development Permit has been properly conducted as follows:

a. An application for a Conditional Use Permit and Coastal Development Permit was submitted on October 17, 2019, and deemed complete and accepted by the City as being consistent with the applicable submittal requirements on November 15, 2019. Said application and all related material have been available for public review at City offices since the date of submittal.

b. The project has been reviewed by the City's Architectural Review Board at a duly noticed public hearing which included, but is not limited to, mailed notice to all property owners within 300 feet of the subject property and residents within 100 feet of the property.

c. The proposed project was evaluated and found to conform to the applicable zone districts and to be consistent with the City's Coastal Land Use Plan, the Interpretive Guidelines of the California Coastal Commission and the California Coastal Act.

d. The project was reviewed and approved by the City's Planning Commission at a duly noticed public hearing which included, but is not limited to, mailed notice to all property owners within 300 feet of the subject property, residents within 100 feet of the property and publication in the local newspaper, the Coastal View News.

e. Three separate applications for an appeal of the Planning Commission's decision to approve the project were submitted on January 28, 2022 consistent with the applicable submittal requirements. Said applications and all related materials have been available for public review at City offices since the date of submittal.

f. The appeals of the Planning Commission's decision have been reviewed by the City Council at a duly noticed hearing which included, but is not limited to, mailed notice to all property owners within 300 feet and all occupants within 100 feet of the subject property and publication in the local newspaper, The Coastal View.

1.2 California Environmental Quality Act

California Environmental Quality Act ("CEQA") findings pursuant to CEQA (California Public Resources Code Sections 21081, 21081.6) and State CEQA Guidelines (Title 14 of the California Code of Regulations, Sections 15090, 15091, 15092, 15097):

a. The Environmental Impact Report ("EIR") dated December 2021 was presented to the City Council and all voting members of the City Council have reviewed and considered the EIR prior to approving this project. The EIR reflects the independent judgment of the City Council and is adequate for this proposed project.

b. The City Council finds and certifies that the EIR dated December 2021 constitutes a complete, accurate, adequate and good faith effort at full disclosure under CEQA. The City Council further finds and certifies that the EIR has been completed in compliance with CEQA.

c. The City Council selects Alternative 3, Steeper Slopes/Reduced Earthwork Alternative from among the Proposed Project and Alternatives 1-4 as the preferred project, finding that it meets the project objectives and results in the fewest and least severe impacts to the environment.

d. The documents and other materials which constitute the record of proceeding upon which this decision is based are in the custody of the City of Carpinteria City Clerk located at 5775 Carpinteria Ave, Carpinteria, CA.

e. Adoption of Environmental Reporting and Monitoring Program. The project description, and conditions of approval, with their corresponding permit monitoring requirements, are hereby adopted as the reporting and monitoring program for this project to ensure compliance during project implementation.

f. Pursuant to Section 21081(a) of the Public Resources Code and Section 15091(a)(1) of the State CEQA Guidelines, the City Council finds that design features incorporated as part of the project description and mitigation measures applied as conditions of project approval would result in the avoidance or reduction to insignificant levels of the following environmental impacts identified in the EIR.

These findings are supported by substantial evidence in the record, including the EIR dated December 2021, associated appendix materials, and the administrative record. The EIR identified the potential for Class II, significant but mitigable impacts in the areas of Aesthetics, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Tribal Cultural Resources, and Utilities and Service Systems.

i. Aesthetics: U.S. Highway 101 in the project area is identified as being eligible for scenic highway designation. Additionally, both City and County of Santa Barbara ("County") planning regulations reflect a high concern for protecting visual resources along U.S. Highway 101 in the project area, as well as protecting public views from the project area towards the ocean and mountains. The project would result in visual changes to the area, introducing new human-scale activity from trail users, as well as physical alteration of the area primarily associated with the removal of existing vegetation, earthwork and grading, the construction of the new bridge over the Union Pacific Railroad ("UPRR") crossing, and fencing and barriers along the proposed path alignment. Trail features have been designed to be visually subordinate to the setting, but due to the high scenic value of the area, potentially significant aesthetic impacts may result. Temporary construction activities, such as staging areas and clearing of vegetation, may also degrade the visual quality of the project area.

   With the incorporation of the following mitigation measures as project conditions of approval, all impacts would be reduced to a less than significant level. **Measure AES-1** requires the project to be reviewed and approved by both the City Architectural Review Board and the County Board of Architectural Review to ensure all project elements reflect quality design and are appropriate for their setting. **Measure BIO-5** requires the development and implementation of a Habitat Mitigation and Monitoring Plan, prepared by a qualified biologist, to mitigate for impacts to ESHA vegetation communities. The Plan may include in-kind on-site restoration of impacted areas, and enhancement/restoration of degraded or disturbed areas adjacent to the impacted areas. A total of 4.32 acres of impacts to ESHA vegetation communities will be required to be mitigated at replacement ratios ranging from 2:1 to 4:1, depending upon the habitat types impacted. To the extent feasible, restoration will occur onsite, and any additional mitigation required shall be carried out on areas within adjacent land controlled by the County or City.

ii. Biological Resources: Construction of the trail project would require removal of ESHA vegetation communities that provide potential habitat for two special status species: California legless lizard and San Diego desert woodrat. Construction activities could result in injury or mortality to these special status species, which would be potentially significant absent mitigation.

There are five native vegetation communities found in the project area that are considered to be ESHA by the City, County and California Department of Fish & Wildlife ("CDFW"), and that would suffer permanent impacts as a result of the proposed project: California Brittle Bush – Ashy Buckwheat Scrub Alliance: 0.42 acres; Quailbush Scrub Alliance: 1.73 acres; California Sagebrush – (Purple Sage) Scrub Alliance: 1.29 acres; Coyote Brush Scrub Alliance: 0.71 acres; Lemonade Berry Scrub Alliance: 0.17 acres. In total, 4.32 acres of ESHA vegetation communities would suffer permanent impacts resulting from the project.

A total of 22 species of native birds were detected on site, including several with the potential to nest there. Nests, eggs, and nestlings of all native birds are protected by the Migratory Bird Treaty Act and the California Fish and Game Code. Vegetation clearing and grading, if occurring during the nesting season, could have the potential to destroy nests, eggs and nestlings, in violation of these regulations. Therefore, impacts to nesting birds are potentially significant.

Potential project impacts associated with biological resources would be addressed through the following mitigation measures: **Measure BIO-1** requires an approved biologist to prepare and implement a worker education and awareness program (WEAP) to educate and make workers aware of sensitive habitats and species that may be encountered in the project area, and to inform workers of required actions that must be implemented to avoid or minimize impacts to sensitive species and habitats. **Measure BIO-2** requires the construction limits to be fenced with highly visible fencing to avoid inadvertent impacts to adjacent areas of ESHA vegetation communities, native vegetation, special-status species and common wildlife species. **Measures BIO-3** and **BIO-4** require pre-construction surveys and relocation efforts for California Legless Lizards and San Diego Woodrats located in the project area, prior to initiation of construction.

Measure BIO-5 requires the development and implementation of a Habitat Mitigation and Monitoring Plan, prepared by a qualified biologist, to mitigate for impacts to ESHA vegetation communities. The Plan may include in-kind on-site restoration of impacted areas, and enhancement/restoration of degraded or disturbed areas adjacent to the impacted areas. A total of 4.32 acres of impacts to ESHA vegetation communities will be required to be mitigated at replacement ratios ranging from 2:1 to 4:1, depending upon the habitat types impacted. To the extent feasible, restoration will occur onsite, and any additional mitigation required shall be carried out on areas within adjacent land controlled by the County or City. **Measure BIO-6** requires a qualified biologist to develop and implement a weed management plan during construction and during implementation of the habitat mitigation and monitoring plan required under Measure BIO-5, to control and prevent the spread of invasive weeds in the project area. **Measure BIO-7** requires a pre-

construction nesting bird survey to be completed within 30 days prior to any vegetation clearing, ground disturbance or use of noise-generating equipment that would occur during the nesting/breeding season of native birds potentially nesting in the project area. If active nests are found, then work would be postponed or halted in the affected area until the nest is vacated and juveniles have fledged. With the incorporation of these identified mitigation measures as project conditions of approval, all impacts would be reduced to a less than significant level.

iii. Cultural Resources: Previously recorded cultural resource sites are known to be present in and near the project area. There is the potential for subsurface intact or previously displaced cultural resources to be present and impacted during construction, which could result in a potentially significant effect to cultural resources.

Avoidance and minimization of cultural resource impacts would be addressed through the following measures: **Measure CR-1** requires development of protocols for practical adherence to Measures CR-2 and CR-3 (below), prior to and after ground disturbing construction activities, through the preparation and implementation of a Cultural Resource Treatment and Inadvertent Discovery Plan (CRTP) by a qualified archaeologist. **Measure CR-2** requires all personnel participating in tasks that may incur ground disturbance to be briefed by a qualified archaeologist about the archaeological sensitivity of the site, the types of cultural resources that could be encountered, and the procedures to follow in the event cultural resources or human remains are encountered.

Measure CR-3 requires a qualified archaeologist to be present to monitor initial grading and clearing activities until such time that it is determined that no additional cultural resources are located in the area, and to also monitor the installation of bridge pilings within intact soils and/or any soils deeper than 10 feet below current ground surface to ascertain that no additional cultural resources are present in the improvement area. **Measure CR-4** requires that construction activities be suspended and redirected to another area in the event cultural resources are encountered to allow the monitoring archaeologist to assess the nature, extent and significance of any discoveries and develop appropriate management recommendations for treatment of the discovered cultural resource(s). With the incorporation of the identified mitigation measures as project conditions of approval, all impacts would be reduced to a less than significant level.

iv. Geology and Soils: The project area is located in a geologically active area vulnerable to earthquakes and secondary impacts such as landslides and liquefaction. The project includes features, such as the manufactured slopes and bridge crossing over the UPRR corridor, which could be damaged by seismic ground shaking. The project entails earthwork and grading activities

to lay back and stabilize slopes in the project area in an effort to reduce potential erosion effects; nevertheless, erosion impacts could be worsened unless proper slope construction techniques are employed.

Potential project impacts associated with geology and soils would be addressed through the following measures: **Measures GEO-1** and **GEO-2** require the design of the bridge and bridge foundation to adhere to the recommendations contained in the project-specific geotechnical report. **Measure GEO-3** requires the design and construction of manufactured slopes to also adhere to the recommendations contained within the project-specific geotechnical report. With the incorporation of the identified mitigation measures as project conditions of approval and aspects of the project design, all impacts would be reduced to a less than significant level.

v. Hazards and Hazardous Materials: There is the potential for soils along the project alignment adjacent to the U.S. Highway 101 corridor to contain aerially deposited lead (ADL). Soils containing ADL could be used for fill soils for the project, potentially exposing the public to the contaminated soils. Construction activities and equipment use hydrocarbon fuels and lubricants which are considered hazardous materials. Concrete, paint and other surface coatings are also considered hazardous materials, and are anticipated to be used during construction. Spills or leaks of such materials into the storm drain system could pose potentially significant water quality hazards.

With the incorporation of the following identified mitigation measures as project conditions of approval, all impacts would be reduced to a less than significant level: **Measure HAZ-1** requires surface soils within the project alignment north of the UPRR corridor to be tested for potential ADL presence to determine if such soils meet applicable safety standards and can be used for fill or if standards are exceeded, the soils must be disposed of in a properly licensed landfill. **Measure WAT-2** requires the contractor to prepare and implement a Stormwater Pollution Prevention Plan that includes best management practices to be implemented and monitored prior to and during construction to minimize potential construction-related water quality impacts.

vi. Hydrology and Water Quality: Temporary construction activities may result in inadvertent water quality impacts related to soil, dust, paint and/or concrete entering the stormwater drainage system. There is increased potential for stormwater runoff and erosion during construction and until new/replacement vegetation is established. During the operational phase of the project, soil, trash, dog waste, and other impurities have the potential to enter the project's storm drainage systems and could result in potentially significant water quality impacts. Failure to properly maintain new/replaced storm drain infrastructure associated with the project could result in significant erosion of the bluff face.

Avoidance and minimization of hydrology and water quality impacts would be addressed and mitigated to less than significant levels through the following measures which have been incorporated into the project conditions of approval. **Measure WAT-1** requires the project to obtain and maintain coverage under a Construction General Permit from the State Water Resources Control Board. **Measure WAT-2** requires the contractor to prepare and implement a Stormwater Pollution Prevention Plan that includes best management practices to be implemented and monitored prior to and during construction to minimize potential construction-related water quality impacts. **Measure WAT-3** requires implementation of an Erosion and Sediment Control Plan utilizing best management practices throughout grading and construction activities.

Measure WAT-4 requires replanting of native vegetation and hydroseeding of slope areas with appropriate native seed mixes as soon as practicable following completion of trail construction, in order to provide long-term stabilization of soils disturbed during construction. **Measure WAT-5** requires ongoing periodic inspection and maintenance/repairs of all new and replaced storm water components on an annual basis prior to the start of the rainy season, to ensure all components are in good repair and not blocked by debris or sediment. **Measure WAT-6** requires all project area storm drain inlets to be outfitted with storm drain filters/inserts to minimize pollutants from impacting the ocean. Filters shall be cleaned at least twice a year, once immediately prior to November 1 (start of the rainy season) and once in January.

vii. Land Use and Planning: The City of Carpinteria's and County of Santa Barbara's respective Local Coastal Programs contain a number of policies and regulations concerning resource protection within the Coastal Zone. Project impacts to these resources could result in potentially significant land use and planning impacts unless properly mitigated. Incorporation of all of the mitigation measures identified in the EIR would reduce environmental impacts to less than significant levels, such that the proposed project would not conflict with any applicable land use plan, policy or regulation of an agency with jurisdiction over the project.

viii. Noise: Short-term, temporary noise impacts would occur during construction. Residences closest to the project site (i.e., residences located in the Rincon Point neighborhood) are the only sensitive receptors in the project area and could periodically be exposed to potentially significant noise impacts if not properly mitigated. Construction-related traffic, such as haul trucks, which may pass by the sensitive receptors causing intermittent noise impacts.

Avoidance and minimization of noise impacts would be addressed through the following measures which have been incorporated into the project conditions of approval. **Measure NOI-1** would limit construction hours for the

project to the hours between 8:00 a.m. and 5:00 p.m., Monday through Friday. No construction is permitted to occur on weekends or state holidays. Construction maintenance shall be limited to the same hours. Non-noise generating construction activities would be exempt from these restrictions. **Measure NOI-2** requires all construction equipment with engines to have original manufacturer's approved muffling devices, and all stationary equipment be physically buffered from nearby sensitive receptors.

ix. Tribal Cultural Resources: No known tribal cultural resources listed in the California Register of Historical Resources or in a local register of historical resources are known to be present within the project site. Nevertheless, given the known presence of sensitive archaeological resources in the general vicinity, there is potential for unknown subsurface tribal cultural resources to be present and to be impacted during construction, resulting in potentially significant impacts to tribal cultural resources.

Measure TCR-1 requires initial ground disturbing activities to be monitored by a Native American observer. The monitor/observer shall immediately inform equipment operators in the event archaeological resources are encountered, and shall be empowered to immediately halt construction activity in the area of the discovery until assessment can be completed and materials recovered, as appropriate. Measure TCR-1 in coordination with **Measures CR-1** through **CR-4**, previously described above, would reduce potentially significant impacts to unknown tribal cultural resources to a less than significant level, and have been incorporated into the project conditions of approval.

x. Utilities and Service Systems: The project would moderately alter existing drainage patterns in the project area through re-grading of project slopes, short-term removal of vegetation, and introduction of the new impervious trail surface (approximately one acre of new impervious surface), resulting in potentially significant impacts to water quality. New storm drainage infrastructure associated with the project could pose potentially significant erosion impacts if not properly maintained to avoid failure of said infrastructure. Previously identified **Measures WAT-1** through **WAT-5** would address and reduce potentially significant temporary construction-related water quality impacts and storm drainage infrastructure impacts to less than significant levels, and have been incorporated into the project conditions of approval.

1.3 Conditional Use Permit Findings

Pursuant to Carpinteria Municipal Code §14.62.040(8), the City Council shall determine that all of the following criteria have been met prior to approving or approving with conditions a Conditional Use Permit:

a. *The site for the proposed use is adequate in size and shape to accommodate the use.*

The portion of the Rincon Trail project located in the jurisdiction of the City of Carpinteria would fit entirely within the existing Caltrans right-of-way for U.S. Highway 101 and City of Carpinteria right-of-way near the eastern terminus of Carpinteria Avenue. A portion of the Caltrans right-of-way located just east of the City-County boundary would be conveyed to the City of Carpinteria as part of the project in order to facilitate the City's ongoing ownership and responsibility for this portion of the trail. A temporary construction easement may need to be acquired from the property owner of the easternmost parcel on Carpinteria Avenue (APN 001-210-016) to facilitate access to, and construction of the new trail alignment. The western trailhead would be located in an existing unimproved shoulder of Carpinteria Avenue, adjacent to the Rincon Road/State Highway 150 intersection. Informal trailhead parking would be available via on-street parallel parking near the cul-de-sac at the end of Carpinteria Avenue and in the remaining portion of the unimproved shoulder.

Use of off-site areas for mitigation of projected permanent biological resources impacts is anticipated to be necessary to meet specified regulatory replacement ratios for loss of sensitive vegetation communities along the trail alignment. The adjacent Rincon Bluffs Preserve and natural areas of the Rincon Beach County Park have been preliminarily identified as the preferred receiver site for offsite compensatory mitigation for native vegetation impacts that cannot be accommodated onsite due to site area constraints. Final site selections for any proposed offsite compensatory mitigation efforts will be included in the required Habitat Mitigation and Monitoring Plan for the project.

b. *The site for the proposed use is served by streets and highways that are properly designed to carry the type and quantity of traffic generated by the subject use.*

This project is designed to improve bicycle and pedestrian travel by providing a dedicated class-I direct coastal route between the eastern terminus of Carpinteria Avenue in the City of Carpinteria and public recreational facilities located southeast of the City in unincorporated Santa Barbara and Ventura Counties (i.e., Rincon Beach County Park; Rincon Point State Beach; and Pacific Coast Bikeway). The project would provide a safer and legal alternative to the current use of the unprotected U.S. Highway 101 shoulder and/or informal trails that trespass through the UPRR corridor to connect the City of Carpinteria to points southward for cyclists and pedestrians. The trail project would fill in this existing gap in the California Coastal Trail ("CCT") system, consistent with the circulation and bikeway systems outlined in the County of Santa Barbara's Comprehensive Plan, the City of Carpinteria's General Plan/Coastal Land Use Plan, the statewide CCT Map, and the Plan for Improved Agency Partnering (Caltrans and California Coastal Commission, 2016). The project would enhance and improve coastal access and alternative

transportation opportunities for bicycles and pedestrians, consistent with local coastal policies and plans.

The project would have no long-term substantive impact on the capacity of roadways in the project area. Completion of the bike path is anticipated to result in an incremental reduction of vehicle trips to access nearby popular coastal recreation destinations. Existing roadways and public parking areas at the trail ends have sufficient capacity to serve any trail-related vehicle traffic.

Temporary construction-related traffic has been estimated in the project EIR and found to be less than significant. Haul trucks used to export cut from the project site on the City's portion of the trail would utilize U.S. Highway 101 and the State Highway 150 interchange to access the site. The EIR estimates up to three haul truck trips per hour over an eight-hour work day during the earthwork phase of construction. Given the low frequency of haul truck trips and immediate proximity of highway access, haul truck trips are not anticipated to result in any significant disruptions to traffic circulation or capacity.

c. *The granting of the permit will not materially adversely affect such necessary community services as sewage disposal, fire protection, water supply, and police protection.*

A copy of the project application and plans were routed to all applicable agencies and special districts for review and comments. All of these agencies have indicated the project would not have adverse effects upon their ability to continue to serve the population of Carpinteria. The project would enhance public coastal access and opportunities for alternative transportation in the Carpinteria area, providing a benefit to the community. The project would not generate wastewater needing treatment, and would not generate a noticeable increase in demand for fire or police protection services. A negligible amount of water would be required during construction and to establish/maintain the new landscape plantings.

The City's portion of the trail project will tie into and be served by existing storm drain infrastructure that serves U.S. Highway 101, which has sufficient capacity to take on the added storm water flows generated by the new impervious surfaces affiliated with the trail project north of the UPRR crossing (estimated at approximately 0.5 acres). Mitigation Measures WAT-1 through WAT-4 address erosion and sedimentation control during construction to avoid water quality impacts and to not damage or overwhelm existing storm drain infrastructure. Mitigation Measure WAT-5 requires ongoing monitoring and upkeep of project-related storm drain infrastructure to avoid failure or damages.

An existing 4-inch sewer force main is located in the project area, near the proposed trail alignment for the section of trail north of the UPRR crossing. The sewer force main would be protected in place during construction. An abandoned underground oil pipeline passes underneath the trail alignment near the western

trailhead located in the City of Carpinteria. The pipeline would be protected in place. Other utilities near the project area, but not within the project footprint include a water main line and underground communication lines, neither of which would be impacted by construction of the City's portion of the trail.

d. *The granting of the permit will not be detrimental to the health, safety, and general welfare of the neighborhood.*

The Rincon Trail project establishes a new dedicated public Class I bicycle and pedestrian trail between the City of Carpinteria and recreational amenities (i.e., public beaches, park and bicycle path) located south of the City in unincorporated Santa Barbara and Ventura Counties. The project results in beneficial recreational, coastal access, and alternative transportation impacts for the region.

The EIR prepared for the project analyzed potentially significant environmental effects associated with the project and identified appropriate mitigation measures to ensure that all impacts were mitigated to a less than significant level. Mitigation measures were identified for the following issue areas: Aesthetics, Biological Resources, Cultural Resources, Geology/Soils, Hazards/Hazardous Materials, Hydrology/Water Quality, Land Use/Planning, Noise, Tribal Cultural Resources, and Utilities/Service Systems. In addition, compliance with Santa Barbara County Air Pollution Control District ("APCD") standards is required to ensure that impacts to Air Quality, and Greenhouse Gas Emissions are minimized and remain less than significant. The mitigation measures incorporated into the project via the EIR and the project restrictions imposed via conditions of approval ensure that granting the permit will not be detrimental to the health, safety and welfare of the neighborhoods located nearby to project components.

e. *The proposed use is consistent with the coastal plan, general plans, and applicable specific plan(s).*

As discussed in the policy consistency section of the City Council staff report dated March 28, 2022 and the Planning Commission staff report dated January 18, 2022, and herein both incorporated by reference, the project would be consistent with the various applicable policies from the Land Use, Community Design, Circulation, Open Space/Conservation/Recreation, Safety, Noise, and Public Facilities/ Services Elements. The project would fill in an existing gap in the California Coastal Trail ("CCT"), thereby improving public coastal access and alternative transportation opportunities in the project area. The trail and its design elements have been reviewed by the City's Architectural Review Board ("ARB") for consistency with applicable design policies and found to conform. The project incorporates appropriate mitigation measures, consistent with the requirements of the City's General Plan/Coastal Land Use Plan and Zoning Code to address all unavoidable impacts to ESHA and sensitive species, and other appropriate measures and standards are included to avoid potential impacts related to aesthetics, cultural resources, geology/soils, hazards/hazardous materials, hydrology/water quality,

noise, tribal cultural resources, and utilities and service systems, consistent with the policies of the City's General Plan/Coastal Land Use Plan.

f. *The proposed use will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.*

The EIR prepared for the project identified potentially significant impacts on aesthetics, biological resources, cultural resources, geology/soils, hazards/hazardous materials, hydrology/water quality, land use/planning, noise, and utilities/service systems; the EIR also identified standard Santa Barbara County Air Pollution Control District ("APCD") measures that the project is required to implement to ensure impacts to air quality, and greenhouse gas emissions are minimized and remain less than significant. The EIR contains mitigation measures to reduce all environmental impacts of the proposal to less than significant levels; pertinent mitigation measures from the EIR have been incorporated as conditions of approval.

The project has also been designed to minimize land form modification, and impacts to ESHA, cultural resources and water quality, avoid or reduce exposure to geologic hazards and hazardous materials, avoid disruptions to public utilities, and be aesthetically compatible with the project setting, as required by the resource protection policies of the City's General Plan/Coastal Land Use Plan.

g. *The proposed development will not conflict with recorded easements acquired by the public-at-large for access through or use of the property within the proposed development or any easements granted to any public agency or required as a condition of approval.*

The proposed project would not interfere with any recorded easements acquired by the public-at-large for access through, or use of, the project area. Rather, the proposed project involves the construction of a new public multi-use pathway within existing public right-of-way between the east end of the City of Carpinteria and the unincorporated areas near the Santa Barbara/Ventura County line to facilitate improved public coastal access, recreation and alternative transportation opportunities in the area. In this regard, the project enhances public access along the Carpinteria coastline and between areas located in the City of Carpinteria and those in the unincorporated Rincon Point area.

A portion of the Caltrans right-of-way located just east of the City-County boundary would be dedicated and transferred to the City of Carpinteria as part of the project in order to facilitate the City's ongoing ownership and responsibility for this portion of the trail. A temporary construction easement may need to be acquired from the property owner of the easternmost parcel on Carpinteria Avenue (APN 001-210-016) to facilitate access to, and construction of the new trail alignment. The proposed project is not known to conflict with any easements granted to any public

agency. Maintenance access for Caltrans and UPRR through the project area will be maintained/provided, as needed.

h. *Any other conditions which are reasonably necessary to protect the public peace, health, safety, and general welfare.*

Through the environmental review process, a number of mitigation measures have been developed in order to avoid significant impacts to the environment. All mitigation measures identified in the EIR have been included in the conditions of approval and are fully enforceable. Additional project-specific conditions of approval have been included to address traffic management during construction, property owner/neighbor outreach, and ongoing maintenance responsibilities for the trail improvements.

1.4 Coastal Development Permit Finding

Pursuant to the California Coastal Act, the Administrative Regulations of the California Coastal Commission and the City's Local Coastal Program, it has been found that the permit requested may be issued based on the following finding:

a. *The proposed development is in conformity with the City's certified Local Coastal Program.*

The Caltrans right-of-way is designated Transportation Corridor (TC) in the General Plan/Coastal Land Use Plan and is undesignated with respect to zoning. The portion of the project located on Carpinteria Avenue is designed Visitor-serving Commercial (VC) in the General Plan/Coastal Land Use Plan and is zoned Resort District (RES). The proposed use is consistent with the stipulations outlined for these land use designations as the project involves improvements to pedestrian and bicyclist facilities, which are permissible in all land use categories and zoning districts. A Conditional Use Permit and Coastal Development Permit are required for this major transportation facility. The project can meet all of the required findings for approval of the required CUP (discussed above) and CDP. The proposed project is consistent with all applicable policies in the General Plan/Coastal Land Use Plan as discussed in the City Council staff report dated March 28, 2022, and the Planning Commission staff report dated January 18, 2022, both of which are herein incorporated by reference. The project is also consistent with the Interpretive Guidelines of the California Coastal Commission and the California Coastal Act.

f:\pdata\0_active projects\carp rincon trail\production drawings\carp-rincon-title sheet.dwg BY: Michael Bandich

1. THE PROPOSED GRADE SEPARATION PROJECT SHALL NOT INCREASE THE QUANTITY AND/OR CHARACTERISTICS OF THE FLOW IN THE RAILROAD'S DITCHES AND/OR DRAINAGE STRUCTURES.

2. THE ELEVATION OF THE EXISTING TOP-OF-RAIL PROFILE SHALL BE VERIFIED BEFORE BEGINNING CONSTRUCTION. ALL DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE RAILROAD PRIOR TO CONSTRUCTION.

3. THE CONTRACTOR MUST SUBMIT A PROPOSED METHOD OF EROSION AND SEDIMENT CONTROL AND HAVE THE METHOD APPROVED BY THE RAILROAD.

4. . ALL SHORING SYSTEMS THAT IMPACT THE RAILROAD'S OPERATIONS AND/OR SUPPORTS THE RAILROAD'S EMBANKMENT SHALL BE DESIGNED AND CONSTRUCTED PER CURRENT RAILROAD GUIDELINES FOR TEMPORARY SHORING.

5. ALL DEMOLITIONS WITHIN THE RAILROAD'S RIGHT-OF-WAY AND/OR DEMOLITION THAT MAY IMPACT THE RAILROAD'S TRACKS OR OPERATIONS SHALL BE IN COMPLIANCE WITH THE RAILROAD'S DEMOLITION GUIDELINES.

6. ERECTION OVER THE RAILROAD'S RIGHT-OF-WAY SHALL BE DESIGNED TO CAUSE NO INTERRUPTION TO THE RAILROAD'S OPERATION, ENABLING THE TRACK(S) TO REMAIN OPEN TO TRAFFIC PER THE RAILROAD'S REQUIREMENTS.

7. RAILROAD REQUIREMENTS DO NOT ALLOW WORK WITHIN 50 FEET OF TRACK CENTERLINE WHEN A TRAIN PASSES THE WORK SITE AND ALL PERSONNEL MUST CLEAR THE AREA WITHIN 25 FEET OF THE TRACK CENTERLINE AND SECURE ALL EQUIPMENT.

8. FALSE-WORK CLEARANCES SHALL COMPLY WITH MINIMUM CONSTRUCTION CLEARANCES.

9. ALL PERMANENT CLEARANCES SHALL BE VERIFIED BEFORE PROJECT CLOSING.

10. FOR RAILROAD COORDINATION PLEASE REFER TO THE RAILROAD MINIMUM REQUIREMENTS AS PART OF SPECIAL PROVISIONS.

NOTES:

1. STRUCTURAL SECTION FOR PATH AND GUTTER IS:
   0.42' JPCP
   0.5' AB (CLASS 2)
2. DIMENSIONS OF THE STRUCTURAL SECTION ARE SUBJECT TO TOLERANCES SPECIFIED IN THE STANDARD SPECIFICATIONS.
3. SUPERELEVATION AS SHOWN OR AS DIRECTED BY ENGINEER. ALSO SEE PROFILE SHEETS.
4. CHEVRON/VENOCO OIL PIPELINE IS SHOWN 9-FEET BELOW THE ORIGINAL GROUND, BASED ON OBSERVATION NOTES DURING CONSTRUCTION. ACTUAL DEPTH MAY VARY.
5. A SEWER "FORCE MAIN" EXISTS ALONG THE SOUTH BOUND LANE OF HWY 101. RECORD DRAWINGS SHOW THE DEPTH OF THIS SEWER TO BE HIGHLY VARIABLE.
6. CALTRANS ELECTRIC LIGHTING CONDUIT IS NOT SHOWN. THIS EXISTS ALONG SHOULDER OF THE SOUTHBOUND 101 LANES.
7. REGARDING THE TERM "MAX" WHEN REFERRING TO SLOPES, SOME CUT SLOPES ARE BUILT BETWEEN DIFFERENT ALIGNMENTS EACH WITH THEIR OWN PROFILE. THE ENGINEERS HAVE SET THESE ALIGNMENTS TO ACCOMMODATE THE CUT SLOPES SHOWN. THE TERM "MAX" INDICATES THE MAXIMUM VARIABLE SLOPE CREATED BY THE GRADING BETWEEN THESE ALIGNMENTS
8. SLOPE ROUNDING IS NOT SHOWN. SEE SPECIAL PROVISIONS FOR ADDITIONAL INFORMATION.
9. SEE FENCING PLAN FOR FENCE LAYOUT.

f:\pdata\0_active projects\carp rincon trail\production drawings\crt-drainage.dwg BY: Michael Bandich

NOTES:

1. THESE PLANS ARE APPROVED FOR THE LAYOUT AND CONSTRUCTION OF THE DRAINAGE FACILITIES ONLY.
2. EXISTING DRAINAGE SYSTEMS ARE NAMED ACCORDING TO THE 1968 CALTRANS DRAINAGE PLANS (SEE RECORD DRAWINGS).
3. SOIL REINFORCEMENT, WHERE IT WILL BE PLACED, IS NOT SHOWN ON THE DRAINAGE PROFILES
4. PIPES IN PROFILE VIEW ARE EXTENDED TO CENTER OF STRUCTURE & LENGTHS OF PIPES ARE ROUNDED UP TO NEAREST 2' FOR MEASUREMENT. PIPES WILL BE TRIMMED PER STANDARD PLANS.
5. PIPE ELBOWS ARE USED WHERE STORM DRAIN CHANGES VERTICAL ANGLE AND ARE INCLUDED IN THE LENGTH.
6. JOINT RESTRAINERS ARE: (SEE CALTRANS STD PLANS FOR DETAIL)
   - 6.1. TYPE A - AT MID-POINT OF PIPE
   - 6.2. TYPE B - AT PIPE JOINT
7. STRUCTURE HEIGHT (H) IS MEASURED FROM TOP OF BOTTOM SLAB TO THE NORMAL GUTTER GRADE LINE UNDEPRESSED AT THE CURB FACE.
8. DEPTH & LOCATION OF COMMUNICATION LINE ON OLD BENCH IS NOT KNOWN. POTHOLE BEFORE PROCEEDING. SEE RIGHT-OF WAY AGREEMENTS IN CITY OFFICES FOR MORE INFORMATION.

f:\pdata\0_active projects\carp rincon trail\production drawings\carp-pavement delineations.dwg BY: Michael Bandich

GENERAL UTILITY NOTES:

1. 10-INCH OIL PIPELINE (FORMALLY VENOCO--NOW CHEVRON) - BELIEVED TO BE "ABANDONED".

LOCATION / ALIGNMENT

- THIS LINE GENERALLY FOLLOWS THE CALTRANS RIGHT-OF-WAY (OUTSIDE OF STATE RIGHT OF WAY), TRAVELING FROM FWY 150, TOWARD THE "WAVE OVERHEAD" WHERE IT DESCENDS TO THE UPRR, THEN TRAVELS EASTWARD.

DEPTH

- DEPTH OF PIPELINE IS UNKNOWN.

PROJECT WILL

- EXCAVATE NEAR/OVER THIS PIPELINE IN LOCATIONS.
- EXCAVATIONS MAY EXPOSE OR "CUT" THIS LINE.
- DESIGNERS HAVE BEEN TOLD THAT THIS LINE IS "FULL OF WATER"

REFERENCE INFORMATION:

- CALTRANS RECORD DRAWINGS FOR CONSTRUCTION ON STATE HIGHWAY, CONTRACT 07-260704, PROJECT 0700000490, PAGE 205/757 (SHEET U-16).
- VENOCO RECORD DRAWING S2656-A-101 "PAREDON PROJECT: EXISTING 10-INCH PIPELINE ALIGNMENT". THIS DRAWING IS PAGE C-23 OF THE "PROPOSED FINAL EIR".
- BENGAL HAS ATTEMPTED TO FIND MORE DATA, BUT WITH THE BANKRUPTCY OF VENOCO WE WERE UNABLE TO REACH STAFF FROM BEACON WEST WITH BETTER INFORMATION.

2. 6-INCH WATER PIPELINE: LATERAL 27-R-F: CARPINTERIA VALLEY WATER DISTRICT:
"ABANDONED".

LOCATION / ALIGNMENT

- THIS LINE ONCE CROSSED HWY 150 FROM CARPINTERIA AVE TO CAMINO CARRETA, EAST OF HWY 150

DEPTH

- UNKNOWN.

PROJECT WILL

- EXCAVATE THROUGH THE LOCATION OF OLD WATERLINE.

REFERENCE INFORMATION:

- CVWD ATLAS MAPS PROVIDED IN APRIL, 2016, NAME THIS AS "ABANDONED LINE; LATERAL 27-R-F."
- PIPELINE IS SHOWN AS "ABANDONED" ON THE DRAWINGS FOR THE CONSTRUCTION ON STATE HIGHWAY, CONTRACT 07-260704, PROJECT 0700000490, PAGE 205/757 (SHEET U-16).

3. 4-INCH PRESSURE SEWER: CARPINTERIA SANITARY DISTRICT (CSD) "SEPTIC TO SEWER CONVERSION PROJECT"

LOCATION / ALIGNMENT

- THIS LINE CONNECTS A GRAVITY SEWER, DRAINING WEST FROM THE INTERSECTION OF HWY 150/CARPINTERIA AVE., WITH A PRESSURE SEWER LINE FROM A PUMPING PLANT IN RINCON COUNTY PARK. THE LINE GENERALLY FOLLOWS THE SOUTHBOUND SIDE OF THE FREEWAY, AND I LOCATED ABOUT 5-FEET BEHIND THE DIKE / EDGE OF SHOULDER.

DEPTH

- THE PIPELINE IS SHOWN TO GENERALLY BE ABOUT 8-FEET DEEP, EXCEPT AT "WAVE OVERHEAD", WHERE IT BECOMES SHALLOWER TO CROSS UPRR. RECORD DRAWINGS SHOW AS-BUILT DEPTHS WHICH VARY GREATLY.

PROJECT WILL

- CROSS THIS PIPELINE IN VARIOUS LOCATIONS.

REFERENCE INFORMATION

- PIPELINE IS SHOWN ON CSD DRAWINGS 15-1-5 THROUGH 15-1-7: DESIGNED BY PENFIELD AND SMITH FOR THE "SEPTIC TO SEWER CONVERSION PROJECT".

4. FRONTIER COMMUNICATION LINE (ON OLD RAILROAD BENCH--LEADING TO RINCON PARK)

LOCATION / ALIGNMENT

- BECAUSE OF THE LIMITED DATA PROVIDED ON THE ATLAS DRAWINGS WE ARE UNSURE OF THE LOCATION OF THIS LINE.
- ACCORDING TO THE ATLAS MAPS, A FRONTIER FACILITY NAMED "CRPRCAXF" LINE FOLLOWS THE AT&T LINE FROM CARPINTERIA AVE, CROSS COUNTRY TO THE UPRR, WHERE IT FOLLOWS THE ACTIVE UPRR CORRIDOR TO THE EAST.
- BUT IN JANUARY, 2019 FRONTIER MARKED A FIBER OPTIC LINE ON THE OLD RAILROAD BENCH, LEADING TO RINCON COUNTY PARK, WE COULD SEE BOTH THE CONDUIT AND THE MANHOLES ALONG THE OLD BENCH, BUT WE ARE UNSURE IF THE EXISTING FRONTIER FACILITY WHICH TRAVELS WESTWARD FROM RINCON PARK IS THE SAME LINE AS "CRPRCAXF" SHOWN ON THE ATLAS MAPS.

DEPTH

- ALONG THE OLD RAILROAD BENCH, THE LINE IS VISIBLE AT SOME LOCATIONS: AT THESE LOCATIONS IT APPEARS TO BE ABOUT 4-FEET DEEP.

PROJECT WILL:

- CONSTRUCT EMBANKMENTS ON TOP OF IT.
- CONSTRUCT NUMEROUS STORM DRAINS UNDER THIS LINE.
- CONSTRUCT A SOIL RETAINING STRUCTURE BELOW IT AT ABOUT STATION 31+00.
- CONSTRUCT A SLOPE BELOW IT AT ABOUT STATION 36+50.

DESIGNERS NOTE:

- THE LANDMASS AROUND THIS EXISTING FACILITY IS FAILING IN SOME LOCATIONS. THIS IS THE REASON DESIGNERS PROPOSE TO BUILD THE RETAINING WALLS AND SLOPE REPAIRS TO SUPPORT THE RINCON TRAIL. THIS SLOPE INSTABILITY IS LIKELY ONE REASON THE RAILROAD WAS MOVED IN THE 1960'S.
- THE OLD "WOOD SUPPORT STRUCTURE" WHICH WAS BUILT TO SUPPORT THIS FACILITY APPEARS TO BE FAILING AT ABOUT STATION 31+00.
- THE CONDUIT IS VISIBLE IN SOME LOCATIONS BECAUSE THE LANDMASS BELOW IT HAS SLID AWAY.
- AFTER THE RINCON TRAIL IS CONSTRUCTED, ACCESS TO THIS FACILITY WILL BE MORE DIFFICULT.
- PERHAPS FRONTIER WOULD LIKE TO RELOCATE A PORTION OF THIS LINE TO FOLLOW THE RINCON TRAIL.

REFERENCE INFORMATION

- "FRONTIER UG UTILITY ATLAS MAP" (NOT MUCH DETAIL SHOWN) PROVIDED TO BENGAL IN 2017 & 2019.

5. AT&T / PACIFIC BELL: IN UPRR CORRIDOR

LOCATION / ALIGNMENT

- THIS LINE CONNECTS CROSS-COUNTRY FROM A POINT ON CARPINTERIA AVE, EAST OF HWY 150, ACROSS PRIVATE PROPERTY AND THEN DOWN THE CUT SLOPE TO THE RAILROAD CORRIDOR WHERE THIS LINE THEN FOLLOWS THE RAILROAD TRACKS ON THE "FREEWAY SIDE" TO THE EAST.

DEPTH

- UNKNOWN.

PROJECT WILL:

- HAVE NO EFFECT ON THIS FACILITY. EARTHWORK AND BRIDGE WORK WILL MUCH HIGHER ON SLOPE. NO CONSTRUCTION TRAFFIC WILL CROSS THIS LINE.

REFERENCE INFORMATION

- AT&T RECORD DRAWINGS WT 129DN0687 AND 689.

6. MCI & SPRINT FIBER SYSTEMS: IN UPRR CORRIDOR

LOCATION / ALIGNMENT

- THIS LINE FOLLOWS THE RAILROAD TRACKS ON THE "OCEAN SIDE".

DEPTH

- UNKNOWN.

PROJECT WILL:

- HAVE NO EFFECT ON THIS FACILITY. EARTHWORK AND BRIDGE WORK WILL MUCH HIGHER ON SLOPE. NO CONSTRUCTION TRAFFIC WILL CROSS THIS LINE.

REFERENCE INFORMATION

- THESE LINES ARE SHOWN ON THE 2010 DRAWINGS FOR THE CONSTRUCTION ON STATE HIGHWAY, CONTRACT 07-260704, PROJECT 0700000490, PAGE 205/757 (SHEET U-16). LINES ARE SHOWN NEAR THE WAVE OVERHEAD. THE LOCATIONS SHOWN ARE APPROXIMATE MATCHES TO THE FIELD MARKERS WE LOCATED FURTHER WEST.
- IN 2017 SPRINT PROVIDED A SKETCH.
- 2019 SPRINT RECORD DRAWING NTWRK416 EXCERPT FROM FIBER OPTIC ROUTE RECORD DRAWING

Contractor's Concrete Placement Plan
The Contractor shall submit a concrete placement plans for approval by the the Engineer at least 14 Calendar days before each proposed pour. Work may not proceed until this plan is approved.
The key components of the include description/provisions/sequencing for each of the following:

- Construction of two components of the cross section: the (generally) 16-foot-wide trail, and (generally) 6.5-foot-wide concrete ditch. Note the ditch concrete is tinted--the trail is "grey".
- Proposed cure time to accommodated construction of these 2 components
- Method for concrete formwork / slip forming
- Placement of square dowel bars in baskets (for transverse joints) and plate dowels (for longitudinal joints)
- Method for Concrete placement
- Saw cutting of the control joints
- Application of curing compound
- Provisions to protect concrete already in place from damage/cracking from subsequent loaded concrete trucks
- Approach to replace portions of concrete which may be accidentally damaged, so that the replaced concrete closely matches the texture, joints, finish and color of the adjacent "original" concrete which was not damage.

Engineer's Notes to the Contractor

- The Contractor's attention is directed to note the narrow work access which will be available from the "based subgrade" during placement of the concrete trail / ditches.
- Because of the limited thickness of the concrete pavement, loaded concrete trucks shall not drive over previously placed concrete. If the Contractor can provide appropriate measures to protect the previously-placed concrete from damage from UNLOADED trucks, such may be included in the concrete placement plan for consideration by the Engineer
- The Engineer envisions that these narrow corridors, which exist on a sloping profile, will affect the maneuverability / access of concrete trucks on the "based subgrade".
- Along the 101 Freeway / Carpinteria Ave. segment, The Contractor may wish to consider using boom pumps for some portions of the trail.
- On the "Ocean side" of the railroad, Note that access for concrete deliveries is isolated; no parallel roads exists.
- At the time of the design, Engineers envisioned the paving could be constructed either by slip-forming of by fixed forms; either method is acceptable.
- Engineer's envisioned that slip-forming would be the preferred method for paving.
- The contractor may wish to pour alternating components of the trail: perhaps alternating "the trail", then "the ditch", paving. Such is acceptable, providing the Contractor maintains a uniform finish and grade .

Ditch Plate Dowels
The longitudinal joint between the edge of pavement and the ditch are reinforced with Diamond-Shaped Plate Dowels similar to PNA-Brand Diamond Dowels, as approved by the Engineer .
These shall have the following properties:

- 4.5 inch x4.5 inch x $\frac{1}{4}$ inches-thick
- Hot-dipped galvanized or epoxy coated
- Spaced to match sawcuts as shown

Square Dowels supported by "Baskets"
The transverse joints are reinforced with dowels are similar to PNA-Brand Square Dowel Basket, shown on Drawing SDB-1

- 1/2 -inch square x 9-inches long
- Hot-dipped galvanized or epoxy coated
- Spaced to match sawcuts as shown
- Note some baskets on the ocean side of bridge are "long" to accommodate the wider pavement here.
- Note some baskets at the east end where the trail forks are "short". Both sides of the fork are considered in one length of basket.

Concrete Mix / Finish
The concrete mix specifications and color are defined in the special provisions

Saw Cutting

- Placed at the spacing shown on the plans
- Completed within 4 hours of concrete placement
- Cut 2-inches deep

Concrete shall be treated with curing compound or cure-control measures (tarps, rugs, visqueen) as defined in the special provisions. Curing compounds shall be appropriate for "colored concrete" when used on the such surfaces.

Second Concrete Pour--path wear surface

Concrete placement for the wear surface shall start "at the bridge" and proceed away from bridge toward either trailhead
The concrete pour for the "trail" shall not occur sooner than 7 calendar days after the ditch pour
No concrete trucks shall drive on the previously-constructed ditch.
Prior to concrete placement Contractor shall place sturdy survey reference stakes along the trail to allow dowel basket to be quickly and accurately placed at the intervals shown. These stakes also identify the center of the basket to the sawcutting personal so they may accurately sawcut the joint after the basket is covered with concrete.

the sliding Square dowels are Similar to PNA-Brand Square Dowels, as approved by the Engineer, and shall have the following properties:

- Dowels measure $\frac{1}{2}$ x $\frac{1}{2}$ inch x 18-inches long.
- Dowels are hot-dipped galvanized
- Dowels are inside dowel clips supported by baskets.
- Vertical placement of dowels: dowels are place inn the middle--mid-height of the slab
- Are spaced along the basket at 24-inch on centers (Transverse to the centerline of the trail)

Sawcuts shall be completed within 4 hours of concrete placement.
Sawcuts are 2-inches deep.

Contractor shall have spare concrete sawing equipment on stand-by during cutting procedures.

NOTES
1. Dowels saw cut from hot rolled steel bar per ASTM A36 to within 3/16" of specified length.
2. Side frame supports fabricated from 1/4" diameter cold drawn wire per ASTM A108 grade 1010 - 1020.
3. Square dowel clips are fitted to the free end of the dowel and extend to at least 2" past the center of the dowel.
4. Assemblies manufactured so that they stack on top of each other for transportation and remain stable under concrete placement.
5. Square Dowel Basket assembly as manufacured. by PNA Construction Technologies, Inc. (800) 542-0214.

STRUCTURE DESIGN CRITERIA

STRUCTURE IS DESIGNED PER AASHTO LRFD GUIDE SPECIFICATIONS FOR THE DESIGN OF PEDESTRIAN BRIDGES, 2ND EDITION, 2015

CONSTRUCTION METHODS

OVERVIEW:
THIS IS A PREFABRICATED STEEL BRIDGE, WITH A CAST-IN-PLACE CONCRETE DECK. THE BRIDGE IS SUPPORTED BY A DEEP FOUNDATION SYSTEM USING CAST-IN-DRILL HOLE (CIDH) CONCRETE PILES.

DETAILS OF CONSTRUCTION METHODS;

THE BRIDGE WILL BE BUILT USING THE FOLLOWING CONSTRUCTION SEQUENCE:

BRIDGE FOUNDATION:

A) **PILES:** CAST-IN-DRILL HOLE (CIDH). THESE ABUTMENT PILES WILL BE BUILT BY DRILLING TO AN ELEVATION SHOWN IN "BRIDGE FOUNDATION PLAN" .

AFTER THE HOLE IS COMPLETE BAR REINFORCING STEEL WILL BE PLACED INSIDE THE HOLE USING CENTRALIZERS TO POSITION THE STEEL IN THE HOLE. FINALLY, CONCRETE WILL BE PLACED "FROM THE BOTTOM-UP", USING CONCRETE TREMIES.

B) **REINFORCED CONCRETE ABUTMENTS / WING WALLS:**
REINFORCED CONCRETE ABUTMENTS WILL BE CONSTRUCTED ON TOP OF THE CIDH PILES. THE ABUTMENTS / WINGWALLS WILL BE BUILT IN-PLACE USING STANDARD PLYWOOD FORMWORK. THE ABUTMENTS INCLUDE BOLTS TO TIE THE BRIDGE SUPERSTRUCTURE TO THE ABUTMENT.

BRIDGE SUPERSTRUCTURE:
THE BRIDGE SUPERSTRUCTURE IS A SHOP-BUILT STEEL TRUSS SYSTEM. THE STEEL USED IN THE BRIDGE SHALL BE COR-TEN STEEL WHICH WILL BE PAINTED LIGHT SKY BLUE, CONTRACTOR TO PROVIDE A SAMPLE/PAINT CHIP FOR APPROVAL.. THE BRIDGE WILL BE FABRICATED BY A PREQUALIFIED SUPPLIER WITH SHOP-CERTIFIED PROCEDURES.

BRIDGE DECK:
AFTER THE PREFABRICATED STEEL SUPERSTRUCTURE IS BOLTED TO THE BRIDGE ABUTMENTS, THE CONTRACTOR WILL PLACE DECK REINFORCEMENT, SUPPORTED ON THE FACTORY-BUILT "DECK PAN" BY CHAIRS OR DOBIES. BRIDGE DECK REINFORCEMENT IS BY BRIDGE FABRICATOR. NO FALSEWORK WILL BE NEEDED TO SUPPORT THIS DECK FROM BELOW. NEXT THE DECK CONCRETE WILL BE PLACED USING A BOOM PUMP. THIS DECK WILL BE FINISHED LIKELY USING HAND METHODS (COMPARED TO MECHANIZED "BIDWELL" FINISHING).

GENERAL NOTES:

1. THE PROPOSED GRADE SEPARATION PROJECT SHALL NOT INCREASE THE QUANTITY AND/OR CHARACTERISTICS OF THE DRAINAGE IN THE RAILROAD'S DITCHES AND/OR DRAINAGE STRUCTURES.
2. THE ELEVATION OF THE EXISTING TOP-OF-RAIL PROFILE SHALL BE VERIFIED BEFORE BEGINNING CONSTRUCTION. ALL DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE RAILROAD PRIOR TO CONSTRUCTION.
3. THE CONTRACTOR MUST SUBMIT A PROPOSED METHOD OF EROSION AND SEDIMENT CONTROL AND HAVE THE METHOD APPROVED BY THE RAILROAD.
4. ALL SHORING SYSTEMS THAT IMPACT THE RAILROAD'S OPERATIONS AND/OR SUPPORTS THE RAILROAD'S EMBANKMENT SHALL BE DESIGNED AND CONSTRUCTED PER CURRENT RAILROAD GUIDELINES FOR TEMPORARY SHORING.
5. ALL DEMOLITIONS WITHIN THE RAILROAD'S RIGHT-OF-WAY AND/OR DEMOLITION THAT MAY IMPACT THE RAILROAD'S TRACKS OR OPERATIONS SHALL BE IN COMPLIANCE WITH THE RAILROAD'S DEMOLITION GUIDELINES.
6. ERECTION OVER THE RAILROAD'S RIGHT-OF-WAY SHALL BE DESIGNED TO CAUSE NO INTERRUPTION TO THE RAILROAD'S OPERATION, ENABLING THE TRACK(S) TO REMAIN OPEN TO TRAFFIC PER THE RAILROAD'S REQUIREMENTS.
7. RAILROAD REQUIREMENTS DO NOT ALLOW WORK WITHIN 50 FEET OF TRACK CENTERLINE WHEN A TRAIN PASSES THE WORK SITE AND ALL PERSONNEL MUST CLEAR THE AREA WITHIN 25 FEET OF THE TRACK CENTERLINE AND SECURE ALL EQUIPMENT.
8. FALSE-WORK CLEARANCES SHALL COMPLY WITH MINIMUM CONSTRUCTION CLEARANCES.
9. ALL PERMANENT CLEARANCES SHALL BE VERIFIED BEFORE PROJECT CLOSING.
10. FOR RAILROAD COORDINATION PLEASE REFER TO THE RAILROAD MINIMUM REQUIREMENTS AS PART OF SPECIAL PROVISIONS.

Live Loading:	H 10 Design, Pedestrian Loading = 90 PSF
Seismic Loading:	Site Specific Acceleration Response Spectra Curve
Piles:	See "Pile Data" table on "BRIDGE FOUNDATION PLAN" sheet
Reinforced Concrete:	f_y = 60,000 psi f_c = 4,000 psi (Unless otherwise shown or specified)
Structural Steel:	ASTM A709 Grade 50
Steel Pipe Piles:	ASTM A252, Grade 3

ACCELERATION RESPONSE SPECTRA

PILE DATA TABLE

LOCATION	PILE TYPE	NOMINAL RESISTANCE (KIPS)		DESIGN TIP ELEVATION (FT)	SPECIFIED TIP ELEVATION (FT)
		COMPRESION	TENSION		
ABUT 1	24" CIDH	250	0	70 (a) 80 (b)	70
ABUT 2	24" CIDH	250	0	64 (a) 75 (b)	64

Notes:

1. Design tip elevations are controlled by (a) Compression (static), (b) Lateral Load, respectively.
2. The Specified Tip Elevation shall not be raised above the design tip elevations for lateral, and tolerable settlement.
3. For the specified pile tip elevations, support settlement due to the total vertical load based on the service limit state I load combination is estimated to be less than one (1) inch for both abutments.

GENERAL NOTES: SURVEY DATUMS INFORMATION

1. The horizontal datum for this map is based on ground control positions as contained in digital files for the 2007 aerial mapping by Golden State Aerial Surveying. Photography dated 12.12.2007. The datum is unknown but appears to be or proximate to NAD83. Epoch is unknown.
2. The vertical datum for this map is based on ground control orthometric heights as contained in digital files for the 2007 aerial mapping by Golden State Aerial Surveying. Photography dated 2007.07.07. The datum is unknown but appears to be or proximate to NAVD88.
3. Grid coordinates for aerial mapping appear to be or proximate to California State Plane Coordinate System Zone 5.
4. Survey units appear to be US Survey feet.
5. Surveying for location of monuments and other ground control were performed by REESE Water & Land Surveying Services in August & September, 2017, using both static and RTK GNSS methods. Orthometric heights for surveyed points were derived by applying a high-precision geoid model to surveyed ellipsoid heights.
6. The local survey benchmarks are points #2005 & #2006 from 2007 mapping as listed.
7. The basis of bearings is the line between points #2005 and #2006 as shown: N40°15'49"W 3633.72ft.

GENERAL NOTES: RIGHT OF WAY INFORMATION

1. Data for right of way, easements, or other title lines shown are derived from compiled record information tied to surveyed positions of found monumentation.
2. A Condition of Title Report, No. 5026900-5688306, dated 2018.05.10, by First American Title Insurance Co. has been used as the basis for the easement and other title information shown hereon.
3. Sources of information for title lines include, but are not limited to: Santa Barbara County deeds, State Highway Map Books, State Highway Monumentation Map Books; Santa Barbara County Assessor information; California Department of Transportation right of way maps; Union Pacific Right of Way and Track Maps.
4. No attempt to resolve gaps, gores, hiatuses, or other misalignment of record information has been made to establish a lotline or boundary that does not appear of record. This mapping shall not be construed as an establishment of record information per California B&P Code sec.8700 et seq.
5. To resolve any particular deed or map line, a survey and map shall be performed according to provisions in the Professional Land Surveyors Act, B&P sec. 8700 et seq.

GENERAL NOTES

SURVEY DATUMS INFORMATION

1. The horizontal datum for this map is based on ground control positions as contained in digital files for the 2007 aerial mapping by Golden State Aerial Surveying. Photography dated 12.12.2007.
The datum is unknown but appears to be NAD83. Epoch is unknown.
2. The vertical datum for this map is based on ground control orthometric heights as contained in digital files for the 2007 aerial mapping by Golden State Aerial Surveying. Photography dated 2007.07.07.
The datum is unknown but appears to be NAV088.
3. Grid coordinates for aerial mapping appear to be California State Plane Coordinate System Zone 5.
4. Survey units appear to be US Survey feet.
5. Surveying for location of monuments and other ground control were performed by REESE Water & Land Surveying Services in August & September, 2017, using both static and RTK GNSS methods. Orthometric heights for surveyed points were derived by applying a high-precision geoid model to surveyed ellipsoid heights.
6. The local survey benchmarks are points #2005 & #2006 from 2007 mapping as listed.
7. The basis of bearings is the line between points #2005 and #2006 as shown: N40°15'49"W 3633.72ft.
8. The proposed location for the 16' wide paved portion of the multi-use trail has been shown for information only. Its alignment is subject to change.

SURVEYOR'S STATEMENT

This map was prepared by me and is based on a field survey performed by me in August & September, 2017, at the request of Bengal Engineering, Inc.
This map delineates the horizontal and vertical locations of visible features, natural and man-made, within the areas shown for the purpose of site planning and engineering study. No warranty as to the size, type and location of non-visible features, natural and man made, that may exist, is expressed or implied.
Utility agencies should be contacted prior to any excavation.

DIGITAL DATA

These data may have been delivered as a courtesy to the client or other third parties in digital form. Delivery of the electronic file does not constitute the delivery of our professional services.

GENERAL NOTES: SURVEY DATUMS INFORMATION
1. The horizontal datum for this map is based on ground control positions as contained in digital files for the 2007 aerial mapping by Golden State Aerial Surveying. Photography dated 12.12.2007. The datum is unknown but appears to be NAD83. Epoch is unknown.
2. The vertical datum for this map is based on ground control orthometric heights as contained in digital files for the 2007 aerial mapping by Golden State Aerial Surveying. Photography dated 2007.07.07. The datum is unknown but appears to be NAVD88.
3. Grid coordinates for aerial mapping appear to be California State Plane Coordinate System Zone 5.
4. Survey units appear to be US Survey feet.
5. Surveying for location of monuments and other ground control were performed by REESE Water & Land Surveying Services in August & September, 2017, using both static and RTK GNSS methods. Orthometric heights for surveyed points were derived by applying a high-precision geoid model to surveyed ellipsoid heights.
6. The local survey benchmarks are points #2005 & #2006 from 2007 mapping as listed.
7. The basis of bearings is the line between points #2005 and #2006 as shown: N40°15'49"W 3633.72ft.
8. The proposed location for the 16' wide paved portion of the multi-use trail has been shown for information only. Its alignment is subject to change.

GENERAL NOTES: RIGHT OF WAY INFORMATION
9. Data for right of way, easements, or other title lines shown are derived from compiled record information tied to surveyed positions of found monumentation.
10. A Condition of Title Report, No. 5026900-5688306, dated 2018.05.10, by First American Title Insurance Co. has been used as the basis for the easement and other title information shown hereon.
11. Sources of information for title lines include, but are not limited to: Santa Barbara County deeds, State Highway Map Books, State Highway Monumentation Map Books; Santa Barbara County Assessor information; California Department of Transportation right of way maps; Union Pacific Right of Way and Track Maps.
12. No attempt to resolve gaps, gores, hiatuses, or other misalignment of record information has been made to establish a lotline or boundary that does not appear of record. This mapping shall not be construed as an establishment of record information per California B&P Code sec.8700 et seq.
13. To resolve any particular deed or map line, a survey and map shall be performed according to provisions in the Professional Land Surveyors Act, B&P sec. 8700 et seq.

SURVEYOR'S STATEMENT
This map was prepared by me and is based on a field survey performed by me from September, 2017, to July, 2018, at the request of Bengal Engineering, Inc.
This map delineates the horizontal and vertical locations of visible features, natural and man-made, within the areas shown for the purpose of site planning and engineering study. No warranty as to the size, type and location of non-visible features, natural and man made, that may exist, is expressed or implied.
Utility agencies should be contacted prior to any excavation.

Attachment A

Exhibit 3: Recommended Conditions of Approval

Rincon Trail Project Appeal
19-2015-CUP/CDP
City Council Hearing, March 28, 2022

CITY COUNCIL HEARING
APPEAL OF PLANNING COMMISSION'S APPROVAL OF
RINCON TRAIL PROJECT
PROJECT 19-2015-CUP/CDP
MARCH 28, 2022

EXHIBIT 3: CONDITIONS OF APPROVAL

The Conditions set forth in this permit affect the title and possession of the real property that is the subject of this permit and shall run with the real property or any portion thereof. All the terms, covenants, conditions and restrictions herein imposed shall be binding upon and inure to the benefit of the owner (applicant, developer), his or her heirs, administrators, executors, successors and assigns. Upon any sale, division or lease of real property, all the conditions of this permit shall apply separately to each portion of the real property and the owner (applicant, developer) and/or possessor of any such portion shall succeed to and be bound by the obligations imposed on the owner (applicant, developer) by this permit.

PROJECT DESCRIPTION

1. This Conditional Use Permit and Coastal Development Permit is based upon and limited to compliance with the project description, the hearing exhibits (Attachment A, Exhibit 2 to the staff report dated March 28, 2022) and conditions of approval set forth below. Any deviations from the project description, exhibits or conditions must be reviewed and approved by the City for conformity with this approval. Deviations may require approved changes to the permit and/or further environmental review. Deviations without the above described approval will constitute a violation of permit approval.

   The project description is as follows:

   The City of Carpinteria Parks and Recreation Department is seeking approval of a Conditional Use Permit and Coastal Development Permit to construct a 850-foot segment of Class I multi-use path in the City and Caltrans rights-of-way at the eastern end of the City of Carpinteria to allow for a dedicated bike and pedestrian path connection between the City of Carpinteria and Rincon Beach County Park in unincorporated Santa Barbara County. The remainder of the approximately 2,800-foot long trail is located in the jurisdiction of the County of Santa Barbara. The trail is intended to support alternative transportation in the area and fill in a missing link in the 1,200 mile California Coastal Trail.

The overall project limits would extend from near the Carpinteria Avenue/State Highway 150 intersection to the western terminus of the Rincon Beach County Park parking lot in unincorporated Santa Barbara County. Beginning in the unimproved shoulder just east of the Carpinteria Avenue/State Highway 150 intersection, the trail would trend east/northeast, roughly paralleling the southbound US Highway 101 on-ramp. The trail would be situated on a new bench cut into the existing manufactured slope above the on-ramp and would gently descend in elevation toward the Union Pacific Railroad (UPRR) corridor where the trail would cross the UPRR corridor using a new pre-fabricated 160-foot long, 14-foot wide clear span bridge. South of the UPRR corridor, the trail would turn due east and gradually descend the face of the ocean-side bluff, terminating at the western terminus of the Rincon Beach County Park parking lot.

The portion of the trail under consideration by the City of Carpinteria City Council extends from Carpinteria Avenue to the eastern City boundary, roughly coincident with the middle of the trail segment north of the UPRR corridor, and measures approximately 850 linear feet. The County of Santa Barbara has permit jurisdiction over the remainder of the trail (approximately 1,950 linear feet), continuing east from the city boundary (and including the new bridge crossing over the UPRR corridor) to the pathway's terminus at the Rincon Beach County Park parking lot.

The proposed concrete multi-use path would feature a five-foot travel lane in each direction, and a paved shoulder width of three feet on each side, for a total path width of 16 feet. A six-foot wide shallow concrete v-ditch would run along the inside of the trail length for the purposes of capturing and conveying stormwater to onsite drainage facilities. Protective fencing would be provided along the trail alignment to keep trail users on the improved path.

Total grading and earthwork quantities for the entirety of the project necessary to cut an Americans with Disability Act (ADA)-compliant trail bench, stabilize slopes, and control stormwater runoff through the project area are estimated at 96,040 cubic yards of cut. Approximately 10,519 cubic yards of the cut material would be used for fill onsite; the remaining 85,521 cubic yards of cut material would be exported offsite. Approximately 45% of the estimated earthwork (equivalent to ~43,200 cubic yards of cut) is expected to occur on the inland side of the UPRR alignment; and the remaining 55% (~52,800 cubic yards) on the ocean side of the UPRR alignment. A storm drain collection system is proposed for the trail alignment, which would utilize a combination of repaired existing and new piped storm drains on the bluff face and drain outlets to the ocean. The portion of the trail located in the jurisdiction of the City of Carpinteria would

tie into and be served by existing Caltrans storm drain infrastructure for US Highway 101. A habitat restoration plan is included to restore areas disturbed during construction and to mitigate for permanent removal of vegetation to accommodate the new trail.

As part of the project, the City will obtain an easement from UPRR for the bridge crossing over, and trail improvements within, the UPRR alignment. The City is also anticipating the acquisition of right-of-way from the California Department of Transportation (Caltrans) to accommodate the trail alignment.

The grading, development, use, and maintenance of the property, the size, shape, arrangement, and location of structures, parking areas and landscape areas, and the protection and preservation of resources shall conform to the project description above and the hearing exhibits and conditions of approval below. The property and any portions thereof shall be sold, leased or financed in compliance with this project description and the approved hearing exhibits and conditions of approval hereto. All plans (such as Landscape Plans) must be submitted for review and approval and shall be implemented as approved by the City.

MITIGATION MEASURES FROM THE CERTIFIED PROJECT ENVIRONMENTAL IMPACT REPORT (EIR)

2. **MM-AES-1 Board of Architectural Review.**
The Owner/Applicant shall obtain City Architectural Review Board ("ARB") and County South Board of Architectural Review ("SBAR") approval for project design. All project elements (e.g., design, scale, character, colors, materials, and landscaping) shall be compatible with vicinity development and shall conform in all respects to ARB/SBAR approval.
Plan Requirements and Timing: The Owner/Applicant shall submit architectural drawings of the project including photo renditions from the beach of the storm drains proposed along the bluff face for review and shall obtain final City ARB and County SBAR approval prior to issuance of the zoning clearance. Grading plans, if required, shall be submitted to the City's Planning Department concurrent with or prior to ARB/SBAR plan filing with the Carpinteria Community Development Department or County Planning and Development. ***Monitoring*****:** The Owner/Applicant shall demonstrate to Community Development Department staff and Planning & Development Department compliance monitoring staff that the project has been built consistent with approved ARB/SBAR design and landscape plans prior to Final Building Inspection Clearance.

3. **MM-BIO-1 Workers Environmental Awareness Program (WEAP).**
The Owner/Applicant shall fund an approved biologist to prepare and implement a worker education and awareness program (WEAP) specific to the project. The program shall be presented to all individuals involved in the construction of the project. The program shall include information focused on sensitive vegetation communities, sensitive wildlife and plant species, and common wildlife species and their habitats and shall include, but not be limited to, the following:

- Description of sensitive vegetation communities.
- Workers shall be provided with photographs of sensitive biological resources including sensitive wildlife and plant species.
- Workers shall be informed verbally and in writing of the various project tasks that require biological surveys and monitoring for resource protection.
- Workers shall be provided with a photograph or description of the markers for active bird nests, trees, or other mitigation areas, so that they shall know these are not to be disturbed without a biological monitor present.
- Workers shall be informed not to litter. All trash and litter shall be picked up and removed from the construction sites at the end of each day.
- Workers shall be informed to obey a speed limit of 15 miles per hour while traveling on the project site to avoid collisions with wildlife.
- Workers shall avoid driving over or otherwise disturbing areas outside the designated construction areas.

Plan Requirements and Timing: The Owner/Applicant shall submit the WEAP to the City of Carpinteria ("City") and County of Santa Barbara ("County") for review and approval prior to zoning clearance approval. All workers, contractors, and visitors shall attend the WEAP prior to entering the project site and performing any work. The Owner/Applicant shall provide copies of the training attendance sheets to City and County staff as a record of compliance with this measure on a monthly basis. The WEAP shall be reviewed and approved by the City and County prior to Zoning Clearance approval. Implementation of the WEAP training shall occur prior to the start of construction and as new crew members are added to the project.
Monitoring: The City and County permit compliance staff will ensure compliance with the WEAP throughout construction by review of attendance sheets and hardhats, inspection of the site, and interviewing workers, as appropriate.

4. **MM-BIO-2 Fencing.**
To prevent inadvertent impacts on adjacent sensitive vegetation communities including County ESH and City ESHA, native vegetation, special-status species, and common wildlife species and their habitats, construction limits will be fenced with highly visible fencing and staked.

Wildlife safe highly visible construction fencing shall be installed to identify the limits of grading/disturbance, which would reduce potential human trampling outside of the construction limits and minimize the potential spread of non-native weeds or invasive plant species. Wildlife-safe construction fencing and flagging shall remain in place during construction and replaced as needed.

Plan Requirements and Timing: The detailed fencing plan, showing the location of required fencing shall be reviewed and approved by City and County staff prior to Zoning Clearance approval. This condition shall be printed on all project plans. The detailed fencing plan, showing the location of fencing shall be submitted to City and County staff for review and approval prior to Zoning Clearance approval. The fence shall be installed prior to the start of ground disturbing activities. ***Monitoring:*** The City of Carpinteria and County staff will inspect the project plans and site, to ensure compliance with this measure as appropriate.

5. **MM-BIO-3 Pre-construction California Legless Lizard Survey and Relocation.**

Prior to initiation of construction, capture and relocation efforts for California legless lizards shall be conducted. Trapping shall be conducted by a qualified biologist and shall include the following steps:

i. Prior to initiation of capture and relocation, a suitable receptor site shall be located. This site shall include areas with loose, moist soils occurring in scrub habitat with high coverage of deerweed (*Lotus scoparius*) or California goldenbush, in arroyo willow (*Salix lasiolepis*) thickets or in other suitable scrub or woodland habitat.

ii. Capture and relocation shall take place no more than five days prior to the initiation of construction.

iii. These surveys shall be performed by lightly raking loose soil, sand and leaf litter with a wooden rake for a sufficient period to determine that no legless lizards are present, or all legless lizards have been captured.

iv. Any lizards found shall be placed in a receptacle with sand and a wet towel and relocated to the previously designated receptor site.

Plan Requirements and Timing**:** Prior to initiation of construction, capture and relocation efforts for California legless lizards shall be conducted where appropriate. Trapping shall be conducted by a qualified biologist.

Monitoring**:** The City of Carpinteria and County staff shall ensure the pre-construction survey and relocation efforts, if required, are completed prior to commencement of any earth-moving activities.

6. **MM-BIO-4 Pre-construction Woodrat Survey and Relocation.**

Prior to initiation of construction, capture and relocation efforts for woodrat shall be conducted. Trapping shall be conducted by a qualified biologist and shall include the following steps:

i. Prior to initiation of capture and relocation, a suitable receptor site shall be located. This site shall be within similar habitat and an adequate distance away from any locations that might be subject to increased human disturbance, such as adjacent to a walking path.
ii. These pre-construction surveys shall be performed searching all coastal sage scrub or coastal bluff scrub within the disturbance area for middens or other sign of the species.
iii. Any middens and woodrats found shall be live-trapped and relocated to the pre-determined receptor site. The midden shall be dismantled and the materials placed at the relocation site.

***Plan Requirements and Timing*:** Prior to initiation of construction, capture and relocation efforts for woodrat shall be conducted where appropriate. Trapping shall be conducted by a qualified biologist. ***Monitoring*:** The City of Carpinteria and County staff shall ensure the pre-construction survey and relocation efforts, if required, are completed prior to commencement of any earth-moving activities.

7. **MM-BIO-5 Habitat Mitigation and Monitoring Plan.**
Prior to issuance of zoning clearance approval, the Owner/Applicant shall contract with a qualified biologist to develop a Habitat Mitigation and Monitoring Plan (Plan) to mitigate for impacts to County ESH/City ESHA vegetation communities. The Plan shall outline efforts to restore or enhance coastal sage scrub and coastal bluff scrub communities, and, therefore, preserve or provide wildlife habitat, in areas impacted by construction of the trail but outside the trail-related impervious surfaces and within similar habitats adjacent to the impacted biological resources. The Plan may focus on the following:

- In-kind, on-site restoration of areas where coastal sage scrub or coastal bluff scrub has been removed;
- Enhancement of impacted areas on site currently occupied by ornamental, disturbed or developed areas;
- Restoration of areas occupied by non-native habitats or native habitats with large components of non-native vegetation, within similar habitats adjacent to the impacted biological resources.

A total of 4.32 acres of impacts are proposed to County ESH/City ESHA native vegetation communities. Under the Plan, impacts to S3/County ESH/City ESHA native vegetation communities (California brittle bush – ashy buckwheat scrub alliance, *Encelia californica* association and lemonade berry scrub alliance, *Rhus integrifolia* association) that total 0.59 acres shall be restored in-kind at 4:1. Impacts to S4 and S5/County ESH/City ESHA native vegetation communities (quailbush scrub alliance, *Atriplex lentiformis* association, California sagebrush – (purple sage) scrub alliance, *Artemisia californica* association, and coyote brush scrub alliance, *Baccharis pilularis* association) that total 3.73 acres shall be restored in-kind at 2:1. To the extent feasible, restoration should occur on site and, any additional

mitigation required shall be carried out on areas within adjacent land controlled by the County or City, such as the Rincon Bluffs Preserve or Rincon Beach County Park.

A qualified biologist/botanist shall develop the Plan, which shall provide specific measures to restore or enhance habitat to replace the loss of coastal sage scrub and coastal bluff scrub communities. This Plan shall be focused on adaptive management principles, and shall identify detailed enhancement areas and strategies based on the parameters outlined below, with long term timing and monitoring requirements. The Plan shall:

i. Provide an up-to-date inventory of on-site native vegetation resources.
ii. Define attainable and measurable goals and objectives to achieve through implementation of the Plan. Goals and objectives shall focus on replacement of coastal sage scrub, coastal bluff scrub and rare plants removed during construction.
iii. Provide site selection and justification. Prior to identifying habitat restoration mitigation areas, both within the project area and adjacent lands, the habitat shall be surveyed for sensitive vegetation communities and special-status species, to ensure avoidance of impacts during habitat restoration implementation. Additionally, potential adjacent mitigation lands shall be assessed to ensure sites are suitable and appropriate for implementation of habitat restoration for the impacted native vegetation communities.
iv. Detail a restoration work plan including methodologies, restoration schedule, plant materials (seed and container plant) sourcing – locally genetic stock, and implementation strategies.
v. Provide a detailed maintenance plan to include removal of invasive non-native species.
vi. Define annual and final performance standards. Prior to grading, the project-related native coastal bluff scrub and coastal scrub vegetation communities shall be assessed by vegetation community type for percent cover (both basal and vegetative), species diversity, density, and abundance. This project site native vegetation community data shall be used to define performance standards for native habitat restoration by vegetation layers (tree, shrub, grass, and forb) for each vegetation community type and for non-native plant species.
vii. Identify that the restoration areas shall be irrigation-free for at least 3 years and the performance standards have remained stable (no negative trend for richness/ diversity/ abundance/ cover of native species and no positive trend for invasive/non-native cover for each vegetation layer) for at least 3 years.
viii. Provide a monitoring plan to include methods and analysis of results. Also, include goals, success or failure criteria, and an adaptive management plan, contingency actions, and suggestions for failed restoration efforts.

Plan Requirements and Timing: Prior to issuance of zoning clearance approval, the Owner/Applicant shall contract with a qualified biologist to develop the Plan. The Plan shall outline efforts to restore or enhance coastal sage scrub and coastal bluff scrub communities in areas impacted by construction of the project. ***Monitoring*****:** The City of Carpinteria and County staff shall ensure development of the Plan and adherence to Plan measures are completed prior to commencement of any earth-moving activities. Additionally, California Department of Fish and Wildlife shall approve the Plan prior to issuance of zoning clearance approval. City and County staff shall periodically conduct site inspections to ensure compliance on site. Restored areas shall be monitored for five years following planting. Annual reports and the final report shall be submitted to the City and County.

8. **MM-BIO-6 Weed Management Plan.**
Prior to issuance of zoning clearance approval, the Owner/Applicant shall contract with a qualified biologist to develop a Weed Management Plan to be implemented during construction and implementation of the Habitat Mitigation and Monitoring Plan. The Weed Management Plan shall include, but is not limited to, the following:
    - Prior to ground disturbance, a City approved qualified biologist shall map invasive weeds within the limits of impacts plus a 100-foot buffer. Invasive weeds shall be defined as California Invasive Plant Inventory Database (Cal-IPC) moderate and high ratings. Invasive species subject to control measures shall be identified. Note that non-native grasses such as bromes and wild oats shall be mapped but are not subject to control measures. Prior to ground disturbance, areas with invasive weeds shall be treated according to control methods below and BMPs for invasive weeds.
    - To prevent the spread of invasive weeds and inhibit germination, the following shall be implemented:
        - Maintain vehicle wash and conduct inspections to monitor the types of materials brought on site to minimize the potential for invasive weed introduction
        - Limit disturbance areas to the permitted disturbance area
        - Limit ingress and egress to defined routes
        - Use certified weed-free products
    - Invasive weed control methods shall include legally permitted herbicide, manual, and mechanical methods approved for application. The application of herbicides shall be in compliance with state and federal laws and regulations under the prescription of a pest control advisor, with the City's concurrence, and shall be implemented by a licensed qualified applicator. All product labels shall be followed. Spot treatments shall be the method of application and broadcast applications shall be avoided. Herbicides shall not be applied during or within 72 hours of a forecasted measurable rain

event or during high wind conditions. Invasive weed debris accumulated during manual and mechanical removal methods shall be disposed of at an appropriate location off-site. Maintenance shall be timed to remove invasive weeds prior to seed production. The maintenance crew shall coordinate with the City approved biologist to avoid and minimize impacts to plant species and wildlife species.

- A City approved qualified biologist shall perform annual monitoring within the limits of disturbance and a 100-foot buffer to map and document invasive weed species. At any time during implementation of the Weed Management Plan, monitoring frequency may increase as needed to provide guidance to maintenance crews.

Plan Requirements and Timing: Prior to issuance of zoning clearance approval, the Owner/Applicant contract with a qualified biologist to develop the Plan. The Plan shall outline efforts to implement a weed management plan to control invasive weeds. Pre-construction survey results shall be reported and ongoing invasive weed control efforts and annual survey results shall be submitted annually and for the five year duration of the Habitat Mitigation and Monitoring Plan. ***Monitoring:*** The City of Carpinteria and County staff shall ensure development of the Plan and adherence to Plan measures are completed prior to commencement of any earth-moving activities. City and County staff shall periodically conduct site inspections to ensure compliance on site and to ensure the Plan is fully implemented.

9. **MM-BIO-7 Pre-construction Nesting Bird Surveys.**
Within 30 days prior to any vegetation clearing or ground disturbance, or use of noise-generating equipment associated with construction or grading that would occur during the nesting/breeding season of native bird species potentially nesting on the site (typically mid-February through August in the project region, or as determined by a qualified biologist), the Owner/Applicant shall have weekly surveys conducted by a qualified biologist to determine if active nests of special-status bird species, or of any bird species protected by the Migratory Bird Treaty Act or the California Fish and Game Code, are present in the disturbance zone or within 300 feet (500 feet for raptors) of the area to be disturbed. The surveys shall occur on a weekly basis, with the last survey being conducted no more than seven days prior to initiation of disturbance work. If ground disturbance is delayed, then additional pre-disturbance surveys shall be conducted such that no more than seven days will have elapsed between the survey and ground disturbance activities. The Owner/Applicant or contractor shall provide the biologist with plans detailing the extent of proposed ground disturbance prior to the survey effort.
If active nests are found, including any nests for Cooper's hawk, clearing and use of noise-generating construction within 300 feet of the nest (500 feet for raptors) shall be postponed or halted, at the discretion of the biologist, until the nest is vacated and juveniles have fledged, as determined by the

biologist, and there is no evidence of a second attempt at nesting. Limits of construction to avoid an active nest shall be established in the field with highly visible construction fencing, and construction personnel shall be instructed on the sensitivity of nest areas. The results of the surveys, including graphics showing the locations of any nests detected, and any avoidance measures recommended, shall be submitted to the City and County within 14 days of completion of the pre-construction surveys to document compliance with applicable state and federal laws pertaining to the protection of native birds.
***Plan Requirements and Timing*:** Pre-construction nesting bird surveys shall be completed within 30 days prior to any vegetation clearing or ground disturbance associated with construction or grading during the bird nesting season (typically mid-February to August). The surveys shall occur on a weekly basis, with the last survey being conducted no more than seven days prior to initiation of disturbance work. ***Monitoring*:** The City of Carpinteria and County staff shall ensure the pre-construction nesting bird surveys and any avoidance requirements are completed prior to commencement of any earthmoving activities.

10. **MM-CR-1 Cultural Resource Treatment and Inadvertent Discovery Plan.** Potential impacts to cultural resources shall be minimized through development of protocols for practical adherence of mitigation measures CR-2 and CR-3 prior to and after ground disturbing construction activities associated with the proposed project. These protocols shall be outlined in a Cultural Resource Treatment Plan (CRTP). The CRTP shall be developed by a City-qualified archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards, prior to the implementation of ground disturbing activities and include wording of each mitigation measure CR-2-4, specific and detailed explanation for implementation of each mitigation measure and contact protocol. The CRTP shall be provided to all agency personnel, consulting tribes, contractors and archaeological personnel. The existence and necessity for adherence to the CRTP shall be noted on plans, handbooks, or the like associated with tasks that may incur ground disturbance either intentionally or inadvertently.
Plan Requirements and Timing: Prior to issuance of a grading permit, the Owner/Applicant shall contract with a County-qualified/City-approved archaeologist to develop the required CRTP in accordance with the above criteria. ***Monitoring:*** City of Carpinteria/County of Santa Barbara staff shall review and authorize the CRTP prior to the commencement of ground disturbance activities to ensure that the CRTP adheres to the criteria established in CR-1.

11. **MM-CR-2 Workers Environmental Awareness Program (WEAP) Training.**
All personnel participating in tasks that may incur ground disturbance either intentionally or inadvertently shall be briefed regarding unanticipated discoveries prior to the start of said activities. A basic presentation shall be prepared by a City-qualified archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards to inform all personnel working on the project about the archaeological sensitivity of proposed project areas. The purpose of the WEAP training is to provide specific details on the kinds of archaeological materials that may be identified during project activities and explain the importance of and legal basis for the protection of cultural resources. Each personnel shall also be instructed in the proper procedures to follow in the event that cultural resources or human remains are encountered. These procedures include work curtailment or redirection, and the immediate contact of the site supervisor, qualified archaeologist and if human remains are encountered, the County coroner.
Plan Requirements and Timing: Prior to issuance of a grading permit, the Owner/Applicant shall contract with a County-qualified/City-approved archaeologist to develop and conduct the required WEAP Training in accordance with the above criteria. ***Monitoring:*** City of Carpinteria/County of Santa Barbara staff shall ensure the required WEAP training has been conducted by attending the WEAP Training and documenting attendance of required personnel by means of a sign in sheet completed by all attendees of the WEAP Training.

12. **MM-CR-3 Archaeological Monitor.**
Initial ground disturbing activities shall be monitored by a County-qualified/City-approved archaeologist in accordance with the following specifications:
Temporary Impact Areas (equipment staging and materials storage outside trail alignment) – a County-qualified/City-approved archaeologist shall monitor transport and placement activities until such time that it is reasonable to ascertain that no additional prehistoric archaeological/cultural resources are located within areas of temporary disturbance of the proposed project site.
Permanent Impact Areas not including bridge piling installation (all areas of the trail alignment excepting the bridge approaches area on both sides of the UPRR alignment) – a County-qualified/City-approved archaeologist shall monitor project implementation during the initial grading and excavation activities until such time as sufficient subsurface soil has been uncovered/excavated to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area.
Bridge piling installation – a County-qualified/City-approved archaeologist shall monitor the installation of bridge pilings within intact soils and/or any

soils deeper than 10 feet below current ground surface to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area.
The monitor shall immediately inform equipment operators in the event archaeological resources are encountered, and shall be empowered to immediately halt construction activity in the area of the discovery until assessment can be completed, and materials recovered as appropriate (refer to CR-2 for additional detail). Monitoring reports shall be provided to the City of Carpinteria/County of Santa Barbara on a monthly basis during construction, with a final monitoring report produced at the conclusion of construction activities and provided to both the City and County.
***Plan Requirements and Timing*:** Prior to issuance of a grading permit, the Owner/Applicant shall contract with a County-qualified/City-approved archaeologist to monitor initial ground disturbance activities in accordance with the above criteria. ***Monitoring*:** City of Carpinteria/County of Santa Barbara staff shall ensure the contracted archaeologist provide monitoring of initial ground disturbance activities in accordance with the above criteria through receipt of field documentation describing each day of monitoring, construction activity occurring during the monitoring, and observed soil profile conditions related to the potential for presence of archaeological resources.

13. **MM-CR-4 Discovery of Cultural Resources.**
In the event cultural resources are encountered, construction shall be redirected to another area of the project while data/resource assessment and recovery is accomplished.
Grading/construction shall be immediately suspended in the immediate area (no less than 50 feet from the area of the discovery) where cultural resources are encountered and temporarily redirected to another portion of the project area to allow the archaeologist to assess the nature, extent and significance of any discoveries and develop appropriate management recommendations for archaeological resource treatment consistent with Santa Barbara County Guidelines for the Implementation of California Environmental Quality Act of 1970 (as amended May 25, 2010). It is anticipated that recovery of artifacts would occur where project elements (such as pilings) would conflict with in situ artifact locations, and such artifacts would be properly archived in accordance with the project CEQA, City of Carpinteria and Santa Barbara County guidelines and the CRTP protocol.
Identified remedial action for the discovery shall be completed prior to allowing construction to recommence in the area, no less than 50 feet from the area of the discovery. The project sponsors shall be responsible for funding the assessment of archaeological resources encountered during construction, and for the proper archiving or preservation of such resources. A Phase 3 Archaeological Resources Assessment and Data Recovery

Report shall be prepared to document any archaeological resources encountered during construction.
***Plan Requirements and Timing*:** Prior to issuance of a grading permit, the Owner/Applicant shall contract with a County-qualified/City-approved archaeologist to provide archaeological assessment and recovery of any archaeological resources encountered during project construction, in accordance with the above criteria. ***Monitoring*:** City of Carpinteria/County of Santa Barbara staff shall ensure the contracted archaeologist assess the nature, extent and significance of any archaeological discoveries occurring during project construction and develop appropriate management recommendations for archaeological resource treatment in accordance with the project CEQA, City of Carpinteria and Santa Barbara County guidelines and the CRTP protocol.
The contracted archaeologist shall assess the nature, extent and significance of any archaeological discoveries occurring during project construction and develop appropriate management recommendations for archaeological resource treatment.

14. **MM-GEO-1 Seismicity.**
    The pedestrian bridge shall adhere to the recommendation identified in Appendix E to the Environmental Impact Report to withstand a peak ground acceleration (PGA) at the site of 0.8g generated by an earthquake of moment magnitude Mw=7.4.
    Plan Requirements and Timing: Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall verify the engineering plans include this bridge design specification. ***Monitoring*:** City of Carpinteria/County of Santa Barbara public works staff or construction inspector retained for the project shall inspect bridge construction to verify conformance with this specification.

15. **MM-GEO-2 Differential Settlement of Pedestrian Bridge Foundations.**
    Bridge foundation construction shall adhere to the recommendation identified in Appendix E to the Environmental Impact Report, which specifies a deep foundation employing cast-in-drilled hole (CIDH) piles. Based on the anticipated loadings, Caltrans Standard Plan 24” CIDH Concrete Piles with 200 kips design capacity are recommended in the geotechnical report. Should hard cemented bedrock be encountered during the installation of the CIDH piles, coring may be necessary.
    Plan Requirements and Timing: Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall verify the engineering plans include this bridge foundation specification. ***Monitoring*:** City of Carpinteria/County of Santa Barbara public works staff or construction inspector retained for the project shall inspect foundation construction to verify conformance with this specification.

16. **MM-GEO-3 Soil Erosion/Slope Stability.**
Slope construction shall adhere to the recommendations in the geotechnical report, summarized below:
    i. All new fills placed along the trail alignment shall be placed as engineered geotextile-reinforced soils with subsurface/back drains.
    ii. Manufactured slope profiles shall be no steeper than as specified in the Bengal 2019 geotechnical report (Appendix E), or any updated version thereof which has been prepared to address final trail design.
    iii. Install adequate surface drainage facilities to collect and dispose of surface runoff properly, consistent with the drainage system designs included in 30% Project Plans for Rincon Multi- Use Trail (Appendix E), or as updated to address final trail design.
    iv. Hydro-seed the exposed newly cut and fill surfaces. Periodic watering and re-application of hydroseed shall occur as necessary until vegetation on slope surfaces has been successfully established.

    These measures, in conjunction with the slope flattening and load reduction resulting from the proposed slope cutbacks, should substantially reduce the hazards associated with both slope erosion and local/surficial slope instability under both static and seismic loading conditions.
    Plan Requirements and Timing: Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall verify the engineering plans include the above specifications. ***Monitoring*****:** City of Carpinteria/County of Santa Barbara public works staff or construction inspector retained for the project shall inspect slope and drainage system construction to verify conformance with these specifications.

17. **MM-HAZ-1 Aerially Deposited Lead (ADL).**
Surface soils within the trail alignment segment north of the UPRR corridor shall be tested for potential ADL presence to determine if such soils may be used as fill, or must be disposed in a properly licensed landfill. Using the risk based screening levels developed by California Office of Environmental Health Hazard Assessment (OEHHA), excavated soils with a lead concentration less than or equal to 80 mg/kg total lead (analyzed by USEPA Method 6010 or 6020) would be acceptable for reuse without restrictions, including as fill material within the Rincon Trail project. Excavated soils that are considered a California hazardous waste (total lead concentration greater than or equal to 1,000 mg/kg or a soluble lead concentration greater than or equal to 5 milligrams per liter [mg/L] as determined by the California Waste Extraction Test [CAWet]) or are a RCRA hazardous waste and must be disposed of in a Class I hazardous waste landfill. Excavated soils with lead concentrations below 1,000 mg/kg but above 80 mg/kg total lead may be eligible for reuse with specific restrictions to reduce or eliminate exposure, with prior written approval from DTSC, or may be disposed of at an appropriately permitted landfill.

***Plan Requirements*:** ADL testing requirements and soil re-use restrictions according to identified ADL concentration shall be shown on grading and building plans. Since excess soil material would be generated through proposed grading activities, soils containing greater than 80 mg/kg total lead shall not be used as fill material for the project but shall be exported off site. Soil containing total lead greater than 1,000 mg/kg shall be disposed in a Class I hazardous waste landfill. ***Timing*:** Condition shall be adhered to throughout all grading and construction activities. ***Monitoring*:** City of Carpinteria and County of Santa Barbara staff shall ensure measures are on plans. City and County Grading Inspectors shall spot check and ensure compliance on site.

18. **MM-WAT-1 Obtain Coverage Under Construction General Permit.**
The project shall obtain coverage under a Construction General Permit via the State Water Resources Control Board (SWRCB) (Water Quality Order 99-08-DWQ).
***Plan Requirements*:** The requirement to obtain coverage from the SWRCB under a Construction General Permit shall be indicated on grading plans. ***Timing*:** Evidence of coverage under a Construction General Permit shall be provided to the City of Carpinteria Public Works Department and County of Santa Barbara Public Works Division prior to the initiation of grading. ***Monitoring*:** City and County Public Works staff shall confirm evidence of the Construction General Permit issuance prior to issuance of grading permits.

19. **MM-WAT-2 Stormwater Pollution Prevention Plan.**
The construction contractor shall prepare a Stormwater Pollution Prevention Plan that includes Best Management Practices (BMPs) to be implemented and monitored prior to and during construction. The following BMPs shall be incorporated into the SWPPP to minimize potential construction-related water quality impacts:
    i. Disturbed areas shall be stabilized or re-vegetated prior to the start of the rainy season. The work area shall be flagged to identify its limits. Vegetation shall not be removed or intentionally damaged beyond these limits.
    ii. Construction materials shall be placed in designated areas where they could not enter water bodies or storm drains due to spillage or erosion.
    iii. Waste and debris generated during construction shall be stored in designated waste collection areas and containers away from watercourses and shall be disposed of regularly.
    iv. During construction, washing of concrete trucks, paint, equipment, or similar activities shall occur only in areas where polluted water and materials can be contained for subsequent removal from the site. Wash water shall not be discharged to the storm drains, street, drainage ditches, creeks, or wetlands. The concrete washout area

shall be isolated from water bodies, and wash water and waste shall be removed from the project site. The location of the washout area shall be clearly noted at the construction site with signs.

v. All fueling of heavy equipment shall occur in a designated area removed from water bodies and other drainages, such that any spillage would not enter surface waters. The designated refueling area shall include a drain pan or drop cloth and absorbent materials to clean up spills. The location of the fueling area shall be clearly noted at the construction site with signs.

vi. Vehicles and equipment shall be maintained properly to prevent leakage of hydrocarbons and coolant and shall be examined for leaks on a daily basis. All maintenance shall occur in a designated off-site area. The designated area shall include a drain pan or drop cloth and absorbent materials to clean up spills.

vii. Any accidental spill of hydrocarbons or coolant that may occur on the construction site shall be cleaned up immediately. Absorbent materials shall be maintained on the construction site for this purpose.

viii. Special considerations for work during the rainy season: stockpiled soils should be covered at the end of the work day, and concrete pouring shall be avoided within 15 days of a forecasted rain event to allow full curing, due to its toxic nature until it has fully cured.

***Plan Requirements*:** A Stormwater Pollution Prevention Plan (SWPPP) shall be prepared and implemented prior to construction and shall include the above elements. The SWPPP shall be submitted to City and County Public Works for review and approval prior to the issuance of grading permits for the project. ***Timing*:** The stormwater features and BMPs shall be installed and operational prior to initiation of grading. ***Monitoring*:** City and County Public Works staff shall site inspect for installation and maintenance in accordance with the approved plan and periodically thereafter to ensure proper maintenance over the duration of construction activities.

20. **MM-WAT-3 Erosion and Sediment Control Plan.**
Best available erosion and sediment control measures shall be implemented and maintained during grading and construction. Best available erosion and sediment control measures may include, but are not limited to, use of sediment basins, gravel bags, silt fences, geo-bags or gravel and geotextile fabric berms, erosion control blankets, coir rolls, jute net and straw bales. Construction access points shall be stabilized using gravel beds, rumble plates or other measures to prevent sediment from being tracked onto adjacent roadways. Any sediment or other materials tracked off site shall be removed the same day as they are tracked using dry cleaning methods. ***Plan Requirements and Timing*:** An erosion and sediment control plan shall be submitted to and approved by City and County Public Works prior to issuance of grading permits. The plan shall be designed and implemented to

address erosion and sediment control during all phases of development of the site. ***Monitoring*****:** City and County Public Works shall perform site inspections throughout construction.

21. **MM-WAT-4 Planting of Vegetation.**
    As soon as practicable following the completion of trail construction, the contractor shall install native plantings for biological restoration and hydro-seed slope areas with an appropriate native plant seed mix, in order to provide long-term stabilization of soils disturbed during construction. Periodic watering and re-application of hydro-seed shall occur as necessary until vegetation on slope surfaces has been successfully established.
    Plan Requirements and Timing**:** Landscaping plans including biological restoration areas and hydro-seeding of manufactured slope areas submitted to City Community Development Department and County Planning & Development (CDD/P&D) for review prior to issuance of zoning clearance.
    Monitoring**:** CDD/P&D shall site inspect vegetation plantings and hydro-seed application before issuing final clearance and acceptance of the trail project.

22. **MM-WAT-5 Periodic Inspection and Maintenance of Storm Drain Components.**
    Staff from City and County Parks/Public Works departments shall perform an annual inspection of stormwater components annually, prior to the on-set of the rainy season (November 1) to ensure all components are in good repair and are not blocked by debris or sediment. Any materials found to be obstructing flow in the drainage system shall be removed prior to November 1 each year. The exposed vertical portion of each of the corrugated metal pipe drains shall be examined annually for signs of corrosion, damage or openings in the drain pipe wall. Corrosion visible on the exterior pipe wall shall be treated and sealed promptly, any holes through the pipe wall shall be patched, or the damaged/affected segment shall be replaced or modified.
    Plan Requirements and Timing**:** The Applicant/Owner shall include these inspection and maintenance requirements in the final drainage system design plans. The plans shall be submitted to Community Development Department/Planning & Development (CDD/P&D) and City and County Public Works for review prior to approval of a grading permit and issuance of zoning clearance. ***Monitoring*****:** A memo with the annual inspection notes and corrective maintenance performed shall be prepared and submitted to the City and County Public Works Departments.

23. **MM-WAT-6 Storm Drain Filters.**
    To minimize pollutants impacting the ocean, storm drain filters/inserts shall be installed in the project area storm drain inlets. The filters/inserts shall be maintained in working order.

Plan Requirements: Prior to approval of Grading Permits and issuance of zoning clearance, the Owner/Applicant shall submit plans identifying the type and location of filters/inserts to Community Development Department/Planning & Development (CDD/P&D) and City and County Public Works for review and approval. The location of such filters/inserts shall be noted on grading and building plans. ***Timing:*** Filters/inserts shall be installed prior to final clearance and shall be cleaned using approved methods at least twice a year, once immediately prior to November 1 (before the start of the rainy season) and once in January. ***Monitoring:*** CDD/P&D and City and County Public Works shall site inspect periodically throughout the construction phase to ensure proper installation. Records of maintenance shall be maintained by City/County and shall be submitted to CDD/P&D and City and County Public Works on an annual basis prior to the start of the rainy season and for five years thereafter. After the fifth year, the records shall be maintained by the City/County. CDD/P&D and Public Works shall review the maintenance records and site inspect as needed following completion of construction to ensure periodic cleanout.

24. **MM-NOI-1 Construction Hours.**
    Construction activity for site preparation and for future development shall be limited to the hours between 8:00 a.m. and 5:00 p.m., Monday through Friday. No construction shall occur on state holidays (e.g., Thanksgiving, Labor Day) or weekends. Construction equipment maintenance shall be limited to the same hours. Non-noise generating construction activities are not subject to these restrictions.
    ***Plan Requirements*:** Two signs stating these restrictions shall be posted on site at each end of the proposed trail. ***Timing*:** Signs shall be in place prior to the beginning of and throughout all grading and construction activities. ***Monitoring*:** City and County Grading Inspectors shall spot check and respond to complaints.

25. **MM-NOI-2 Construction Equipment.**
    All construction equipment with engines must have original manufacturer's approved muffling devices. All stationary equipment shall be physically buffered from nearby sensitive receptors.
    ***Plan Requirements*:** Plans shall indicate the requirement of original equipment manufacturer ("OEM") muffled equipment. ***Timing*:** This condition applies when any engine driven equipment is in use at the project site during construction. ***Monitoring*:** City of Carpinteria and County of Santa Barbara Grading Inspectors shall spot check and respond to complaints.

26. **MM-TCR-1 Native American Monitor/Observer.**
    Initial ground disturbing activities shall be monitored by a Native American observer in accordance with the following specifications:

Temporary Impact Areas (equipment staging and materials storage outside trail alignment) – a Native American observer, ancestrally affiliated with the area, shall monitor transport and placement activities until such time that it is reasonable to ascertain that no additional prehistoric archaeological/cultural resources are located within areas of temporary disturbance of the proposed project site.
Permanent Impact Areas not including bridge piling installation (all areas of the trail alignment excepting the bridge approach areas on both sides of the UPRR alignment) – a Native American observer, ancestrally affiliated with the area, shall monitor project implementation during the initial grading and excavation activities until such time as sufficient subsurface soil has been uncovered/excavated to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area.
Bridge piling installation – a Native American observer, ancestrally affiliated with the area, shall monitor the installation of bridge pilings within intact soils and/or any soils deeper than 10 feet below current ground surface to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area.
The monitor/observer shall immediately inform equipment operators in the event archaeological resources are encountered, and shall be empowered to immediately halt construction activity in the area of the discovery until assessment can be completed, and materials recovered as appropriate (refer to CR-2 for additional detail). Monitor reports shall be provided to the City of Carpinteria/County of Santa Barbara on a monthly basis during construction, with a final monitoring report produced at the conclusion of construction activities and provided to the City and County.
***Plan Requirements and Timing*:** Prior to issuance of a grading permit, the Owner/Applicant shall contract with a Native American observer, ancestrally affiliated with the area, to monitor initial ground disturbance activities in accordance with the above criteria. ***Monitoring*:** City of Carpinteria/County of Santa Barbara staff shall ensure the Native American observer, ancestrally affiliated with the area, provide monitoring of initial ground disturbance activities in accordance with the above criteria through receipt of field documentation describing each day of monitoring, construction activity occurring during the monitoring, and observed soil profile conditions related to the potential for presence of archaeological resources.

PROJECT SPECIFIC CONDITIONS

27. **Mitigation Compliance, Monitoring and Reporting Requirement.** Owner/Applicant shall submit to the Community Development Department and County Planning & Development (CDD/P&D) a draft monitoring program for the mitigation measures identified in the Certified EIR, approved Project Description and Conditions of Approval for review and

comment. A City-approved biologist and mitigation monitors responsible for permit compliance monitoring shall be retained and paid for by the applicant. The mitigation monitoring program shall include, but not be limited to the following elements for the entirety of the project:

- Mitigation Measures. A list of the project's mitigation measures.
- Implementation of Mitigation. Timing and party responsible for implementation of each mitigation measure.
- Mitigation Monitoring. Timing and party responsible for monitoring of each mitigation measure and a list of mitigation monitors to be retained.
- Mitigation Reporting. Procedures, timing and responsible party for reporting to the City on project mitigation compliance and monitoring.

28. **Biologist.** A City-approved qualified biologist shall be designated by the Owner/Applicant. The biologist shall be responsible for ensuring compliance with the provisions of the Mitigation Monitoring and Reporting Program. The biologist shall have authority over all other environmental monitors provided by the Owner/Applicant. The Owner/Applicant shall submit the name, contact information and qualifications of the biologist and obtain approval from the Community Development Director prior to commencement of construction.

29. **Final Architectural Review.** The project shall return to the City of Carpinteria Architectural Review Board ("ARB") for final review and approval of construction plans. ***Plan Requirements:*** Plans submitted for final review by the ARB shall include construction plans and specifications all project elements, including but not limited to, fencing and railing, bridge design, signage, landscaping, and any proposed lighting. ***Timing:*** Final review by the ARB shall occur prior to zoning clearance and issuance of grading permits. ***Monitoring:*** CDD staff shall be responsible for ensuring the project receives final approval from the ARB prior to zoning clearance or issuance of grading permits. CDD staff shall ensure that the final plans approved for construction reflect any required revisions by the ARB.

30. **Traffic Management Plan.** Provide a detailed Traffic Management Plan for review by Public Works, Community Development, Carpinteria-Summerland Fire Protection District and the Santa Barbara County Sheriff's Office, and obtain approval from the Public Works Director in consultation with the Community Development Director. The plan shall identify:

- Construction Phases. Project construction stage exhibits including work descriptions.
- Staging and Parking Areas. Equipment staging, materials storage and construction worker parking areas.
- Truck Routes. Construction truck routes to minimize noise and traffic effects to residential neighborhoods.

- Ramp Closures and Detours. Any proposed closures of US 101 ramps and/or detours, by construction stage, if applicable.
- City Street Closures and Detours. Any proposed closures of City streets and/or detours, by construction stage.
- Signs and Traffic Control Measures. Signage and other planned temporary traffic control measures, by construction stage.
- Public Awareness. A program for public awareness and outreach to commuters, property owners, businesses, residents and agencies affected by project construction.
- Public Relations Committee. Applicant is required to form and support a Public Relations Committee consisting of Caltrans, SBCAG, a public relations consultant, business representatives, residents, transit and public safety agencies and City representatives. The Committee shall meet regularly prior to and during construction. Applicant shall review construction, construction phasing, mitigation measures, public relations efforts and permit conditions of approval with the committee. Applicant shall consider feedback and comments from the committee and the general public throughout project construction and make necessary adjustments in response to problems and/or concerns when possible.
- Maintenance of Access. Plans for providing access to businesses, coastal dependent uses and recreational uses during construction.
- Motorist Information Measures. Elements such as radio announcements and appropriate signage.
- Incident Response Measures. Strategies such as construction zone enhanced enforcement program ("COZEEP") and freeway service patrol.
- Coordination and Reporting. A program for ongoing reporting and coordination with the City and other affected agencies throughout construction.

31. **Trail Improvement Maintenance Agreement.** The City and County shall enter into a Trail Improvement Maintenance Agreement to define the maintenance responsibilities of the trail improvements. The Trail Improvement Maintenance Agreement must be signed and entered into prior to issuance of any Engineering Permits.

32. **Pre-Construction Conference.** Prior to commencement of construction, a preconstruction conference shall be held by the Resident Engineer to include construction processes and environmental mitigation and monitoring. The conference shall include representatives from Public Works, Community Development, County of Santa Barbara staff, Project Engineer, Landscape Architect, Contractor and Subcontractor(s), Biologist, and Mitigation Monitors.

33. **Temporary Construction Staging Areas.** The applicant shall submit to the Public Works Director for approval any areas intended for temporary staging of construction equipment and materials in the City of Carpinteria.

34. **Interpretive Signage.** Consistent with development standard Carpinteria Municipal Code ("CMC") § 14.45.030(8)(b), an educational or interpretive display shall be installed which describes the nearby harbor seal rookery. Plans and details depicting the proposed location, design, construction and content of the display shall be prepared and submitted to the Community Development Department for review and approval prior to issuance of any Engineering Permits for the project.

35. **Timing of Project Completion.** Pursuant to the requirements of the Transportation Corridor Wetland Overlay District (CMC §14.45), the Santa Claus Lane Multi-Use Path project shall be completed and open to the public no later than the completion of the Linden Avenue and Casitas Pass Road Interchanges and Via Real Extension construction.

CONDITIONAL USE PERMIT CONDITIONS

36. This Conditional Use Permit is not valid until an Engineering Permit for the development and/or use has been obtained. Failure to obtain said Engineering Permit shall render this Conditional Use Permit and Coastal Development Permit null and void. Prior to the approval of the Engineering Permit, all of the conditions listed in this Conditional Use Permit and Coastal Development Permit that are required to be satisfied prior to approval of an Engineering Permit must be satisfied. Upon issuance of the Engineering Permit, the Conditional Use Permit and Coastal Development Permit shall be valid. The effective date of this Permit shall be the date of action by the City Council, or if appealed, the date of action by the Coastal Commission.

37. If the City Council determines at a noticed public hearing that the permittee is not in compliance with any permit condition(s), the City Council is empowered, in addition to revoking the permit pursuant to said section, to amend, alter, delete or add conditions to this permit.

38. Any use authorized by this Conditional Use Permit and Coastal Development Permit shall immediately cease upon expiration or revocation of this Conditional Use Permit and Coastal Development Permit. Any Engineering Permit issued pursuant to this Conditional Use Permit and Coastal Development Permit shall expire upon expiration or revocation of the Conditional Use Permit and Coastal Development Permit. Conditional Use Permit and Coastal Development Permit renewals must be applied for

prior to expiration of the Conditional Use Permit and Coastal Development Permit.

39. The owner/applicant's acceptance of this permit and/or commencement of construction and/or operations under this permit shall be deemed acceptance of all conditions of this permit by the permittee.

40. Within two years after the effective date of this permit, construction shall commence. Construction cannot commence until an Engineering Permit has been issued. Failure to commence the construction pursuant to a valid Engineering Permit shall render the Conditional Use Permit and Coastal Development Permit null and void.

41. All time limits may be extended by the City Council for good cause shown, provided a written request, including a statement of reasons for the time limit extension request is filed with Community Development prior to the expiration date.

42. If the owner/applicant requests a time extension for this permit, the permit may be revised to include updated language to standard conditions and/or mitigation measures and additional conditions and/or mitigation measures which reflect changed circumstances or additional identified project impacts. Mitigation fees shall be those in effect at the time of issuance of an Engineering Permit.

43. Before commencing any work pertaining to the erection, alteration, enlarging or rebuilding of any structure or improvement, the owner/applicant shall obtain an Engineering Permit. The permit is necessary to ensure implementation of the conditions required by the City Council. Before any Permit will be issued by Community Development, the owner/applicant must obtain written clearance from all agencies having conditions; such clearance shall indicate that the applicant has satisfied all pre-construction conditions. A form for such clearance is available from Community Development.

44. If, at any time, the City Council determines that there has been, or may be, a violation of the findings or conditions of this Conditional Use Permit and Coastal Development Permit, or of the Municipal Code regulations, a public hearing may be held before the City Council to review this permit. At said hearing, the City Council may add additional conditions, or recommend enforcement actions, or revoke the permit entirely, as necessary to ensure compliance with the Municipal Code, and to provide for the health, safety, and general welfare of the City.

45. City Manager and/or Community Development Director shall be informed of any minor changes to the project scope. Any minor changes may be approved by the City Manager and/or Community Development Director. Any major changes will require the filing of a revision application to be considered by the City Council.

46. The owner/applicant shall comply with all requirements of the City of Carpinteria (including but not limited to public improvements as defined in CMC Section 15.16.110) and any other applicable requirements of any federal, state or local law or regulation by an agency of the State and/or any government entity with jurisdiction over the permit or activities thereunder.

47. The standards defined within the City's adopted model Building Codes (UBC; NEC; UMC; UFC; UPC; UHC) relative to the building and occupancy shall apply to this project.

48. Any and all damage or injury to public property resulting from this development, including without limitation, City streets and storm drain infrastructure, shall be corrected or result in being repaired and restored to its original or better condition.

49. No Engineering Permit shall be issued for this project prior to meeting all required terms and conditions listed herein. When not specified herein, all conditions shall be satisfied prior to issuance of an Engineering Permit or prior to commencement of construction when allowed by the Community Development Director.

50. To allow time for the utility companies to locate and mark their facilities for the contractor, the applicant shall telephone Underground Service Alert (USA) toll free at 1-800-227-2600 a minimum of 48 hours prior to the start of construction. For best response, provide as much notice as possible, up to 10 working days.

51. Compliance with the attached Departmental and District letters is required as follows. Where not specified otherwise, Conditions shall be met prior to the start of construction:
    a. Carpinteria Sanitary District letter dated October 31, 2019
    b. Santa Barbara County Air Pollution Control District letter dated November 12, 2019

52. All applicable final conditions of approval shall be printed in their entirety on applicable pages of grading/construction plans submitted to Community Development. These shall be graphically illustrated where feasible. The approved set of plans shall be retained at the construction site for review by the Public Works Director during the course of construction.

53. Owner/Applicant shall ensure that the project complies with all approved plans and all project conditions including those which must be monitored after the project is built and occupied. To accomplish this, owner/applicant agrees to contact Community Development at least two weeks prior to commencement of construction activities to schedule an onsite pre-construction meeting with agency personnel and key construction personnel.

54. Prior to issuance of an Engineering Permit, the owner/applicant shall provide a signed copy of the Conditions of Approval on a form acceptable to Community Development. Such form may be obtained from the Community Development Department. Written authorization to proceed and consent to conditions of approval by the applicant shall be provided to the City prior to commencement of any demolition or construction activity.

55. Written authorization to proceed and consent to conditions of approval by the applicant shall be provided to the City prior to grading permit issuance.

Approved by the City Council on March 28, 2022

I HAVE READ AND UNDERSTOOD, AND I WILL COMPLY
WITH ALL ABOVE STATED CONDITIONS OF THIS PERMIT

Subject: Project No. 19-2015-CUP/CDP
Carpinteria Rincon Trail Project

Dear Mr. Bobroff;

Thank you for the opportunity to provide comments on the subject project. The project applicant proposes to construct a 2,800-foot long paved multi-use trail extending from the eastern terminus of Carpinteria Avenue in the City of Carpinteria to Rincon Beach Park in the County of Santa Barbara, near the Ventura County line. The proposed trail would be 16 feet in width (comprised of a 10-wide path with a 3-foot paved shoulder along each side of the trail). The trail project includes a new 160-foot long clear span pre-fabricated bridge crossing over the UPRR alignment. Grading and earthwork quantities necessary to cut the trail bench and stabilize slopes in the project area estimated at 104,000 cubic yards of cut, 10,300 cubic yards of which would be used for fill on-site. The remaining 94,000 cubic yards of cut material would be exported offsite. A storm drain collection system is proposed for the trail alignment, with new drain outlets to the ocean.

The Carpinteria Sanitary District (District) has the following initial comment:

- The District has a 4-inch diameter HDPE sewer force main that is located immediately north (5 feet to 30 feet) of the proposed trail alignment. At stations 21 through 23.5, the proposed trail is approximately five (5) horizontal feet from the force main. It also appears the proposed trail is 5 to 10 vertical feet from the force main. This force main is a high priority subsurface installation that provides sewer service to the Rincon Point community.

- Contractors excavating, boring, drilling, sinking fenceposts or other subsurface work must take extreme precaution to ensure the force main is protected during the construction of the trail. The District should be notified when excavation activities are occurring between stations 21 through 24. This should be noted on the construction drawings.

If you have any questions regarding the comments provided by the District, please contact me at (805) 684-7214, ext. 13.

Sincerely,
CARPINTERIA SANITARY DISTRICT

Re: Air Pollution Control District Suggested Conditions on Rincon Trail Project, 19-2015-CUP/CDP

Dear Nick Bobroff:

The Air Pollution Control District (District) has reviewed the referenced project, which consists of the construction and operation of a 2,800-foot long, 16-foot wide concrete paved multi-use trail extending from the eastern terminus of Carpinteria Avenue in the City of Carpinteria to Rincon Beach Park in the County of Santa Barbara, near the Ventura County line. The trail will include a 160-foot long pre-fabricated bridge over the railroad tracks. Grading is estimated at 104,000 cubic yards (CY) of cut, 10,300 CY of fill, and 94,000 CY of export. The subject property, identified in the Assessor Parcel Map Book as APNs 001-220-032, 001-220-092, 001-220-100, and 001-220-101, is located at the eastern end of Carpinteria Avenue in the City of Carpinteria.

Air Pollution Control District staff offers the following suggested conditions:

1. Standard dust mitigations (**Attachment A**) are recommended for all construction and/or grading activities. The name and telephone number of an on-site contact person must be provided to the District prior to grading/building permit issuance.

2. District Rule 345, *Control of Fugitive Dust from Construction and Demolition Activities* establishes limits on the generation of visible fugitive dust emissions at demolition and construction sites. The rule includes measures for minimizing fugitive dust from on-site activities and from trucks moving on- and off-site. Please see www.ourair.org/wp-content/uploads/rule345.pdf.

3. The State of California considers particulate matter emitted by diesel engines carcinogenic. Therefore, during project grading, construction, and hauling, construction contracts must specify that contractors shall adhere to the requirements listed in **Attachment B** to reduce emissions of particulate matter (as well as of ozone precursors) from diesel equipment. Recommended measures should be implemented to the maximum extent feasible.

4. All portable diesel-fired construction engines rated at 50 bhp or greater must have either statewide Portable Equipment Registration Program (PERP) certificates or District permits prior to grading/building permit issuance. Construction engines with PERP certificates are exempt from District permit, provided they will be on-site for less than 12 months.

NOV 18 2019
CITY OF CARPINTERIA

Aeron Arlin Genet, Air Pollution Control Officer

5. At all times, idling of heavy-duty diesel trucks should be minimized; auxiliary power units should be used whenever possible. State law requires that:
   - Drivers of diesel-fueled commercial vehicles shall not idle the vehicle's primary diesel engine for greater than 5 minutes at any location.
   - Drivers of diesel-fueled commercial vehicles shall not idle a diesel-fueled auxiliary power system (APS) for more than 5 minutes to power a heater, air conditioner, or any ancillary equipment on the vehicle. Trucks with 2007 or newer model year engines must meet additional requirements (verified clean APS label required).
   - See www.arb.ca.gov/noidle for more information.

If you or the project applicant have any questions regarding these comments, please feel free to contact me at (805) 961-8873 or via email at HoD@sbcapcd.org.

Sincerely,

Desmond Ho
Air Quality Specialist
Planning Division

SANTA BARBARA COUNTY

ATTACHMENT A
FUGITIVE DUST CONTROL MEASURES

These measures are required for all projects involving earthmoving activities regardless of the project size or duration. Projects are expected to manage fugitive dust emissions such that emissions do not exceed APCD's visible emissions limit (APCD Rule 302), create a public nuisance (APCD Rule 303), and are in compliance with the APCD's requirements and standards for visible dust (APCD Rule 345).

- During construction, use water trucks or sprinkler systems to keep all areas of vehicle movement damp enough to prevent dust from leaving the site and from exceeding the APCD's limit of 20% opacity for greater than 3 minutes in any 60 minute period. At a minimum, this should include wetting down such areas in the late morning and after work is completed for the day. Increased watering frequency should be required when sustained wind speed exceeds 15 mph. Reclaimed water should be used whenever possible. However, reclaimed water should not be used in or around crops for human consumption.
- Onsite vehicle speeds shall be no greater than 15 miles per hour when traveling on unpaved surfaces.
- Install and operate a track-out prevention device where vehicles enter and exit unpaved roads onto paved streets. The track-out prevention device can include any device or combination of devices that are effective at preventing track out of dirt such as gravel pads, pipe-grid track-out control devices, rumble strips, or wheel-washing systems.
- If importation, exportation, and stockpiling of fill material is involved, soil stockpiled for more than one day shall be covered, kept moist, or treated with soil binders to prevent dust generation. Trucks transporting fill material to and from the site shall be tarped from the point of origin.
- Minimize the amount of disturbed area. After clearing, grading, earthmoving, or excavation is completed, treat the disturbed area by watering, OR using roll-compaction, OR revegetating, OR by spreading soil binders until the area is paved or otherwise developed so that dust generation will not occur. All roadways, driveways, sidewalks etc. to be paved should be completed as soon as possible.
- Schedule clearing, grading, earthmoving, and excavation activities during periods of low wind speed to the extent feasible. During periods of high winds (>25 mph) clearing, grading, earthmoving, and excavation operations shall be minimized to prevent fugitive dust created by onsite operations from becoming a nuisance or hazard.
- The contractor or builder shall designate a person or persons to monitor and document the dust control program requirements to ensure any fugitive dust emissions do not result in a nuisance and to enhance the implementation of the mitigation measures as necessary to prevent transport of dust offsite. Their duties shall include holiday and weekend periods when work may not be in progress. The name and telephone number of such persons shall be provided to the Air Pollution Control District prior to grading/building permit issuance and/or map clearance.

PLAN REQUIREMENTS: All requirements shall be shown on grading and building plans and/or as a separate information sheet listing the conditions of approval to be recorded with the map. **Timing:** Requirements shall be shown on plans prior to grading/building permit issuance and/or recorded with the map during map recordation. Conditions shall be adhered to throughout all grading and construction periods.

MONITORING: The Lead Agency shall ensure measures are on project plans and/or recorded with maps. The Lead Agency staff shall ensure compliance onsite. APCD inspectors will respond to nuisance complaints.

SANTA BARBARA COUNTY

ATTACHMENT B
DIESEL PARTICULATE AND NO_x EMISSION REDUCTION MEASURES

Particulate emissions from diesel exhaust are classified as carcinogenic by the state of California. The following is a list of regulatory requirements and control strategies that should be implemented to the maximum extent feasible.

The following measures are required by state law:

- All portable diesel-powered construction equipment greater than 50 brake horsepower (bhp) shall be registered with the state's portable equipment registration program OR shall obtain an APCD permit.
- Fleet owners of diesel-powered mobile construction equipment greater than 25 hp are subject to the California Air Resource Board (CARB) In-Use Off-Road Diesel-Fueled Fleets Regulation (Title 13, California Code of Regulations (CCR), §2449), the purpose of which is to reduce oxides of nitrogen (NOx), diesel particulate matter (DPM), and other criteria pollutant emissions from in-use off-road diesel-fueled vehicles. Off-road heavy-duty trucks shall comply with the State Off-Road Regulation. For more information, see www.arb.ca.gov/msprog/ordiesel/ordiesel.htm.
- Fleet owners of diesel-fueled heavy-duty trucks and buses are subject to CARB's On-Road Heavy-Duty Diesel Vehicles (In-Use) Regulation (Title 13, CCR, §2025), the purpose of which is to reduce DPM, NOx and other criteria pollutants from in-use (on-road) diesel-fueled vehicles. For more information, see www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm.
- All commercial off-road and on-road diesel vehicles are subject, respectively, to Title 13, CCR, §2449(d)(3) and §2485, limiting engine idling time. Off-road vehicles subject to the State Off-Road Regulation are limited to idling no more than five minutes. Idling of heavy-duty diesel trucks during loading and unloading shall be limited to five minutes, unless the truck engine meets the optional low-NOx idling emission standard, the truck is labeled with a clean-idle sticker, and it is not operating within 100 feet of a restricted area.

The following measures are recommended:

- Diesel equipment meeting the CARB Tier 3 or higher emission standards for off-road heavy-duty diesel engines should be used to the maximum extent feasible.
- On-road heavy-duty equipment with model year 2010 engines or newer should be used to the maximum extent feasible.
- Diesel powered equipment should be replaced by electric equipment whenever feasible. Electric auxiliary power units should be used to the maximum extent feasible.
- Equipment/vehicles using alternative fuels, such as compressed natural gas (CNG), liquefied natural gas (LNG), propane or biodiesel, should be used on-site where feasible.
- Catalytic converters shall be installed on gasoline-powered equipment, if feasible.
- All construction equipment shall be maintained in tune per the manufacturer's specifications.
- The engine size of construction equipment shall be the minimum practical size.
- The number of construction equipment operating simultaneously shall be minimized through efficient management practices to ensure that the smallest practical number is operating at any one time.
- Construction worker trips should be minimized by requiring carpooling and by providing for lunch onsite.
- Construction truck trips should be scheduled during non-peak hours to reduce peak hour emissions whenever feasible.
- Proposed truck routes should minimize to the extent feasible impacts to residential communities and sensitive receptors.
- Construction staging areas should be located away from sensitive receptors such that exhaust and other construction emissions do not enter the fresh air intakes to buildings, air conditioners, and windows.

PLAN REQUIREMENTS AND TIMING: Prior to grading/building permit issuance and/or map recordation, all requirements shall be shown as conditions of approval on grading/building plans, and/or on a separate sheet to be recorded with the map. Conditions shall be adhered to throughout all grading and construction periods. The contractor shall retain the Certificate of Compliance for CARB's In-Use Regulation for Off-Road Diesel Vehicles onsite and have it available for inspection.

MONITORING: The Lead Agency shall ensure measures are on project plans and/or recorded with maps. The Lead Agency staff shall ensure compliance onsite. APCD inspectors will respond to nuisance complaints.

Rincon Trail Project Appeal
19-2015-CUP/CDP
City Council Hearing, March 28, 2022

PLANNING COMMISSION STAFF REPORT

MEETING DATE: January 18, 2022

ITEM FOR CONSIDERATION

Conditional Use Permit and Coastal Development Permit, and Certification of the Environmental Impact Report for the Rincon Trail Project

19-2015-CUP/CDP

Request to accept and certify the Environmental Impact Report for the Rincon Trail project, and to grant a Conditional Use Permit and Coastal Development Permit for the 850-foot long portion of the trail project located in the City of Carpinteria. The entirety of the proposed approximately 2,800-foot long multi-use trail would connect the east end of Carpinteria Avenue to Rincon Beach County Park in unincorporated Santa Barbara County.

I. RECOMMENDATION

Adopt the attached Resolution PC-22-001, thereby acting on behalf of the City of Carpinteria as the Lead Agency as defined by the California Environmental Quality Act ("CEQA"), accepting and certifying the Environmental Impact Report ("EIR") for the Rincon Trail project as having satisfied the procedural and statutory requirements of CEQA; selecting the Steeper Slopes/Reduced Earthwork Alternative ("Alternative 3") as the preferred project; and approving the Conditional Use Permit and

Coastal Development Permit for the portion of the proposed Rincon Trail project located in the City of Carpinteria.

II. PROPOSED PROJECT DESCRIPTION

Project Overview

Proposed Project

The Rincon Trail is a public multi-use trail that would connect the eastern end of the City of Carpinteria to Rincon Beach County Park located in unincorporated Santa Barbara County near the Ventura County line. The proposed trail would originate from Carpinteria Avenue in the City of Carpinteria, just east of the intersection with State Route ("SR") 150, and proceed easterly for approximately 2,800 linear feet, terminating at the western terminus of the Rincon Beach County Park parking lot. The proposed trail would be finished in a concrete pavement and feature a usable width of 16 feet (comprised of a five-foot wide "travel lane" in each direction and three-foot wide shoulders on each side). A six-foot wide shallow concrete v-ditch would run along the inside of the trail length for the purposes of capturing and conveying stormwater to onsite drainage facilities. Protective fencing would be provided along the trail alignment to keep trail users on the improved path. The trail project also includes a new 14-foot wide, 160-foot clear-span pre-fabricated bridge crossing over the Union Pacific Railroad ("UPRR") alignment.

Grading and earthwork quantities necessary to cut an Americans with Disability Act ("ADA")-compliant trail bench, stabilize slopes, and control stormwater runoff through the project area are estimated at 96,040 cubic yards ("CY") of cut. Approximately 10,519 CY of the cut material would be used for fill onsite; the remaining 85,521 CY of cut material would be exported offsite. Approximately 45% of the estimated earthwork (equivalent to ~43,200 CY of cut) is expected to occur on the inland side of the UPRR alignment; and the remaining 55% (~52,800 CY) on the ocean side of the UPRR alignment. A storm drain collection system is proposed for the trail alignment, which would utilize a combination of repaired existing and new piped storm drains on the bluff face and drain outlets onto the sandy beach below the bluff. A habitat restoration plan is included to restore areas disturbed during construction and to mitigate for permanent removal of vegetation to accommodate the new trail.

The westernmost approximately 850 linear feet of the trail, running roughly parallel to U.S. Highway 101 from the trailhead just east of the Carpinteria Avenue/SR 150 intersection and north of the UPRR alignment falls within the jurisdiction of the City of Carpinteria. The remainder of the trail alignment (approximately 1,950 linear feet), including the new bridge over the UPRR alignment, would fall within the permitting jurisdiction of the County of Santa Barbara. As part of the project, the City will obtain an easement from UPRR for the bridge crossing over, and trail improvements within, the UPRR alignment. The City is also anticipating the acquisition of right-of-way from the California Department of Transportation ("Caltrans") to accommodate the trail alignment.

The purpose of the Rincon Trail project is to close an existing critical gap in the California Coastal Trail between the Carpinteria Bluffs and the Pacific Coast Bikeway (i.e., bike path from Bates Road to just south of Mussel Shoals along U.S. Highway 101), that would serve to enhance opportunities for public coastal access and recreation, and support alternative means of transportation. The Rincon

Trail project also is intended to provide a safe and attractive alternate route to the existing unsanctioned, informal use trails connecting the Carpinteria Bluffs to Rincon Beach County Park, which trespass through UPRR property, and reduce the unprotected use of the U.S. Highway 101 shoulder between SR 150 and Bates Road by cyclists. With the recent acquisition by the City of Carpinteria of the majority of the Bluffs III area for the new Rincon Bluffs Preserve, the proposed trail would also function as a critical connection between existing public recreation amenities in the area.

A more complete project description is included in "Section 2, Project Description," of the Draft EIR included as Exhibit 2 to this report. Minor revisions to the project description are reflected in "Section 3, Changes to the Draft EIR," of the Proposed Final EIR included as Exhibit 3. Proposed 100% plans for the trail and bridge are included as Attachment B to Exhibit 1. Perspective renderings and other supporting materials are included as Exhibit 4.

Environmentally Superior Alternative: Steeper Slopes/Reduced Earthwork Alternative ("Alternative 3")

The Proposed Final EIR identifies the Steeper Slopes/Reduced Earthwork Alternative ("Alternative 3") as the environmentally superior alternative, as it would have the same or slightly less severe impacts compared to the proposed project by achieving further reductions in earthwork quantities through minor adjustments to the proposed trail width and surface slope, while still achieving all project objectives. The Alternative 3 design is substantially similar to the proposed project except that for a portion of the trail alignment south of the UPRR crossing, an approximately 690-foot length of the trail has been reduced in width from 16 feet to 14 feet, and the trail pathway surface slope has been slightly steepened from a maximum five percent (5%) grade to a maximum six percent (6%) grade. The steeper slope results in the trail alignment intersecting the existing abandoned historic railroad bench at a more westerly point and re-using a longer portion of this existing historic bench to reach the Rincon Beach County Park trail terminus as compared to the proposed project.

These minor adjustments to the design of the trail segment south of the UPRR crossing result in a further net reduction of 121 CY of exported material compared to the proposed project (from 85,521 CY to 85,400 CY), which in turn account for slight reductions in the severity of identified potential impacts related to air quality, energy, greenhouse gas emissions, hydrology/water quality, noise, and recreation. As part of the action to adopt and certify the project EIR, staff recommends the Planning Commission select Alternative 3 as the preferred project as it meets all project objectives while reducing environmental impacts compared to the proposed project and other alternatives.

A more complete description of Alternative 3 is included in "Section 6, Alternatives," of the Draft EIR (Exhibit 2); minor refinements to the description of the Alternative 3 project are described in "Section 6.6.3, Steeper Slopes/Reduced Earthwork Alternative (Alternative 3)" of the Proposed Final EIR (Exhibit 3). A current conceptual design of the revised alignment for Alternative 3 is included as Figure 6.2 in the Proposed Final EIR.

Proposed Final Environmental Impact Report

Pursuant to the California Environmental Quality Act ("CEQA"), the City of Carpinteria is acting as the Lead Agency in accordance with CEQA Guidelines Sections 15050-15051, and is responsible for preparing this environmental document for the Rincon Trail project. The purpose of the CEQA

analysis is to determine whether the proposed project may have significant effects on the environment, to identify possible mitigation measures to reduce the severity of any significant effects, and to disclose the findings of this analysis to the public and decision makers. The prepared Proposed Final Environmental Impact Report ("EIR") is intended to provide the factual basis for finding that the project will not have a significant effect on the environment with the inclusion of the identified mitigation measures.

The Planning Commission is responsible for accepting and certifying the Proposed Final EIR as having: 1.) Adequately and accurately described and disclosed all potential project impacts; 2.) Satisfactorily reducing all identified potentially significant environmental effects to less than significant levels through the implementation of appropriate mitigation measures; and 3.) Satisfying the procedural and statutory requirements of CEQA. As part of the action in certifying the EIR, the Planning Commission must also select the preferred project from amongst the proposed project or project alternatives.

The Proposed Final EIR under consideration is included with this report as Exhibit 3.

Additional Permit Approvals

Following acceptance and certification of the EIR by the Planning Commission, acting on behalf of the City of Carpinteria as Lead Agency, as having satisfied the requirements of CEQA, additional permits and/or approvals for the Rincon Trail project are required from the following jurisdictions:

- County of Santa Barbara – Development Plan, Conditional Use Permit and Coastal Development Permit ("DP/CUP/CDP") for the portion of the trail construction located within the unincorporated area of Santa Barbara County;
- California Department of Transportation ("Caltrans") – permit authority and easement, or fee simple acquisition, for portions of the trail located within U.S. Highway 101 right-of-way;
- California Public Utilities Commission ("CPUC") – Authorization to construct a grade-separated pedestrian trail crossing over the UPRR Santa Barbara Subdivision main line;
- Union Pacific Railroad ("UPRR") – granting of easement and approval for railway crossing and portions of the trail on UPRR-owned property;
- State Water Resources Control Board ("SWRCB") – Coverage under the General Construction Activity Permit; and
- National Environmental Policy Act ("NEPA") clearance – Due to some of the project funding coming from federal sources through Caltrans, the project must demonstrate compliance with NEPA. Staff is drafting a Categorical Exclusion ("CE") for review and certification by Caltrans as having satisfied all pertinent NEPA requirements.

III. BACKGROUND

Site Characteristics

The project site is located near the eastern terminus of Carpinteria Avenue and extends eastward to the western terminus of the Rincon Beach County Park parking lot located in unincorporated Santa Barbara County. The project area appears to be a semi-natural setting at first glance, however, the proposed trail alignment is located upon a series of highly altered, manufactured slopes resulting from

earthwork activities associated with the 1960s re-alignment of U.S. Highway 101 (formerly SR 2) and the UPRR corridor inland away from the coastal bluffs. Remnants of the past SR 2 and UPRR alignments are visible in the project area, including the former rail bench along the coastal bluff face, abandoned retaining walls and storm drains associated with the past highway alignment, and remnant sections of highway paving. The existing slopes and soil conditions in the project area are highly dynamic, subject to erosive effects of runoff and areas of remnant historic landslides that further contribute to slope instability. It is expected the area may become vulnerable to coastal bluff retreat from the effects of sea level rise in the future as well.

North of the current UPRR alignment, the proposed trail would be located on a new bench cut into the face of the existing manufactured slope overlooking U.S. Highway 101 and the southbound on-ramp from SR 150. After crossing the UPRR alignment just west of where U.S. Highway 101 crosses the railroad tracks, the proposed trail alignment would round the western shoulder of the ridge located south of the UPRR alignment (sometimes referred to as the "Bates Bluff" or "Rincon Bluff"), and traverse across the steep south-facing, or ocean side, of the coastal bluff face on a new cut trail bench located above the abandoned former UPRR rail bench, gradually descending toward the existing turn-around at the western end of the Rincon Beach County Park parking lot where the trail would terminate. In the Alternative 3 project scenario, the proposed trail alignment would descend to the existing former UPRR rail bench at a more westerly point, utilizing some of the existing bench to reach the terminus of the proposed trail at the Rincon Beach County Park parking lot.

Various transportation-related infrastructure and underground utilities run through the project area, including but not limited to U.S. Highway 101, which runs just to the north of the proposed trail alignment, major storm drain facilities associated with U.S. Highway 101 which crosses the trail alignment, a four-inch force sewer main serving the homes on Rincon Point which roughly parallels the westerly portion of the trail alignment, the UPRR rail corridor which crosses the trail alignment, an underground communications line which approximately parallels the easterly portion of the trail alignment, and an abandoned in place underground oil pipeline that also crosses the trail alignment just north of the railroad tracks.

Public recreational amenities in the area include the newly acquired Rincon Bluffs Preserve located on Bluffs III, just southwest of the proposed westerly terminus of the trail, Rincon Beach County Park located at the eastern terminus of the proposed trail, and Rincon Point State Beach, located just east of the vehicular entrance into Rincon Beach County Park. The Pacific Coast Bikeway begins immediately adjacent to the entrance to Rincon Point State Beach and continues southward paralleling U.S. Highway 101. Public beaches are located seaward of the coastal bluff face and proposed trail alignment. Informal use trails crisscross the bluffs in the project area and have provided historic, unsanctioned public access to, and across, the UPRR alignment between the Carpinteria Bluffs and the Rincon Beach County Park. The area is also informally used by members of the soaring community (e.g., hang gliders, paragliding, etc.), who take off from an unimproved launch point, located on private property, at the southeastern tip of the Carpinteria Bluffs on flights toward Rincon Point or along the Carpinteria Bluffs.

Vegetation in the area is characterized as a mix of native and non-native/disturbed vegetative communities. Several large swatches of undisturbed native vegetation are present in the project area, including several areas with concentrations of identified sensitive species. The extent, types, and sensitivity of Biological resources located in the project area are discussed in more detail in "Section 3.3, Biological Resources" of the Proposed Final EIR, included with this report as Exhibit 3.

The project area within the City is not assigned to a zoning designation on the City's Zoning Map, however, the immediately adjacent privately-owned parcels to the south are zoned Resort District ("RES") and have a Visitor-serving Commercial ("VC") land use designation. The U.S. Highway 101 corridor immediately to the north of the project site has a Transportation Corridor ("TC") land use designation. For the portion of the trail project located in the County's jurisdiction, the project area is zoned Transportation Corridor ("TC") and Recreation ("REC"), and has corresponding TC and Recreation/Open Space land use designations. The project area is also subject to several Overlay Districts including Environmentally Sensitive Habitat Area ("ESH"), and Coastal Appeals ("CA") in the City, along with the County's Hwy 101 Corridor Zoning Overlay, and View Corridor Overlay.

California Coastal Trail

According to the State Coastal Conservancy, the California Coastal Trail ("CCT") is "*an interconnected public trail system being developed along the California coastline that will span over 1,230 miles from Oregon to Mexico.*" The CCT is "*designed to make the coast more accessible, foster appreciation and stewardship of the scenic and natural resources of the coast, provide recreational opportunities, and encourage non-motorized transportation. The CCT is developed as close to the ocean as possible, and where feasible, within sight, sound, and smell of the ocean. The CCT is considered a braided network, meaning there can be parallel routes that accommodate different experiences, such as a sandy beach route for beach visitors, a bluff top dirt hiking path providing scenic views, and a paved path for bikers, wheelchair users, and people needing firmer footing.*" Statewide, approximately 70% of the CCT is currently completed. The CCT was designated as a federal Millennium Legacy Trail in 1999.

According to the Coastal Conservancy's "California Coastal Trail Mapping Viewer," the primary CCT route follows the Coastal Vista Trail through the Carpinteria Bluffs, terminating for now, at the start of the Bluffs III property (now the Rincon Bluffs Preserve). The primary CCT route picks back up in Rincon Beach County Park and continues from there southeast along the Pacific Coast Bikeway. The missing trail segment through Bluffs III to Rincon Beach County Park represents a key gap in the coastal trail system for the region. With the recent acquisition of the majority of the Bluffs III property by the City (and official trail and park improvement planning underway) and with the completion of the Rincon Trail project, this critical local gap in the CCT could be filled in, providing significant coastal access, recreation, and alternative transportation benefits to the surrounding communities.

It is for this reason that the Rincon Trail project has been specifically called out in the Open Space, Recreation and Conservation Element of the City's General Plan/Coastal Land Use Plan as a future public trail improvement for the City to pursue as a capital project, and why the project was identified as one of two key regional alternative transportation projects that were required to be completed as a condition of approval for Caltrans' "South Coast Highway 101 HOV Lanes" projects (discussed below). The project objectives developed for the Rincon Trail project, which are described in Section 2.4.3, Objectives, of the Draft EIR, also reflect the emphasis placed on providing a coastal trail project that meets the design intentions of the CCT.

Project History

Local Coastal Program Amendment for the Linden Avenue and Casitas Pass Road Interchanges, Via Real Extension , South Coast HOV Lanes, and the Coast Route Bike Path Projects

The Rincon Trail project was initially conceived as part of a suite of transportation improvement projects associated with Caltrans' U.S. Highway 101 interchange and widening projects in Carpinteria. Working in close collaboration with Caltrans and the California Coastal Commission ("CCC"), the City received approval and certification of a Local Coastal Program Amendment ("LCPA") in October 2015 (LCP-4-CPN-15-0018-1 / City Project 09-1522-LCPA/ORD) to, among other things, create the new Transportation Corridor Wetland Overlay ("TCWO") (Carpinteria Municipal Code ("CMC") §14.45) and Whitney Site Agriculture Overlay (CMC §14.41) Districts to carve out specific exceptions for limited unavoidable impacts to wetlands and prime soils/agriculture associated with the U.S. Highway 101 projects necessary to complete these critical infrastructure projects, subject to specific mitigation measures to reduce impacts to the maximum extent feasible and other beneficial coastal resource enhancement project components.

One of the applicable development standards for the U.S. Highway 101 projects subject to the new TCWO District is to *require of Caltrans* (emphasis added) the construction of two "*regionally important improvements to alternative transportation modes for the purpose of increasing access to coastal resources for all members of the public*" (CMC §14.45.030[7]); the two identified projects being the Coast Route Bike Path (i.e., Santa Claus Lane to Carpinteria Avenue, previously approved by the Planning Commission in December 2021) and the subject Rincon Coastal Trail (SR 150/Carpinteria Avenue to Rincon Beach County Park). The Coast Route Bike Path project is required to be completed no later than completion of the adjacent phase of construction for the South Coast HOV Lanes project; the Rincon Coastal Trail project is required to be completed no later than completion of the Linden Avenue and Casitas Pass Road Interchanges and Via Real Extension project construction.

Following certification of the LCPA to create the necessary new Overlay Districts, the City took action on the Conditional Use Permit and Coastal Development Permit ("CUP/CDP") application (Project 09-1522-CUP/CDP) for Caltrans' Linden Avenue and Casitas Pass Road Interchanges and Via Real Extension project in November 2015. Condition no. 3.7.15 of the adopted project conditions of approval requires Caltrans to complete construction of the Rincon Trail project as a required coastal access and recreation component of the larger project as depicted in the City of Carpinteria Planning Commission's approval of Project 15-1760-CUP/CDP (discussed below), and subject to approval by the County of Santa Barbara and California Public Utilities Commission. The condition stipulates that while construction of the trail is the sole responsibility of Caltrans acting as the project applicant, the City, County of Santa Barbara, Santa Barbara County Association of Governments ("SBCAG") and Caltrans are to work cooperatively to complete construction of the trail project. As documented in a Memorandum of Understanding ("MOU") at the time, the City agreed to take the lead role in the design and environmental permitting work for the Rincon Trail project, and SBCAG took on the primary role of administering funding for the project as part of the larger U.S. Highway 101 projects. The condition also provides that if the trail cannot be completed along the route described in the Mitigated Negative Declaration ("MND") prepared for Project 15-1760-CUP/CDP, then the applicant shall provide an alternative route. Finally, the condition requires that the trail be open to the public prior to completion of the Linden Avenue and Casitas Pass Road Interchanges and Via Real Extension improvements.

Carpinteria Rincon Trail Project, 15-1760-CUP/CDP

In anticipation of the CCC's certification of the LCPA establishing the TCWO District and the City's subsequent approval of the CUP/CDP application for the Linden Avenue and Casitas Pass Road Interchange and Via Real Extension project, the City initiated a separate CEQA process for the Rincon Trail project in 2012 and its own CUP/CDP application for the anticipated trail in March 2015 (Project 15-1760-CUP/CDP). This initial iteration of the Rincon Trail Project followed a similar alignment from Carpinteria Avenue to the UPRR corridor crossing as the current proposed project, but then incorporated a major switchback element after crossing the railroad tracks to move the trail off the shoulder of the ridge south of the railroad tracks (i.e. "Bates Bluff") and onto the existing abandoned former railroad bench located along the lower ocean-side bluff face. This existing bench was to accommodate the remainder of the new trail and connect to Rincon Beach County Park. This initial project description also called for additional project components including a new trailhead parking area on Carpinteria Avenue, the need for approximately 1,000 linear feet of retaining walls up to 14 feet in height throughout the "switchback" portion of the trail alignment, a rainwater cistern to collect runoff for use in irrigation of mitigation plantings, and trail lighting. This same trail alignment is included in the current EIR as Alternative 2.

This initial version of the project required preparation of a Mitigated Negative Declaration ("MND") to satisfy the requirements of CEQA, and was reviewed and recommended to the Planning Commission for approval by the City's Environmental Review Committee ("ERC") in June 2012, with only minor revisions to the proposed environmental document. Following formal submittal of the CUP/CDP application, the project was reviewed and recommended for approval by the City's Architectural Review Board ("ARB") in April 2015 as submitted. The City's Planning Commission reviewed and approved the CUP/CDP application for the City's portion of the Rincon Trail project, and acting as Lead Agency for the project, accepted and certified the MND as having satisfied all CEQA requirements in May 2015.

A companion DP/CUP/CDP application for the portion of the trail within the jurisdiction of the County of Santa Barbara was subsequently submitted in 2017, but was deemed incomplete pending submittal of additional information. In May 2017, while the project design team continued to develop the proposed design and construction plans, the City's entitlements for the Rincon Trail project expired due to failure of the project to initiate construction within the allotted two-year timeframe from project approval.

Since that time, the project design team continued to work on the project plans, completing necessary geotechnical and drainage studies to more completely assess the site conditions and understand how these conditions would affect the construction of the trail, with the intention of obtaining a reauthorization of the City's approval of the trail project and completing the County's permitting process. However, after further study, the more detailed understanding of the site conditions along with further refinement of the trail alignment and design revealed that the initial trail alignment described in the 2012 MND and approved by the City in 2015 was no longer preferable, or possibly even feasible from a constructability standpoint due to a variety of site constraints. These site constraints include but were not limited to, conflicts with major U.S. Highway 101 storm drain infrastructure, unstable geologic conditions within the original trail alignment, more extensive encroachments of improvements into the UPRR corridor, and inability to build the trail in a manner consistent with Americans with Disabilities Act ("ADA") design guidelines.

Further study revealed that an alternative, more direct alignment was available that could avoid interference with critical storm drain infrastructure, avoid the need for construction of costly and unsightly retaining walls, shorten the overall trail length, minimize construction in areas of geologic instability, reduce the extent of work within the UPRR alignment, and provide an ADA-compliant path profile for the entire trail length. This alternate alignment was also found to better achieve the stated project objectives.

Despite being found to be preferable to the original trail alignment, this new alignment was determined to be significantly different from what was previously considered under the original MND, and identified possible new significant environmental impacts not previously disclosed, such that a new environmental review for the revised alignment was deemed necessary in order to comply with the requirements of CEQA.

Carpinteria Rincon Trail Project, 19-2015-CUP/CDP, Subsequent Mitigated Negative Declaration

A revised CUP/CDP application was submitted to the City in October 2019 for the current proposed alignment. A Subsequent Mitigated Negative Declaration ("SMND") was prepared for the current project alignment in fall 2019 to describe the potential impacts of the revised trail and circulated for public review over November/December 2019. The SMND was reviewed and recommended for approval to the Planning Commission by the City's ERC in November 2019, following which, the City also held a public informational workshop to review the proposed project and answer questions from the public in December 2019. The SMND was considered and certified by the Planning Commission at its January 6, 2020 hearing.

An appeal of the Planning Commission's decision was filed by a member of the public during the 10-day appeal period following the Planning Commission's action, citing allegations of having "*started construction (and) used funds and/or equipment, which may conceal, the true costs of the project*;" of having "*not considered, in the Mitigated Negative Declaration Report, the dynamics, of further destabilization, of the Pacific Ocean facing bluff, we call, "Little Diamondhead," both during, and after, attempts, at construction*;" and of being "*a path, which does not safely connect to the existing path, (Carpinteria to Ventura), as it terminates into a Santa Barbara County parking lot and violates the City of Carpinteria, 2013 Final Bicycle Master Plan.*" Consideration of the appeal by the City Council was postponed due to the onset of the COVID-19 global pandemic.

In September 2020, the City Council elected to not hear the appeal and instead move forward with the preparation of an EIR as the appropriate CEQA environmental review document in order to allow for a more in-depth analysis of key issue areas identified during consideration of the SMND. A letter was sent to the appellant in October 2020 notifying him of the City's decision to not grant an appeal hearing and to instead proceed with the preparation of an EIR for the proposed project. The appellant was invited to participate in the public review of the new EIR.

IV. ANALYSIS

Environmental Impact Report

As discussed in the project background section (above), at the direction of the City Council in September 2020, staff amended their contract with the environmental consultant, Dudek, to prepare an EIR for the current version of the proposed project. The intention in preparing an EIR was to allow for a more in-depth analysis of key issue areas (e.g., biological resources, geologic resources, water quality, and recreation) and to identify a suite of project alternatives for consideration that could be feasibly expected to meet all or most of the stated project objectives.

The EIR is an informational document intended for the use by the City, other public agencies, and members of the general public in evaluating the potential environmental effects of the proposed project. The CEQA requires that the EIR identify the significant effects of the project on the environment and provide measures or alternatives that can mitigate or avoid these effects. The EIR also includes an examination of the effects of cumulative development.

A Notice of Preparation ("NOP") was circulated by the City on October 30, 2020 to initiate a 30-day public scoping period to gather input from other public agencies and the general public concerning the scope and content of the EIR. During the 30-day scoping period, the City also hosted a public scoping meeting on November 17, 2020 to gather additional public input. The NOP and comments received during the scoping period are included as Appendix A to the Draft EIR (Exhibit 2). Based on the proposed project as described in the NOP and comments received during the scoping period, the following issue areas were identified as being potentially significant and were addressed in the detailed analysis of the EIR: *Aesthetics; Air Quality; Biological Resources; Cultural Resources; Geology and Soils; Greenhouse Gas Emissions; Hazards and Hazardous Emissions; Hydrology and Water Quality; Land Use Planning; Noise; Recreation; Transportation; Tribal Cultural Resources; and Utilities and Service Systems.*

The Draft EIR described the proposed revised project, outlined some of the key differences as compared to the original project, and evaluated the potential for environmental impacts resulting from the revised project. The Draft EIR also identified four project alternatives and broadly evaluated the potential for environmental impacts of these alternative designs compared to those impacts anticipated for the proposed project.

The four alternatives, which are described in more detail in Section 6.0 of the Draft EIR (Exhibit 2) and Proposed Final EIR (Exhibit 3), can be summarized as follows: Alternative 1. No Project/No Build Alternative (i.e., maintain the existing condition); Alternative 2. Maximize Existing Benchwork/Topography Alternative (i.e., the original 2015 version of the project); Alternative 3. Steeper Slopes/Reduced Earthwork Alternative (i.e., substantially similar to the proposed project, but utilizes a slightly narrower trail width and steeper trail surface slope for a segment of the trail south of the UPRR crossing to further reduce earthwork quantities); and Alternative 4. Freeway Adjacent Trail Avoiding Bluff Face Alternative (which utilizes the same alignment as the proposed project up to and including the UPRR crossing, but then shifts the trail to the north side of the ocean front ridge south of the UPRR alignment, roughly parallel and adjacent to the U.S. Highway 101 corridor). Alternative 3, Steeper Slopes/Reduced Earthwork Alternative, was identified as the environmentally superior

alternative as it was found to meet all of the project objectives while resulting in the same or slightly less severe environmental effects as compared to the proposed project.

The Draft EIR identified no Class I (significant, unavoidable) impacts associated with the project. However, Class II impacts (significant, but feasibly mitigated) were identified in the following categories: *Aesthetics, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Tribal Cultural Resources, and Utilities and Service Systems*. With the incorporation of identified mitigation measures, all of these impacts would be reduced to a less than significant level. Additional Class III (less than significant) impacts were identified for *Aesthetics, Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hydrology and Water Quality, Noise, Public Services, Recreation, Transportation, and Utilities and Service Systems*.

The Draft EIR was made available for public review for a 45-day public review period, beginning on March 12, 2021 and concluding on April 26, 2021. At the start of the public review period, a Notice of Completion ("NOC") was submitted to the State Clearinghouse and a Notice of Availability ("NOA") was distributed to interested parties and also filed with the State Clearinghouse. The Draft EIR, and NOA were also published to the City website.

During the 45-day public review period, the City's Environmental Review Committee ("ERC") held a public hearing on the Draft EIR on April 13, 2021 to receive comments on the adequacy of the document. Approximately 40 members of the public attended. Public comments received at the ERC meeting included, but were not limited to, the following:

- Disagreement with the findings and conclusions of the wind flow study, and with the EIR's categorization of recreational impacts to soaring activities as "less than significant;"
- Disagreement over language in the EIR concerning legal rights to use of the launch site and compliance of soaring activities in the area with various local and federal regulations;
- Request for the project team to consult with the soaring community on project alternatives that would better preserve existing wind conditions;
- Concerns over the safety of terminating the east end of the trail into the Rincon Beach County Park parking lot; and
- A preference for Alternative 4, Freeway Adjacent Trail Avoiding Bluff Face Alternative, over the proposed project alignment;

During deliberations by the ERC, key comments, questions and recommendations included:

- Stated concerns over the adequacy of proposed erosion control measures during construction throughout the rainy season given the extent and steepness of the affected slopes;
- Identified the need to address impacts from concrete work during the rainy season in the Water Quality and Hydrology section of the EIR;
- Skepticism about the viability of the mitigation measures calling for woodrat and legless lizard relocation ahead of vegetation clearing;
- Recommended the bird nesting survey measure be updated to require compliance with applicable state and federal regulations;
- Stated concerns about the severity of the anticipated impacts to soaring activities and skepticism over the findings of the air flow study;

- Disagreement about the emphasis placed on establishing a trail alignment that maximizes ocean views at the expense of increased earthwork;
- Raised questions about the design and alignment of Alternative 4 relative to the bridge crossing of the UPRR alignment and estimated earthwork quantities;
- Requested additional information and details about the design of Alternative 4;
- Raised safety concerns about the eastern end of the trail terminating in the Rincon Beach County Park parking lot; and
- A stated preference by several of the ERC members for Alternative 4 over the proposed project.

The ERC took action on two separate motions related to the Draft EIR: In Motion 1, the ERC voted 4-0 (Committee member Ilasin abstained) to recommend revisions to the EIR to address the ERC's comments, recommendations, clarifications, additional mitigation measures and corrections, including providing additional project details for "Alternative 4." In Motion 2, the ERC again voted 4-0 with Committee member Ilasin again abstaining, to recommend approval of the EIR to the Planning Commission with an expressed preference for "Alternative 4," and with an understanding that the previous motion's comments would be incorporated into the Proposed Final EIR. The Minutes from the April 13, 2021 ERC Meeting and, where appropriate, responses to comments from the ERC, are included in Section 2. Responses to Comments, of the Proposed Final EIR (Exhibit 3).

Comment letters submitted during the 45-day public review period were received from the County of Santa Barbara, County of Ventura, SBCAG, Carpinteria Sanitary District, California Coastal Commission ("CCC"), California Public Utilities Commission ("CPUC"), California Department of Fish and Wildlife ("CDFW"), Southern California Gas Company, Northern Chumash Tribal Council, and Friends of Bates Beach. Approximately 41 comment letters were also received from members of the public, the majority of which came from members of the soaring community.

Copies of all received comment letters from the 45-day public review period are included as Section 2. Responses to Comments, of the Proposed Final EIR (Exhibit 3). Responses were prepared for all received comment letters, and are also included in Section 2 of the Proposed Final EIR. Comments of greatest significance that required an in depth response and/or that resulted in revisions to the Proposed Final EIR can be summarized as follows:

- A number of commenters suggested that the Recreation Section of the EIR should not have included a discussion on the fundamentals of soaring or Federal Aviation Administration ("FAA") regulations pertaining to soaring activities, and also expressed skepticism regarding the conclusions of the airflow analysis study and the determination of a less than significant project impact on existing soaring opportunities;
- Several commenters highlighted concerns with the volume of earthwork necessary to implement the proposed project and indicated that additional effort should be completed to identify alternatives for trail development that could further reduce earthwork volumes and landform modification;
- Commenters have indicated that the biological field surveys failed to detect some plant and wildlife species that are present within the project alignment, and that further alternatives should be developed and studied in order to avoid or minimize project impacts upon environmentally sensitive habitat areas ("ESHA");

- A substantial number of commenters expressed support for implementation of Alternative 4 instead of the proposed Project. Due to this expression of interest by members of the public, Santa Barbara County requested each of the alternatives identified in the EIR include sufficient depth of analysis to support a potential approval based on any of the alternatives;
- Under the Biological Resources section, permanent impacts to ESHA should include not just those areas displaced by the proposed trail, but also areas of vegetation removal. Further, the anticipated extent of temporary and permanent impacts to ESHA should be described in greater detail, and mitigation ratios revised to reflect the new totals of temporary and permanent impacts;
- Under the Biological Resources section, a more detailed analysis of the impacts to specific sensitive plant species is required;
- Under the Biological Resources section, some mitigation measures require additional specificity and/or need to be augmented with additional measures or more robust requirements (e.g., addressing areas used for offsite mitigation; inclusion of a weed management plan, higher replacement ratios, require approval of the habitat restoration plan by CDFW, use of more stringent performance criteria for restoration areas, etc.);
- Concerns were shared about the safety of cyclists and pedestrians utilizing the Rincon Beach County Park parking lot;
- Concerns were raised about the proximity of trail construction to the Carpinteria Sanitary District's four-inch force main serving the Rincon Point homes, and the need to preserve access to the force main during construction. Similarly, concerns were raised about preserving access to the District's wastewater lift station located in the Rincon Beach County Park parking lot, particularly as it relates to the Alternative 4 scenario; and
- Inclusion of additional policies from the County of Santa Barbara Comprehensive Plan were requested to be included and addressed in appropriate sections of the EIR.

To address the above comments, additional and/or revised analysis was included in the Proposed Final EIR in an errata format, including but not limited to, providing a more detailed overview of the methodologies and findings of the air flow study relied upon in the EIR; a re-writing of portions of the Biological Resources impact analysis and refinements to some of the Biological Resources mitigation measures to address comments from CDFW and CCC staff; and a more detailed analysis of the project alternatives and the severity of their respective impacts relative to the proposed project. All revisions to the EIR are shown in ~~strikeout~~ and underline in Section 3, Changes to the Draft EIR, of the Proposed Final EIR (Exhibit 3).

In addition to addressing the above comments, either in the Responses to Comments (Section 2) of the Proposed Final EIR and/or in revisions to the EIR itself (Section 3 of the Proposed Final EIR), the changes to the EIR also reflect a pair of key revisions to the design of the proposed project and the environmentally superior alternative (Alternative 3, Steeper Slopes/Reduced Earthwork Alternative):

- In an effort to address concerns about the quantity of earthwork along the bluff face south of the UPRR corridor, the design of the proposed project was refined to eliminate the need for a new bench above the proposed trail pathway. Elimination of this previously proposed additional bench above the trail resulted in a reduction of total earthwork from 107,386 CY to 96,040 CY, a reduction in total cubic yards of fill from 14,860 CY to 10,519 CY, and a reduction in total export from 92,526 CY to 85,521 CY. Overall, this revision resulted in an

approximately eleven percent (11%) reduction in total earthwork as compared to the proposed project described in the Draft EIR.

Along with this revision to the proposed project grading, the total number of storm drains needed to serve the project was reduced from five down to four. The existing deteriorated storm drains, of which there are two, would be removed and replaced along with the net addition of two new storm drains to serve the proposed trail. This revision to the proposed project design resulted in modest reductions to other previously identified impacts related to air quality, geology/soils, and water quality/erosion resulting from the reduced quantity of anticipated earthwork.

- The above described revision to the project design was also carried over into Alternative 3, the Steeper Slopes/Reduced Earthwork Alternative design. Alternative 3 was then further updated to replace a portion of the new trail alignment south of the UPRR crossing with a slightly narrower trail pathway (14 feet wide rather than 16 feet) and a slightly steeper pathway profile (six percent maximum slope rather than five percent maximum slope) in an effort to further reduce earthwork as much as possible, achieve compliance with resource protection policies, and to minimize the environmental impacts of the project. The revision to the trail surface slope would evidently exceed ADA design guidance (i.e., 5% maximum slope), however, the trail may qualify for a design exception from the U.S. Access Board ("USAB") where compliance is not practicable due to terrain.

  The design revisions would result in an additional net reduction in total earthwork quantities of 121 CY compared to the updated proposed project. The revision would also allow the trail alignment to intersect the existing abandoned historic rail bench at a more westerly point and utilize a longer segment of this historic bench to connect to the eastern terminus of the proposed trail at Rincon Beach County Park. Overall, this revision to the Alternative 3 design can be found to result in a slight lessening of some of the environmental effects of the project as compared to the proposed project. Section 6.6.3, Steeper Slopes/Reduced Earthwork Alternative (Alternative 3) of the Proposed Final EIR provides a more detailed summary of the revised alternative 3 description and minor revisions to the Alternative 3 impact analysis.

With the incorporation of the above-described revisions into the Proposed Final EIR, staff believes the EIR can be found to have satisfied all requirements of CEQA, and can be adopted and certified as such by the Planning Commission. As part of the Planning Commission's action, the Commission must also select a preferred project from amongst the proposed project or Alternatives 1 through 4. As previously noted earlier in the staff report, staff recommends the Commission select Alternative 3 as the preferred project in their actions to adopt and certify the EIR for the project.

Responses to Common Soaring Community Issues

The soaring community (i.e., paragliders and hang-gliders) have been active participants in the City's preparation of the Draft EIR and Proposed Final EIR, and the prior SMND. The following section endeavors to address anticipated questions from the Planning Commission and public regarding issues raised by the soaring community.

CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts resulting from a project. (*Preserve Poway v. City of Poway* (2016) 245 Cal.App.4th 560, 566, 579-580; CEQA Guidelines, § 15064(e).) This concept is reflected in CEQA Guidelines Appendix G: Environmental Checklist form which agencies use to identify potential recreation environmental impacts. According to Appendix G of the CEQA Guidelines, a significant impact related to recreation occurs if a project would:

a. *Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.*
b. *Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.*
c. *Result in cumulatively considerable recreation impacts.*

Section 3.11, Recreation, of the Draft EIR, and Section 2, Global Response 1 and Section 3.11, Recreation, of the Proposed Final EIR evaluate the project's potential environmental impacts related to recreation and conclude that the project would have less than a significant effect on the environment.

Notwithstanding, in response to soaring community comments, the City commissioned an Airflow Analysis Report (Appendix I of the Draft EIR) by an expert in fluid dynamics to analyze the proposed project's potential impacts to wind uplift patterns above the bluff face to assess the impacts on the environment and soaring activities. Using two different modeling techniques, the Airflow Analysis Report concludes that project re-grading could conservatively result in a vertical wind speed reduction of up to 20 to 30 percent above the project alignment, which the EIR concluded was a less than significant impact on the environment. Moreover, the Airflow Analysis Report indicates that any potential adverse impacts on the usability of air space above the proposed trail alignment are unlikely to generate significant physical impacts consistent with the standards in Appendix G of the CEQA Guidelines. (See, e.g., *Chico Advocates for a Responsible Economy v. City of Chico* (2019) 40 Cal.App.5th 839 [reasoning that loss of convenience is merely an example of a social problem, and without an accompanying physical change to the environment, CEQA does not require its analysis]; CEQA Guidelines, § 15131(a).) Accordingly, staff believes that the Draft EIR and Proposed Final EIR more than comply with the requirements of CEQA.

Architectural Review Board

The proposed project was referred to the City's Architectural Review Board ("ARB") for preliminary review at its October 28, 2021 meeting. The ARB and public were asked to focus their review and comments on: 1.) the design of the portion of the trail located in the jurisdiction of the City of Carpinteria; and 2.) the design of trail amenities/features common to the entirety of the trail (e.g. fencing and railings).

In general, the Boardmembers were in support of the proposed project but had various suggestions for simplifying and consolidating the styles of fencing and railings used throughout the project, the color/treatment of the bridge over the UPRR corridor, trail maintenance considerations, and trail safety concerns. More specifically, comments included a recommendation to utilize a railing style on the bridge wing walls at each end of the bridge that mimics the truss style railing used on the bridge itself; utilizing a natural galvanized finish for the bridge structure (and integrated railings/fencing); use of a concrete post and rail style fence for long-term durability; consideration of low intensity

solar lighting, where needed for safety, along the trail route; and concerns over the safety of the east end of the trail terminating into the Rincon Beach County Park parking lot.

Seven members of the public addressed the ARB at the meeting. All speakers raised objections to the proposed project, including but not limited to, safety concerns with the eastern terminus of the trail at the Rincon Beach County Park parking lot; concerns that the trail project would negatively impact soaring conditions over the area; allegations that elements of the project have begun construction without permits; allegations that the project is violating multiple City rules and claims that the plans are too tentative or preliminary at this stage to receive ARB approval; and concerns about the quantity and extent of earthwork in the area. Three public comment letters were submitted prior to the meeting, including two letters of support for the proposed project.

The ARB ultimately unanimously recommended preliminary approval of the project to the Planning Commission with their comments attached. A copy of the approved Minutes and received public comment letters from the October 28th meeting are attached as Exhibit 5.

The project has also been conceptually reviewed by the County of Santa Barbara's South Board of Architectural Review ("SBAR") in May 2021. The SBAR was generally in support of the project, but provided the following comments for further study:

- Four different railings are shown. Study ways to make the proposed railings more consistent and compatible. Look to wave-patterned fencing design on the southern portion of the freeway as a potential reference. Fourth "vertical picket" design may be inappropriate.
- Consider a rust-red color for the bridge instead of green for bridge railing design.
- Return with a comprehensive landscape plan showing how disturbed areas will be revegetated.
- Provide signage information.
- Look into safety lighting, at least at the bridge.
- Chain-link fencing is not appropriate and is underwhelming. Provide a proper architectural fencing solution that is integrated with other fencing styles.

The project design team has since been working on refinements to the bridge finish, and fencing/railing design in an attempt to respond to and satisfy both ARB and SBAR comments. Following approval by the Planning Commission, the project has been conditioned to return to the ARB for final review. Likewise, the portion of the project located in the County's jurisdiction would continue through preliminary review with SBAR prior to consideration by the County Planning Commission.

Carpinteria Municipal Code, Title 14. Zoning

Conditional Use Permit

Pursuant to CMC §14.62.030, Conditional uses, including "buildings, structures and uses of a public works, public service or public utility nature" are permissible in any zoning district, subject to the approval of a Conditional Use Permit ("CUP"). A CUP may be granted by the Planning Commission for such a project upon a determination that all of the following criteria (CMC §14.62.040.8) have been met:

a. *The site for the proposed use is adequate in size and shape to accommodate the use;*
b. *The site for the proposed use is served by streets and highways that are properly designed to carry the type and quantity of traffic generated by the subject use;*
c. *The granting of the permit will not materially adversely affect such necessary community services as sewage disposal, fire protection, water supply, and police protection;*
d. *The granting of the permit will not be detrimental to the health, safety, and general welfare of the neighborhood;*
e. *The proposed use is consistent with the coastal plan, general plans, and applicable specific plan(s);*
f. *The proposed use will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;*
g. *The proposed development will not conflict with recorded easements acquired by the public-at-large for access through or use of the property within the proposed development or any easements granted to any public agency or required as a condition of approval;*
h. *Any other conditions which are reasonably necessary to protect the public peace, health, safety, and general welfare.*

The proposed public trail project qualifies as a public works project that is permissible with approval of a CUP. The City segment of the proposed project would be located entirely within existing public rights-of-way and would establish a new public multi-use pathway connecting the City of Carpinteria with Rincon Beach County Park in unincorporated Santa Barbara County. The project would provide a more direct and safer cyclist and pedestrian path connection than the existing setting, which relies upon use of the U.S. Highway 101 shoulder or informal use trails that trespass through the UPRR corridor, and connect public recreational areas at each end. Advanced coordination with utility service providers will ensure that construction of the proposed project would not interrupt services to surrounding land uses. Impacts to sensitive habitats would be minimized to the maximum extent feasible and mitigated with appropriate compensatory habitat restoration/enhancement efforts. All other identified potentially significant environmental effects would be similarly mitigated to less than significant levels, as documented in the EIR prepared for the proposed project. The analysis provided herein demonstrates the project's consistency with the City's General Plan and Coastal Land Use Plan, including but not limited to the requirements of the Transportation Corridor Wetland Overlay District. A more complete analysis of the proposed project's consistency with the above criteria is provided in Exhibit 1, Attachment A, Findings for Approval.

Transportation Corridor Wetland Overlay District

As discussed in the Background discussion, above, the City of Carpinteria adopted the Transportation Corridor Wetland Overlay ("TCWO") District (Ordinance No. 703) to allow for specific transportation improvements within the U.S. Highway 101 corridor as part of the larger South Coast Highway 101 HOV Lanes project that would otherwise result in unavoidable impacts to wetlands and/or a required protective wetland buffer, subject to specific development standards. Included amongst these development standards is a requirement that the subject multi-use path project be completed and open to the public no later than the completion of the Linden Avenue and Casitas Pass Road Interchanges and Via Real Extension construction.

Condition 3.7.15, Coastal Access and Recreation, of the adopted conditions of approval for the Linden Avenue and Casitas Pass Road Interchanges and Via Real Extension project placed this

requirement to complete the Rincon Trail on Caltrans, consistent with the provisions of the TCWO District. The condition clarifies that while construction and completion of the trail remains the sole responsibility of Caltrans, the City, County, SBCAG, and Caltrans will work cooperatively to complete the project. Further, the condition stipulates that if the project cannot be completed as originally described in the certified May 4, 2015 MND, then the applicant shall provide an alternative route.

While the need to develop and design an alternative route and complete the necessary environmental studies for the new route have delayed construction of the Rincon Trail project beyond the timing specified in the TCWO development standards and project conditions, completion of the Rincon Trail project would, nevertheless, achieve compliance with the intent of these requirements.

Environmentally Sensitive Habitat Area (ESH) Overlay District

According to the Biological Resources section of the EIR prepared for the project, portions of the proposed trail route would be located in areas of the City designated as ESHA and therefore subject to the requirements of the ESH Overlay District (CMC §14.42). Consistent with those requirements, the EIR provides a complete description of flora and fauna found, or potentially expected to be found, in the project area, describes and quantifies the extent and severity of potential impacts to sensitive species, and where appropriate, provides mitigation measures intended to avoid, minimize and/or offset those impacts to less than significant levels.

The trail project has been designed in an effort to minimize impacts to ESHA to the maximum extent feasible while still achieving the stated project objectives. Nevertheless, impacts to ESHA cannot be entirely avoided and mitigation is necessary, including but not limited to compensatory habitat restoration, which would occur both onsite in disturbed areas and offsite, as needed, to meet required replacement ratios. If the project is approved, the adopted conditions of approval, which incorporate the mitigation measures from the EIR, require development of a detailed habitat restoration plan subject to approval by CDFW.

Coastal Appeals (CA) Overlay District

Pursuant to CMC §14.48, CA Coastal Appeals Overlay District, the proposed project is located within the appeals jurisdiction of the CCC. Thus, the proposed project must be considered at a public hearing, and the Planning Commission's decision may be appealed to the City Council. The City Council's final decision also is appealable to the CCC. There is no filing fee required for an appeal of a project located within the CA Overlay District.

General Plan/Coastal Land Use Plan

The project site has a General Plan/Coastal Land Use Plan designation of Transportation Corridor (TC) and is adjacent to the Bluffs III area, which is currently designated Visitor-serving Commercial (VC). The project is located within Subarea 6, The Bluffs, as identified in the Community Design Element of the General Plan/Coastal Land Use Plan.

The following is a list of relevant objectives and policies contained in the City's General Plan/Coastal Land Use Plan that pertain to the proposed project, and an analysis of the project's conformance to those objectives and policies.

Land Use Element

Objective LU-1: *Establish the basis for orderly, well planned urban development while protecting coastal resources and providing for greater access and recreational opportunities for the public.*

Objective LU-3: *Preserve the small beach town character of the built environment of Carpinteria, encouraging compatible revitalization and avoiding sprawl development at the City's edge.*

Policy LU-3h: *Develop land uses that encourage the thoughtful layout of transportation networks, minimize the impacts of vehicles in the community, and encourage alternative means of transportation.*

Policy LU-3i: *Ensure the provision of adequate services and resources, including parking, public transit and recreational facilities, to serve proposed development.*

The proposed project would establish a new public coastal access route and bike/pedestrian path connecting the eastern end of the City of Carpinteria to unincorporated areas southeast of the City. The portion of the project within the City of Carpinteria's jurisdiction would be located entirely within existing Caltrans and City rights-of-way. The intent is to create a more direct, safe, convenient and attractive alternative transportation option that completes a critical missing gap in the California Coastal Trail and dissuades the continued dangerous and/or illicit use of the U.S. Highway 101 shoulder or informal use trails that trespass through the UPRR corridor to travel from Carpinteria to the Rincon Beach County Park, Rincon Point State Beach, and the Pacific Coast Bikeway. The proposed path will also afford new public vantage points of the adjacent Rincon Beach County Park and Pacific Ocean. The trail can be reached from the existing Class II bike path along Carpinteria Avenue or the trail network along the Carpinteria Bluffs. Informal public on-street parking at the east end of Carpinteria Avenue can also serve the trail. Additional parking and pedestrian/cyclist access to the trail is available from Rincon Beach County Park at the eastern terminus of the proposed trail. Thus, the project can be found to be consistent with the above objectives and policies.

Community Design Element

Objective CD-3: *The design of the community should be consistent with the desire to protect views of the mountains and the sea (California Coastal Act of 1976 §30251).*

The project would enhance public views toward the ocean and mountains by establishing a new multi-use trail situated along the face of the coastal bluffs between the U.S. Highway 101 corridor and the shoreline. North of the UPRR crossing, the trail would provide expansive views over the highway toward the Santa Ynez Mountains. South of the UPRR corridor (and outside of the City's jurisdiction), the proposed trail would be set into the face of the existing coastal bluff and provide unobstructed views over the adjacent shoreline and Pacific Ocean, below. The proposed railing/barrier materials are designed to meet applicable safety requirements while remaining visually permeable. The path would be situated such that it is not expected to have a negative impact on existing views from the highway toward the ocean, or from the beach/shoreline back toward the coastal bluffs. As the project would have beneficial impacts on public coastal and mountain views, the project can be found consistent with this objective.

Objective CD-8: *To encourage and facilitate pedestrian and bicycle pathways.*

Policy CD-8a: *All streets should be designed with safe and pleasant pedestrian ways at their edge. Pedestrian ways shall be spatially separated from vehicular traffic by elements such as trees, other plantings, streetlights, and/or parked cars.*

Policy CD-8b: *To provide convenient pedestrian routes, the existing network of automobile lanes, trails and pedestrian ways in the Downtown District and adjacent neighborhoods should be preserved, reinforced and extended into other neighborhoods. This pedestrian network should be in addition to, not in lieu of, pedestrian ways on the streets.*

The proposed multi-use path would provide a physically separated bicycle and pedestrian path from the east end of Carpinteria Avenue to Rincon Beach County Park, staying on the ocean side of U.S. Highway 101. The new path would fill in a critical missing gap in the California Coastal Trail and would dissuade the ongoing dangerous and/or illicit use of the U.S. Highway 101 shoulder or informal use trails that trespass through the UPRR corridor. The proposed trail provides a direct connection from the east end of Carpinteria Avenue, where both the existing Class II bicycle lane along Carpinteria Avenue and the Carpinteria Bluffs trail network terminate, to public recreational areas and facilities located near the Santa Barbara/Ventura County line (i.e., Rincon Beach County Park; Rincon Point State Beach; and the Pacific Coast Bikeway). The trail is intended to support both recreational use and alternative transportation/commuting.

The proposed trail has been designed to be physically and grade separated from adjacent vehicle travel lanes. The trail would be set into the face of the existing manufactured slopes of the ridgeline that separates U.S. Highway 101 from the shoreline. The trail would be 14-16 feet in usable width to safely accommodate two-way bicycle and pedestrian traffic. Disturbed areas adjacent to the trail alignment would be revegetated with native plantings appropriate to the coastal bluff setting. Based on these characteristics, the proposed project can be found to be consistent with the above objective and policies.

Objective CD-11: *Existing public spaces should be maintained, and new public spaces should be incorporated into neighborhoods and districts as an important aspect of their design.*

Policy CD-11b: *Public spaces should be located and designed to encourage their use during the day and in the evening. The time and type of use for each space should be planned to be compatible with adjacent land uses, and with any existing flora and fauna that are to be preserved.*

Policy CD-11c: *All public spaces and facilities should reflect quality design.*

The project is unique in that it spans across jurisdictional boundaries, however, the design intention for the project is to develop a plan and design theme that would be mutually supported by both the City and County to ensure the project has a high quality, durable, and consistent appearance. The project has been favorably reviewed by both the City's ARB and the County's SBAR on at least one occasion each, and the design team is currently working to incorporate revised fencing and railing details into the proposed plans based on comments received. The design team is also considering incorporating low level solar lighting along key portions of the proposed trail alignment for safety purposes and to facilitate trail usage in the early morning or evening hours.

Speaking broadly, the proposed trail is intended to provide an attractive, safe, broadly accessible and convenient pedestrian and bicycle connection between the City of Carpinteria and unincorporated areas of Santa Barbara and Ventura Counties to the southeast of the City. Staff believes the proposed plans reflect the intent of the above Objective and Policies to provide for high quality and well-designed public spaces and facilities.

Objective CD-12: *Development should fit quietly into the area's natural and introduced landscape, deferring to open spaces, existing natural features and native and sensitive habitats.*

Policy CD-12a: *Landscape planning shall be respectful of the natural character of the City and enhance existing native plant communities and environmentally sensitive habitat areas.*

CD-12-Implementation Policy 1: *Use of native, locally adapted species shall be encouraged and shall be required within and adjacent to ESHA.*

The proposed trail alignment passes through a disturbed area characterized by remnants of past transportation infrastructure projects, including but not limited to, manufactured slopes, a former railroad bench, a former state highway alignment, and infrastructure serving the current highway and railroad alignments. Nevertheless, pockets of native vegetation communities have colonized and reestablished portions of the project area over the past decades, some of which are considered sensitive and qualify as ESHA based on City policies.

According to the Biological Resources section of the EIR prepared for the proposed project, the construction of the trail would result in approximately 4.32 acres of permanent impacts to sensitive native vegetation communities (i.e., ESHA) in the project area (see Figure 3.3-1 of the Draft EIR for a depiction of areas of anticipated impacts and ESH areas). Of this, approximately 0.76 acres of ESHA would be permanently impacted by the new trail alignment itself; the remaining approximately 3.55 acres of permanent impacts to ESHA are related to vegetated areas that would be cleared/disturbed during earthwork to stabilize the new trail bench and bluff faces above/below the trail alignment. Permanently impacted areas would be mitigated through revegetation and enhancement/restoration of existing degraded coastal bluff scrub habitats in the project area where feasible. Impacts would also be offset through additional offsite compensatory mitigation, ideally within nearby similar habitats, such as at the City's Rincon Bluffs Preserve. Compensatory mitigation replacement ratios would range between 2:1 and 4:1, depending upon the particular species that were impacted.

A habitat mitigation and monitoring plan is required to be developed to guide the restoration efforts and ensure successful rehabilitation of impacted areas, including but not limited to, identifying areas for compensatory mitigation, developing appropriate plant/seed mixes for the affected vegetation community types, defining a detailed maintenance plan, and defining annual and final performance standards. Based on the foregoing, the project can be found to be consistent with the above objective and policies.

Objective CD-13: *Ensure that lighting of new development is sensitive to the character and natural resources of the City and minimizes photopollution to the maximum extent feasible.*

Policy CD-13a: *Lighting for development adjacent to an ESHA shall be designed to further minimize potential impacts to habitat.*

CD-13-Implementation Policy 4: *Lighting along roads and in developed areas within or adjacent to ESHA shall not exceed 0.01 foot-candles five feet inside of any City-identified ESHA area.*

CD-13-Implementation Policy 5: *Spotlights or floodlights in or adjacent to ESHA shall not be permitted.*

Currently, no lighting is proposed as part of the trail project. However, during architectural review, both the City ARB and the County SBAR suggested that at least some low level lighting along portions of the trail could be beneficial for safety purposes during early morning or evening hours. The project design team is considering these comments as they continue to develop the project plans. If lighting is incorporated into the project plans, it would be reviewed for compliance with this objective and policies, and would be subject to review by the ARB and SBAR.

Objective CDS6-2: *Ensure that development is controlled to avoid impacts to significant viewsheds, vistas, and view corridors.*

Policy CDS6-b: *Development on the Bluffs shall not obstruct existing view corridors of the ocean and bluff top edge. In addition, views of the ocean and mountains for users of the Carpinteria Bluffs Nature Park and coastal trail(s), for bluffs area property owners and visitors, and for passing motorists, shall be maintained.*

CDS6-Implementation Policy 57: *New structures shall be low intensity, and reflect the low-rise, small-town feel of the surrounding area. New structures shall be designed to blend into the site and the rest of the city.*

CDS6-Implementation Policy 58: *All structures, including ancillary structures, shall be appropriately placed so as to minimize their obtrusiveness, and to maintain existing view corridors. Existing views from Bailard Avenue, Carpinteria Avenue, and U.S. 101 to the ocean shall be preserved.*

CDS6-Implementation Policy 60: *New development shall maintain existing topographic variations of the Carpinteria Bluffs, such as the ridgeline in Bluffs I and the terracing of Bluffs III. Development of Bluffs I should be designed to respect the viewshed from the bluff trail looking north toward the mountains and from the Bluffs Nature Park looking west. Location and design of buildings shall respect the topography and follow topographic forms whenever possible, visible variations in the ground plane are to be retained, avoiding a flat, mass graded appearance. These variations in the ground plane are also to be reflected in variations in the roof lines of individual buildings.*

Policy CDS6-d: *Landscape Planning shall be respectful of the natural character of the Bluffs and enhance existing native plant communities and environmentally sensitive habitat areas.*

CDS6-Implementation Policy 75: *Use of native, locally adapted species shall be required.*

CDS6-Implementation Policy 83: *Development within the Carpinteria Bluffs should fit quietly into the area's natural and introduced landscape, deferring to open spaces, existing natural features, and native and sensitive habitats.*

As discussed elsewhere in this report, the proposed trail has been designed to be visually subordinate to its setting by setting the trail into the existing bluff faces and not altering the overall height of the ridge. For the portion of the trail located in the City of Carpinteria, the trail alignment would be located above the southbound U.S. Highway 101 on-ramp from the SR 150 interchange, on the face of the existing manufactured slope, and would generally mimic/maintain the appearance of this engineered slope. Placing the trail at this location would have no substantive impact on ocean or mountain views from U.S. Highway 101 or nearby public areas on the bluffs. The trail would, however, provide a new vantage for pedestrian/cyclist views toward both the ocean and the mountains. Permanent ancillary structures associated with the trail project such as protective fencing or railings must be designed to meet respective Caltrans/UPRR safety standards, but are also being designed to be visually unobtrusive and respectful of the naturalized setting in terms of selected colors, and materials. Disturbed areas resulting from trail construction and earthwork would be restored and revegetated with appropriate native plantings that correspond to the sensitive habitats found in the project area. Therefore, the project can be found to be consistent with the above Subarea 6 community design objective and policies.

Circulation Element

Objective C-4: *Improve the Carpinteria Avenue corridor to ensure adequate traffic flow, safe bicycle use and improved aesthetic qualities.*

Objective C-6: *Provide adequate safe railroad crossings and to effectuate community design of buffers that will attenuate rail-related noise.*

Policy C-6a: *Seek funding sources for grade-separated crossings of the rail line to resolve conflicts with urban linkages, where such structures are considered feasible. [10-year]*

Objective C-7: *Build demand for alternative transportation use by increasing ease, effectiveness, and social acceptability, and through foresighted planning.*

Policy C-7b: *Develop safe and direct pedestrian accessibility between residential areas, schools, parks, and shopping areas in both new and existing urban areas.*

Objective C-8: *Support and develop safe, direct and well-maintained bicycle and pedestrian systems and recreational boating facilities that serve all segments of the public.*

Policy C-8a: *Integrate the development of bicycle routes and pedestrian pathways in additional areas of the city, and encourage the utilization of such routes for commuting as well as recreational purposes.*

Policy C-8d: *Encourage integration of the city's bicycle routes with state and countywide programs.*

Policy C-8f: *Encourage pedestrian movement by providing pedestrian facilities that are direct and convenient, particularly in the beach and downtown areas.*

Policy C-8g: *Consider rerouting the Pacific Coast Bikeway to another location parallel to the coastline, such as adjacent to the railroad right of way throughout the city. [5-year]*

Policy C-8h: *Encourage a bike trail link from Carpinteria to Summerland along the railroad right of way and a coastal link to Ventura paralleling U.S. 101.*

The proposed project would provide a new separated Class I bicycle and pedestrian path connecting the City of Carpinteria to the unincorporated Santa Barbara and Ventura County lands southeast of the City, and will also serve to fill in a critical missing link in the California Coastal Trail, a statewide coastal public access trail. The proposed path will allow for a safer, more attractive, convenient, and more direct alternative to the popular but unsafe and/or illicit routes currently used by pedestrians and cyclists to connect Carpinteria to points south. The project includes a new bridge over the UPRR corridor to facilitate a safe, legal crossing of the railroad tracks. The proposed path is intended to support both alternative transportation commuting and recreational activities.

At the western terminus of the multi-use path in the City of Carpinteria, the proposed path will terminate across the street from the newly acquired Rincon Bluffs Preserve and the Class II bike lanes on Carpinteria Avenue. Formalized trails and parking facilities are currently in the preliminary design stage for the Rincon Bluffs Preserve and will help to further improve pedestrian and cyclist connections between public recreational areas in the east end of the City. At the eastern terminus of the proposed path, located in Rincon Beach County Park, the trail would direct cyclists into the existing parking lot. Pedestrians would be able to access the existing walkways in the park. County Parks and SBCAG staff have been exploring options for a future continuation of a dedicated bicycle trail through Rincon Beach County Park to allow cyclists wishing to continue southbound onto the Pacific Coast Bikeway to bypass the county park parking lot.

Open Space, Recreation and Conservation Element

Objective OSC-1: *Protect, preserve and enhance local natural resources and habitats.*

Policy OSC-1a: *Protect Environmentally Sensitive Habitat Area(s) (ESHA) from development and maintain them as natural open space or passive recreational areas.*

Policy OSC-1b: *Prohibit activities, including development, that could damage or destroy ESHA.*

Policy OSC-1f: *Protect and restore degraded wetlands, butterfly habitat, native plant communities, and sensitive, rare, threatened or endangered species habitat on City-owned land to the maximum extent feasible.*

OSC-1-Implementation Policy 8: *Regulate all development, including agricultural development, adjacent to ESHA, in or adjacent to ocean-fronting parks or recreation areas, or contiguous to coastal waters, to prevent adverse impacts on habitat resources. Regulatory measures shall include, but are not limited to: setbacks, buffer zones, grading controls, noise restrictions, lighting restrictions, requirements for wildlife permeable fencing, and maintenance and establishment of native vegetation.*

OSC-1-Implementation Policy 9: *Prior to issuance of a development permit, all projects shall be found to be in compliance with all applicable habitat protection policies of the General Plan/Local Coastal Plan and implementing policies and regulations of the Coastal Access and Recreation*

Program, Carpinteria Bluffs Access Recreation Master Open Space Program, and any other implementing plan for these policies that has been certified as an amendment to the City's LCP.

Objective OSC-2: *Preserve and restore the natural resources of the Carpinteria Bluffs.*

Objective OSC-7: *Conserve native plant communities.*

Policy OSC-7b: *When sites are graded or developed, areas with significant amounts of native vegetation shall be preserved. Structures shall be sited and designed to minimize the impact of grading, paving construction of roads, runoff and erosion on native vegetation. Sensitive resources that exhibit any level of disturbance shall be maintained, and if feasible, restored. New development shall include measures to restore any disturbed or degraded habitat on the project site. Cut and fill slopes and all areas disturbed by construction activities shall be landscaped or revegetated at the completion of grading. Plantings shall be of native, drought-tolerant plant species consistent with the existing native vegetation on the site. Invasive plant species that tend to supplant native species shall be prohibited.*

The proposed trail alignment passes through a disturbed area characterized by remnants of past transportation infrastructure projects, including but not limited to, manufactured slopes, a former railroad bench, a former state highway alignment, and infrastructure serving the current highway and railroad alignments. Nevertheless, pockets of native vegetation communities have colonized and reestablished portions of the project area over the past decades, some of which are considered sensitive and qualify as ESHA based on City policies. The project area is severely constrained in terms of locating a trail through the bluffs while avoiding various utility, infrastructure, geologic, and biological constraints, thus it is not possible to plot a trail alignment through the area that would entirely avoid sensitive habitats. Instead, the project design team has attempted to minimize impacts to ESHA while also meeting all other project objectives and design requirements.

Despite these minimization efforts, according to the Biological Resources section of the EIR prepared for the proposed project, the construction of the trail would still result in approximately 4.32 acres of permanent impacts to sensitive native vegetation communities (i.e., ESHA) in the project area (see Figure 3.3-1 of the Draft EIR for a depiction of areas of anticipated impacts and ESH areas). Of this, approximately 0.76 acres of ESHA would be permanently impacted by the new trail alignment; the remaining approximately 3.55 acres of permanent impacts to ESHA are related to vegetated areas that would be cleared/disturbed during earthwork to stabilize the new trail bench and bluff faces above/below the trail alignment. Permanently impacted areas would be mitigated through revegetation and enhancement/restoration of existing degraded coastal bluff scrub habitats in the project area, wherever feasible. Impacts would also be offset through additional offsite compensatory mitigation, ideally within nearby similar habitats, such as at the City's Rincon Bluffs Preserve or natural areas of Rincon Beach County Park. Compensatory mitigation replacement ratios would range between 2:1 and 4:1, depending upon the particular species that were impacted.

A habitat mitigation and monitoring plan is required to be developed to guide the restoration efforts and ensure successful rehabilitation of impacted areas, including but not limited to, identifying areas for compensatory mitigation, developing appropriate plant/seed mixes for the affected vegetation community types, defining a detailed maintenance plan, and defining annual and final performance standards. The habitat mitigation and monitoring plan must be reviewed and approved by CDFW. Additional mitigation measures call for completing sensitive species surveys prior to starting clearing

or earthwork; using protective fencing to delineate the limits of the construction area and avoid impacts to surrounding ESHA; utilizing biological monitors onsite during construction; training workers about sensitive biological resources in the project area; and developing and implementing a weed management plan to be employed during construction and throughout the implementation of the habitat mitigation and monitoring plan. Based on the foregoing, the project can be found to be consistent with the above objective and policies.

Policy OSC-6f: *All development shall be evaluated for potential adverse impacts to water quality and shall consider Site Design, Source Control and Treatment Control BMPs in order to minimize polluted runoff and water quality impacts resulting from development. In order to maximize the reduction of water quality impacts, BMPs should be incorporated into the project design in the following progression: (1) Site Design BMPs, (2) Source Control BMPs, and (3) Treatment Control BMPs.*

Policy OSC-10a: *Minimize the erosion and contamination of beaches. Minimize the sedimentation, channelization and contamination of surface water bodies.*

OSC-10-Implementation Policy 52: *Ensure that soil erosion and the off-site deposition of soils is not exacerbated through development.*

The proposed project would result in 2,800 linear feet of new impervious surfaces along the ridgeline separating U.S. Highway 101 from the ocean. Nonetheless, the project has been designed to reduce or minimize the potential for adverse impacts on stormwater quality. Existing slopes along the trail alignment would be stabilized and slightly laid back, and a new drainage channel installed along the inside edge of the trail to make the bluffs less prone to erosive actions, and to capture and direct stormwater flows to replaced/new storm drains (outfitted with filters/inserts to capture pollutants) that are proposed as part of the project. The replaced/additional storm drains are intended to help divide storm water discharges from the drainage area among additional outfalls to minimize discharge volumes at any one outlet. Each outlet is to be outfitted with a horizontal outfall and rock rip rap to act as an energy dissipater to further reduce potential for erosive effects from stormwater runoff. The storm drain facilities are required to be annually monitored and maintained throughout the life of the project.

Additional water quality measures have been identified and will be employed during construction to avoid or minimize erosion and other water quality impacts during construction. These include obtaining permit coverage for the project from the State Water Resources Control Board, developing and implementing a stormwater pollution prevention plan, developing and implementing an erosion and sediment control plan, and revegetating all impacted areas as soon as practicable following completion of trail construction. Additional details about the project's potential water quality impacts and avoidance/mitigation measures are discussed in Section 3.8 of the Draft EIR (Exhibit 2) and of the Proposed Final EIR (Exhibit 3). Based on the careful design of the project and implementation of the identified mitigation measures, the project can be found to be consistent with the above policies.

Objective OSC-11: *Carpinteria will conduct its planning and administrative activities so as to maintain the best possible air quality.*

Policy OSC-11a: *Carefully review development that will significantly impact air quality.*

Policy OSC-11b: *Promote the reduction of mobile source emissions related to vehicular traffic (e.g., promote alternative transportation, vanshare, buses).*

The proposed project is anticipated to result in short-term construction-related impacts to air quality and greenhouse gas emissions resulting from earth work and use of vehicles and equipment during construction. Compliance with standard Santa Barbara County Air Pollution Control District ("APCD") air quality measures, which are required of all discretionary projects, would ensure these temporary construction-related impacts remain less than significant. Consistent with Policy OSC-11b, the proposed project creates a new multi-use path connecting the City of Carpinteria with unincorporated areas to the south of the City. Operationally, such a path may help to facilitate alternative transportation between these areas in lieu of car trips, which could help to incrementally reduce air quality impacts and greenhouse gas emissions.

Objective OSC-13: *Preserve Carpinteria's visual resources.*

Policy OSC-13a: *Preserve broad, unobstructed views from the nearest public street to the ocean, including but not limited to Linden Avenue, Bailard Avenue, Carpinteria Avenue, and U.S. Highway 101. In addition, design and site new development on or adjacent to bluffs, beaches, streams, or the salt marsh to prevent adverse impacts on these visual resources.*

Policy OSC-13g: *Require new development to protect scenic resources by utilizing natural landforms and native vegetation for screening structures, access roads, building foundations, and cut and fill slopes in project design which otherwise complies with visual resource protection policies.*

Policy OSC-13h: *Plans for development shall minimize cut and fill operations. Plans that do not minimize cut and fill shall be denied.*

The proposed project alignment is located along both sides of a narrow ridge that separates the current U.S. Highway 101 alignment from the coastline. The entire area, including the ridge in question, was altered and manipulated first by previous alignments of the railroad and State Route 2 (precursor to current U.S. Highway 101), and then again even more significantly during the excavation and construction of the current UPRR and U.S. Highway 101 alignments through the project area. The resulting ridge in question is characterized by over-steepened, manufactured and terraced slopes that have become "naturalized" in the intervening decades through colonization by native and nonnative vegetation, and by natural erosion/weathering activities.

Establishing a multi-use trail across this ridge to connect the east end of Carpinteria Avenue to Rincon Beach County Park necessitates cutting a new bench into the bluff face and stabilizing the bluff face above/below the trail alignment to ensure the long-term safety and viability of the trail. Importantly, the trail has been designed to traverse the bluff face, gradually descending in elevation from west to east at an ADA-compliant slope while avoiding the need to alter the overall height of the ridge.[1] Cutting the new trail benches into the bluff faces would generally maintain and mimic the appearance and character of the existing bluff faces, which are similarly interrupted by existing

[1] If selected as the preferred project, the Alternative 3 design includes a section of trail located in the County of Santa Barbara's jurisdiction that would slightly exceed ADA design standards (i.e., a six percent maximum slope rather than a five percent maximum slope); however this section may be eligible for a design exception from the USAB where strict conformance with ADA design standards is not practicable due to terrain.

terraces/benches. The bluff profile would be slightly laid back to ensure long term stability and to better control for runoff/erosion. Laying back the slope would also be more conducive to planting of native vegetation as part of the revegetation/habitat enhancement work required to offset anticipated biological resource impacts. Protective fencing and railings along the trail alignment, and the bridge crossing over the UPRR alignment are being designed to be visually unobtrusive in this setting with guidance from the City ARB and the County SBAR, while still meeting the respective safety standards of Caltrans and UPRR.

Over the course of the development of the trail project, various revisions and redesigns have occurred to avoid and address geologic hazards, as well as to further minimize earthwork and landform modifications of the coastal bluffs, both for policy consistency purposes as well as to reduce projected construction costs and reduce impacts on air flow conditions over the ridge. Most recently, the proposed project description was modified to eliminate a new terraced bench that was previously proposed upslope of the new trail bench. Removal of this new upslope bench from the plans resulted in an eleven percent (11%) reduction in earthwork quantities as compared to the project design described in the Draft EIR and results in one less bench traversing the face of the coastal bluff. Alternative 3, as described in the Proposed Final EIR, goes one step beyond and nets a slight further reduction in earthwork quantities by slightly narrowing and steepening a segment of the trail located in the County's jurisdiction south of the UPRR alignment to descend the bluff face at a more westerly point and utilize more of the existing abandoned former railroad bench to reach Rincon Beach County Park. By further reducing earthwork and thus the corresponding severity/extent of some of the anticipated environmental effects (i.e., geology/soils, water quality, air quality, etc.), the Alternative 3 design was found to be the environmentally superior alternative and is recommended by staff to be selected as the preferred project in the EIR. Alternative 3 would also be the most consistent with the above objective and policies.

Objective OSC-14: *Provide for adequate park and recreation facilities to meet the needs of the community and visitors.*

Policy OSC-14a: *Increase coastal and recreational access for all segments of the population, including the disabled and elderly, while protecting natural resources, particularly environmentally sensitive habitat areas.*

Objective OSC-15: *Maintain the existing trail system and provide additional recreation and access opportunities by expanding the trail system.*

Policy OSC-15c: *Pursue development of a trail and/or boardwalk system along the coastline.*

OSC-15-Implementation Policy 70: *Continue the development of a coastline trail to extend from Carpinteria City Beach to Rincon Beach Park with vertical access points placed as frequently as possible to encourage public access.*

The proposed project enhances coastal public access and recreational opportunities, providing a safer, attractive, more convenient and direct pedestrian and bicycle link between the City of Carpinteria and the unincorporated areas of Santa Barbara and Ventura Counties to the southeast of the City. Depending upon which of the design alternatives of the trail is selected, all or most of the trail would be designed to be compliant with accessibility requirements. In either case, the proposed trail would enhance coastal and recreational access for all segments of the population and would achieve the

intent of the above objectives and policies, in particular OSC-15 Implementation Policy 70, which specifically describes the continuation of a coastal trail extending from the City of Carpinteria to Rincon Beach County Park.

While the bluffs area in question is regularly used by cyclists and pedestrians to reach recreational areas and facilities located south of the City of Carpinteria (e.g., Rincon Beach County Park; Rincon Point State Beach; Pacific Coastal Bikeway, etc.), the project area has also been informally used by members of the soaring community (i.e., para-gliders and similar free flight apparatus) for the past several decades. Pilots launch from private property located on Bluffs III, cross over the UPRR alignment and rely upon uplift from the coastal bluffs to gain altitude and continue their flights. The use of the area for soaring has never been officially recognized or sanctioned by the City of Carpinteria or the County of Santa Barbara, and in addition to the questionable nature of access to the launch points on Bluffs III, the flying activities in the area pose other safety, liability and potential regulatory concerns given the close proximity of the railroad tracks and U.S. Highway 101 to the common flight paths.

Nevertheless, the EIR analyzed to what extent the proposed trail project could impact the air flow conditions relied upon by the soaring community to continue their flying activities in the area. As discussed in Section 3.11, Recreation, of the Draft EIR, Section 2, Global Response 1, and Section 3.11, Recreation, of the Proposed Final EIR, an Airflow Analysis Report was commissioned by an expert in fluid dynamics to provide an understanding of the change in wind uplift patterns above the bluff face resulting from the proposed project. Using two different modeling techniques, the Airflow Analysis Report concludes that project re-grading could conservatively result in a vertical wind speed reduction of up to 20 to 30 percent above the project alignment, which the EIR concluded was less than significant, and would not be expected to result in a substantial decrease in soaring opportunities. In light of this conclusion, staff believes the proposed project strikes a reasonable balance between preserving opportunities for soaring in the project area while also providing a critical multi-use path through the area that is of regional benefit to nearby communities. See additional discussion above regarding soaring.

Objective OSC-16: *Preserve Carpinteria's cultural resources.*

Policy OSC-16a: *Carefully review any development that may disturb important archaeological or historically valuable sites.*

OSC-16-Implementation Policy 77: *Prior to the city granting a development permit, all archaeological sites (or areas near known archeological sites that have been determined though Phase 1 investigation to potentially include cultural or paleontolgical resources) must undergo a subsurface test to determine the integrity and significance of the site. Through the project environmental review process, the disposition and/or preservation of any archaeological sites deemed to have significance as a result of the subsurface testing shall be determined. Preservation of cultural/paleontological resource sites through avoidance shall be preferred, however, other methods of disposition may be approved through the environmental review process as identified in the city's Guidelines for the Implementation of CEQA.*

OSC-16-Implementation Policy 78: *A qualified archaeologist and Native American observer (acceptable to the city) shall be retained to monitor grading activities on identified archeological sites and in the vicinity of identified archaeological resources. If cultural artifacts or similar*

material of potential cultural or paleontological importance, are uncovered during grading or other excavation the following shall occur:

a. *The monitor or archaeologist shall halt the grading or excavation and notify the City.*
b. *A qualified archaeologist shall prepare a report assessing the significance of the find and recommending any actions to be taken by the applicant(s) prior to the city granting permission for grading to resume.*
c. *The removal of cultural artifacts or other materials shall only occur after preparation of the report and in conformance with the recommendations of the report as approved by the City.*

The project area is known to be in the vicinity of previously recorded cultural resource sites, although the bluffs upon which the proposed trail alignment is to be located have been previously significantly disturbed and altered during the construction of the present-day alignment of both the UPRR corridor and the U.S. Highway 101 corridor. Initial "phase I" surveys along the proposed trail alignment and areas of disturbance failed to uncover any cultural resources; nevertheless, the chance remains for there to be subsurface intact cultural resources in the project area that could be impacted during construction. Thus, in order to avoid a potentially significant impact to cultural resources, and to be consistent with the above objective and policies, the project is required to have an archaeological monitor and a Native American observer in place during all periods of ground disturbance and during the initial excavation for the bridge footings/abutments; conduct a training with all personnel participating in tasks that may involve ground disturbance so they are aware of protocols in the event of a discovery of cultural materials; and develop and implement a cultural resource treatment and inadvertent discovery plan.

Safety Element

Objective S-1: *Minimize the potential risks and reduce the loss of life, property and the economic and social dislocations resulting from fault rupture in the planning area, from ground shaking due to an earthquake along a fault in the planning area or in the region, from seismically-induced liquefaction in the planning area, and from seismically-induced tsunamis.*

Objective S-2: *Minimize the potential risks and reduce the loss of life, property and economic and social dislocations resulting from seismically-induced and naturally-occurring landslides, from mud and debris flows, from rock falls, and from seacliff retreat.*

Policy S-2a: *Areas identified on Figure S-2 as High Landslide Potential shall either be designated in an open space zoning category or the potential for landslide will be mitigated through avoiding disturbance of the slope area of the site subject to landslide potential.*

Objective S-3: *Minimize the potential risks and reduce the loss of property and the economic and social dislocations resulting from expansive soils, soil settlement, subsidence, and hydrocompaction.*

Policy S-3b: *All new development will comply with the Uniform Building Code, local City building ordinances, and geotechnical recommendations related to construction in areas identified as having a high potential for expansive soils or soil settlement.*

According to Figures S-2 and S-3 of the Safety Element of the City's General Plan/Coastal Land Use Plan, the proposed project is located in an area with high potential for soil settlement. According to the project-specific EIR, the project area is also located in a geologically active area in the vicinity of

the Rincon Creek fault, the Carpinteria fault, and the Red Mountain fault. The portion of the trail south of the UPRR corridor located in the County's jurisdiction is also subject to areas affected by unstable soils and vulnerable to coastal bluff retreat. The project does not entail any new buildings or other critical infrastructure; nevertheless, the project is required to be designed in compliance with the recommendations of the project engineer and geotechnical report, including any measures necessary to ensure the long-term viability of the pathway, bridge foundations, and slope stability in light of the potential geologic conditions known to be present in the area (see Mitigation Measures GEO-1 through GEO-3). The portion of the trail located in the City's jurisdiction is not threatened by bluff retreat; the portion of the trail located in the County's jurisdiction has been sufficiently located back from the bluff edge to account for average rates of bluff retreat over the expected lifespan of the project.

Objective S-4: *Minimize the potential risks and reduce the loss of life, property and the economic and social dislocations resulting from flooding.*

The project area is not located in a flood hazard zone according to the most recent FEMA Flood Insurance Rate Map for the area. However, the general project area located along the bluffs has been identified as being an area vulnerable to erosion/bluff face retreat impacts from future sea level rise (beginning to become vulnerable with as little as 1-2 feet of sea level rise when periodic flooding may reach the terminus of the storm drain outlets and/or toe of the coastal bluff), according to both the City's and County's respective vulnerability assessments. Nevertheless, the proposed trail alignment has been located sufficiently far inboard from the bluff face, such that the closest portion of the trail to the existing sea cliff (located in the County's section of the trail) measures approximately 60 feet back from the bluff edge, which equates to somewhere between 60 and 120 years of erosion based on current and expected bluff retreat rates. A more detailed analysis of the project's vulnerability to potential sea level rise impacts is discussed in section 3.8.4 of the Draft EIR (Exhibit 2). Given this analysis, the EIR found that flood hazards would not be significant.

Objective S-6: *Minimize the potential risks and reduce the loss of life, property and the economic and social dislocations resulting from hazardous materials accidents at large industrial facilities, at facilities handling acutely hazardous materials, and along transportation corridors.*

Policy S-6b: *City policies concerning the use, storage, transportation and disposal of hazardous materials, and regarding underground or above-ground storage tanks shall reflect the County of Santa Barbara and the State Regional Water Quality Control Board policies and requirements and shall ensure that the use, storage, transportation and disposal of hazardous materials does not result in hazardous discharge or runoff.*

Policy S-6d: *The City shall support protective measures against the spillage of hazardous materials, including crude oil, gas and petroleum products, and shall support effective containment and cleanup facilities and procedures for accidental spills that occur.*

Given the proximity to U.S. Highway 101, the EIR identified the potential for the presence of aerially deposited lead ("ADL") to be found along the portion of the proposed trail alignment north of the UPRR crossing. To avoid potential exposure to ADL, the soils within the trail alignment north of the UPRR crossing are required to be tested to determine if such soils may be used as fill or must be disposed of in a properly licensed landfill. Testing for, and proper disposal of, any ADL contaminated soil would ensure the project is consistent with the intent of the above objective and policies. Further, as part of

any required stormwater pollution prevention plan, the project contractor will need to develop and implement standard practices to avoid and contain accidental spills or leaks of any hazardous materials used during construction activities.

Noise Element

Objective N-5: *The City will minimize the effects of nuisance noise effects on sensitive land uses.*

Policy N-5b: *The City will require that construction activities adjacent to sensitive noise receptors be limited as necessary to prevent adverse impacts.*

Policy N-5c: *The City will require that construction activities employ techniques that minimize the noise impacts on adjacent uses.*

The proposed project has the potential to create short-term construction-related noise impacts for the nearest sensitive receptors, which are some of the homes in the Rincon Point neighborhood located approximately 775 feet from the eastern terminus of the proposed trail. Residences and commercial developments across the highway from the proposed project location are not expected to be negatively impacted, as the construction noise should not be audible above the existing U.S. Highway 101 noise. Proposed mitigation measures follow standard construction noise reduction strategies: limit construction hours to Monday through Friday between the hours of 8:00 a.m. and 5:00 p.m.; and require all construction equipment to be equipped with the manufacturer's original muffling devices and all stationary equipment to be physically buffered from sensitive receptors. With the incorporation of these measures, noise impacts would be reduced to less than significant levels and the project can be found to be consistent with this objective and policies.

Public Facilities and Services Element

Objective PF-5: *To provide a high quality and broad range of public services, facilities and utilities to meet the needs of all present and future residents of the Carpinteria Planning Area.*

Objective PF-6: *To ensure that new development is adequately served by utilities and does not impact existing service areas in the community.*

As discussed elsewhere, the proposed project would provide a new safer, more convenient, direct and attractive pedestrian/cyclist route between the City of Carpinteria and unincorporated areas of Santa Barbara and Ventura Counties located to the southeast of the City. The project would enhance coastal access, recreational opportunities, and the ease of alternative transportation throughout the area, consistent with the intent of Objective PF-5, above.

As currently designed, the project does not require any new permanent utilities with the exception of upgrading and supplementing existing storm drainage facilities along the ocean-facing bluff face of the trail alignment (for the unincorporated County portion of the trail) to manage storm water runoff from the bluff face and new trail surface. These upgraded storm water facilities would help to ensure the long term stability of the trail and the bluff face upon which the trail is to be placed. Other existing infrastructure/utilities located in or near the project area would be protected in place and where necessary, marked or otherwise identified, to avoid unintended impacts or disruptions to service during construction. With the exception of water quality measures related to

erosion/sedimentation control and the design/maintenance of the new storm drain facilities, the project would not result in any adverse significant impacts to utilities or public facilities. Likewise, the water quality measures identified in the EIR would reduce the identified potentially significant water quality and public utility impacts to less than significant levels.

VII. ACTION OPTIONS

1. Adopt Resolution PC-22-001, thereby accepting and certifying the EIR for the Rincon Trail Project as having satisfied the procedural and statutory requirements of CEQA; selecting Alternative 3 as the preferred project; and approving Project 19-2015-CUP/CDP to allow construction of the proposed 850-foot long portion of the Rincon Trail project located in the City of Carpinteria; and adopt the Findings in Exhibit 1, Attachment A. (staff's recommendation)

2. Direct staff to prepare revisions to the Proposed Final EIR and/or to the proposed project, and return to the next Commission meeting.

3. Conceptually deny the project as proposed. Direct staff to return with findings for denial to the Planning Commission's next meeting.

Exhibit 1

Resolution PC-22-001

Rincon Trail Project
19-2015-CUP/CDP
PC Hearing, January 18, 2022

RESOLUTION NO. PC-22-001

A RESOLUTION OF THE CITY OF CARPINTERIA PLANNING COMMISSION TO ADOPT AND CERTIFY THE ENVIRONMENTAL IMPACT REPORT PREPARED FOR THE RINCON TRAIL PROJECT; AND TO APPROVE THE CONDITIONAL USE PERMIT AND COASTAL DEVELOPMENT PERMIT 19-2015-CUP/CDP TO ALLOW THE CONSTRUCTION OF THE 850-FOOT SEGMENT OF THE CLASS I MULTI-USE PATH LOCATED IN THE CITY OF CARPINTERIA. THE ENTIRETY OF THE PROPOSED 2,800-FOOT TRAIL WOULD CONNECT THE EAST END OF CARPINTERIA AVENUE TO RINCON BEACH COUNTY PARK IN UNINCORPORATED SANTA BARBARA COUNTY. THE PROJECT IS LOCATED IN CITY AND CALTRANS RIGHT-OF-WAY AT THE EASTERN END OF THE CITY OF CARPINTERIA.

REQUESTED BY MATT ROBERTS, DIRECTOR, CITY OF CARPINTERIA PARKS & RECREATION DEPARTMENT

WHEREAS, in October 2015, the California Coastal Commission certified City of Carpinteria Local Coastal Plan Amendment (LCPA) LCP-4-CPN-15-0018-1 / City Project 09-1522-LCPA/ORD to establish the Transportation Corridor Wetland Overlay (TCWO) District, which required completion of the Rincon Trail Project as a condition of approval for the Linden Casitas Interchanges and Via Real Extension Project, as a balancing provision to offset unavoidable wetland impacts through completion of one of two regionally important improvements to alternative transportation modes for the purpose of increasing access to coastal resources for all members of the public; and

WHEREAS, the City of Carpinteria Planning Commission previously certified a Mitigated Negative Declaration (MND), and considered and approved a Conditional Use Permit and Coastal Development Permit for an earlier iteration of the Rincon Trail Project in May 2015; and

WHEREAS, in May 2017, the previously granted entitlements for the Rincon Trail project expired due to failure to initiate construction within the allotted two-year timeframe from project approval while construction drawings and specifications were still in development; and

WHEREAS, the City of Carpinteria Planning Commission considered a new application for a Conditional Use Permit and Coastal Development Permit filed by Matt Roberts, City of Carpinteria Parks and Recreation Department, on October 17, 2019 to allow for the construction of a 850-foot segment of the larger 2,800-foot class I multi-use path between the east end of the City of Carpinteria and Rincon Beach County Park in unincorporated Santa Barbara County; and

WHEREAS, the current application was subsequently deemed complete and accepted by the City as being consistent with the applicable submittal requirements on November 15, 2019; and

WHEREAS, the Planning Commission previously accepted and certified a Subsequent Mitigated Negative Declaration (SMND) for the project in January 2020; and

WHEREAS, the acceptance and certification of the SMND by the Planning Commission was appealed to the City Council, and while the appeal was never taken up by the City Council, the Council directed staff in September 2020 to proceed with the preparation of an Environmental Impact Report in order to allow for a more in-depth analysis of key issue areas identified during consideration of the SMND; and

WHEREAS, in response to direction received from the City Council, and in accordance with the California Environmental Quality Act (CEQA), an Environmental Impact Report (EIR) dated December 2021 was prepared for the project and has been noticed and subject to public review as required under CEQA; and

WHEREAS, the Community Development Director has provided public notice of the intent of the Planning Commission, acting on behalf of the City of Carpinteria as Lead Agency, to accept and certify the EIR prepared for the project as having fulfilled all procedural and statutory requirements of CEQA; and

WHEREAS, the Planning Commission has reviewed and considered the EIR, together with any comments received during the public review process; and

WHEREAS, the City of Carpinteria Architectural Review Board considered the proposed project at their October 28, 2021 meeting wherein the project was recommended for preliminary approval; and

WHEREAS, the Planning Commission has conducted a hearing and received evidence regarding the application for the Conditional Use Permit and Coastal Development Permit; and

WHEREAS, the Planning Commission has reviewed the policies of the General Plan/Coastal Land Use Plan and the Zoning Code standards that are relevant to the project.

NOW THEREFORE, THE PLANNING COMMISSION HEREBY RESOLVES AS FOLLOWS:

1. The foregoing recitals are true and correct and are incorporated herein by reference.

2. The EIR prepared for the project is accepted and certified as having satisfied the requirements of CEQA;

3. The Planning Commission has reviewed and considered the EIR, together with any comments received during the public review process;

4. The Planning Commission finds that the EIR reflects the City of Carpinteria's independent judgment and analysis;

5. The Alternative 3, Steeper Slopes/Reduced Earthwork Alternative, has been selected as the preferred project in the EIR;

6. The Conditional Use Permit and Coastal Development Permit are approved, making the Findings for approval outlined in Attachment A; and

7. The Conditional Use Permit and Coastal Development Permit for the project shown in Attachment B are approved subject to the conditions of approval set forth in Attachment C.

PASSED, APPROVED AND ADOPTED this 18th day of January 2022, by the following called vote:

AYES: COMMISSIONERS:

NOES: COMMISSIONER(S):

ABSENT: COMMISSIONER:

_____
Jane Benefield, Chair

ATTEST:

_____
Steve Goggia, Secretary

I hereby certify that the foregoing Resolution was duly and regularly introduced and adopted at a regular meeting of the Planning Commission of the City of Carpinteria held the 18th day of January, 2022

Exhibit 1

Attachment A: Findings for Approval

Rincon Trail Project
19-2015-CUP/CDP
PC Hearing, January 18, 2022

ATTACHMENT A: FINDINGS FOR APPROVAL

PLANNING COMMISSION HEARING
RINCON TRAIL PROJECT
PROJECT 19-2015-CUP/CDP
JANUARY 18, 2022

FINDINGS PURSUANT TO GOVERNMENT CODE, LOCAL COASTAL PLAN, GENERAL PLAN, AND TITLE 14 OF THE CARPINTERIA MUNICIPAL CODE

1.0 Administrative Findings

The Planning Commission hereby incorporates by reference as though set forth in full all Community Development Department staff reports and attachments thereto presented to the Planning Commission and all comments made or received either orally or in writing at the public hearings on this project and the associated Environmental Impact Report.

1.1 Procedures

Pursuant to the California Coastal Act, the Administrative Regulations of the California Coastal Commission and the City of Carpinteria's ("City") Local Coastal Program, it has been found that the process for public review of the subject Local Coastal Development Permit has been properly conducted as follows:

a. An application for a Conditional Use Permit and Coastal Development Permit was submitted on October 17, 2019, and deemed complete and accepted by the City as being consistent with the applicable submittal requirements on November 15, 2019. Said application and all related material have been available for public review at City offices since the date of submittal.

b. The application has been evaluated and found to conform to the applicable zone districts and to be consistent with the City's Coastal Land Use Plan, the Interpretive Guidelines of the California Coastal Commission and the California Coastal Act.

c. The project has been reviewed by the City's Architectural Review Board at a duly noticed public hearing which included, but is not limited to, mailed notice to all property owners within 300 feet of the subject property and residents within 100 feet of the property.

d. The project has been reviewed by the City's Planning Commission at a duly noticed public hearing which included, but is not limited to, mailed notice to all property owners within

300 feet of the subject property, residents within 100 feet of the property and publication in the local newspaper, the Coastal View News.

1.2 California Environmental Quality Act

California Environmental Quality Act ("CEQA") findings pursuant to CEQA (California Public Resources Code Sections 21081, 21081.6) and State CEQA Guidelines (California Code of Regulations Sections 15090, 15091, 15092, 15097):

a. The Environmental Impact Report ("EIR") dated December 2021 was presented to the Planning Commission and all voting members of the Planning Commission have reviewed and considered the EIR prior to approving this project. The EIR reflects the independent judgment of the Planning Commission and is adequate for this proposed project.

b. The Planning Commission finds and certifies that the EIR dated December 2021 constitutes a complete, accurate, adequate and good faith effort at full disclosure under CEQA. The Planning Commission further finds and certifies that the EIR has been completed in compliance with CEQA.

c. The Planning Commission selects Alternative 3, Steeper Slopes/Reduced Earthwork Alternative from among the Proposed Project and Alternatives 1-4 as the preferred project, finding that it meets the project objectives and results in the fewest and least severe impacts to the environment.

d. The documents and other materials which constitute the record of proceeding upon which this decision is based are in the custody of the Planning Commission Secretary located at 5775 Carpinteria Ave, Carpinteria, CA.

e. Adoption of Environmental Reporting and Monitoring Program. The project description, and conditions of approval, with their corresponding permit monitoring requirements, are hereby adopted as the reporting and monitoring program for this project to ensure compliance during project implementation.

f. Pursuant to Section 21081(a) of the Public Resources Code and Section 15091(a)(1) of the State CEQA Guidelines, the Planning Commission finds that design features incorporated as part of the project description and mitigation measures applied as conditions of project approval would result in the avoidance or reduction to insignificant levels the following environmental impacts identified in the EIR. These findings are supported by substantial evidence in the record, including the EIR dated December 2021, and associated appendix materials. The EIR identified the potential for Class II, significant but mitigable impacts in the areas of Aesthetics, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Tribal Cultural Resources, and Utilities and Service Systems.

i. Aesthetics: U.S. Highway 101 in the project area is identified as being eligible for scenic highway designation. Additionally, both City and County of Santa Barbara ("County") planning regulations reflect a high concern for protecting visual resources along U.S. Highway 101 in the project area, as well as protecting public views from the project area towards the ocean and mountains. The project would result in visual changes to the area, introducing new human-scale activity from trail users, as well as physical alteration of the area primarily associated with the removal of existing vegetation, earthwork and grading, the construction of the new bridge over the Union Pacific Railroad ("UPRR") crossing, and fencing and barriers along the proposed path alignment. Trail features have been designed to be visually subordinate to the setting, but due to the high scenic value of the area, potentially significant aesthetic impacts may result. Temporary construction activities, such as staging areas and clearing of vegetation, may also degrade the visual quality of the project area.

With the incorporation of the following mitigation measures as project conditions of approval, all impacts would be reduced to a less than significant level. **Measure AES-1** requires the project to be reviewed and approved by both the City Architectural Review Board and the County South Board of Architectural Review to ensure all project elements reflect quality design and are appropriate for their setting. **Measure BIO-5** requires the development and implementation of a Habitat Mitigation and Monitoring Plan, prepared by a qualified biologist, to mitigate for impacts to ESHA vegetation communities. The Plan may include in-kind on-site restoration of impacted areas, and enhancement/restoration of degraded or disturbed areas adjacent to the impacted areas. A total of 4.32 acres of impacts to ESHA vegetation communities will be required to be mitigated at replacement ratios ranging from 2:1 to 4:1, depending upon the habitat types impacted. To the extent feasible, restoration will occur onsite, and any additional mitigation required shall be carried out on areas within adjacent land controlled by the County or City.

ii. Biological Resources: Construction of the trail project would require removal of ESHA vegetation communities that provide potential habitat for two special status species: California legless lizard and San Diego desert woodrat. Construction activities could result in injury or mortality to these special status species, which would be potentially significant absent mitigation.

There are five native vegetation communities found in the project area that are considered to be ESHA by the City, County and California Department of Fish & Wildlife ("CDFW"), and that would suffer permanent impacts as a result of the proposed project: California Brittle Bush – Ashy Buckwheat Scrub Alliance: 0.42 acres; Quailbush Scrub Alliance: 1.73 acres; California Sagebrush – (Purple Sage) Scrub Alliance: 1.29 acres; Coyote Brush Scrub Alliance: 0.71 acres; Lemonade

Berry Scrub Alliance: 0.17 acres. In total, 4.32 acres of ESHA vegetation communities would suffer permanent impacts resulting from the project.

A total of 22 species of native birds were detected on site, including several with the potential to nest there. Nests, eggs, and nestlings of all native birds are protected by the Migratory Bird Treaty Act and the California Fish and Game Code. Vegetation clearing and grading, if occurring during the nesting season, could have the potential to destroy nests, eggs and nestlings, in violation of these regulations. Therefore, impacts to nesting birds are potentially significant.

Potential project impacts associated with biological resources would be addressed through the following mitigation measures: **Measure BIO-1** requires an approved biologist to prepare and implement a worker education and awareness program (WEAP) to educate and make workers aware of sensitive habitats and species that may be encountered in the project area, and to inform workers of required actions that must be implemented to avoid or minimize impacts to sensitive species and habitats. **Measure BIO-2** requires the construction limits to be fenced with highly visible fencing to avoid inadvertent impacts to adjacent areas of ESHA vegetation communities, native vegetation, special-status species and common wildlife species. **Measures BIO-3** and **BIO-4** require pre-construction surveys and relocation efforts for California Legless Lizards and San Diego Woodrats located in the project area, prior to initiation of construction.

Measure BIO-5 requires the development and implementation of a Habitat Mitigation and Monitoring Plan, prepared by a qualified biologist, to mitigate for impacts to ESHA vegetation communities. The Plan may include in-kind on-site restoration of impacted areas, and enhancement/restoration of degraded or disturbed areas adjacent to the impacted areas. A total of 4.32 acres of impacts to ESHA vegetation communities will be required to be mitigated at replacement ratios ranging from 2:1 to 4:1, depending upon the habitat types impacted. To the extent feasible, restoration will occur onsite, and any additional mitigation required shall be carried out on areas within adjacent land controlled by the County or City. **Measure BIO-6** requires a qualified biologist to develop and implement a weed management plan during construction and during implementation of the habitat mitigation and monitoring plan required under Measure BIO-5, to control and prevent the spread of invasive weeds in the project area. **Measure BIO-7** requires a pre-construction nesting bird survey to be completed within 30 days prior to any vegetation clearing, ground disturbance or use of noise-generating equipment that would occur during the nesting/breeding season of native birds potentially nesting in the project area. If active nests are found, then work would be postponed or halted in the affected area until the nest is vacated and juveniles have fledged. With the incorporation of these identified mitigation measures as project conditions of approval, all impacts would be reduced to a less than significant level.

iii. Cultural Resources: Previously recorded cultural resource sites are known to be present in and near the project area. There is the potential for subsurface intact or previously displaced cultural resources to be present and impacted during construction, which could result in a potentially significant effect to cultural resources.

Avoidance and minimization of cultural resource impacts would be addressed through the following measures: **Measure CR-1** requires development of protocols for practical adherence to Measures CR-2 and CR-3 (below), prior to and after ground disturbing construction activities, through the preparation and implementation of a Cultural Resource Treatment and Inadvertent Discovery Plan (CRTP) by a qualified archaeologist. **Measure CR-2** requires all personnel participating in tasks that may incur ground disturbance to be briefed by a qualified archaeologist about the archaeological sensitivity of the site, the types of cultural resources that could be encountered, and the procedures to follow in the event cultural resources or human remains are encountered.

Measure CR-3 requires a qualified archaeologist to be present to monitor initial grading and clearing activities until such time that it is determined that no additional cultural resources are located in the area, and to also monitor the installation of bridge pilings within intact soils and/or any soils deeper than 10 feet below current ground surface to ascertain that no additional cultural resources are present in the improvement area. **Measure CR-4** requires that construction activities be suspended and redirected to another area in the event cultural resources are encountered to allow the monitoring archaeologist to assess the nature, extent and significance of any discoveries and develop appropriate management recommendations for treatment of the discovered cultural resource(s). With the incorporation of the identified mitigation measures as project conditions of approval, all impacts would be reduced to a less than significant level.

iv. Geology and Soils: The project area is located in a geologically active area vulnerable to earthquakes and secondary impacts such as landslides and liquefaction. The project includes features, such as the manufactured slopes and bridge crossing over the UPRR corridor, which could be damaged by seismic ground shaking. The project entails earthwork and grading activities to lay back and stabilize slopes in the project area in an effort to reduce potential erosion effects; nevertheless, erosion impacts could be worsened unless proper slope construction techniques are employed.

Potential project impacts associated with geology and soils would be addressed through the following measures: **Measures GEO-1** and **GEO-2** require the design of the bridge and bridge foundation to adhere to the recommendations contained in the

project-specific geotechnical report. **Measure GEO-3** requires the design and construction of manufactured slopes to also adhere to the recommendations contained within the project-specific geotechnical report. With the incorporation of the identified mitigation measures as project conditions of approval and aspects of the project design, all impacts would be reduced to a less than significant level.

v. Hazards and Hazardous Materials: There is the potential for soils along the project alignment adjacent to the U.S. Highway 101 corridor to contain aerially deposited lead (ADL). Soils containing ADL could be used for fill soils for the project, potentially exposing the public to the contaminated soils. Construction activities and equipment use hydrocarbon fuels and lubricants which are considered hazardous materials. Concrete, paint and other surface coatings are also considered hazardous materials, and are anticipated to be used during construction. Spills or leaks of such materials into the storm drain system could pose potentially significant water quality hazards.

With the incorporation of the following identified mitigation measures as project conditions of approval, all impacts would be reduced to a less than significant level: **Measure HAZ-1** requires surface soils within the project alignment north of the UPRR corridor to be tested for potential ADL presence to determine if such soils meet applicable safety standards and can be used for fill or if standards are exceeded, the soils must be disposed of in a properly licensed landfill. **Measure WAT-2** requires the contractor to prepare and implement a Stormwater Pollution Prevention Plan that includes best management practices to be implemented and monitored prior to and during construction to minimize potential construction-related water quality impacts.

vi. Hydrology and Water Quality: Temporary construction activities may result in inadvertent water quality impacts related to soil, dust, paint and/or concrete entering the stormwater drainage system. There is increased potential for stormwater runoff and erosion during construction and until new/replacement vegetation is established. During the operational phase of the project, soil, trash, dog waste, and other impurities have the potential to enter the project's storm drainage systems and could result in potentially significant water quality impacts. Failure to properly maintain new/replaced storm drain infrastructure associated with the project could result in significant erosion of the bluff face.

Avoidance and minimization of hydrology and water quality impacts would be addressed and mitigated to less than significant levels through the following measures which have been incorporated into the project conditions of approval. **Measure WAT-1** requires the project to obtain and maintain coverage under a Construction General Permit from the State Water Resources Control Board. **Measure WAT-2** requires the contractor to prepare and implement a Stormwater

Pollution Prevention Plan that includes best management practices to be implemented and monitored prior to and during construction to minimize potential construction-related water quality impacts. **Measure WAT-3** requires implementation of an Erosion and Sediment Control Plan utilizing best management practices throughout grading and construction activities.

Measure WAT-4 requires replanting of native vegetation and hydroseeding of slope areas with appropriate native seed mixes as soon as practicable following completion of trail construction, in order to provide long-term stabilization of soils disturbed during construction. **Measure WAT-5** requires ongoing periodic inspection and maintenance/repairs of all new and replaced storm water components on an annual basis prior to the start of the rainy season, to ensure all components are in good repair and not blocked by debris or sediment. **Measure WAT-6** requires all project area storm drain inlets to be outfitted with storm drain filters/inserts to minimize pollutants from impacting the ocean. Filters shall be cleaned at least twice a year, once immediately prior to November 1 (start of the rainy season) and once in January.

vii. Land Use and Planning: The City of Carpinteria's and County of Santa Barbara's respective Local Coastal Programs contain a number of policies and regulations concerning resource protection within the Coastal Zone. Project impacts to these resources could result in potentially significant land use and planning impacts unless properly mitigated. Incorporation of all of the mitigation measures identified in the EIR would reduce environmental impacts to less than significant levels, such that the proposed project would not conflict with any applicable land use plan, policy or regulation of an agency with jurisdiction over the project.

viii. Noise: Short-term, temporary noise impacts would occur during construction. Residences closest to the project site (i.e., residences located in the Rincon Point neighborhood) are the only sensitive receptors in the project area and could periodically be exposed to potentially significant noise impacts if not properly mitigated. Construction-related traffic, such as haul trucks, which may pass by the sensitive receptors causing intermittent noise impacts.

Avoidance and minimization of noise impacts would be addressed through the following measures which have been incorporated into the project conditions of approval. **Measure NOI-1** would limit construction hours for the project to the hours between 8:00 a.m. and 5:00 p.m., Monday through Friday. No construction is permitted to occur on weekends or state holidays. Construction maintenance shall be limited to the same hours. Non-noise generating construction activities would be exempt from these restrictions. **Measure NOI-2** requires all construction equipment with engines to have original manufacturer's approved muffling devices, and all stationary equipment be physically buffered from nearby sensitive receptors.

ix. Tribal Cultural Resources: No known tribal cultural resources listed in the California Register of Historical Resources or in a local register of historical resources are known to be present within the project site. Nevertheless, given the known presence of sensitive archaeological resources in the general vicinity, there is potential for unknown subsurface tribal cultural resources to be present and to be impacted during construction, resulting in potentially significant impacts to tribal cultural resources.

Measure TCR-1 requires initial ground disturbing activities to be monitored by a Native American observer. The monitor/observer shall immediately inform equipment operators in the event archaeological resources are encountered, and shall be empowered to immediately halt construction activity in the area of the discovery until assessment can be completed and materials recovered, as appropriate. Measure TCR-1 in coordination with **Measures CR-1** through **CR-4**, previously described above, would reduce potentially significant impacts to unknown tribal cultural resources to a less than significant level, and have been incorporated into the project conditions of approval.

x. Utilities and Service Systems: The project would moderately alter existing drainage patterns in the project area through re-grading of project slopes, short-term removal of vegetation, and introduction of the new impervious trail surface (approximately one acre of new impervious surface), resulting in potentially significant impacts to water quality. New storm drainage infrastructure associated with the project could pose potentially significant erosion impacts if not properly maintained to avoid failure of said infrastructure. Previously identified **Measures WAT-1** through **WAT-5** would address and reduce potentially significant temporary construction-related water quality impacts and storm drainage infrastructure impacts to less than significant levels, and have been incorporated into the project conditions of approval.

1.3 Conditional Use Permit Findings

Pursuant to Carpinteria Municipal Code §14.62.040(8), the Planning Commission shall determine that all of the following criteria have been met prior to approving or approving with conditions a Conditional Use Permit:

a. *The site for the proposed use is adequate in size and shape to accommodate the use.*

The portion of the Rincon Trail project located in the jurisdiction of the City of Carpinteria would fit entirely within the existing Caltrans right-of-way for U.S. Highway 101 and City of Carpinteria right-of-way near the eastern terminus of Carpinteria Avenue. A portion of the Caltrans right-of-way located just east of the City-County boundary would be dedicated and transferred to the City of Carpinteria as part of the project in order to facilitate the City's ongoing ownership and responsibility for this portion of the trail. A temporary construction

easement may need to be acquired from the property owner of the easternmost parcel on Carpinteria Avenue (APN 001-210-016) to facilitate access to, and construction of the new trail alignment. The western trailhead would be located in an existing unimproved shoulder of Carpinteria Avenue, adjacent to the Rincon Road/State Highway 150 intersection. Informal trailhead parking would be available via on-street parallel parking near the cul-de-sac at the end of Carpinteria Avenue and in the remaining portion of the unimproved shoulder.

Use of off-site areas for mitigation of projected permanent biological resources impacts is anticipated to be necessary to meet specified regulatory replacement ratios for loss of sensitive vegetation communities along the trail alignment. The adjacent Rincon Bluffs Preserve and natural areas of the Rincon Beach County Park have been preliminarily identified as the preferred receiver site for offsite compensatory mitigation for native vegetation impacts that cannot be accommodated onsite due to site area constraints. Final site selections for any proposed offsite compensatory mitigation efforts will be included in the required Habitat Mitigation and Monitoring Plan for the project.

b. *The site for the proposed use is served by streets and highways that are properly designed to carry the type and quantity of traffic generated by the subject use.*

This project is designed to improve bicycle and pedestrian travel by providing a dedicated class-I direct coastal route between the eastern terminus of Carpinteria Avenue in the City of Carpinteria and public recreational facilities located southeast of the City in unincorporated Santa Barbara and Ventura Counties (i.e., Rincon Beach County Park; Rincon Point State Beach; and Pacific Coast Bikeway). The project would provide a safer and legal alternative to the current use of the U.S. Highway 101 shoulder and/or informal trails that trespass through the UPRR corridor to connect the City of Carpinteria to points southward for cyclists and pedestrians. The trail project would fill in this existing gap in the California Coastal Trail ("CCT"), consistent with the circulation and bikeway systems outlined in the County of Santa Barbara's Comprehensive Plan, the City of Carpinteria's General Plan/Coastal Land Use Plan, the statewide CCT Map, and the Plan for Improved Agency Partnering (Caltrans and California Coastal Commission, 2016). The project would enhance and improve coastal access and alternative transportation opportunities for bicycles and pedestrians, consistent with local coastal policies and plans.

The project would have no long-term substantive impact on the capacity of roadways in the project area. Completion of the bike path is anticipated to result in an incremental reduction of vehicle trips to access nearby popular coastal destinations. Existing roadways and public parking areas at the trail ends have sufficient capacity to serve any trail-related vehicle traffic.

Temporary construction-related traffic has been estimated in the project EIR and found to be less than significant. Haul trucks used to export cut from the project site on the City's

portion of the trail would utilize US Highway 101 and the State Highway 150 interchange to access the site. The EIR estimates up to three haul truck trips per hour over an eight-hour work day during the earthwork phase of construction. Given the low frequency of haul truck trips and immediate proximity of highway access, haul truck trips are not anticipated to result in any significant disruptions to traffic circulation or capacity.

c. *The granting of the permit will not materially adversely affect such necessary community services as sewage disposal, fire protection, water supply, and police protection.*

A copy of the project application and plans were routed to all applicable agencies and special districts for review and comments. All of these agencies have indicated the project would not have adverse effects upon their ability to continue to serve the population of Carpinteria. The project would enhance public coastal access and opportunities for alternative transportation in the Carpinteria area, providing a benefit to the community. The project would not generate wastewater needing treatment, and would not generate a noticeable increase in demand for fire or police protection services. A negligible amount of water would be required during construction and to establish/maintain the new landscape plantings.

The City's portion of the trail project will tie into and be served by existing storm drain infrastructure that serves U.S. Highway 101, which has sufficient capacity to take on the added storm water flows generated by the new impervious surfaces affiliated with the trail project north of the UPRR crossing (estimated at approximately 0.5 acres). Mitigation Measures WAT-1 through WAT-4 address erosion and sedimentation control during construction to avoid water quality impacts and to not damage or overwhelm existing storm drain infrastructure. Mitigation Measure WAT-5 requires ongoing monitoring and upkeep of project-related storm drain infrastructure to avoid failure or damages.

An existing 4-inch sewer force main is located in the project area, near the proposed trail alignment for the section of trail north of the UPRR crossing. The sewer force main would be protected in place during construction. An abandoned underground oil pipeline passes underneath the trail alignment near the western trailhead located in the City of Carpinteria. The pipeline would be protected in place. Other utilities near the project area, but not within the project footprint include a water main line and underground communication lines, neither of which would be impacted by construction of the City's portion of the trail.

d. *The granting of the permit will not be detrimental to the health, safety, and general welfare of the neighborhood.*

The Rincon Trail project establishes a new dedicated public Class I bicycle and pedestrian trail between the City of Carpinteria and recreational amenities (i.e., public beaches, park and bicycle path) located south of the City in unincorporated Santa Barbara and Ventura

Counties. The project results in beneficial recreational, coastal access, and alternative transportation impacts for the region.

The EIR prepared for the project analyzed potentially significant environmental effects associated with the project and identified appropriate mitigation measures to ensure that all impacts were mitigated to a less than significant level. Mitigation measures were identified for the following issue areas: Aesthetics, Biological Resources, Cultural Resources, Geology/Soils, Hazards/Hazardous Materials, Hydrology/Water Quality, Land Use/Planning, Noise, Tribal Cultural Resources, and Utilities/Service Systems. In addition, compliance with Santa Barbara County Air Pollution Control District (APCD) standards is required to ensure that impacts to Air Quality, and Greenhouse Gas Emissions are minimized and remain less than significant. The mitigation measures incorporated into the project via the EIR and the project restrictions imposed via conditions of approval ensure that granting the permit will not be detrimental to the health, safety and welfare of the neighborhoods located nearby to project components.

e. *The proposed use is consistent with the coastal plan, general plans, and applicable specific plan(s).*

As discussed in the General Plan/Coastal Land Use Plan policy analysis section of the Staff Report dated January 18, 2022 and herein incorporated by reference, the project would be consistent with the various applicable policies from the Land Use, Community Design, Circulation, Open Space/Conservation/Recreation, Safety, Noise, and Public Facilities/ Services Elements. The project would fill in an existing gap in the California Coastal Trail (CCT), thereby improving public coastal access and alternative transportation opportunities in the project area. The trail and its design elements have been reviewed by the City's Architectural Review Board ("ARB") for consistency with applicable design policies and found to conform. The project incorporates appropriate mitigation measures, consistent with the requirements of the City's General Plan/Coastal Land Use Plan and Zoning Code to address all unavoidable impacts to ESHA and sensitive species, and other appropriate measures and standards are included to avoid potential impacts related to aesthetics, cultural resources, geology/soils, hazards/hazardous materials, hydrology/water quality, noise, tribal cultural resources, and utilities and service systems, consistent with the policies of the City's General Plan/Coastal Land Use Plan.

f. *The proposed use will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.*

The EIR prepared for the project identified potentially significant impacts on aesthetics, biological resources, cultural resources, geology/soils, hazards/hazardous materials, hydrology/water quality, land use/planning, noise, and utilities/service systems; the EIR also identified standard Santa Barbara County Air Pollution Control District ("APCD") measures that the project is required to implement to ensure impacts to air quality, and greenhouse gas

emissions are minimized and remain less than significant. The EIR contains mitigation measures to reduce all environmental impacts of the proposal to less than significant levels; pertinent mitigation measures from the EIR have been incorporated as conditions of approval.

The project has also been designed to minimize land form modification, and impacts to ESHA, cultural resources and water quality, avoid or reduce exposure to geologic hazards and hazardous materials, avoid disruptions to public utilities, and be aesthetically compatible with the project setting, as required by the resource protection policies of the City's General Plan/Coastal Land Use Plan.

g. *The proposed development will not conflict with recorded easements acquired by the public-at-large for access through or use of the property within the proposed development or any easements granted to any public agency or required as a condition of approval.*

The proposed project would not interfere with any recorded easements acquired by the public-at-large for access through, or use of, the project area. Rather, the proposed project involves the construction of a new public multi-use pathway within existing public right-of-way between the east end of the City of Carpinteria and the unincorporated areas near the Santa Barbara/Ventura County line to facilitate improved public coastal access, recreation and alternative transportation opportunities in the area. In this regard, the project enhances public access along the Carpinteria coastline and between areas located in the City of Carpinteria and those in the unincorporated Rincon Point area.

A portion of the Caltrans right-of-way located just east of the City-County boundary would be dedicated and transferred to the City of Carpinteria as part of the project in order to facilitate the City's ongoing ownership and responsibility for this portion of the trail. A temporary construction easement may need to be acquired from the property owner of the easternmost parcel on Carpinteria Avenue (APN 001-210-016) to facilitate access to, and construction of the new trail alignment. The proposed project is not known to conflict with any easements granted to any public agency. Maintenance access for Caltrans and UPRR through the project area will be maintained/provided, as needed.

h. *Any other conditions which are reasonably necessary to protect the public peace, health, safety, and general welfare.*

Through the environmental review process, a number of mitigation measures have been developed in order to avoid significant impacts to the environment. All mitigation measures identified in the EIR have been included in the conditions of approval and are fully enforceable. Additional project-specific conditions of approval have been included to address traffic management during construction, property owner/neighbor outreach, and ongoing maintenance responsibilities for the trail improvements.

1.4 Coastal Development Permit Finding

Pursuant to the California Coastal Act, the Administrative Regulations of the California Coastal Commission and the City's Local Coastal Program, it has been found that the permit requested may be issued based on the following finding:

a. *The proposed development is in conformity with the City's certified Local Coastal Program.*

The Caltrans right-of-way is designated Transportation Corridor (TC) in the General Plan/Coastal Land Use Plan and is undesignated with respect to zoning. The portion of the project located on Carpinteria Avenue is designed Visitor-serving Commercial (VC) in the General Plan/Coastal Land Use Plan and is zoned Resort District (RES). The proposed use is consistent with the stipulations outlined for these land use designations as the project involves improvements to pedestrian and bicyclist facilities, which are permissible in all land use categories and zoning districts. A Conditional Use Permit and Coastal Development Permit are required for this major transportation facility. The project can meet all of the required findings for approval of the required CUP (discussed above) and CDP. The proposed project is consistent with all applicable policies in the General Plan/Coastal Land Use Plan as discussed in the Planning Commission staff report dated January 18, 2022. The project is also consistent with the Interpretive Guidelines of the California Coastal Commission and the California Coastal Act.

Exhibit 1

Attachment B: Proposed Plans

Rincon Trail Project
19-2015-CUP/CDP
PC Hearing, January 18, 2022

For the **Project Plans**, please refer to

Attachment A, Exhibit 2

of the City Council Staff Report dated March 28, 2022

Exhibit 1

Attachment C: Recommended Conditions of Approval

Rincon Trail Project
19-2015-CUP/CDP
PC Hearing, January 18, 2022

PLANNING COMMISSION HEARING
PROJECT 19-2015-CUP/CDP
JANUARY 18, 2022

ATTACHMENT C: CONDITIONS OF APPROVAL RINCON TRAIL PROJECT

The Conditions set forth in this permit affect the title and possession of the real property that is the subject of this permit and shall run with the real property or any portion thereof. All the terms, covenants, conditions and restrictions herein imposed shall be binding upon and inure to the benefit of the owner (applicant, developer), his or her heirs, administrators, executors, successors and assigns. Upon any sale, division or lease of real property, all the conditions of this permit shall apply separately to each portion of the real property and the owner (applicant, developer) and/or possessor of any such portion shall succeed to and be bound by the obligations imposed on the owner (applicant, developer) by this permit.

PROJECT DESCRIPTION

1. This Conditional Use Permit and Coastal Development Permit is based upon and limited to compliance with the project description, the hearing exhibits (Exhibit 1, Attachment B to the staff report dated January 18, 2022) and conditions of approval set forth below. Any deviations from the project description, exhibits or conditions must be reviewed and approved by the City for conformity with this approval. Deviations may require approved changes to the permit and/or further environmental review. Deviations without the above described approval will constitute a violation of permit approval.

   The project description is as follows:

   The City of Carpinteria Parks and Recreation Department is seeking approval of a Conditional Use Permit and Coastal Development Permit to construct a 850-foot segment of Class I multi-use path in the City and Caltrans rights-of-way at the eastern end of the City of Carpinteria to allow for a dedicated bike and pedestrian path connection between the City of Carpinteria and Rincon Beach County Park in unincorporated Santa Barbara County. The remainder of the approximately 2,800-foot long trail is located in the jurisdiction of the County of Santa Barbara. The trail is intended to support alternative transportation in the area and fill in a missing link in the 1,200 mile California Coastal Trail.

   The overall project limits would extend from near the Carpinteria Avenue/State Highway 150 intersection to the western terminus of the Rincon Beach County Park parking lot in unincorporated Santa Barbara County. Beginning in the unimproved shoulder just east of the Carpinteria Avenue/State Highway 150 intersection, the trail would trend east/northeast, roughly paralleling the southbound US Highway 101 on-ramp. The trail would be situated on a new bench cut into the existing

manufactured slope above the on-ramp and would gently descend in elevation toward the Union Pacific Railroad (UPRR) corridor where the trail would cross the UPRR corridor using a new pre-fabricated 160-foot long, 14-foot wide clear span bridge. South of the UPRR corridor, the trail would turn due east and gradually descend the face of the ocean-side bluff, terminating at the western terminus of the Rincon Beach County Park parking lot.

The portion of the trail under consideration by the City of Carpinteria Planning Commission extends from Carpinteria Avenue to the eastern City boundary, roughly coincident with the middle of the trail segment north of the UPRR corridor, and measures approximately 850 linear feet. The County of Santa Barbara has permit jurisdiction over the remainder of the trail (approximately 1,950 linear feet), continuing east from the city boundary (and including the new bridge crossing over the UPRR corridor) to the pathway's terminus at the Rincon Beach County Park parking lot.

The proposed concrete multi-use path would feature a five-foot travel lane in each direction, and a paved shoulder width of three feet on each side, for a total path width of 16 feet. A six-foot wide shallow concrete v-ditch would run along the inside of the trail length for the purposes of capturing and conveying stormwater to onsite drainage facilities. Protective fencing would be provided along the trail alignment to keep trail users on the improved path.

Total grading and earthwork quantities for the entirety of the project necessary to cut an Americans with Disability Act (ADA)-compliant trail bench, stabilize slopes, and control stormwater runoff through the project area are estimated at 96,040 cubic yards of cut. Approximately 10,519 cubic yards of the cut material would be used for fill onsite; the remaining 85,521 cubic yards of cut material would be exported offsite. Approximately 45% of the estimated earthwork (equivalent to ~43,200 cubic yards of cut) is expected to occur on the inland side of the UPRR alignment; and the remaining 55% (~52,800 cubic yards) on the ocean side of the UPRR alignment. A storm drain collection system is proposed for the trail alignment, which would utilize a combination of repaired existing and new piped storm drains on the bluff face and drain outlets to the ocean. The portion of the trail located in the jurisdiction of the City of Carpinteria would tie into and be served by existing Caltrans storm drain infrastructure for US Highway 101. A habitat restoration plan is included to restore areas disturbed during construction and to mitigate for permanent removal of vegetation to accommodate the new trail.

As part of the project, the City will obtain an easement from UPRR for the bridge crossing over, and trail improvements within, the UPRR alignment. The City is also anticipating the acquisition of right-of-way from the California Department of Transportation (Caltrans) to accommodate the trail alignment.

The grading, development, use, and maintenance of the property, the size, shape, arrangement, and location of structures, parking areas and landscape areas, and the protection and preservation of resources shall conform to the project description above and the hearing exhibits and conditions of approval below. The property and any portions thereof shall be sold, leased or financed in compliance with this project description and the approved hearing exhibits and conditions of approval hereto. All plans (such as Landscape Plans) must be submitted for review and approval and shall be implemented as approved by the City.

MITIGATION MEASURES FROM THE CERTIFIED PROJECT ENVIRONMENTAL IMPACT REPORT (EIR)

2. **MM-AES-1 Board of Architectural Review.**
The Owner/Applicant shall obtain City Architectural Review Board ("ARB") and County South Board of Architectural Review ("SBAR") approval for project design. All project elements (e.g., design, scale, character, colors, materials, and landscaping) shall be compatible with vicinity development and shall conform in all respects to ARB/SBAR approval.
Plan Requirements and Timing: The Owner/Applicant shall submit architectural drawings of the project including photo renditions from the beach of the storm drains proposed along the bluff face for review and shall obtain final City ARB and County SBAR approval prior to issuance of the zoning clearance. Grading plans, if required, shall be submitted to the City's Planning Department concurrent with or prior to ARB/SBAR plan filing with the Carpinteria Community Development Department or County Planning and Development. ***Monitoring*:** The Owner/Applicant shall demonstrate to Community Development Department staff and Planning & Development Department compliance monitoring staff that the project has been built consistent with approved ARB/SBAR design and landscape plans prior to Final Building Inspection Clearance.

3. **MM-BIO-1 Workers Environmental Awareness Program (WEAP).**
The Owner/Applicant shall fund an approved biologist to prepare and implement a worker education and awareness program (WEAP) specific to the project. The program shall be presented to all individuals involved in the construction of the project. The program shall include information focused on sensitive vegetation communities, sensitive wildlife and plant species, and common wildlife species and their habitats and shall include, but not be limited to, the following:
    - Description of sensitive vegetation communities.
    - Workers shall be provided with photographs of sensitive biological resources including sensitive wildlife and plant species.
    - Workers shall be informed verbally and in writing of the various project tasks that require biological surveys and monitoring for resource protection.
    - Workers shall be provided with a photograph or description of the markers for active bird nests, trees, or other mitigation areas, so that they shall know these are not to be disturbed without a biological monitor present.

- Workers shall be informed not to litter. All trash and litter shall be picked up and removed from the construction sites at the end of each day.
- Workers shall be informed to obey a speed limit of 15 miles per hour while traveling on the project site to avoid collisions with wildlife.
- Workers shall avoid driving over or otherwise disturbing areas outside the designated construction areas.

Plan Requirements and Timing: The Owner/Applicant shall submit the WEAP to the City of Carpinteria ("City") and County of Santa Barbara ("County") for review and approval prior to zoning clearance approval. All workers, contractors, and visitors shall attend the WEAP prior to entering the project site and performing any work. The Owner/Applicant shall provide copies of the training attendance sheets to City and County staff as a record of compliance with this measure on a monthly basis. The WEAP shall be reviewed and approved by the City and County prior to Zoning Clearance approval. Implementation of the WEAP training shall occur prior to the start of construction and as new crew members are added to the project. ***Monitoring:*** The City and County permit compliance staff will ensure compliance with the WEAP throughout construction by review of attendance sheets and hardhats, inspection of the site, and interviewing workers, as appropriate.

4. **MM-BIO-2 Fencing.**
To prevent inadvertent impacts on adjacent sensitive vegetation communities including County ESH and City ESHA, native vegetation, special-status species, and common wildlife species and their habitats, construction limits will be fenced with highly visible fencing and staked. Wildlife safe highly visible construction fencing shall be installed to identify the limits of grading/disturbance, which would reduce potential human trampling outside of the construction limits and minimize the potential spread of non-native weeds or invasive plant species. Wildlife-safe construction fencing and flagging shall remain in place during construction and replaced as needed.
Plan Requirements and Timing: The detailed fencing plan, showing the location of required fencing shall be reviewed and approved by City and County staff prior to Zoning Clearance approval. This condition shall be printed on all project plans. The detailed fencing plan, showing the location of fencing shall be submitted to City and County staff for review and approval prior to Zoning Clearance approval. The fence shall be installed prior to the start of ground disturbing activities. ***Monitoring:*** The City of Carpinteria and County staff will inspect the project plans and site, to ensure compliance with this measure as appropriate.

5. **MM-BIO-3 Pre-construction California Legless Lizard Survey and Relocation.**
Prior to initiation of construction, capture and relocation efforts for California legless lizards shall be conducted. Trapping shall be conducted by a qualified biologist and shall include the following steps:
   i. Prior to initiation of capture and relocation, a suitable receptor site shall be located. This site shall include areas with loose, moist soils occurring in scrub habitat with high coverage of deerweed (*Lotus scoparius*) or

California goldenbush, in arroyo willow (*Salix lasiolepis*) thickets or in other suitable scrub or woodland habitat.

ii. Capture and relocation shall take place no more than five days prior to the initiation of construction.

iii. These surveys shall be performed by lightly raking loose soil, sand and leaf litter with a wooden rake for a sufficient period to determine that no legless lizards are present, or all legless lizards have been captured.

iv. Any lizards found shall be placed in a receptacle with sand and a wet towel and relocated to the previously designated receptor site.

***Plan Requirements and Timing*:** Prior to initiation of construction, capture and relocation efforts for California legless lizards shall be conducted where appropriate. Trapping shall be conducted by a qualified biologist. ***Monitoring*:** The City of Carpinteria and County staff shall ensure the pre-construction survey and relocation efforts, if required, are completed prior to commencement of any earth-moving activities.

6. **MM-BIO-4 Pre-construction Woodrat Survey and Relocation.**
Prior to initiation of construction, capture and relocation efforts for woodrat shall be conducted. Trapping shall be conducted by a qualified biologist and shall include the following steps:

i. Prior to initiation of capture and relocation, a suitable receptor site shall be located. This site shall be within similar habitat and an adequate distance away from any locations that might be subject to increased human disturbance, such as adjacent to a walking path.

ii. These pre-construction surveys shall be performed searching all coastal sage scrub or coastal bluff scrub within the disturbance area for middens or other sign of the species.

iii. Any middens and woodrats found shall be live-trapped and relocated to the pre-determined receptor site. The midden shall be dismantled and the materials placed at the relocation site.

***Plan Requirements and Timing*:** Prior to initiation of construction, capture and relocation efforts for woodrat shall be conducted where appropriate. Trapping shall be conducted by a qualified biologist. ***Monitoring*:** The City of Carpinteria and County staff shall ensure the pre-construction survey and relocation efforts, if required, are completed prior to commencement of any earth-moving activities.

7. **MM-BIO-5 Habitat Mitigation and Monitoring Plan.**
Prior to issuance of zoning clearance approval, the Owner/Applicant shall contract with a qualified biologist to develop a Habitat Mitigation and Monitoring Plan (Plan) to mitigate for impacts to County ESH/City ESHA vegetation communities. The Plan shall outline efforts to restore or enhance coastal sage scrub and coastal bluff scrub communities, and, therefore, preserve or provide wildlife habitat, in areas impacted by construction of the trail but outside the trail-related impervious surfaces and within similar habitats adjacent to the impacted biological resources. The Plan may focus on the following:

- In-kind, on-site restoration of areas where coastal sage scrub or coastal bluff scrub has been removed;
- Enhancement of impacted areas on site currently occupied by ornamental, disturbed or developed areas;
- Restoration of areas occupied by non-native habitats or native habitats with large components of non-native vegetation, within similar habitats adjacent to the impacted biological resources.

A total of 4.32 acres of impacts are proposed to County ESH/City ESHA native vegetation communities. Under the Plan, impacts to S3/County ESH/City ESHA native vegetation communities (California brittle bush – ashy buckwheat scrub alliance, *Encelia californica* association and lemonade berry scrub alliance, *Rhus integrifolia* association) that total 0.59 acres shall be restored in-kind at 4:1. Impacts to S4 and S5/County ESH/City ESHA native vegetation communities (quailbush scrub alliance, *Atriplex lentiformis* association, California sagebrush – (purple sage) scrub alliance, *Artemisia californica* association, and coyote brush scrub alliance, *Baccharis pilularis* association) that total 3.73 acres shall be restored in-kind at 2:1. To the extent feasible, restoration should occur on site and, any additional mitigation required shall be carried out on areas within adjacent land controlled by the County or City, such as the Rincon Bluffs Preserve or Rincon Beach County Park.

A qualified biologist/botanist shall develop the Plan, which shall provide specific measures to restore or enhance habitat to replace the loss of coastal sage scrub and coastal bluff scrub communities. This Plan shall be focused on adaptive management principles, and shall identify detailed enhancement areas and strategies based on the parameters outlined below, with long term timing and monitoring requirements. The Plan shall:

i. Provide an up-to-date inventory of on-site native vegetation resources.

ii. Define attainable and measurable goals and objectives to achieve through implementation of the Plan. Goals and objectives shall focus on replacement of coastal sage scrub, coastal bluff scrub and rare plants removed during construction.

iii. Provide site selection and justification. Prior to identifying habitat restoration mitigation areas, both within the project area and adjacent lands, the habitat shall be surveyed for sensitive vegetation communities and special-status species, to ensure avoidance of impacts during habitat restoration implementation. Additionally, potential adjacent mitigation lands shall be assessed to ensure sites are suitable and appropriate for implementation of habitat restoration for the impacted native vegetation communities.

iv. Detail a restoration work plan including methodologies, restoration schedule, plant materials (seed and container plant) sourcing – locally genetic stock, and implementation strategies.

v. Provide a detailed maintenance plan to include removal of invasive non-native species.

vi. Define annual and final performance standards. Prior to grading, the project-related native coastal bluff scrub and coastal scrub vegetation communities shall be assessed by vegetation community type for percent cover (both

basal and vegetative), species diversity, density, and abundance. This project site native vegetation community data shall be used to define performance standards for native habitat restoration by vegetation layers (tree, shrub, grass, and forb) for each vegetation community type and for non-native plant species.

vii. Identify that the restoration areas shall be irrigation-free for at least 3 years and the performance standards have remained stable (no negative trend for richness/ diversity/ abundance/ cover of native species and no positive trend for invasive/non-native cover for each vegetation layer) for at least 3 years.

viii. Provide a monitoring plan to include methods and analysis of results. Also, include goals, success or failure criteria, and an adaptive management plan, contingency actions, and suggestions for failed restoration efforts.

Plan Requirements and Timing: Prior to issuance of zoning clearance approval, the Owner/Applicant shall contract with a qualified biologist to develop the Plan. The Plan shall outline efforts to restore or enhance coastal sage scrub and coastal bluff scrub communities in areas impacted by construction of the project. ***Monitoring:*** The City of Carpinteria and County staff shall ensure development of the Plan and adherence to Plan measures are completed prior to commencement of any earth-moving activities. Additionally, California Department of Fish and Wildlife shall approve the Plan prior to issuance of zoning clearance approval. City and County staff shall periodically conduct site inspections to ensure compliance on site. Restored areas shall be monitored for five years following planting. Annual reports and the final report shall be submitted to the City and County.

8. **MM-BIO-6 Weed Management Plan.**
Prior to issuance of zoning clearance approval, the Owner/Applicant shall contract with a qualified biologist to develop a Weed Management Plan to be implemented during construction and implementation of the Habitat Mitigation and Monitoring Plan. The Weed Management Plan shall include, but is not limited to, the following:

- Prior to ground disturbance, a City approved qualified biologist shall map invasive weeds within the limits of impacts plus a 100-foot buffer. Invasive weeds shall be defined as California Invasive Plant Inventory Database (Cal-IPC) moderate and high ratings. Invasive species subject to control measures shall be identified. Note that non-native grasses such as bromes and wild oats shall be mapped but are not subject to control measures. Prior to ground disturbance, areas with invasive weeds shall be treated according to control methods below and BMPs for invasive weeds.
- To prevent the spread of invasive weeds and inhibit germination, the following shall be implemented:
    - Maintain vehicle wash and conduct inspections to monitor the types of materials brought on site to minimize the potential for invasive weed introduction
    - Limit disturbance areas to the permitted disturbance area
    - Limit ingress and egress to defined routes
    - Use certified weed-free products

- Invasive weed control methods shall include legally permitted herbicide, manual, and mechanical methods approved for application. The application of herbicides shall be in compliance with state and federal laws and regulations under the prescription of a pest control advisor, with the City's concurrence, and shall be implemented by a licensed qualified applicator. All product labels shall be followed. Spot treatments shall be the method of application and broadcast applications shall be avoided. Herbicides shall not be applied during or within 72 hours of a forecasted measurable rain event or during high wind conditions. Invasive weed debris accumulated during manual and mechanical removal methods shall be disposed of at an appropriate location off-site. Maintenance shall be timed to remove invasive weeds prior to seed production. The maintenance crew shall coordinate with the City approved biologist to avoid and minimize impacts to plant species and wildlife species.
- A City approved qualified biologist shall perform annual monitoring within the limits of disturbance and a 100-foot buffer to map and document invasive weed species. At any time during implementation of the Weed Management Plan, monitoring frequency may increase as needed to provide guidance to maintenance crews.

Plan Requirements and Timing: Prior to issuance of zoning clearance approval, the Owner/Applicant contract with a qualified biologist to develop the Plan. The Plan shall outline efforts to implement a weed management plan to control invasive weeds. Pre-construction survey results shall be reported and ongoing invasive weed control efforts and annual survey results shall be submitted annually and for the five year duration of the Habitat Mitigation and Monitoring Plan. ***Monitoring:*** The City of Carpinteria and County staff shall ensure development of the Plan and adherence to Plan measures are completed prior to commencement of any earth-moving activities. City and County staff shall periodically conduct site inspections to ensure compliance on site and to ensure the Plan is fully implemented.

9. **MM-BIO-7 Pre-construction Nesting Bird Surveys.**
Within 30 days prior to any vegetation clearing or ground disturbance, or use of noise-generating equipment associated with construction or grading that would occur during the nesting/breeding season of native bird species potentially nesting on the site (typically mid-February through August in the project region, or as determined by a qualified biologist), the Owner/Applicant shall have weekly surveys conducted by a qualified biologist to determine if active nests of special-status bird species, or of any bird species protected by the Migratory Bird Treaty Act or the California Fish and Game Code, are present in the disturbance zone or within 300 feet (500 feet for raptors) of the area to be disturbed. The surveys shall occur on a weekly basis, with the last survey being conducted no more than seven days prior to initiation of disturbance work. If ground disturbance is delayed, then additional pre-disturbance surveys shall be conducted such that no more than seven days will have elapsed between the survey and ground disturbance activities. The Owner/Applicant or contractor shall provide the biologist with plans detailing the extent of proposed ground disturbance prior to the survey effort.

If active nests are found, including any nests for Cooper's hawk, clearing and use of noise-generating construction within 300 feet of the nest (500 feet for raptors) shall be postponed or halted, at the discretion of the biologist, until the nest is vacated and juveniles have fledged, as determined by the biologist, and there is no evidence of a second attempt at nesting. Limits of construction to avoid an active nest shall be established in the field with highly visible construction fencing, and construction personnel shall be instructed on the sensitivity of nest areas. The results of the surveys, including graphics showing the locations of any nests detected, and any avoidance measures recommended, shall be submitted to the City and County within 14 days of completion of the pre-construction surveys to document compliance with applicable state and federal laws pertaining to the protection of native birds.
***Plan Requirements and Timing*:** Pre-construction nesting bird surveys shall be completed within 30 days prior to any vegetation clearing or ground disturbance associated with construction or grading during the bird nesting season (typically mid-February to August). The surveys shall occur on a weekly basis, with the last survey being conducted no more than seven days prior to initiation of disturbance work. ***Monitoring*:** The City of Carpinteria and County staff shall ensure the pre-construction nesting bird surveys and any avoidance requirements are completed prior to commencement of any earthmoving activities.

10. **MM-CR-1 Cultural Resource Treatment and Inadvertent Discovery Plan.** Potential impacts to cultural resources shall be minimized through development of protocols for practical adherence of mitigation measures CR-2 and CR-3 prior to and after ground disturbing construction activities associated with the proposed project. These protocols shall be outlined in a Cultural Resource Treatment Plan (CRTP). The CRTP shall be developed by a City-qualified archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards, prior to the implementation of ground disturbing activities and include wording of each mitigation measure CR-2-4, specific and detailed explanation for implementation of each mitigation measure and contact protocol. The CRTP shall be provided to all agency personnel, consulting tribes, contractors and archaeological personnel. The existence and necessity for adherence to the CRTP shall be noted on plans, handbooks, or the like associated with tasks that may incur ground disturbance either intentionally or inadvertently.
Plan Requirements and Timing: Prior to issuance of a grading permit, the Owner/Applicant shall contract with a County-qualified/City-approved archaeologist to develop the required CRTP in accordance with the above criteria. ***Monitoring:*** City of Carpinteria/County of Santa Barbara staff shall review and authorize the CRTP prior to the commencement of ground disturbance activities to ensure that the CRTP adheres to the criteria established in CR-1.

11. **MM-CR-2 Workers Environmental Awareness Program (WEAP) Training.** All personnel participating in tasks that may incur ground disturbance either intentionally or inadvertently shall be briefed regarding unanticipated discoveries prior to the start of said activities. A basic presentation shall be prepared by a City-qualified archaeologist, meeting the Secretary of the Interior's Professional

Qualification Standards to inform all personnel working on the project about the archaeological sensitivity of proposed project areas. The purpose of the WEAP training is to provide specific details on the kinds of archaeological materials that may be identified during project activities and explain the importance of and legal basis for the protection of cultural resources. Each personnel shall also be instructed in the proper procedures to follow in the event that cultural resources or human remains are encountered. These procedures include work curtailment or redirection, and the immediate contact of the site supervisor, qualified archaeologist and if human remains are encountered, the County coroner.
Plan Requirements and Timing: Prior to issuance of a grading permit, the Owner/Applicant shall contract with a County-qualified/City-approved archaeologist to develop and conduct the required WEAP Training in accordance with the above criteria. ***Monitoring:*** City of Carpinteria/County of Santa Barbara staff shall ensure the required WEAP training has been conducted by attending the WEAP Training and documenting attendance of required personnel by means of a sign in sheet completed by all attendees of the WEAP Training.

12. **MM-CR-3 Archaeological Monitor.**
Initial ground disturbing activities shall be monitored by a County-qualified/City-approved archaeologist in accordance with the following specifications:
Temporary Impact Areas (equipment staging and materials storage outside trail alignment) – a County-qualified/City-approved archaeologist shall monitor transport and placement activities until such time that it is reasonable to ascertain that no additional prehistoric archaeological/cultural resources are located within areas of temporary disturbance of the proposed project site.
Permanent Impact Areas not including bridge piling installation (all areas of the trail alignment excepting the bridge approaches area on both sides of the UPRR alignment) – a County-qualified/City-approved archaeologist shall monitor project implementation during the initial grading and excavation activities until such time as sufficient subsurface soil has been uncovered/excavated to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area.
Bridge piling installation – a County-qualified/City-approved archaeologist shall monitor the installation of bridge pilings within intact soils and/or any soils deeper than 10 feet below current ground surface to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area.
The monitor shall immediately inform equipment operators in the event archaeological resources are encountered, and shall be empowered to immediately halt construction activity in the area of the discovery until assessment can be completed, and materials recovered as appropriate (refer to CR-2 for additional detail). Monitoring reports shall be provided to the City of Carpinteria/County of Santa Barbara on a monthly basis during construction, with a final monitoring report produced at the conclusion of construction activities and provided to both the City and County.

***Plan Requirements and Timing*:** Prior to issuance of a grading permit, the Owner/Applicant shall contract with a County-qualified/City-approved archaeologist to monitor initial ground disturbance activities in accordance with the above criteria.
***Monitoring*:** City of Carpinteria/County of Santa Barbara staff shall ensure the contracted archaeologist provide monitoring of initial ground disturbance activities in accordance with the above criteria through receipt of field documentation describing each day of monitoring, construction activity occurring during the monitoring, and observed soil profile conditions related to the potential for presence of archaeological resources.

13. **MM-CR-4 Discovery of Cultural Resources.**
In the event cultural resources are encountered, construction shall be redirected to another area of the project while data/resource assessment and recovery is accomplished.
Grading/construction shall be immediately suspended in the immediate area (no less than 50 feet from the area of the discovery) where cultural resources are encountered and temporarily redirected to another portion of the project area to allow the archaeologist to assess the nature, extent and significance of any discoveries and develop appropriate management recommendations for archaeological resource treatment consistent with Santa Barbara County Guidelines for the Implementation of California Environmental Quality Act of 1970 (as amended May 25, 2010). It is anticipated that recovery of artifacts would occur where project elements (such as pilings) would conflict with in situ artifact locations, and such artifacts would be properly archived in accordance with the project CEQA, City of Carpinteria and Santa Barbara County guidelines and the CRTP protocol.
Identified remedial action for the discovery shall be completed prior to allowing construction to recommence in the area, no less than 50 feet from the area of the discovery. The project sponsors shall be responsible for funding the assessment of archaeological resources encountered during construction, and for the proper archiving or preservation of such resources. A Phase 3 Archaeological Resources Assessment and Data Recovery Report shall be prepared to document any archaeological resources encountered during construction.
***Plan Requirements and Timing*:** Prior to issuance of a grading permit, the Owner/Applicant shall contract with a County-qualified/City-approved archaeologist to provide archaeological assessment and recovery of any archaeological resources encountered during project construction, in accordance with the above criteria.
***Monitoring*:** City of Carpinteria/County of Santa Barbara staff shall ensure the contracted archaeologist assess the nature, extent and significance of any archaeological discoveries occurring during project construction and develop appropriate management recommendations for archaeological resource treatment in accordance with the project CEQA, City of Carpinteria and Santa Barbara County guidelines and the CRTP protocol.
The contracted archaeologist shall assess the nature, extent and significance of any archaeological discoveries occurring during project construction and develop appropriate management recommendations for archaeological resource treatment.

14. **MM-GEO-1 Seismicity.**
The pedestrian bridge shall adhere to the recommendation identified in Appendix E to the Environmental Impact Report to withstand a peak ground acceleration (PGA) at the site of 0.8g generated by an earthquake of moment magnitude Mw=7.4. ***Plan Requirements and Timing:*** Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall verify the engineering plans include this bridge design specification. ***Monitoring*:** City of Carpinteria/County of Santa Barbara public works staff or construction inspector retained for the project shall inspect bridge construction to verify conformance with this specification.

15. **MM-GEO-2 Differential Settlement of Pedestrian Bridge Foundations.**
Bridge foundation construction shall adhere to the recommendation identified in Appendix E to the Environmental Impact Report, which specifies a deep foundation employing cast-in-drilled hole (CIDH) piles. Based on the anticipated loadings, Caltrans Standard Plan 24" CIDH Concrete Piles with 200 kips design capacity are recommended in the geotechnical report. Should hard cemented bedrock be encountered during the installation of the CIDH piles, coring may be necessary. ***Plan Requirements and Timing:*** Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall verify the engineering plans include this bridge foundation specification. ***Monitoring*:** City of Carpinteria/County of Santa Barbara public works staff or construction inspector retained for the project shall inspect foundation construction to verify conformance with this specification.

16. **MM-GEO-3 Soil Erosion/Slope Stability.**
Slope construction shall adhere to the recommendations in the geotechnical report, summarized below:
    i. All new fills placed along the trail alignment shall be placed as engineered geotextile-reinforced soils with subsurface/back drains.
    ii. Manufactured slope profiles shall be no steeper than as specified in the Bengal 2019 geotechnical report (Appendix E), or any updated version thereof which has been prepared to address final trail design.
    iii. Install adequate surface drainage facilities to collect and dispose of surface runoff properly, consistent with the drainage system designs included in 30% Project Plans for Rincon Multi- Use Trail (Appendix E), or as updated to address final trail design.
    iv. Hydro-seed the exposed newly cut and fill surfaces. Periodic watering and re-application of hydroseed shall occur as necessary until vegetation on slope surfaces has been successfully established.

    These measures, in conjunction with the slope flattening and load reduction resulting from the proposed slope cutbacks, should substantially reduce the hazards associated with both slope erosion and local/surficial slope instability under both static and seismic loading conditions.
    Plan Requirements and Timing: Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall verify the engineering plans include the above specifications. ***Monitoring*:** City of Carpinteria/County of Santa Barbara public works staff or construction inspector retained for the project shall inspect

slope and drainage system construction to verify conformance with these specifications.

17. **MM-HAZ-1 Aerially Deposited Lead (ADL).**
Surface soils within the trail alignment segment north of the UPRR corridor shall be tested for potential ADL presence to determine if such soils may be used as fill, or must be disposed in a properly licensed landfill. Using the risk based screening levels developed by California Office of Environmental Health Hazard Assessment (OEHHA), excavated soils with a lead concentration less than or equal to 80 mg/kg total lead (analyzed by USEPA Method 6010 or 6020) would be acceptable for reuse without restrictions, including as fill material within the Rincon Trail project. Excavated soils that are considered a California hazardous waste (total lead concentration greater than or equal to 1,000 mg/kg or a soluble lead concentration greater than or equal to 5 milligrams per liter [mg/L] as determined by the California Waste Extraction Test [CAWet]) or are a RCRA hazardous waste and must be disposed of in a Class I hazardous waste landfill. Excavated soils with lead concentrations below 1,000 mg/kg but above 80 mg/kg total lead may be eligible for reuse with specific restrictions to reduce or eliminate exposure, with prior written approval from DTSC, or may be disposed of at an appropriately permitted landfill. ***Plan Requirements***: ADL testing requirements and soil re-use restrictions according to identified ADL concentration shall be shown on grading and building plans. Since excess soil material would be generated through proposed grading activities, soils containing greater than 80 mg/kg total lead shall not be used as fill material for the project but shall be exported off site. Soil containing total lead greater than 1,000 mg/kg shall be disposed in a Class I hazardous waste landfill. ***Timing***: Condition shall be adhered to throughout all grading and construction activities. ***Monitoring***: City of Carpinteria and County of Santa Barbara staff shall ensure measures are on plans. City and County Grading Inspectors shall spot check and ensure compliance on site.

18. **MM-WAT-1 Obtain Coverage Under Construction General Permit.**
The project shall obtain coverage under a Construction General Permit via the State Water Resources Control Board (SWRCB) (Water Quality Order 99-08-DWQ). ***Plan Requirements***: The requirement to obtain coverage from the SWRCB under a Construction General Permit shall be indicated on grading plans. ***Timing***: Evidence of coverage under a Construction General Permit shall be provided to the City of Carpinteria Public Works Department and County of Santa Barbara Public Works Division prior to the initiation of grading. ***Monitoring***: City and County Public Works staff shall confirm evidence of the Construction General Permit issuance prior to issuance of grading permits.

19. **MM-WAT-2 Stormwater Pollution Prevention Plan.**
The construction contractor shall prepare a Stormwater Pollution Prevention Plan that includes Best Management Practices (BMPs) to be implemented and monitored prior to and during construction. The following BMPs shall be incorporated into the SWPPP to minimize potential construction-related water quality impacts:

i. Disturbed areas shall be stabilized or re-vegetated prior to the start of the rainy season. The work area shall be flagged to identify its limits. Vegetation shall not be removed or intentionally damaged beyond these limits.

ii. Construction materials shall be placed in designated areas where they could not enter water bodies or storm drains due to spillage or erosion.

iii. Waste and debris generated during construction shall be stored in designated waste collection areas and containers away from watercourses and shall be disposed of regularly.

iv. During construction, washing of concrete trucks, paint, equipment, or similar activities shall occur only in areas where polluted water and materials can be contained for subsequent removal from the site. Wash water shall not be discharged to the storm drains, street, drainage ditches, creeks, or wetlands. The concrete washout area shall be isolated from water bodies, and wash water and waste shall be removed from the project site. The location of the washout area shall be clearly noted at the construction site with signs.

v. All fueling of heavy equipment shall occur in a designated area removed from water bodies and other drainages, such that any spillage would not enter surface waters. The designated refueling area shall include a drain pan or drop cloth and absorbent materials to clean up spills. The location of the fueling area shall be clearly noted at the construction site with signs.

vi. Vehicles and equipment shall be maintained properly to prevent leakage of hydrocarbons and coolant and shall be examined for leaks on a daily basis. All maintenance shall occur in a designated off-site area. The designated area shall include a drain pan or drop cloth and absorbent materials to clean up spills.

vii. Any accidental spill of hydrocarbons or coolant that may occur on the construction site shall be cleaned up immediately. Absorbent materials shall be maintained on the construction site for this purpose.

viii. Special considerations for work during the rainy season: stockpiled soils should be covered at the end of the work day, and concrete pouring shall be avoided within 15 days of a forecasted rain event to allow full curing, due to its toxic nature until it has fully cured.

***Plan Requirements*:** A Stormwater Pollution Prevention Plan (SWPPP) shall be prepared and implemented prior to construction and shall include the above elements. The SWPPP shall be submitted to City and County Public Works for review and approval prior to the issuance of grading permits for the project. ***Timing*:** The stormwater features and BMPs shall be installed and operational prior to initiation of grading. ***Monitoring*:** City and County Public Works staff shall site inspect for installation and maintenance in accordance with the approved plan and periodically thereafter to ensure proper maintenance over the duration of construction activities.

20. **MM-WAT-3 Erosion and Sediment Control Plan.**
Best available erosion and sediment control measures shall be implemented and maintained during grading and construction. Best available erosion and sediment control measures may include, but are not limited to, use of sediment basins, gravel bags, silt fences, geo-bags or gravel and geotextile fabric berms, erosion control blankets, coir rolls, jute net and straw bales. Construction access points shall be stabilized using gravel beds, rumble plates or other measures to prevent sediment from being tracked onto adjacent roadways. Any sediment or other materials tracked off site shall be removed the same day as they are tracked using dry cleaning methods.
***Plan Requirements and Timing*:** An erosion and sediment control plan shall be submitted to and approved by City and County Public Works prior to issuance of grading permits. The plan shall be designed and implemented to address erosion and sediment control during all phases of development of the site. ***Monitoring*:** City and County Public Works shall perform site inspections throughout construction.

21. **MM-WAT-4 Planting of Vegetation.**
As soon as practicable following the completion of trail construction, the contractor shall install native plantings for biological restoration and hydro-seed slope areas with an appropriate native plant seed mix, in order to provide long-term stabilization of soils disturbed during construction. Periodic watering and re-application of hydro-seed shall occur as necessary until vegetation on slope surfaces has been successfully established.
***Plan Requirements and Timing*:** Landscaping plans including biological restoration areas and hydro-seeding of manufactured slope areas submitted to City Community Development Department and County Planning & Development (CDD/P&D) for review prior to issuance of zoning clearance. ***Monitoring*:** CDD/P&D shall site inspect vegetation plantings and hydro-seed application before issuing final clearance and acceptance of the trail project.

22. **MM-WAT-5 Periodic Inspection and Maintenance of Storm Drain Components.**
Staff from City and County Parks/Public Works departments shall perform an annual inspection of stormwater components annually, prior to the on-set of the rainy season (November 1) to ensure all components are in good repair and are not blocked by debris or sediment. Any materials found to be obstructing flow in the drainage system shall be removed prior to November 1 each year. The exposed vertical portion of each of the corrugated metal pipe drains shall be examined annually for signs of corrosion, damage or openings in the drain pipe wall. Corrosion visible on the exterior pipe wall shall be treated and sealed promptly, any holes through the pipe wall shall be patched, or the damaged/affected segment shall be replaced or modified.
***Plan Requirements and Timing*:** The Applicant/Owner shall include these inspection and maintenance requirements in the final drainage system design plans. The plans shall be submitted to Community Development Department/Planning & Development (CDD/P&D) and City and County Public Works for review prior to

approval of a grading permit and issuance of zoning clearance. ***Monitoring*:** A memo with the annual inspection notes and corrective maintenance performed shall be prepared and submitted to the City and County Public Works Departments.

23. **MM-WAT-6 Storm Drain Filters.**
To minimize pollutants impacting the ocean, storm drain filters/inserts shall be installed in the project area storm drain inlets. The filters/inserts shall be maintained in working order.
Plan Requirements: Prior to approval of Grading Permits and issuance of zoning clearance, the Owner/Applicant shall submit plans identifying the type and location of filters/inserts to Community Development Department/Planning & Development (CDD/P&D) and City and County Public Works for review and approval. The location of such filters/inserts shall be noted on grading and building plans. ***Timing:*** Filters/inserts shall be installed prior to final clearance and shall be cleaned using approved methods at least twice a year, once immediately prior to November 1 (before the start of the rainy season) and once in January. ***Monitoring:*** CDD/P&D and City and County Public Works shall site inspect periodically throughout the construction phase to ensure proper installation. Records of maintenance shall be maintained by City/County and shall be submitted to CDD/P&D and City and County Public Works on an annual basis prior to the start of the rainy season and for five years thereafter. After the fifth year, the records shall be maintained by the City/County. CDD/P&D and Public Works shall review the maintenance records and site inspect as needed following completion of construction to ensure periodic cleanout.

24. **MM-NOI-1 Construction Hours.**
Construction activity for site preparation and for future development shall be limited to the hours between 8:00 a.m. and 5:00 p.m., Monday through Friday. No construction shall occur on state holidays (e.g., Thanksgiving, Labor Day) or weekends. Construction equipment maintenance shall be limited to the same hours. Non-noise generating construction activities are not subject to these restrictions. ***Plan Requirements*:** Two signs stating these restrictions shall be posted on site at each end of the proposed trail. ***Timing*:** Signs shall be in place prior to the beginning of and throughout all grading and construction activities. ***Monitoring*:** City and County Grading Inspectors shall spot check and respond to complaints.

25. **MM-NOI-2 Construction Equipment.**
All construction equipment with engines must have original manufacturer's approved muffling devices. All stationary equipment shall be physically buffered from nearby sensitive receptors.
***Plan Requirements*:** Plans shall indicate the requirement of original equipment manufacturer ("OEM") muffled equipment. ***Timing*:** This condition applies when any engine driven equipment is in use at the project site during construction. ***Monitoring*:** City of Carpinteria and County of Santa Barbara Grading Inspectors shall spot check and respond to complaints.

26. **MM-TCR-1 Native American Monitor/Observer.**
Initial ground disturbing activities shall be monitored by a Native American observer in accordance with the following specifications:
Temporary Impact Areas (equipment staging and materials storage outside trail alignment) – a Native American observer, ancestrally affiliated with the area, shall monitor transport and placement activities until such time that it is reasonable to ascertain that no additional prehistoric archaeological/cultural resources are located within areas of temporary disturbance of the proposed project site.
Permanent Impact Areas not including bridge piling installation (all areas of the trail alignment excepting the bridge approach areas on both sides of the UPRR alignment) – a Native American observer, ancestrally affiliated with the area, shall monitor project implementation during the initial grading and excavation activities until such time as sufficient subsurface soil has been uncovered/excavated to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area.
Bridge piling installation – a Native American observer, ancestrally affiliated with the area, shall monitor the installation of bridge pilings within intact soils and/or any soils deeper than 10 feet below current ground surface to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area.
The monitor/observer shall immediately inform equipment operators in the event archaeological resources are encountered, and shall be empowered to immediately halt construction activity in the area of the discovery until assessment can be completed, and materials recovered as appropriate (refer to CR-2 for additional detail). Monitor reports shall be provided to the City of Carpinteria/County of Santa Barbara on a monthly basis during construction, with a final monitoring report produced at the conclusion of construction activities and provided to the City and County.
***Plan Requirements and Timing*:** Prior to issuance of a grading permit, the Owner/Applicant shall contract with a Native American observer, ancestrally affiliated with the area, to monitor initial ground disturbance activities in accordance with the above criteria. ***Monitoring*:** City of Carpinteria/County of Santa Barbara staff shall ensure the Native American observer, ancestrally affiliated with the area, provide monitoring of initial ground disturbance activities in accordance with the above criteria through receipt of field documentation describing each day of monitoring, construction activity occurring during the monitoring, and observed soil profile conditions related to the potential for presence of archaeological resources.

PROJECT SPECIFIC CONDITIONS

27. **Mitigation Compliance, Monitoring and Reporting Requirement.**
Owner/Applicant shall submit to the Community Development Department and County Planning & Development (CDD/P&D) a draft monitoring program for the mitigation measures identified in the Certified EIR, approved Project Description and Conditions of Approval for review and comment. A City-approved biologist and mitigation monitors responsible for permit compliance monitoring shall be

retained and paid for by the applicant. The mitigation monitoring program shall include, but not be limited to the following elements for the entirety of the project:

- Mitigation Measures. A list of the project's mitigation measures.
- Implementation of Mitigation. Timing and party responsible for implementation of each mitigation measure.
- Mitigation Monitoring. Timing and party responsible for monitoring of each mitigation measure and a list of mitigation monitors to be retained.
- Mitigation Reporting. Procedures, timing and responsible party for reporting to the City on project mitigation compliance and monitoring.

28. **Biologist.** A City-approved qualified biologist shall be designated by the Owner/Applicant. The biologist shall be responsible for ensuring compliance with the provisions of the Mitigation Monitoring and Reporting Program. The biologist shall have authority over all other environmental monitors provided by the Owner/Applicant. The Owner/Applicant shall submit the name, contact information and qualifications of the biologist and obtain approval from the Community Development Director prior to commencement of construction.

29. **Final Architectural Review.** The project shall return to the City of Carpinteria Architectural Review Board ("ARB") for final review and approval of construction plans. ***Plan Requirements:*** Plans submitted for final review by the ARB shall include construction plans and specifications all project elements, including but not limited to, fencing and railing, bridge design, signage, landscaping, and any proposed lighting. ***Timing:*** Final review by the ARB shall occur prior to zoning clearance and issuance of grading permits. ***Monitoring:*** CDD staff shall be responsible for ensuring the project receives final approval from the ARB prior to zoning clearance or issuance of grading permits. CDD staff shall ensure that the final plans approved for construction reflect any required revisions by the ARB.

30. **Traffic Management Plan.** Provide a detailed Traffic Management Plan for review by Public Works, Community Development, Carpinteria-Summerland Fire Protection District and the Santa Barbara County Sheriff's Office, and obtain approval from the Public Works Director in consultation with the Community Development Director. The plan shall identify:

- Construction Phases. Project construction stage exhibits including work descriptions.
- Staging and Parking Areas. Equipment staging, materials storage and construction worker parking areas.
- Truck Routes. Construction truck routes to minimize noise and traffic effects to residential neighborhoods.
- Ramp Closures and Detours. Any proposed closures of US 101 ramps and/or detours, by construction stage, if applicable.
- City Street Closures and Detours. Any proposed closures of City streets and/or detours, by construction stage.
- Signs and Traffic Control Measures. Signage and other planned temporary traffic control measures, by construction stage.

- Public Awareness. A program for public awareness and outreach to commuters, property owners, businesses, residents and agencies affected by project construction.
- Public Relations Committee. Applicant is required to form and support a Public Relations Committee consisting of Caltrans, SBCAG, a public relations consultant, business representatives, residents, transit and public safety agencies and City representatives. The Committee shall meet regularly prior to and during construction. Applicant shall review construction, construction phasing, mitigation measures, public relations efforts and permit conditions of approval with the committee. Applicant shall consider feedback and comments from the committee and the general public throughout project construction and make necessary adjustments in response to problems and/or concerns when possible.
- Maintenance of Access. Plans for providing access to businesses, coastal dependent uses and recreational uses during construction.
- Motorist Information Measures. Elements such as radio announcements and appropriate signage.
- Incident Response Measures. Strategies such as construction zone enhanced enforcement program ("COZEEP") and freeway service patrol.
- Coordination and Reporting. A program for ongoing reporting and coordination with the City and other affected agencies throughout construction.

31. **Trail Improvement Maintenance Agreement.** The City and County shall enter into a Trail Improvement Maintenance Agreement to define the maintenance responsibilities of the trail improvements. The Trail Improvement Maintenance Agreement must be signed and entered into prior to issuance of any Engineering Permits.

32. **Pre-Construction Conference.** Prior to commencement of construction, a preconstruction conference shall be held by the Resident Engineer to include construction processes and environmental mitigation and monitoring. The conference shall include representatives from Public Works, Community Development, County of Santa Barbara staff, Project Engineer, Landscape Architect, Contractor and Subcontractor(s), Biologist, and Mitigation Monitors.

33. **Temporary Construction Staging Areas.** The applicant shall submit to the Public Works Director for approval any areas intended for temporary staging of construction equipment and materials in the City of Carpinteria.

34. **Interpretive Signage.** Consistent with development standard CMC §14.45.030(8)(b), an educational or interpretive display shall be installed which describes the nearby harbor seal rookery. Plans and details depicting the proposed location, design, construction and content of the display shall be prepared and submitted to the Community Development Department for review and approval prior to issuance of any Engineering Permits for the project.

35. **Timing of Project Completion.** Pursuant to the requirements of the Transportation Corridor Wetland Overlay District (CMC §14.45), the Santa Claus Lane Multi-Use Path project shall be completed and open to the public no later than the completion of the Linden Avenue and Casitas Pass Road Interchanges and Via Real Extension construction.

CONDITIONAL USE PERMIT CONDITIONS

36. This Conditional Use Permit is not valid until an Engineering Permit for the development and/or use has been obtained. Failure to obtain said Engineering Permit shall render this Conditional Use Permit and Coastal Development Permit null and void. Prior to the approval of the Engineering Permit, all of the conditions listed in this Conditional Use Permit and Coastal Development Permit that are required to be satisfied prior to approval of an Engineering Permit must be satisfied. Upon issuance of the Engineering Permit, the Conditional Use Permit and Coastal Development Permit shall be valid. The effective date of this Permit shall be the date of action by the Planning Commission, or if appealed, the date of action by the Coastal Commission.

37. If the Planning Commission or City Council determines at a noticed public hearing that the permittee is not in compliance with any permit condition(s), the Planning Commission or City Council is empowered, in addition to revoking the permit pursuant to said section, to amend, alter, delete or add conditions to this permit.

38. Any use authorized by this Conditional Use Permit and Coastal Development Permit shall immediately cease upon expiration or revocation of this Conditional Use Permit and Coastal Development Permit. Any Engineering Permit issued pursuant to this Conditional Use Permit and Coastal Development Permit shall expire upon expiration or revocation of the Conditional Use Permit and Coastal Development Permit. Conditional Use Permit and Coastal Development Permit renewals must be applied for prior to expiration of the Conditional Use Permit and Coastal Development Permit.

39. The owner/applicant's acceptance of this permit and/or commencement of construction and/or operations under this permit shall be deemed acceptance of all conditions of this permit by the permittee.

40. Within two years after the effective date of this permit, construction shall commence. Construction cannot commence until an Engineering Permit has been issued. Failure to commence the construction pursuant to a valid Engineering Permit shall render the Conditional Use Permit and Coastal Development Permit null and void.

41. All time limits may be extended by the Planning Commission or City Council for good cause shown, provided a written request, including a statement of reasons for the time limit extension request is filed with Community Development prior to the expiration date.

42. If the owner/applicant requests a time extension for this permit, the permit may be revised to include updated language to standard conditions and/or mitigation measures and additional conditions and/or mitigation measures which reflect changed circumstances or additional identified project impacts. Mitigation fees shall be those in effect at the time of issuance of an Engineering Permit.

43. Before commencing any work pertaining to the erection, alteration, enlarging or rebuilding of any structure or improvement, the owner/applicant shall obtain an Engineering Permit. The permit is necessary to ensure implementation of the conditions required by the Planning Commission. Before any Permit will be issued by Community Development, the owner/applicant must obtain written clearance from all agencies having conditions; such clearance shall indicate that the applicant has satisfied all pre-construction conditions. A form for such clearance is available from Community Development.

44. If, at any time, the Planning Commission determines that there has been, or may be, a violation of the findings or conditions of this Conditional Use Permit and Coastal Development Permit, or of the Municipal Code regulations, a public hearing may be held before the Planning Commission to review this permit. At said hearing, the Planning Commission may add additional conditions, or recommend enforcement actions, or revoke the permit entirely, as necessary to ensure compliance with the Municipal Code, and to provide for the health, safety, and general welfare of the City.

45. City Manager and/or Community Development Director shall be informed of any minor changes to the project scope. Any minor changes may be approved by the City Manager and/or Community Development Director. Any major changes will require the filing of a revision application to be considered by the Planning Commission.

46. All requirements of the City of Carpinteria (including but not limited to public improvements as defined in the City of Carpinteria Municipal Code (CMC), Section 15.16.110) and any other applicable requirements of any law or agency of the State and/or any government entity or District shall be met.

47. The standards defined within the City's adopted model Building Codes (UBC; NEC; UMC; UFC; UPC; UHC) relative to the building and occupancy shall apply to this project.

48. Any and all damage or injury to public property resulting from this development, including without limitation, City streets and storm drain infrastructure, shall be corrected or result in being repaired and restored to its original or better condition.

49. No Engineering Permit shall be issued for this project prior to meeting all required terms and conditions listed herein. When not specified herein, all conditions shall be satisfied prior to issuance of an Engineering Permit or prior to commencement of construction when allowed by the Community Development Director.

50. To allow time for the utility companies to locate and mark their facilities for the contractor, the applicant shall telephone Underground Service Alert (USA) toll free at 1-800-227-2600 a minimum of 48 hours prior to the start of construction. For best response, provide as much notice as possible, up to 10 working days.

51. Compliance with the attached Departmental and District letters is required as follows. Where not specified otherwise, Conditions shall be met prior to the start of construction:
    a. Carpinteria Sanitary District letter dated October 31, 2019
    b. Santa Barbara County Air Pollution Control District letter dated November 12, 2019

52. All applicable final conditions of approval shall be printed in their entirety on applicable pages of grading/construction plans submitted to Community Development. These shall be graphically illustrated where feasible. The approved set of plans shall be retained at the construction site for review by the Public Works Director during the course of construction.

53. Owner/Applicant shall ensure that the project complies with all approved plans and all project conditions including those which must be monitored after the project is built and occupied. To accomplish this, owner/applicant agrees to contact Community Development at least two weeks prior to commencement of construction activities to schedule an onsite pre-construction meeting with agency personnel and key construction personnel.

54. Prior to issuance of an Engineering Permit, the owner/applicant shall provide a signed copy of the Conditions of Approval on a form acceptable to Community Development. Such form may be obtained from the Community Development Department. Written authorization to proceed and consent to conditions of approval by the applicant shall be provided to the City prior to commencement of any demolition or construction activity.

55. Written authorization to proceed and consent to conditions of approval by the applicant shall be provided to the City prior to grading permit issuance.

Approved by the Planning Commission on January 18, 2022

I HAVE READ AND UNDERSTOOD, AND I WILL COMPLY WITH ALL ABOVE STATED CONDITIONS OF THIS PERMIT

Subject: Project No. 19-2015-CUP/CDP
Carpinteria Rincon Trail Project

Dear Mr. Bobroff;

Thank you for the opportunity to provide comments on the subject project. The project applicant proposes to construct a 2,800-foot long paved multi-use trail extending from the eastern terminus of Carpinteria Avenue in the City of Carpinteria to Rincon Beach Park in the County of Santa Barbara, near the Ventura County line. The proposed trail would be 16 feet in width (comprised of a 10-wide path with a 3-foot paved shoulder along each side of the trail). The trail project includes a new 160-foot long clear span pre-fabricated bridge crossing over the UPRR alignment. Grading and earthwork quantities necessary to cut the trail bench and stabilize slopes in the project area estimated at 104,000 cubic yards of cut, 10,300 cubic yards of which would be used for fill on-site. The remaining 94,000 cubic yards of cut material would be exported offsite. A storm drain collection system is proposed for the trail alignment, with new drain outlets to the ocean.

The Carpinteria Sanitary District (District) has the following initial comment:

- The District has a 4-inch diameter HDPE sewer force main that is located immediately north (5 feet to 30 feet) of the proposed trail alignment. At stations 21 through 23.5, the proposed trail is approximately five (5) horizontal feet from the force main. It also appears the proposed trail is 5 to 10 vertical feet from the force main. This force main is a high priority subsurface installation that provides sewer service to the Rincon Point community.

- Contractors excavating, boring, drilling, sinking fenceposts or other subsurface work must take extreme precaution to ensure the force main is protected during the construction of the trail. The District should be notified when excavation activities are occurring between stations 21 through 24. This should be noted on the construction drawings.

If you have any questions regarding the comments provided by the District, please contact me at (805) 684-7214, ext. 13.

Sincerely,
CARPINTERIA SANITARY DISTRICT

Re: Air Pollution Control District Suggested Conditions on Rincon Trail Project, 19-2015-CUP/CDP

Dear Nick Bobroff:

The Air Pollution Control District (District) has reviewed the referenced project, which consists of the construction and operation of a 2,800-foot long, 16-foot wide concrete paved multi-use trail extending from the eastern terminus of Carpinteria Avenue in the City of Carpinteria to Rincon Beach Park in the County of Santa Barbara, near the Ventura County line. The trail will include a 160-foot long pre-fabricated bridge over the railroad tracks. Grading is estimated at 104,000 cubic yards (CY) of cut, 10,300 CY of fill, and 94,000 CY of export. The subject property, identified in the Assessor Parcel Map Book as APNs 001-220-032, 001-220-092, 001-220-100, and 001-220-101, is located at the eastern end of Carpinteria Avenue in the City of Carpinteria.

Air Pollution Control District staff offers the following suggested conditions:

1. Standard dust mitigations (**Attachment A**) are recommended for all construction and/or grading activities. The name and telephone number of an on-site contact person must be provided to the District prior to grading/building permit issuance.

2. District Rule 345, *Control of Fugitive Dust from Construction and Demolition Activities* establishes limits on the generation of visible fugitive dust emissions at demolition and construction sites. The rule includes measures for minimizing fugitive dust from on-site activities and from trucks moving on- and off-site. Please see www.ourair.org/wp-content/uploads/rule345.pdf.

3. The State of California considers particulate matter emitted by diesel engines carcinogenic. Therefore, during project grading, construction, and hauling, construction contracts must specify that contractors shall adhere to the requirements listed in **Attachment B** to reduce emissions of particulate matter (as well as of ozone precursors) from diesel equipment. Recommended measures should be implemented to the maximum extent feasible.

4. All portable diesel-fired construction engines rated at 50 bhp or greater must have either statewide Portable Equipment Registration Program (PERP) certificates or District permits prior to grading/building permit issuance. Construction engines with PERP certificates are exempt from District permit, provided they will be on-site for less than 12 months.

RECEIVED
NOV 18 2019
CITY OF CARPINTERIA

Aeron Arlin Genet, Air Pollution Control Officer

5. At all times, idling of heavy-duty diesel trucks should be minimized; auxiliary power units should be used whenever possible. State law requires that:
   - Drivers of diesel-fueled commercial vehicles shall not idle the vehicle's primary diesel engine for greater than 5 minutes at any location.
   - Drivers of diesel-fueled commercial vehicles shall not idle a diesel-fueled auxiliary power system (APS) for more than 5 minutes to power a heater, air conditioner, or any ancillary equipment on the vehicle. Trucks with 2007 or newer model year engines must meet additional requirements (verified clean APS label required).
   - See www.arb.ca.gov/noidle for more information.

If you or the project applicant have any questions regarding these comments, please feel free to contact me at (805) 961-8873 or via email at HoD@sbcapcd.org.

Sincerely,

Desmond Ho
Air Quality Specialist
Planning Division

SANTA BARBARA COUNTY

ATTACHMENT A
FUGITIVE DUST CONTROL MEASURES

These measures are required for all projects involving earthmoving activities regardless of the project size or duration. Projects are expected to manage fugitive dust emissions such that emissions do not exceed APCD's visible emissions limit (APCD Rule 302), create a public nuisance (APCD Rule 303), and are in compliance with the APCD's requirements and standards for visible dust (APCD Rule 345).

- During construction, use water trucks or sprinkler systems to keep all areas of vehicle movement damp enough to prevent dust from leaving the site and from exceeding the APCD's limit of 20% opacity for greater than 3 minutes in any 60 minute period. At a minimum, this should include wetting down such areas in the late morning and after work is completed for the day. Increased watering frequency should be required when sustained wind speed exceeds 15 mph. Reclaimed water should be used whenever possible. However, reclaimed water should not be used in or around crops for human consumption.
- Onsite vehicle speeds shall be no greater than 15 miles per hour when traveling on unpaved surfaces.
- Install and operate a track-out prevention device where vehicles enter and exit unpaved roads onto paved streets. The track-out prevention device can include any device or combination of devices that are effective at preventing track out of dirt such as gravel pads, pipe-grid track-out control devices, rumble strips, or wheel-washing systems.
- If importation, exportation, and stockpiling of fill material is involved, soil stockpiled for more than one day shall be covered, kept moist, or treated with soil binders to prevent dust generation. Trucks transporting fill material to and from the site shall be tarped from the point of origin.
- Minimize the amount of disturbed area. After clearing, grading, earthmoving, or excavation is completed, treat the disturbed area by watering, OR using roll-compaction, OR revegetating, OR by spreading soil binders until the area is paved or otherwise developed so that dust generation will not occur. All roadways, driveways, sidewalks etc. to be paved should be completed as soon as possible.
- Schedule clearing, grading, earthmoving, and excavation activities during periods of low wind speed to the extent feasible. During periods of high winds (>25 mph) clearing, grading, earthmoving, and excavation operations shall be minimized to prevent fugitive dust created by onsite operations from becoming a nuisance or hazard.
- The contractor or builder shall designate a person or persons to monitor and document the dust control program requirements to ensure any fugitive dust emissions do not result in a nuisance and to enhance the implementation of the mitigation measures as necessary to prevent transport of dust offsite. Their duties shall include holiday and weekend periods when work may not be in progress. The name and telephone number of such persons shall be provided to the Air Pollution Control District prior to grading/building permit issuance and/or map clearance.

PLAN REQUIREMENTS: All requirements shall be shown on grading and building plans and/or as a separate information sheet listing the conditions of approval to be recorded with the map. **Timing:** Requirements shall be shown on plans prior to grading/building permit issuance and/or recorded with the map during map recordation. Conditions shall be adhered to throughout all grading and construction periods.

MONITORING: The Lead Agency shall ensure measures are on project plans and/or recorded with maps. The Lead Agency staff shall ensure compliance onsite. APCD inspectors will respond to nuisance complaints.

SANTA BARBARA COUNTY

ATTACHMENT B
DIESEL PARTICULATE AND NO_x EMISSION REDUCTION MEASURES

Particulate emissions from diesel exhaust are classified as carcinogenic by the state of California. The following is a list of regulatory requirements and control strategies that should be implemented to the maximum extent feasible.

The following measures are required by state law:

- All portable diesel-powered construction equipment greater than 50 brake horsepower (bhp) shall be registered with the state's portable equipment registration program OR shall obtain an APCD permit.
- Fleet owners of diesel-powered mobile construction equipment greater than 25 hp are subject to the California Air Resource Board (CARB) In-Use Off-Road Diesel-Fueled Fleets Regulation (Title 13, California Code of Regulations (CCR), §2449), the purpose of which is to reduce oxides of nitrogen (NOx), diesel particulate matter (DPM), and other criteria pollutant emissions from in-use off-road diesel-fueled vehicles. Off-road heavy-duty trucks shall comply with the State Off-Road Regulation. For more information, see www.arb.ca.gov/msprog/ordiesel/ordiesel.htm.
- Fleet owners of diesel-fueled heavy-duty trucks and buses are subject to CARB's On-Road Heavy-Duty Diesel Vehicles (In-Use) Regulation (Title 13, CCR, §2025), the purpose of which is to reduce DPM, NOx and other criteria pollutants from in-use (on-road) diesel-fueled vehicles. For more information, see www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm.
- All commercial off-road and on-road diesel vehicles are subject, respectively, to Title 13, CCR, §2449(d)(3) and §2485, limiting engine idling time. Off-road vehicles subject to the State Off-Road Regulation are limited to idling no more than five minutes. Idling of heavy-duty diesel trucks during loading and unloading shall be limited to five minutes, unless the truck engine meets the optional low-NOx idling emission standard, the truck is labeled with a clean-idle sticker, and it is not operating within 100 feet of a restricted area.

The following measures are recommended:

- Diesel equipment meeting the CARB Tier 3 or higher emission standards for off-road heavy-duty diesel engines should be used to the maximum extent feasible.
- On-road heavy-duty equipment with model year 2010 engines or newer should be used to the maximum extent feasible.
- Diesel powered equipment should be replaced by electric equipment whenever feasible. Electric auxiliary power units should be used to the maximum extent feasible.
- Equipment/vehicles using alternative fuels, such as compressed natural gas (CNG), liquefied natural gas (LNG), propane or biodiesel, should be used on-site where feasible.
- Catalytic converters shall be installed on gasoline-powered equipment, if feasible.
- All construction equipment shall be maintained in tune per the manufacturer's specifications.
- The engine size of construction equipment shall be the minimum practical size.
- The number of construction equipment operating simultaneously shall be minimized through efficient management practices to ensure that the smallest practical number is operating at any one time.
- Construction worker trips should be minimized by requiring carpooling and by providing for lunch onsite.
- Construction truck trips should be scheduled during non-peak hours to reduce peak hour emissions whenever feasible.
- Proposed truck routes should minimize to the extent feasible impacts to residential communities and sensitive receptors.
- Construction staging areas should be located away from sensitive receptors such that exhaust and other construction emissions do not enter the fresh air intakes to buildings, air conditioners, and windows.

PLAN REQUIREMENTS AND TIMING: Prior to grading/building permit issuance and/or map recordation, all requirements shall be shown as conditions of approval on grading/building plans, and/or on a separate sheet to be recorded with the map. Conditions shall be adhered to throughout all grading and construction periods. The contractor shall retain the Certificate of Compliance for CARB's In-Use Regulation for Off-Road Diesel Vehicles onsite and have it available for inspection.

MONITORING: The Lead Agency shall ensure measures are on project plans and/or recorded with maps. The Lead Agency staff shall ensure compliance onsite. APCD inspectors will respond to nuisance complaints.

October 28, 2021 ARB Meeting Minutes & Public Comment Letters Submitted to the ARB

Rincon Trail Project
19-2015-CUP/CDP
PC Hearing, January 18, 2022

Boardmember Discussion:
Boardmember Reginato started the discussion by suggesting that the dumpster should be enclosed and that a few bougainvillea should be added to the landscaping along Linden Avenue.

Boardmember Blakemore agreed with Boardmember Reginato's comments and added that the bougainvillea should be extended along the full perimeter of the wrought iron fencing, including at the north side by the classrooms and along the church parking lot.

Boardmember Johnson asked if the wrought iron would be solid or hollow, and commented that the contractor should be consulted to ensure that the fence would not sag with weight added if the material will be hollow. He suggested that the trash enclosure should be large enough to contain the extra waste generated during special events. He agreed with the expanded landscaping, and suggested that additional landscaping should be added to the northern parking lot by the classrooms. He did comment that the fence is not consistent with the intentions of the design guidelines and he would prefer a 5-foot-tall fence, but understands that this fence will serve a specific purpose for the school.

Boardmember Stein agreed with the comments of the other boardmembers. He clarified that this project is different than the Reality fence because this fence is for a school and not a commercial enterprise. He agreed with Boardmember Johnson about the strength of the fence materials.

ACTION: Motion by Boardmember Johnson, seconded by Boardmember Blakemore, to recommend preliminary/final approval to the Community Development Director with the following comments:

- Construct a slatted chain link fence trash enclosure for the dumpster along the northerly property line; and
- Boardmember Blakemore to review an updated landscape plan based on ARB comments prior to issuance of any Building Permits.

VOTE: 4-0, Rodriguez abstained.

2) Project: Rincon Trail, 19-2015-CUP/CDP
Address: Eastern terminus of Carpinteria Avenue
Applicant: Matt Roberts, City of Carpinteria Parks and Recreation Department
Planner: Nick Bobroff

Request of Matt Roberts, City of Carpinteria Parks and Recreation Department, to consider Project 19-2015-CUP/CDP for preliminary review of a proposal to construct a new public multi-use trail connecting the eastern terminus of Carpinteria Avenue to Rincon Beach County Park located in unincorporated Santa Barbara County. The proposed trail would be approximately 16 feet in width and have a total length of 2,800 linear feet. The portion of the trail located within the City of Carpinteria is the westernmost 850 feet. The City portion of the project is located within City and Caltrans rights-of-way near the southeastern corner of the City.

No Ex Parte Communications were disclosed.

Staff presented the project to the Board, describing the overall project alignment and details, project history and objectives. Staff explained that because of the cross-jurisdictional nature of the project, the County SBAR had already reviewed the County portion of the trail at a conceptual level and the City

ARB was being asked to review the City's portion of the trail along with design features that should be common throughout the trail project (e.g., railings, fencing, etc.).

John Ilasin, Public Works Director, and Scott Onishuk, Bengal Engineering, provided some additional details about the bridge construction specifications, design standards from UPRR and Caltrans, and minor revisions made to the railing and fencing details ahead of the ARB meeting.

Public Comment:
James Zinder, President of the Santa Barbara Soaring Association, alleged that his group did not receive proper 14-day advance notice of the ARB meeting (staff note: Staff clarified that for ARB meetings, only 7-day notice is provided, which the SBSA confirmed receiving by email. Interested parties were also invited to submit their contact information to staff in order to be added to the notification list for future meetings.). He also stated that he believed the eastern terminus of the trail was unsafe due to emptying cyclists into the Rincon Beach parking lot.

Karl Cameron expressed his opposition to the project and referred to a petition signed by 3,000 others that were also opposed to the proposed trail alignment. He expressed skepticism over the severity of the ancient landslide and the inability to construct a trail through the area like what was shown on the original approved version of the project back in 2015, which he noted the soaring community did not object to since it would not have affected their flying conditions. He asked why the ARB were not considering Alternative 4 described in the EIR (trail along the highway to Bates Rd) or an Alternative 5 (trail on the other side of the highway). He reiterated his fear that, as proposed, the project would ruin the area for flying.

Ottis Gillespie made various allegations that construction has commenced on portions of the trail ahead of any permits or approvals being granted.

John Greynald urged the ARB to not approve the plans as presented, describing them as being too preliminary or tentative at this stage, and that more needs to be known and understood before approval is granted. He accused the City of "steamrolling" the soaring community by continuing to push this project forward despite the soaring community's opposition. He also alleged that the project is violating multiple City rules and asserted that the soaring community was prepared to file a lawsuit and would prevail.

George Jimenez submitted a public comment letter and summarized his comments verbally. He expressed his opposition to the proposed project, describing it as too large, incompatible with its setting, subject to excessive earthwork and erosion, likely to cause a dangerous condition for cyclists entering the Rincon Beach parking lot, and that it would ruin flying at the site forever. He urged the ARB and City staff to consider instead a trail on the north side of the bluff or the north side of the highway. He also alleged that he did not receive proper advance notification of the meeting. A copy of his entire letter is on file with the Community Development Department.

Janica noted that the Bates site is important to the soaring community both because it is a coastal site that allows for launching and landing in the same area, and because of the site's smooth laminar flow which creates favorable flying conditions. She noted that for free flight enthusiasts, the bigger the bluff face, the better, and that's why she was opposed to trail designs that required extensive earthwork. She recommended the trail be narrowed to 8 feet in width to reduce earthwork. She

expressed safety concerns for flying in areas with chain link fencing and light poles, as these pose obstacles that sails or other types of flying rigs can get snagged on.

Gary Mussell, Friends of Bates Beach, expressed concern over the trail directing cyclists into the Rincon Beach park parking lot. He explained he studied the location but could not come up with any likely routes that could be developed to safely convey cyclists down to Bates Rd along the edge of the parking lot to avoid cars. He noted that for this reason, the City's Environmental Review Committee expressed a preference for Alternative 4 (trail along north side of bluff) and urged the ARB to also consider this alternative. He also asked why there is no railing shown around the proposed bluff overlook area, suggesting this could be a safety hazard.

Public comment letters were received from the following individuals. Copies of the letters are on file with the Community Development Department:

Cary Hitsman submitted a public comment letter supporting the addition of a multiuse trail between Carpinteria Avenue and Rincon Beach County Park.

Leslie Ogden, President, Channel Islands Bicycle Club, expressed support for a trail connecting the City of Carpinteria to Rincon Beach County Park. She noted the regular use of the area by cyclists and explained the existing alternative options are not safe or suitable for all prospective trail users.

Edword Skuowl alleged that the proposed trail project would illegally harm endangered plant life, irreversibly alter the Migratory Bird Treaty Act, dangerously affect monarch butterflies in the area, and negatively impact California Condors. He supported Alternative 4 (trail along the north side of the bluff), which he believed would not have any of these impacts, would avoid a major lawsuit, and avoid changing the air flow of the area.

Boardmember Discussion:
The Boardmembers discussed the bridge railing and fencing, and how to treat the protective railing/fencing on top of the wing walls at each end of the bridge. It was suggested that rather than carrying the post and rail fence up to the bridge, it may be better to mimic the appearance of the bridge truss railing for the railing on the wing walls.

Bridge color was also a group topic. It was suggested that it would be preferential to simply leave the bridge structure and chain link safety fence as raw galvanized rather than painting these features. It was noted it would be lower maintenance and as the galvanized finish grays out, it would take on a subdued appearance that should blend in well. It would also generally match the finish of the bike path railing used south of Rincon along the shoulder of the highway.

Other comments from the Boardmembers included:

Boardmember Johnson recommended the lookout area be designed and shaped to look more organic and natural. Similarly, he recommended the bluff faces also be sculpted to give them a more naturalized look. Revegetation of the affected areas will be important to achieve an attractive appearance. He supported the use of the post and rail fence for the trail. He suggested use of a color concrete would be a nice feature. He also supported the inclusion of subdued solar lighting along the trail, where needed for safety.

Boardmember Blakemore noted that she will be very interested in reviewing the restoration and planting plan once it's ready. She expressed her preference for the continuation of the post and rail fence for the northern portion of the trail, if allowed by Caltrans.

Boardmember Reginato explained that he liked the appearance of the post and rail fence but thought it would be wise to switch to a concrete product with the same appearance for maintenance reasons. He clarified that he would like to see the trail descend to the existing (former) railroad bench as soon as possible in order to minimize alteration of the bluff face. He described the end of the trail at Rincon Beach Park as being dangerous as there is not a safe space for cyclists to ride through the lot currently, and noted he could not support the project as currently proposed because of this element of the design. He asked whether e-bikes would be allowed on the trail, noting they travel at high speeds which would add further danger for traveling through the Rincon Beach Park parking lot.

Boardmember Rodriguez liked the idea of using a concrete version of the post and rail fence. He also supported continuing the post and rail fence for the north portion of the trail, if allowed. He pointed out the existing cypress trees that grow along the north bluff adjacent the on-ramp and suggested it could be nice to continue these along this side of the trail, if possible. He agreed that lighting for safety is needed in some parts of the trail and that it could be kept low in height and intensity. If possible, he asked the design team to study options for integrating the bridge railing and safety fencing into one feature, like what is used on the new freeway overpasses in Carpinteria. He also asked if there were any options for modifying and extending the existing walkway along the park to serve as a continuation of the bike path through the parking lot.

Boardmember Stein had no objections to the proposed alignment. He agreed with the other Boardmembers about the preference for a concrete post and rail fencing, and about safety concerns at the Rincon Beach park end of the trail.

ACTION: Motion by Boardmember Rodriguez, seconded by Boardmember Johnson, to recommend preliminary approval to the Planning Commission with their comments attached.

Carpinteria, CA 93013

Subject: Multi-Use Path Connector to Rincon Beach County Park

Dear Mr. Bobroff:

The Channel Islands Bicycle Club (CIBike) is an organization of over 300 cyclists in Ventura County. We regularly bike the coast route between Carpinteria and Ventura. CIBike advocates for safe bicycle infrastructure and promotes cycling for commuting, recreation, tourism and sport.

CIBike supports the construction of a multi-use path to connect the City of Carpinteria to Rincon Beach County Park and the Ralph Fertig Coastal Bike Path. The coast route between Carpinteria and Ventura is part of the official Pacific Coast Bike Route. As a result, we regularly see long-distance, fully loaded bikes traveling through the area. Additionally, large numbers of residents and visitors routinely bike the route between Carpinteria and Ventura.

Currently, cyclists must use Bates Road or ride on the Interstate 101 shoulder. Neither is suitable for less experienced cyclists or families with children. Walkers regularly travel along the railroad tracks between Carpinteria and Rincon Beach Park, also clearly unsafe. A dedicated bike/walking path will greatly enhance safety for all.

We understand there are design issues for the path still being considered through the planning and public review process. CIBike maintains that the benefits of bicycling and walking for recreation and transportation are significant and provide ample justification for a well-designed, safe, multi-use path.

Thank you for your efforts to expand access for walkers and cyclists to Carpinteria and Santa Barbara County's coastal areas.

Sincerely,

Leslie Ogden
President, Channel Islands Bicycle Club

Hey Nick

There was a Proposed plan 4 last time.

What happened?

1 you are still ILLEGALLY altering Endangered plant life in the Pictured Plan. FEDERAL LAW INFRACTION
2 you are IRREVERSIBLY altering the MIGRATORY bird act. FEDERAL LAW INFRACTION.
3 the MONARCH butterflies that are currently living At the Point will be Dangerously effected. As a Nearly Endangered species.
4 California Condors an their last spot they come to FEED an SOAR before turning back towards Fillmore CA! Federal law Infraction.

So why are we back to plan 1? We all moved onto plan 4.

Which does NOT effect the Migratory birds, does m
Not affect the Monarchs, an does not Affect the Endangered plant spices on the front of the hill. Leaves the Condors out of the picture.
Avoiding Major Law Suits. AVOIDING changing the Air Flow (coreolus effect/rotor) through the Multi million dollar homes an Monarch habitat.

Which are ALL AGAINST Federal Law. No matter what the Little white rule Book says.

Is the city of Carpinteria that Desperate for 6million dollars? With Pending litigation over the said plan that could cost 40-50million in legal fees by the time 4 Major Federal law suits were all done.

Seriously concerned

Mr. Edword, Skuowl
Citizen/resident

WQO	water quality objectives
ZEV	zero emissions vehicle

1 Preface

1.1 Purpose

This Final Environmental Impact Report (EIR) has been prepared by the City of Carpinteria (City) for the Carpinteria Rincon Trail Project (project or proposed project). This Final EIR has been prepared in conformance with the California Environmental Quality Act of 1970 (CEQA) statutes (Cal. Pub. Res. Code, Section 21000 et. seq., as amended) and implementing guidelines (Cal. Code Regs., Title 14, Section 15000 et. seq.).

Before approving a project, CEQA requires the lead agency to prepare and certify a Final EIR. The City has the principal responsibility for approval of the proposed project and is therefore considered the lead agency under CEQA Section 21067. According to the CEQA Guidelines, Section 15132, the Final EIR shall consist of:

- The Draft EIR or a revision of the Draft EIR
- Comments and recommendations received on the Draft EIR either verbatim or in summary
- A list of persons, organizations, and public agencies commenting on the Draft EIR
- The responses of the lead agency to significant environmental points raised in the review and consultation process; and
- Any other information added by the lead agency

1.2 Format of the Final EIR

This Final EIR consists of the March 2021 Draft EIR and the following three chapters:

1.0 Preface. This chapter summarizes the contents of the Final EIR, the environmental review process, and several minor updates that occurred in the Draft EIR subsequent to the release of the Final EIR for public review.

2.0 Response to Comments. During the 45-day public review period for the Draft EIR, 52 comment letters were received. This chapter contains these comment letters and the City's responses to the comments.

3.0 Errata. Comments that are addressed in Chapter 2.0 may have resulted in minor revisions to the information contained in the March 2021 Draft EIR. Where necessary, deletions to the text are shown in ~~strikeout~~ and additions to the text are shown in <u>underline</u> in all chapters of the Draft EIR where revisions were deemed necessary as a result of received comments. Additionally, through the certification of this Final EIR, where the term "Draft EIR" is used in the text, this is now deemed to be "Final EIR."

1.3 Environmental Review Process

1.3.1 Notice of Preparation

CEQA requires preparation of an EIR when there is substantial evidence supporting a fair argument that a proposed project may have a significant effect on the environment. The purpose of an EIR is to provide decision makers, public agencies, and the general public with an objective and informational document that fully discloses the environmental effects of the proposed project. The EIR process is intended to facilitate the objective evaluation of

potentially significant direct, indirect, and cumulative impacts of the proposed project, and to identify feasible mitigation measures and alternatives that would reduce or avoid the proposed project's significant effects. In addition, CEQA requires that an EIR identify adverse impacts determined to be significant after mitigation.

In accordance with the CEQA Guidelines, a Notice of Preparation (NOP) was distributed on October 30, 2020, to public agencies, organizations, and interested individuals. The purpose of the NOP was to provide notification that the City plans to prepare an EIR and to solicit input on the scope and content of the EIR. A public scoping meeting was also held via Zoom video conference on November 17, 2021. The purpose of this meeting was to seek input from public agencies and the general public regarding the potential environmental impacts of the proposed project. Various agencies, organizations, and individuals submitted 78 written comment letters in response to the NOP. These letters and the NOP were included in Appendix A of the Draft EIR.

1.3.2 Noticing and Availability of the Draft EIR

The Draft EIR was made available for public review and comment pursuant to CEQA Guidelines Section 15087. The 45-day public review period for the Draft EIR started on March 12, 2020 and concluded on April 26, 2021. At the beginning of the public review period, an electronic copy of the Draft EIR and an electronic copy of the Notice of Completion (NOC) were submitted to the State Clearinghouse. Relevant State agencies received electronic copies of the documents. A Notice of Availability (NOA) was distributed to interested parties and filed with the State Clearinghouse. The NOA described where the document was available and how to submit comments on the Draft EIR. The NOA and Draft EIR were also made available to be viewed on the City website at:

https://carpinteriaca.gov/public-works/engineering-division/rincon-multi-use-trail/

During the 45-day public review period, a public hearing was held virtually over Zoom by the City of Carpinteria Environmental Review Committee (ERC) on April 13, 2021. A total of 52 agency, organization, and individual comment letters were received and are included in Chapter 2, Responses to Comments, of this Final EIR.

1.3.3 Final EIR

The Final EIR addresses the comments received during the public review period and includes minor changes to the text of the Draft EIR in accordance with comments that necessitated revisions. This Final EIR will be presented to City decision-makers for potential certification as the environmental document for the proposed project. All agencies who commented on the Draft EIR will be provided with a copy of the Final EIR, pursuant to CEQA Guidelines Section 15088(b). The Final EIR will also be posted on the City's website at:

https://carpinteriaca.gov/public-works/engineering-division/rincon-multi-use-trail/

Pursuant to CEQA Guidelines Section 15091, the City shall make findings for each of the significant effects identified in this EIR and shall support the findings with substantial evidence in the record. After considering the Final EIR in conjunction with making findings under Section 15091, the lead agency may decide whether or how to approve or carry out the project. When a lead agency approves a project that will result in the occurrence of significant effects that are identified in the Final EIR, the agency is required by CEQA to state in writing the specific reasons to support its action based on the Final EIR and/or other information in the record (a statement of findings). A "statement of findings" will be prepared pursuant to CEQA Guidelines Section 15093 and supported by substantial evidence in the record.

1.4 Revisions to the Draft EIR

The comments received during the public review period for the Draft EIR resulted in several minor clarifications and modifications in the text of the March 2021 Draft EIR. In addition, minor editorial corrections have been made in sections of the Draft EIR. These changes are included as part of the Final EIR, to be presented to City decision makers for certification and project approval.

CEQA Guidelines Section 15088.5 identifies when a lead agency must recirculate an EIR. A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the Draft EIR but before certification of the Final EIR. Information includes changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not considered significant unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. As defined in CEQA Guidelines Section 15088.5(a), significant new information requiring recirculation includes the following:

1. A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
2. A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
3. A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to adopt it.
4. The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

The minor clarifications, modifications, and editorial corrections that were made to the Draft EIR are shown in Chapter 3.0, Changes to the Draft EIR, of this Final EIR. None of the revisions that have been made to the EIR resulted in new significant impacts; none of the revisions resulted in a substantial increase in the severity of an environmental impact identified in the Draft EIR; and, none of the revisions brought forth a feasible project alternative or mitigation measure that is considerably different from those set forth in the Draft EIR. Furthermore, the revisions do not cause the Draft EIR to be so fundamentally flawed that it precludes meaningful public review. As none of the CEQA criteria for recirculation have been met, recirculation of the EIR is not warranted. As stated in CEQA Guidelines Section 15088.5(b), "recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR."

INTENTIONALLY LEFT BLANK

2 Responses to Comments

The Draft EIR was circulated for public review on March 12, 2021 through April 26, 2021, in accordance with the 45-day comment period required under Section 15105(a) of the CEQA Guidelines. A total of 52 comment letters were received on the Draft EIR from agencies, organizations, and individuals as shown in the list below. In response to the comments received during public review and to City of Carpinteria (City) staff input subsequent to distribution of the Draft EIR, minor revisions, clarifications, and/or additions have been made to the document which do not change the conclusions of the Final EIR regarding the project's potential environmental impacts and required mitigation. These minor revisions do not represent significant new information. No new significant environmental impacts would occur from these modifications, and similarly, no substantial increase in the severity of environmental impacts would occur. When a comment is not directed to significant environmental issues, the responses indicate that the comment has been acknowledged and no further response is necessary.

The list of commenters and the unique letter-number designators for each letter are shown in Table RTC-1, List of Commenters. Individual comments within each letter are bracketed and subsequently numbered in the right-hand margin of the comment letter. Bracketed/numbered comment letters are placed before the responses to the letter provided below.

Four topics or issue areas were identified in a large percentage of the comment letters, including concerns about the air flow analysis and related impacts to recreation (soaring opportunities), the magnitude of earthwork or landform modification, impacts to biological resources, and the range of alternatives considered. Since these issue areas were present in multiple comment letters, Dudek created a global response addressing each of these areas. The global responses are presented first, preceding the individual comment letters and responses.

Global Responses for Topics Common to Multiple Comment Letters

GR1: Impacts Upon Soaring Opportunities / Airflow Study

A number of commenters suggested that the Recreation Section should not have included a discussion on the fundamentals of soaring or Federal Aviation Administration (FAA) regulations pertaining to soaring activities, and also expressed skepticism regarding the conclusions of the airflow analysis study and the determination of a less than significant project impact on existing soaring opportunities. The response below is intended to address these issues, which are common to multiple comments received.

Discussion of Soaring Fundamentals

Responses to the Notice of Preparation (NOP) by members of the soaring community identified the need to assess impacts of the Project on existing opportunities for soaring in the air space above the Project alignment. While members of the soaring community are required to possess an understanding of the principles affecting paragliding or hang-gliding flight, including factors that influence launch and flight duration, members of the general public and decision-makers are unlikely to have familiarity with such principles. Consequently, it is appropriate to provide a summary of fundamentals pertaining to hang-gliding and paragliding, in order for the public to have a basic understanding of the physical conditions needed to support soaring.

The fundamentals description was derived from the *Elementary Pilot Training Guide* (British Hang-gliding and Paragliding Association, 2021). As a reference for beginning soaring pilots, the guide provides straight-forward discussion of flight principles and wind effects for soaring, using explanations that should be understandable for new pilots as well as interested individuals that do not engage in soaring.

Federal Aviation Administration (FAA) Regulations on Soaring

For each environmental issue area (organized by individual sections or chapters), the EIR provides a summary of the federal, state and local regulations that pertain to the given issue area. Adopted General Plan Policies, ordinances, and regulations, often govern the activities or development allowed on a given property or may be a component of the significance thresholds established for that issue area.

In that NOP responses identified the need to address Project impacts on existing opportunities for soaring in the air space above the Project alignment, it is appropriate to present FAA regulations on soaring as part of the regulatory discussion in the Recreation Section of the EIR.

Airflow Analysis Study

Multiple commenters expressed the perception that the Airflow Analysis Report "specifically states it is based on theory and not intended for this purpose." This perception is evidently based upon the disclaimer provided at the end of the report, which is standard for an aerodynamics analysis of this type. The report disclaimer neither represents the study is based on theory alone, nor that the conclusions are inapplicable to the analysis of airflow alterations resulting from the proposed topographic modifications. The analysis methodology and the intent of the disclaimer are discussed in detail below.

Modeling is commonly employed in the evaluation of environmental effects that could result from a proposed action. Agricultural land conversion, air quality emissions, noise levels, and traffic generation typically are analyzed with the aid of models. The models use equations, which are based upon the measurement of various characteristics

associated with existing activities, to predict these same characteristics for a proposed new project or action. As the number of measurements of characteristics from existing activities increases, the statistical integrity of the data and equations improves, and the model results become more accurate; but the model results remain a prediction, and are not guaranteed to 100 percent reflect actual future conditions. With respect to environmental aerodynamics, a comprehensive model for the prediction of airflow alterations from topographic modification has not been developed at this time (Luzzatto-Feliz, *Email Communication*, June 2021). The airflow analysis report (*Airflow Analysis for the Proposed Regrading of the Rincon Bluffs*, Paolo Luzzatto-Feliz, PhD, January 22, 2021) therefore incorporates existing data from field measurements of air flow over large-scale topographic features, from aerodynamic experiments conducted with scaled models in wind tunnels, from engineering standards for wind stress on buildings, and from published literature addressing wind flow over topography as related to soaring activities, to evaluate potential changes in airflow dynamics associated with the project.

Wind amplification is an important concept in the discussion of air flow over topography. When a mass of air which is moving horizontally over a level surface (e.g., wind blowing over the ocean surface) encounters a hill or cliff, the air volume in front of the hill is compressed into a smaller volume which flows at a faster rate over the hill/cliff, compared to the remainder of the air mass much higher above the hill. In other words, the wind speed approaching the hill at elevations below the top of the hill will be lower than the wind speed as it passes over the top of the hill. As discussed in the air flow analysis study, extensive experiments in 1977 with scaled models in a wind tunnel investigated the effects of changing the angle of the slope, relative to the amount of wind amplification produced by the slope. These original wind tunnel experiments concluded that increasing the angle of the slope for gentle slopes (i.e., slopes from 4:1 or 14 degrees to 2:1 or 27 degrees) did result in wind speed increases. However, for slopes steeper than 2:1, the maximum flow velocity no longer increased with an increase in the slope angle; and likewise decreases in slope angle that do not reduce the slope to less than 2:1 did not decrease the maximum wind velocity. Equations from the wind tunnel experiments were developed to address the wind amplification related to steepness of the slope; subsequent researchers have conducted environmental measurements of wind flow over slopes with varying slope angle, and showed that, for the front and top regions of the topography, field measurements at full scale agreed closely with the wind tunnel experiments. It should be noted that the existing bluff face along the project site has a slope angle greater than 2:1, and the resulting slope angle following the re-grading under the proposed project or under Alternative 3 would also maintain a slope angle greater than 2:1. Because of this, horizontal wind speeds at low altitudes over the bluff top are not expected to be altered by the project.

Vertical wind speed, or uplift, is of interest to the soaring community and is also produced when horizontal wind encounters a slope. Soaring literature contains simple equations for converting horizontal wind speed to a vertical wind speed component, which involves the sine of the slope angle. These equations are again based upon those developed from wind tunnel experiments. For more complex topography, for instance, a slope that has sections of varying steepness or which includes benches, researchers have identified an appropriate semi-empirical approach to estimate uplift. The semi-empirical approach generally involves applying the equations developed from wind tunnel experiments using simple slope models, compare the prediction results of these equations against data from vertical air flow measurements on existing large-scale complex topography in the environment, and make adjustments to the applied equation until the predicted vertical wind speeds are close to those measured. Researchers have identified two approaches that have been successful for the prediction of vertical wind velocities produced from flow over complex topography. The first approach is to use the mean or average slope degree across the entire face of the slope. The second approach uses the average slope degree over the upper portion of the slope (approximately the top third of the slope face), which is immediately below the wind flow amplification zone.

The air flow analysis report employs both of these approaches to predict changes to vertical wind velocities from slope angle modification (i.e., regrading), and reports the results of each approach.

The vertical wind speed prediction approach using the average slope degree of the upper third portion of the slope is based upon research and environmental wind measurements by Crawley & Schmanske (1994). The equation resulting from this approach was specifically focused on vertical wind speeds closer to the surface of the topography, which are important for low elevation soaring operations including take-off and landing maneuvers. Using this approach, vertical wind speeds within the zone that extends upward approximately 20 feet from the bluff top are predicted to be reduced by no more than 10 percent. This predicted reduction in vertical wind speed at low altitudes addresses the re-grading of the bluff face for the proposed project and for Alternative 3. This equation and method is considered to be most accurate within approximately 20 vertical feet of the evaluated topographic feature; the other equation (described below) is appropriate for predicting wind speed alterations at higher elevations above the ground.

The vertical wind speed prediction approach using the average slope degree of the entire slope was developed by researchers to provide a conservative assessment of potential wind speed alterations from slope modification, at altitudes up to a height (elevation) equal to the height of the topographic feature. This approach predicts a potentially conservative vertical wind speed reduction from proposed project regrading of between 25 and 30 percent for elevations within 30 feet above the bluff-top, and approximately 30 percent at elevations above 30 feet over the bluff. For Alternative 3, this approach predicts a vertical wind speed reduction of approximately 20 percent for elevations up to approximately 120 feet above the bluff top.

The disclaimer at the end of the airflow analysis report (Page 11, Luzzatto-Feliz, January 2021) is standard for the type of predictive modeling contained in the report. Sufficient research was performed in the study to identify and compare technical experts' analytical approaches which included wind tunnel experiment results, environmental measurements of horizontal and vertical wind velocity effects associated with topography, and calculations employed for estimating wind velocities for soaring. As indicated in the airflow analysis report, results from the application of appropriate formulas to predict wind velocity changes from the project were checked against published results from various research and were found to compare favorably (Page 9, Luzzatto-Feliz, January 2021). The disclaimer is intended simply to indicate the analysis is predictive in nature, and as with all modeling efforts, future conditions could vary slightly from the predicted conditions.

Conclusion of Less Than Significant Impact Regarding Soaring Opportunities

Published data for the Torrey Pines Gliderport indicate tandem hang-gliders (which can carry pilot and passenger or instructor and student) require a horizontal wind speed between 7 and 15 mph, while tandem para-gliders require wind speed between 10 and 18 mph. According to the U.S. Hang Gliding and Paragliding Association, the ideal wind speed for launching solo gliders is from 5 to 20 mph (https://www.ushpa.org/page/hang-gliding-frequently-asked-questions). This horizontal wind speed range ensures the air movement across the "wing" of the glider is sufficient to produce lift, thereby making launch (take-off) feasible. These data reflect a range of at least 50 percent wind speed across which launch of tandem gliders is feasible, with a range of 75 percent for solo glider launch. Research findings from the air flow analysis indicate, that for slopes steeper than 2:1 (27 degrees), a change to the average slope face does not result in changes to air flow amplification or horizontal wind speeds along the top of the slope. (Page 11, Luzzatto-Feliz, January 2021). Existing slopes, and those resulting from the project or Alternative 3, would each remain greater than 2:1. Hence no decrease in the horizontal wind speeds immediately above the bluff are anticipated from the project, and the ability to launch gliders from areas adjacent to the project alignment would not be affected.

Vertical wind velocities, which affect the ability for a hang-glider or para-glider to increase their altitude and thus extend flight duration, could be reduced in the air space above the trail alignment under the Project and Alternative 3, compared to existing conditions. Using an approach following the methodology of an analysis of topographic effects upon air flow that was conducted specifically for soaring that, as discussed above, employed a specific altitude for determining vertical wind speeds from different slope angles and using the average slope degree for the upper slope, the air flow analysis predicts only a maximum of 10 percent reduction in the vertical wind speeds within approximately 20 vertical feet of the bluff top (refer to additional explanation above). Thus, very low altitude soaring flights over the project alignment are not expected to be substantially affected under most conditions.

Vertical wind velocities at altitudes greater than 30 feet above the bluff face could be reduced by up to 30 percent, meaning there could be fewer opportunities for gliders to gain altitude and extend the duration of their flights in the area above the project alignment, as compared to existing conditions. Based again upon the reported 50 percent range in horizontal wind speeds for successful launch and flight at Torrey Pine Gliderport, and a 75 percent wind speed range for solo glider launch (USHPA), a reduction by 30 percent of the vertical wind speeds at higher elevations over the project alignment is not expected to result in a substantial decrease in soaring opportunities. In addition, the existing bluff face to the west of the trail crossing over the UPRR alignment would not be modified by the project, and therefore ambient air flow conditions along this bluff face would remain unchanged.

Further, as discussed in Section 3.11.4 of the Draft EIR, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts resulting from a project. (*Preserve Poway v. City of Poway* (2016) 245 Cal.App.4th 560, 566, 579-580; CEQA Guidelines, § 15064(e).) The airflow analysis report demonstrates that any potential adverse impacts on the usability of air space above the proposed trail alignment are unlikely to cause significant physical impacts on the environment. (See, e.g., *Chico Advocates for a Responsible Economy v. City of Chico* (2019) 40 Cal.App.5th 839 (reasoning that loss of convenience is merely an example of a social problem, and without an accompanying physical change to the environment, CEQA does not require its analysis); CEQA Guidelines, § 15131(a).) Section 3.3.4 of the Final EIR further evaluates the extent to which the project's topographic changes associated with regrading result in a less than significant environmental impact to migratory avian species. As such, the airflow analysis report provides an expert opinion, based on substantial evidence, that the project will not result in a significant environmental impact.

GR2: Earthwork/Landform Modification

Several commenters highlighted concerns with the volume of earthwork necessary to implement the proposed project and indicated that additional effort should be completed to identify alternatives for trail development that could further reduce earthwork volumes and landform modification. One commenter correctly provided a comparison of the amount of earthwork between the original trail proposal (2015) and the current proposal, indicating the original design involved substantially less earthwork. However, that original design was later found via geotechnical investigation to be infeasible due to the presence of active landslide areas along the originally proposed (2015) trail alignment (Carpinteria Rincon Trail Project Draft EIR, Page 6-9).

With respect to the modification of landforms, the proposed project would re-contour manufactured slopes originally created for the past and current UPRR alignments, the former State Highway 2, and U.S. Highway 101. The re-manufacture of such slopes would result in minimal change to the existing appearance of the slopes, in that they already exhibit more regular planar characteristics than the undulating surfaces that pre-dated the transportation corridor mass grading activities affecting all of the slopes along the trail alignment. Existing sparse vegetation on sloped areas would be replaced with an appropriate assemblage of native, drought-tolerant species using hydro-

seeding and individual container plants, such that short-term visual impacts from earthwork and vegetation removal would be adequately mitigated.

The City and County local coastal plans do reference Coastal Act Section 30251, which requires that the scenic and visual qualities of coastal areas shall be considered and protected, and that new development is sited and designed to minimize alteration of natural land forms and also be subordinate to the character of its setting. The project is consistent with Coastal Act Section 30251 based on the following considerations included in the trail design:

a) Earthwork would largely affect manufactured slope areas—containing debris and excavated material from previous railroad and state highway construction projects—not natural landforms. The top elevation of local ridges within the project area would be preserved, thus maintaining the most visible aspect of site topography which relates to the ridges and bluff-top east and west of the project site.

b) The trail itself would remain a subordinate feature in the visual environment of the site, with a scale that would not draw attention away from the high slopes and ridges against which it is set. The resulting landforms from earthwork to construct the trail would have a similar appearance to both existing slopes along the alignment, as well as to the manufactured slopes extending eastward and westward from the project alignment along the UPRR and U.S. Highway 101 corridors.

c) As part of the remanufacturing of the ocean-side slope east of the existing UPRR alignment, the abandoned former railroad bench cut would be largely filled in, such that the bluff face would continue to have a prominent bench cut into its face, but in a new location slightly higher on the bluff face in order to achieve the necessary trail slope profile. In this respect, the visual condition of a bench cut traversing the face of the manufactured slope would not differ significantly from the existing condition.

d) Once re-manufactured slopes are revegetated (as proposed) such slopes would be more compatible with the natural surrounding than the historic cut slopes remaining from the railroad and state highway construction. Because the project proposes to reduce the slope angle of manufactured slopes (compared to existing), run-off velocity for storm run-off would be reduced, erosion of the bluff face would be reduced, and additional moisture would be retained to support re-planted native and drought-tolerant plants.

With regard to the smaller volume of earthwork identified for the original trail proposal, substantial height retaining walls were proposed as an alternative to earthwork. The original trail design would have necessitated approximately 1,000 feet of retaining wall, with a maximum height of 14 feet. That design was prepared without the benefit of specific geotechnical investigation methods, which have subsequently identified deep-seated landslides along the former extensive switchback section that would have extended eastward from the UPRR rail crossing. The original alignment, due to the presence of severely unstable slope sections, has since been deemed infeasible by the project engineers. Another aspect of the original retaining wall design is that they were intended to anchor the trail itself but would not have addressed soil creep or rock fall from steep manufactured slopes above the elevation of the trail. Thus, trail users would not have been as protected from risk of falling earth materials and the trail itself could have been subject to more intensive maintenance or repair activities. The current design anchors the trail itself on one bench (situated on a low angle slope), with a more stable low-angle slope above it.

Consequently, while earthwork volumes would increase under the current proposal, the resulting slopes and landforms would have greater long-term stability, retaining walls (which are generally more prominent visually) would be completely avoided, and slope angles more conducive to successful revegetation would result, as compared to the original design from 2015. With regard to a proposal which respects the scenic qualities of coastal

areas and remains visually subordinate to the character of the setting, the current proposal is more consistent with coastal policy mandates than the original 2015 alignment. In addition, as discussed above, the original alignment that theoretically could have involved lower earthwork volumes has been proven infeasible. Any trail project within this highly modified environment characterized by remnant manufactured slopes from current and relic transportation corridors by necessity must address correction of unstable steep slope faces, leading to what could appear to be "excessive" grading.

The engineering design for Alternative 3 was specifically driven by an intent to minimize overall project earthwork volumes. Alternative 3 would result in a reduction of 40 cubic yards of excavation compared to the proposed project (with exported material reduced by 121 cubic yards). In this regard, Alternative 3 represents the greatest opportunity to minimize excavation and exported soil earthwork volumes to implement the project. Once again, it is worth reiterating that the slopes along the trail alignment have been subject to previous modification to accommodate transportation projects, and therefore the proposed earthwork would affect manufactured slopes and not natural landforms. Additionally, the remnant slope faces in most cases are steeper than current engineering standards would recommend (and which would be corrected via the project), and the grading to create the benches for the trail are dictated, in part, by the maximum grade percent which is acceptable under ADA. In fact, an approximately 690 foot portion of the trail south of the UPRR crossing with Alternative 3 would marginally exceed the 5 percent maximum ADA trail slope face (this 690-foot segment of the trail would be constructed with trail surface of 6 percent slope) in order to capitalize on as much of the former railroad bench as possible and thereby minimize project earthwork.

The engineering design evaluation to create Alternative 3 informed the project development team, and the proposed project has been subsequently revised to remove the previously proposed mid-elevation bench above the trail segment south of the UPRR alignment. This design change reduces the earthwork volume by 11,346 CY (9.6 percent reduction) for the currently proposed version of the project, compared to the previous version of the proposed project evaluated in the Draft EIR. Alternative 3 further reduces the volume of excavated and exported materials (40 CY less excavation, 121 CY less exported earth material). Alternative 4 was determined to have a very similar total volume of earthwork as the proposed project but would increase export material volumes by approximately 10,000 CY (as compared to the project). Alternative 2 was initially thought to involve substantially less earthwork, but additional geotechnical investigations indicate the presence of extensive landslide features that would require massive retaining structures; as well, available engineering and geotechnical methods for stabilizing the landslide mass are not known to be feasible. The alternatives investigated represent three different potential alignments for the trail, with the degree of topographic modification being a chief factor in the identification of potential alignments. The earthwork for each alignment has been identified for comparison, with total variance between the most and least volume of earthwork at approximately 10 percent. Consequently, the EIR authors do not believe that additional alternatives for the purpose of minimizing earthwork volumes would be warranted in order to meet the criteria for sufficiency of alternatives analysis under CEQA Section 15126.6(d).

GR3: Biological Resources

Commenters have indicated that the field surveys have failed to detect some plant and wildlife species that are present within the project alignment, and that further alternatives should be developed and studied in order to avoid or minimize project impacts upon environmentally sensitive habitat areas (ESHA).

Dudek biologists have conducted general biological resources surveys of the project site in multiple instances, during the spring season of five separate years (2011, 2018, 2019, 2020 and 2021). Because of the history of the design development and subsequent re-design efforts for the proposed trail, the site has been evaluated for the

presence of biological resources much more extensively than typically occurs for a development proposal. Dudek biologists are therefore confident that all important biological resources present within and adjacent to the project alignment and all alternatives have been identified.

According to City of Carpinteria General Plan/Local Coastal Land Use Plan Figure OSC-1, the entire area east of Bailard Avenue and lying between U.S. Highway 101 and the beach is included in an ESHA overlay. While not all area included within the ESHA overlay may have sensitive resources present, it would not evidently be feasible to implement a trail connecting the eastern terminus of Carpinteria Avenue to the northern terminus of the Coast Bike trail (at the southern end of Rincon Beach Park) without impacting some area designated as ESHA. It should be noted that no ESHA designation has been applied by the County of Santa Barbara for the portion of the Rincon Trail alignment within their jurisdiction.

While the total native plant community impact area appears to substantially increase under the current proposal as compared to the original proposal (Alternative 2), this is because of greater area involved with slope re-manufacturing. What must be kept in mind, however, is that the regrading of the slopes to have lower slope angles will enhance the success of the revegetation effort. The original proposal (Alternative 2) would not have included as extensive modification of slopes but would have incorporated substantial retaining walls (which would not provide area for replanting); in essence, the vertical retaining wall area under Alternative 2 represents a larger overall hardscape footprint for the project that would be unavailable to support vegetation, as compared to the current proposal. In this regard, the current proposal, while producing a larger area of impact due to more extensive earthwork area, would have lower residual (permanent) impacts upon native plant communities and ESHA than the original proposal. Mitigation has been required for the impacts to native plant communities (ESHA) including a mandatory restoration plan within both the City of Carpinteria and County of Santa Barbara portions of the project. The final restoration plan will include performance standards and an appropriate combination of hydro seeding and container plants to support long-term revegetation of the re-manufactured slopes.

GR4: Alternatives

A substantial number of commenters expressed support for implementation of Alternative 4 instead of the Project. Due to this expression of interest by members of the public, Santa Barbara County requested each of the alternatives identified in the EIR include sufficient depth of analysis to support a potential approval based on any of the alternatives.

The No Project Alternative (Alternative 1) would not entail any approvals and would simply perpetuate all existing conditions within the trail alignment. No further analysis was deemed necessary to address this alternative. Alternative 2 was previously addressed in a certified mitigated negative declaration (MND); analysis from the MND was summarized in the Alternative 2 discussion in the EIR, as updated with findings from more recent geotechnical investigations. Hence the Alternative 2 analysis presented in the Draft EIR is considered to contain sufficient detail to satisfy CEQA; it must be recognized, however, that due to the need for extraordinary structural engineering and landslide stabilization components that could entail unique impacts to the environment, subsequent environmental review would likely be necessary to implement the trail based on the original alignment (Alternative 2).

The alignment for Alternative 3 is substantially the same as for the project, and the area of potential effect is also principally the same as for the project. Alternative 3 involves a slight shift in the trail alignment on the south side of the UPRR corridor, in order to intersect the historic rail bench at a more westward location to employ more of the existing bench for the trail, and the incorporation of a 6 percent trail surface slope for an approximately 690 foot section of the trail (compared to 5% for the proposed project). Identification of relative impacts of this design and

the applicability of prescribed mitigation measures are adequate under the Alternative 3 discussion of the EIR to support an approval based on this design, without the need for any bolstering of the existing discussion.

Alternative 4 includes a portion (east of the UPRR trail crossing) that is outside of the alignment that has been studied for the project. Notably the biological resources and potential cultural resources within this portion of Alternative 4 were not previously surveyed. Dudek conducted a biological survey of this portion of the trail unique to Alternative 4, and also re-evaluated the findings from the record search conducted for archaeological resources. The discussion under Alternative 4 has been updated accordingly, and now adequately identifies relative impacts of this design and the applicability of prescribed mitigation measures to support an approval based on this design, without the probable need for subsequent environmental review under CEQA (refer to Chapter 3, Alternatives).

Comment Letter S1

Hello Nick – Does the Rincon Trail/EIR have impacts to utilities such as SoCalGas or water, sewer, telecom, electric/Edison, etc? Thanks, Tim. S1-1

Southern California Gas
Timothy Mahoney
March 18, 2021

S1-1 The commenters questions whether the EIR outlines impacts to utilities such as gas, water, sewer, telecommunications, electric.

The proposed project's impacts to utilities, such as gas, water, sewer, telecom, electric, have been analyzed in Section 3.14 of the Draft Environmental Impact Report (EIR). As discussed in this section, the project would not create additional demands in the areas of natural gas, electricity, or telecommunications facilities and therefore no impacts to these utilities would occur. In addition, impacts to water and wastewater would be less than significant.

Comment Letter S2

Hi Nick,

Thanks for our brief phone discussion today regarding the Project DEIR. Please ensure that UP received a copy of the report for any comment. You may forward it to Ms. Peggy Ygbuhay at pygbuhay@up.com. S2-1

Sincerely,

Oliver Garcia, PE
Utilities Engineer
Rail Crossings & Engineering Branch - Rail Safety Division

S2-1 The commenter requests that the City ensures that Union Pacific Railroad (UPRR or UP) received a copy of the EIR.

The City, UPRR, and the project engineer have been working together for the past year on an easement and encroachment agreement for the proposed bridge over-crossing of the UPRR corridor. City Public Works notified UPRR of the availability of the EIR and provided a link to download the document from the City's website. The UPRR project contact has also been added to the project notification list for all future meetings, document releases, etc.

RE: Draft Carpinteria Rincon Trail Project Environmental Impact Report

Dear Mr. Bobroff,

Commission staff has reviewed the Draft Carpinteria Rincon Trail Project Environmental Impact Report (DEIR) regarding the proposed realignment and redesign of the Carpinteria Rincon Trail located within the City of Carpinteria and Santa Barbara County, and we appreciate the opportunity to provide comments for your consideration. S3-1

The originally circulated Mitigated Negative Declaration (MND) for the Rincon Trail, which was subsequently approved by the City through CDP No. 15-1760, included a 12 foot wide and 4,000 foot long shared-use trail, a 110 foot long clear- span bridge over the Union Pacific Rail Road (UPRR) alignment, 17 public parking spaces and a rest area with three picnic tables, signage, lighting and a storm drainage collection system including an on- site bioswale and a 5,000 gallon cistern to provide water for native landscaping during dry months. That project also included 30,000 cubic yards of cut, 7,000 cubic yards of fill and 23,000 cubic yards of export. In 2019 a Subsequent MND (SMND) was prepared, because the project was proposed to be modified to avoid areas with historic landslides, to eliminate the need for retaining walls, to shorten the path length, and to ensure accessibility of the trail for persons with disabilities pursuant to Americans with Disabilities Act (ADA) and Architectural Barriers Act requirements. The modified project included a 16 foot wide and approximately 2,800 foot long shared-use trail, a 160 foot long clear-span bridge over the UPRR alignment, and a storm drainage collection system including new drain outlets to the ocean. That project also included 104,000 cubic yards of cut, 10,300 cubic yards of fill and 94,100 cubic yards of export. The SMND was approved by the Carpinteria Planning Commission, but that decision was appealed to the City Council. Although the appeal of the Planning Commission's approval of the SMND was never heard by the City Council, the City Council decided to move forward with the preparation of a focused EIR. S3-2

The subject DEIR is the product of the focused EIR effort and includes the analysis of four project alternatives: no project/no build (Alternative 1), maximize existing benchwork/topography alternative (Alternative 2), steeper slopes/reduced earthwork alternative (Alternative 3), and freeway adjacent trail avoiding bluff face alternative (Alternative 4). Alternative 3 is identified as the environmentally superior alternative and S3-3

includes the same alignment and project features as the modified project from the SMND, but would result in 15,000 less cubic yards of earthwork. Despite the improvement in the amount of grading, the proposed project and selected alternative raise issues regarding grading and landform alteration, native vegetation communities, and public access. The entire project is located in the Coastal Zone, but spans both the jurisdiction of the City of Carpinteria (City) and County of Santa Barbara (County). Because the Commission has certified a LCP for both the City and County, the standard of review for the proposed project would be the respective LCP policies and provisions.

S3-3 Cont.

Grading and Landform Alteration

The originally approved project included 30,000 cubic yards of cut, 7,000 cubic yards of fill, and 23,000 cubic yards of export while the modified realignment and redesign analyzed in the SMND included 104,000 cubic yards of cut, 10,300 cubic yards of fill and 94,100 cubic yards of export. Alternative 3 would result in a reduction of 15,000 cubic yards of grading compared to the project proposed in the SMND; however, this is still a 62,300 cubic yard increase in the total amount of grading compared to the original project. The City's LCP contains Coastal Act Section 30251, which requires that the scenic and visual qualities of coastal areas shall be considered and protected and that new development is sited and designed to minimize alteration of natural land forms and also subordinate to the character of its setting. The proposed project will result in a significant amount of grading and landform alteration at the subject site. While grading impacts were analyzed in the DEIR, it was determined that with the incorporation of mitigation measures the proposed project would not result in any significant impacts as a result of grading. However, in order to determine consistency with the certified LCP, additional siting and design alternatives to further minimize grading and landform alteration should be analyzed.

S3-4

ESHA

Coastal Act Section 30240, which is incorporated into the City's LCP, requires that Environmentally Sensitive Habitat Areas (ESHA) be protected to the maximum extent feasible. The draft DEIR includes an analysis of temporary and permanent impacts to various vegetation communities, including ESHA; however, it appears that the only permanent impacts identified are those impacts specific to the trail footprint and impacts as a result of vegetation removal are considered temporary. The Commission has historically considered temporary impacts to be those where: 1) there is not significant ground disturbance (i.e. earthwork including grading that disturbs seedbank); and 2) vegetation recovers to comparable size/age class within 12 months from the initial disturbance. All other impacts are considered permanent. The EIR should include more information on the expected temporary and permanent impacts consistent with the Commission's approach and as necessary revise Table 3.3-5 to reflect the totals of temporary and permanent impacts, and required mitigation.

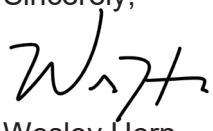
S3-5

Public Access

The originally approved project included the construction of 17 public parking spaces and a rest area with picnic tables at the western terminus of the Rincon Trail, located along Carpinteria Avenue. However, the selected alternative does not include the

S3-6

construction of these public access amenities, and the DEIR indicates that instead, the existing dirt lot would continue to provide informal parking. However, based upon the information included within the DEIR, it is unclear which portions of the dirt areas along Carpinteria Avenue are intended to function as parking for the proposed trail, and if those areas are actually available for public use. In order to facilitate maximum public access to the Rincon Trail, and to ensure consistency with the public access policies of the LCP, the final EIR should analyze project alternatives that include construction of the previously approved, or similar, public access components.



S3-6 Cont.

Each of the issues identified in this letter, as well as other impacts identified in the environmental review process, should be analyzed in the context of alternative project designs. As described above, an analysis of project alternatives is critical to ensure that adverse impacts to coastal resources are avoided to the maximum extent feasible, and that unavoidable impacts are minimized and mitigated. Please note that the comments provided herein are preliminary in nature. More specific comments may be appropriate as the project develops, and Coastal Commission staff requests notification of any future activity associated with this project or related projects. Again, thank you for the opportunity to comment.

Response to Comment Letter S3

California Coastal Commission
Wesley Horn
April 26, 2021

S3-1 The City acknowledges the comment as an introduction to comments that follow. No further response is required.

S3-2 The commenter describes the project proposed under the 2015 Mitigated Negative Declaration (MND) and the 2019 Subsequent MND and provides background to the EIR. The comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR, and therefore, no further response is required.

S3-3 The commenter describes the four alternatives outlined in the EIR as well as the jurisdictions within which the proposed project falls. The commenter states that the standard of review for the proposed project would be the respective local coastal program (LCP) policies and provisions. As described in Section 3.9.4, the proposed project would be consistent with the Carpinteria General Plan/Coastal Land Use Plan and Santa Barbara County Coastal Land Use Plan, that serve as the City's and County's Local Coastal Land Use Plan, which ensures that the local government's land use plans, zoning ordinances, zoning maps, and implementation actions meet the requirements, provisions and polices of the California Coastal Act. The comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR, and therefore, no further response is required.

S3-4 The commenter expresses concern regarding the aesthetic effects of the grading and landform alternation associated with the proposed project and Alternative 3. The commenter suggests that, in order to comply with Coastal Act Section 30251, referenced in the City's LCP, additional siting and design alternatives to minimize grading and alternation should be analyzed.

See Global Response GR2, Earthwork/Landform Modification. In short, the EIR authors do not believe that additional alternatives for the purpose of minimizing earthwork volumes would be warranted in order to meet the criteria for sufficiency of alternatives analysis under CEQA Section 15126.6(d). In addition, minor alterations to the project and to Alternative 3 were accomplished to reduce earthwork volumes, including the removal of a previously proposed mid-elevation bench for the trail segment south of the UPRR alignment (project and Alternative 3), a narrower path width for the portion of the trail south of the UPRR alignment (Alternative 3), and slightly steeper slope of 6 percent for a 690 foot portion of the trail segment south of the UPRR alignment (Alternative 3).

S3-5 The commenter provides background information on Environmentally Sensitive Habitat Areas (ESHA), per Coastal Act Section 30240 and the City's LCP, and states that permanent impacts should expand beyond those specific to the trail footprint and include those that result from vegetation removal. In addition, the commenter requests that the EIR should include more information on the expected temporary and permanent impacts consistent with the Coastal Commission's approach and revise Table 3.3-5 to reflect the new totals of temporary and permanent impacts and required mitigation.

This comment has been addressed in replacement Section 3.3 Biological Resources, including Table 3.3-5 and associated text including required mitigation by reclassifying all project impacts upon

biological resources to permanent impacts. It was determined that the impacts previously defined as temporary were more permanent in nature when associated with impacts to vegetation communities. Furthermore, the mitigation ratio for impacts to S3 native vegetation communities was updated to 4:1 and the mitigation ratio for impacts to S4 and S5 native vegetation communities was updated to 2:1. These mitigation ratios apply to the associated vegetation communities and are not altered for on-site versus off-site mitigation involving native habitat restoration.

S3-6 The commenter expresses concern that the proposed project and alternatives do not include the construction of public access amenities previously included in other CEQA documentation, such as 17 parking spaces and a rest area with picnic tables, to be located at the western terminus of the proposed trail, along Carpinteria Avenue. The commenter is also unclear as to which portions of the dirt areas along Carpinteria Avenue would function as parking for the proposed trail, and if those areas are available for public use.

As discussed in Chapter 2 of the EIR, vehicle parking at the trailhead on the western end would be provided via an existing dirt lot adjacent to the Carpinteria Avenue terminus and available on-street parking in the area; no improvements to the existing informal dirt parking lot are proposed under the Carpinteria Rincon Trail project. However, as part of a separate, future project, the City of Carpinteria intends to provide parking spaces for visitors to the Rincon Bluffs Preserve property that is located immediately adjacent to the western end of the trail, which also would be available for recreationalists to access the trail at this point. It should also be noted that the proposed trail would close a gap in the existing regional bicycle path system, thus allowing access to the trail for pedestrians and cyclists without the need for vehicular use and reducing potential parking demands. The comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR, and therefore, no further response is required.

S3-7 The commenter suggests that all issues identified in this letter (see responses S3-1 through S3-6, above), should be analyzed for each proposed alternative, to ensure that adverse impacts to coastal resources are avoided to the maximum extent feasible, and that unavoidable impacts are minimized and mitigated.

Per CEQA Guidelines Section 15126.6(d), an EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed. (*County of Inyo v. City of Los Angeles* (1981) 124 Cal.App.3d 1). The analysis of the project did not identify any unavoidable significant impacts, which is the paramount consideration for the development of alternatives to the proposed action. However, given potentially significant impacts were identified, the EIR included four distinct alternatives to the project, each with an intent to lessen or avoid the significant impacts of the proposal. Information on each alternative, including involved grading quantities, has been provided in Section 6.0; the relative severity of each impact is also compared to the project, and the necessity under each alternative for implementation of mitigation measures identified for project impacts is identified. Therefore, per CEQA Guidelines Section

15126.6(d), a full analysis of each proposed alternative, including specific mitigation measures to address unique impacts of such an alternative, is not required.

S3-8 The commenter states that comments provided in this letter are preliminary and that more specific comments may be appropriate as the project develops. The commenter states that Coastal Commission staff requests notification of any future activity associated with the project or related projects.

The Coastal Commission will be notified of any future activity associated with the project. The comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR, and therefore, no further response is required.

Subject: Comments on the Draft Environmental Impact Report for the Carpinteria Rincon Multi-Use Trail, SCH #2020060534, Santa Barbara County

Dear Mr. Bobroff:

The California Department of Fish and Wildlife (CDFW) has reviewed the Draft Environmental Impact Report (DEIR) for the Carpinteria Rincon Multi-Use Trail (Project). The City of Carpinteria (City) is the lead agency preparing a DEIR pursuant to the California Environmental Quality Act (CEQA; Pub. Resources Code, § 21000 et. seq.) with the purpose of informing decision-makers and the public regarding potential environmental effects related to the Project.

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

S4-1

CDFW's Role

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State [Fish & Game Code, §§ 711.7, subdivision (a) & 1802; Public Resources Code, § 21070; California Environmental Quality Act (CEQA) Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect state fish and wildlife resources.

CDFW is also submitting comments as a Responsible Agency under CEQA (Public Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority (Fish & Game Code, § 1600 *et seq.*). Likewise, to the extent implementation of the Project as proposed may result in "take" (see Fish & Game Code, § 2050) of any species protected under the California Endangered Species Act (CESA; Fish & Game Code, § 2050 *et seq.*) or the Native Plant Protection Act (NPPA; Fish & Game Code, § 1900 *et*

S4-2

DocuSign Envelope ID: DF08E299-85B5-488B-8842-1100692EE7A0

seq.), CDFW recommends the Project proponent obtain appropriate authorization under the Fish and Game Code. S4-2 Cont.

Project Location: The Project would extend from the eastern end of Carpinteria Avenue, in the City of Carpinteria, to Rincon Beach County Park, in unincorporated Santa Barbara County. The Carpinteria Bluffs Nature Preserve lies to the east of the Project and the Project is bordered by the Rincon Bluffs Preserve.

Project Description/Objectives: The proposed Project includes the construction of a paved 16-foot-wide trail (10-foot-wide path with 3-foot-wide paved shoulder along both sides); an approximately 2,800-feet-long clear-span bridge over the Union Pacific Railroad alignment; parking facilities; fencing; signage; and, a storm drainage collection system, with new drain outlets to the ocean. The bridge would be approximately 160-feet-long, with a width of between 14-feet and 16-feet. S4-3

COMMENTS AND RECOMMENDATIONS

CDFW offers the following comments and recommendations to assist the City in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources.

Comment 1: Adequacy of CEQA-Evaluation for Rare Plants

Issue: The DIER states cliff malacothrix (*Malacothrix saxatilis var. saxatilis*), south coast branching phacelia (*Phacelia ramosissima var. austrolitoralis*), and woolly seablite (*Suaeda taxifolia*) plants will be impacted by the Project. The loss of locally rare species was not fully analyzed in the DEIR.

Specific impact: The removal of individuals of these three species will contribute to their local and overall decline.

Why impact would occur: The DEIR discloses the total number of individuals present but does not specify how many will be impacted by the project. The DEIR concluded impacts to these three species, with no mitigation proposed, would not be significant. The DEIR does not contain sufficient analysis to support this conclusion for the following rare plants: S4-4

- Cliff malacothrix is ranked 4.2 (fairly endangered in California), limited distribution by the California Native Plant Society (CNPS). There are only 18 recent (1980-present) observations of this plant documented in Santa Barbara County.
- South coast branching phacelia is ranked 3.2 (fairly endangered in California) by CNPS. This plant is known from only 39 records (1980-present) in Santa Barbara County.
- Woolly seablite is ranked 4.2 (fairly endangered in California) by CNPS. This plant is known from only 23 recent records (1980-present) in Santa Barbara County.

Many of the plants listed by the CNPS as California Rare Plant Rank 3 and 4 meet the definitions of the California Endangered Species Act of the California Fish and Game Code and are eligible for state listing. Many California Rare Plant Rank 3 and 4 plants are significant locally, and CDFW recommends that they be evaluated for impact significance during

DocuSign Envelope ID: DF08E299-85B5-488B-8842-1100692EE7A0

preparation of environmental documents relating to CEQA, based on CEQA Guidelines §15125 (c) and/or §15380. Impacts to these species or their habitat must be analyzed during preparation of environmental documents relating to CEQA, as they meet the definition of Rare or Endangered under CEQA Guidelines §15125 (c) and/or §15380 (CEQA-rare). To assist botanists in evaluating California Rare Plant Rank 3 and 4 species for CEQA consideration the California Native Plant Society (CNPS) has prepared a technical memorandum titled *Considerations for Including CRPR 4 Plant Taxa in CEQA Biological Resource Impact Analysis* (https://www.cnps.org/wp-content/uploads/2020/02/crpr4_technical_memo.pdf).

This Project contains rare vegetation alliances and *The Considerations for Including CRPR 4 Plant Taxa in CEQA Biological Resource Impact Analysis* indicates List 4 plants that are associated with rare vegetation alliances should be fully evaluated in CEQA.

S4-4 Cont.

Evidence impact would be significant: The DEIR analysis does not acknowledge the limited number of occurrences of these plant species in Santa Barbara County. Given the limited number of occurrences for these species, the DEIR should acknowledge the significance of these impacts. For example, this Project would impact one of 18 occurrences of Cliff malacothrix documented in the last 40 years in the county and provide no mitigation for this impact. CDFW asserts impacting one of 18 known recent occurrences should be considered significant without mitigation.

This information is necessary to allow CDFW to comment on alternatives to avoid impacts, as well as to assess the significance of the specific impact relative to the species (e.g., current range, distribution, population trends, and connectivity).

The Project may result in impacts to CEQA-rare species without including any specific avoidance and minimization measures

Given the current number of recent documented occurrences of each of these plants in Santa Barbara County, impacts to cliff malacothrix, south coast branching phacelia, and woolly seablite plants should be considered significant under CEQA unless they are clearly mitigated below a level of significance.

Inadequate avoidance, minimization, and mitigation measures for impacts to these CEQA-rare plant species will result in the Project continuing to have a substantial adverse direct, indirect, and cumulative effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS.

S4-5

Recommendation #1: When analyzing the current range and extent of CNPS rank 3 and 4 plants, current status and trends for each species should be assessed in context to the local distribution and recent (last 20 years per the Considerations for Including CRPR 4 Plant Taxa in CEQA Biological Resource *Impact Analysis* recommendations) population status.

S4-6

Comment 2: Mitigation for Impacts to Rare Plants

Issue: Mitigation that would replace individuals or occupied land directly impacted by the Project was not proposed.

S4-7

DocuSign Envelope ID: DF08E299-85B5-488B-8842-1100692EE7A0

Specific impact: The removal of individuals of these three species will contribute to their local and overall decline.

Why Impact Would Occur: Project implementation includes grading, vegetation clearing, trail/road construction, soil compaction, utilities construction, road maintenance, and other activities that may result in direct mortality, population declines, or local extirpation of vegetation communities.

Evidence impact would be significant: The DEIR does not provide any specific requirements to replace the number of cliff malacothrix, south coast branching phacelia, and woolly seablite plants impacted. CEQA Guidelines, sections 15070 and §15071 require the document to analyze if the Project may have a significant effect on the environment as well as review if the Project will 'avoid the effect or mitigate to a point where clearly no significant effects would occur'. This information is necessary to allow CDFW to comment on alternatives to avoid impacts, as well as to assess the significance of the specific impact relative to the species (e.g., current range, distribution, population trends, and connectivity).

S4-7 Cont.

Mitigation Measure #1: CDFW recommends the DEIR include mitigation that addresses the loss of these individual plants as well as the land/habitat in which they grow. The specific habitat that supports rare plants, and the current density per acre of these plants, should be assessed when formulating mitigation strategies.

S4-8

Mitigation Measure #2: Given the current status of these rare plants, CDFW recommends the Project be redesigned to avoid impacts to these rare plant species. If avoidance cannot be achieved, CDFW recommends conserving a currently unprotected occurrence of these plant species, including a conservation easement and funding to manage the species in perpetuity. CDFW recommends due to the limited number of recent occurrences of cliff malacothrix (18) and woolly seablite (23) in Santa Barbara county, that the number of individuals as well as the acreage of land that supports them (density) be conserved at a 3:1 ratio. Given South coast branching phacelia has a slightly higher number of occurrences (39) in Santa Barbara County, CDFW recommends that the number of individuals as well as the acreage of land that supports them (density) be conserved at a 1.5:1 ratio.

Recommendation #1: Any mitigation for CEQA-rare plant impacts should include specific, measurable criteria for success. Monitoring for CEQA-rare vegetation communities should occur for a sufficient period to allow trends to be analyzed and demonstrate the occurrence is stable over time. No negative trend in CEQA-rare plant individuals (counted separately as flowering, seed set and non-flowering individuals), and no positive trend in non-native plant cover should occur over the monitoring period.

S4-9

Recommendation #2: When considering mitigation options, CDFW does not recommend topsoil salvage or transplantation as viable mitigation options. Several studies have documented topsoil salvage had no effect on the recolonization of the target plant species (Hinshaw, 1998, Dixon, 2018). Based on the scientific literature available, relying on topsoil salvage alone to mitigate impacts to CEQA-rare plant species does not appear to provide any value to mitigate impacts to the plant.

Transplantation is rarely successful in establishing rare plants at new locations. A study by CDFW (Fiedler, 1991) found that, even under optimum conditions with ample time for planning,

DocuSign Envelope ID: DF08E299-85B5-488B-8842-1100692EE7A0

transplantation was effective in only 15% of cases studied. Other reviews (e.g. Allen, 1994; Howald, 1996) have found similar problems digging up, transporting, and replanting plants, bulbs, rhizomes or seeds imposes a tremendous stress on a plant. They can easily die in the process. Scientifically-tested, reliable methods for salvage, propagation, translocation or transplantation are not available for many rare species. Transplantation can also cause problems at the target site. Genetic contamination can occur if the plant being transplanted can exchange genetic material with local taxa. Disturbance at the target site may facilitate invasion by non-native invasive species (CNPS, 1991).

Recommendation #3: CDFW recommends a Documented Conservation Seed Collection of the impacted rare plant species be made and deposited at either Santa Barbara Botanic Garden or the California Botanic Garden (formerly known as Rancho Santa Ana Botanic Garden). A Documented Conservation Seed Collection is when seed from CNPS ranked 1-4 plants, CEQA-rare, and/or CESA-listed plant species is collected and stored as part of a permanent genetic collection in a protected location. This collection preserves the genome, and any unique alleles that are present in any given occurrence, for future study and reintroduction projects.

Funding should be provided to maintain the collection, as well as conduct periodic germination and viability tests, in perpetuity. Documented conservation collections (long-term storage) are important for conserving rare, gene pool representative germplasm designated for long-term storage to provide protection against extinction and as a source material for future restoration and recovery.

S4-9 Cont.

Recommendation #4: A weed management plan should be developed for the Project area and implemented during the duration of this Project. On-going soil disturbance promotes establishment and growth of non-native weeds. As part of the Project, non-native weeds should be prevented from becoming established. The Project area should be monitored via mapping for new introductions and expansions of non-native weeds.

S4-10

Comment 3: Mitigation for Sensitive Vegetation Communities

Issue: The DEIR states approximately 3.55 acres of CDFW/county/city sensitive vegetation community habitats would be temporarily impacted due to construction and an additional 0.76-acres CDFW/county/city habitats would be permanently impacted due to construction. The DEIR states the temporary impacts would be mitigated at a 1:1 ratio and permanent impact at a 3:1 ratio. The DEIR states a future plan will be prepared to further address this mitigation.

Sensitive vegetation communities are a defined by their dominant plant species, such as California Brittle Bush –Ashy Buckwheat Scrub Alliance and have a separate ranking system than that of individual rare plants, which are covered in Comment 1, above.

CDFW is concerned the 1:1 ratio for “temporary impacts” may not be adequate.

S4-11

Specific Impact: CEQA Guidelines sections 15070 and 15071 require the DEIR to analyze if the Project may have a significant effect on the environment as well as review if the Project will “avoid the effect or mitigate to a point where clearly no significant effects would occur.”

The DEIR states the 1:1 mitigation may occur on “other properties” due to the lack of available area on the Project site for mitigation. Due to the rare nature of these vegetation communities, and the land which supports them, CDFW is concerned about the deferral of mitigation to other,

S4-12

DocuSign Envelope ID: DF08E299-85B5-488B-8842-1100692EE7A0

unidentified properties that may or may not be suitable or even available for appropriate mitigation. Given that most coastal bluff habitat is rare in nature, it is unclear if rare habitats at other properties will be impacted to provide mitigation for this Project.

The DEIR does not indicate if the rare plants mentioned in Comment 1 above, will be impacted by trying to fit all the required sensitive vegetation community mitigation on non-impacted parts of the Project site. The DEIR should disclose if any sensitive vegetation community mitigation will occur within or around areas occupied by cliff malacothrix, south coast branching phacelia, and woolly seablite plants.

S4-12 Cont.

In order to analyze if a project may have a significant effect on the environment, the location, species composition, and success criteria of proposed mitigation information is necessary to allow the Department to comment on alternatives to avoid impacts, as well assess the adequacy of the mitigation proposed.

S4-13

Why Impact Would Occur: Project implementation includes grading, vegetation clearing, trail/road construction, soil compaction, utilities construction, road maintenance, and other activities that may result in direct mortality, population declines, or local extirpation of vegetation communities.

Evidence Impact would be significant: Removing a perennial plant from the ground is a permanent impact resulting in its death, replacing it is considered mitigation. All impacts that remove perennial plants from the ground should be considered under the same lens whether the restoration occurs in the same area as the impacts or in new areas. Both scenarios may or may not produce successful new individuals or the targeted vegetation community assemblage. Both scenarios result in: 1) the loss of established individuals; and, 2) the replacement planting of new individuals. Both scenarios incur temporal losses as well as intensive management to ensure the desired habitat is re-created. Both are at risk for failure and are a community of same-aged individuals lacking the age stratification and complexity of the original habitat.

Inadequate avoidance, minimization, and mitigation measures for impacts to these CEQA-rare vegetation communities will result in the Project continuing to have a substantial adverse direct, indirect, and cumulative effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS.

S4-14

Mitigation Measure #1: CDFW recommends avoiding any sensitive natural communities found on the Project. If avoidance is not feasible, the Project proponent should mitigate at a ratio sufficient to achieve a no-net loss for impacts to special status plant species and their associated habitat. CDFW recommends all impacts to the S3 sensitive vegetation communities (California Brittle Bush –Ashy Buckwheat Scrub Alliance, Encelia californica Association and Lemonade Berry Scrub Alliance, Rhus integrifolia Association) (0.59-acres) should be mitigated at a 4:1 ratio and impacts to the S4 and S5 communities (3.73-acres) be mitigate at a 2:1 ratio due to the overall decline of coastal bluff/scrub habitats region wide.

S4-15

All revegetation/restoration areas that will serve as mitigation should include preparation of a restoration plan, to be approved by CDFW prior to any ground disturbance. The restoration plan should include restoration and monitoring methods; annual success criteria; contingency actions should success criteria not be met; long-term management and maintenance goals; and a funding mechanism for long-term management. Areas proposed as mitigation should have a

S4-16

DocuSign Envelope ID: DF08E299-85B5-488B-8842-1100692EE7A0

recorded conservation easement and be dedicated to an entity which has been approved to hold/manage lands (AB 1094; Government Code, §§ 65965-65968). S4-16 Cont.

Mitigation Measure #2: Success criteria should be based on the specific composition of the vegetation communities being impacted. Success should not be determined until the site has been irrigation-free for at least 5 years and the metrics for success have remained stable (no negative trend for richness/diversity/abundance/cover and no positive trend for invasive/non-native cover for each vegetation layer) for at least 5 years. In the revegetation plan, the success criteria should be compared against an appropriate reference site, with the same vegetation alliance, with as good or better-quality habitat. The success criteria shall include percent cover (both basal and vegetative), species diversity, density, abundance, and any other measures of success deemed appropriate by CDFW. Success criteria shall be separated into vegetative layers (tree, shrub, grass, and forb) for each alliance being mitigated, and each layer shall be compared to the success criteria of the reference site, as well as the alliance criteria in MCV2, ensuring one species or layer does not disproportionally dominate a site but conditions mimic the reference site and meets the alliance membership requirements. S4-17

CDFW does not recommend topsoil salvage or transplantation as viable mitigation options. Several studies have documented topsoil salvage had no effect on the recolonization of the target plant species (Hinshaw, 1998, Dixon, 2018). Based on the scientific literature available, relying on topsoil salvage alone to mitigate impacts to CEQA-rare plant species does not appear to provide any value to mitigate impacts to the plant. S4-18

Filing Fees

The Project, as proposed, would have an impact on fish and/or wildlife resources, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying Project approval to be operative, vested, and final. (California Code of Regulations, tit. 14, § 753.5; Fish and Game Code, § 711.4; Public Resources Code, § 21089). S4-19

Conclusion

CDFW appreciates the opportunity to comment on the DEIR to assist the City of Carpinteria in identifying and mitigating Project impacts on biological resources. If you have any questions or comments regarding this letter, please contact Kelly Schmoker, Senior Environmental Scientist, at (626) 335-9092 or by email at Kelly.Schmoker@wildlife.ca.gov. S4-20

CDFW recommends the following language to be incorporated into a future environmental document for the Project.

Biological Resources			
	Mitigation Measure	**Timing**	**Responsible Party**
REC-Bio-1-CEQA-Rare Plants	When analyzing the current range and extent of CNPS rank 3 and 4 plants, current status and trends for each species should be assessed in context to the local distribution and recent (last 20 years per the Considerations for Including CRPR 4 Plant Taxa in CEQA Biological Resource *Impact Analysis* recommendations) population status.	Prior to Finalizing the EIR	City of Carpinteria
MM-Bio-1-CEQA-Rare Plants	CDFW recommends the DEIR include mitigation that addresses the loss of these individual plants as well as the land/habitat in which they grow. The specific habitat that supports rare plants, and the current density per acre of these plants, should be assessed when formulating mitigation strategies.	Prior to Finalizing the EIR	City of Carpinteria
MM-Bio-2-CEQA-Rare Plants	Given the current status of these rare plants, CDFW recommends the Project be redesigned to avoid impacts to these rare plant species. If avoidance cannot be achieved, CDFW recommends conserving a currently unprotected occurrence of these plant species, including a conservation easement and funding to manage the species in perpetuity. CDFW recommends due to the limited number of recent occurrences of cliff malacanthix (18) and woolly seablite (23) in Santa Barbara county, that the number of individuals as well as the acreage of land that supports them (density) be conserved at a 3:1 ratio. Given South coast branching phacelia has a slightly higher number of occurrences (39) in Santa Barbara County, CDFW recommends that the number of individuals as well as the acreage of land that supports them (density) be conserved at a 1.5:1 ratio.	Prior to Finalizing the EIR	City of Carpinteria
MM-Bio-3-CEQA- Rare Plants	Any mitigation for CEQA-rare plant impacts should include specific, measurable criteria for success. Monitoring for CEQA-rare vegetation communities should occur for a sufficient period to allow trends to be analyzed and demonstrate the occurrence is stable over time. No negative trend in CEQA-rare plant individuals (counted separately as flowering, seed set and non-flowering individuals), and no positive trend in non-native plant cover should occur over the monitoring period.	Prior to Finalizing the EIR	City of Carpinteria
REC-Bio-2-CEQA-Rare Plants	Any mitigation for CEQA-rare plant impacts should include specific, measurable criteria for success. Monitoring for CEQA-rare vegetation communities should occur for a sufficient period to allow trends to be analyzed and demonstrate the occurrence is stable over time. No negative trend in CEQA-rare plant individuals (counted separately as	Prior to Finalizing the EIR	City of Carpinteria

DocuSign Envelope ID: DF08E299-85B5-488B-8842-1100692EE7A0

	flowering, seed set and non-flowering individuals), and no positive trend in non-native plant cover should occur over the monitoring period.		
REC-Bio-3-CEQA-Rare Plants	When considering mitigation options, CDFW does not recommend topsoil salvage or transplantation as viable mitigation options. Several studies have documented topsoil salvage had no effect on the recolonization of the target plant species (Hinshaw, 1998, Dixon, 2018). Based on the scientific literature available, relying on topsoil salvage alone to mitigate impacts to CEQA-rare plant species does not appear to provide any value to mitigate impacts to the plant. Transplantation is rarely successful in establishing rare plants at new locations. A study by CDFW (Fiedler, 1991) found that, even under optimum conditions with ample time for planning, transplantation was effective in only 15% of cases studied. Other reviews (e.g. Allen, 1994; Howald, 1996) have found similar problems digging up, transporting, and replanting plants, bulbs, rhizomes or seeds imposes a tremendous stress on a plant. They can easily die in the process. Scientifically-tested, reliable methods for salvage, propagation, translocation or transplantation are not available for many rare species. Transplantation can also cause problems at the target site. Genetic contamination can occur if the plant being transplanted can exchange genetic material with local taxa. Disturbance at the target site may facilitate invasion by non-native invasive species (CNPS, 1991).	Prior to Finalizing the EIR	City of Carpinteria
REC-Bio-4-CEQA-Rare Plants	CDFW recommends a Documented Conservation Seed Collection of the impacted rare plant species be made and deposited at either Santa Barbara Botanic Garden or the California Botanic Garden (formerly known as Rancho Santa Ana Botanic Garden). A Documented Conservation Seed Collection is when seed from CNPS ranked 1-4 plants, CEQA-rare, and/or CESA-listed plant species is collected and stored as part of a permanent genetic collection in a protected location. This collection preserves the genome, and any unique alleles that are present in any given occurrence, for future study and reintroduction projects. Funding should be provided to maintain the collection, as well as conduct periodic germination and viability tests, in perpetuity. Documented conservation collections (long-term storage) are important for conserving rare, gene pool representative germplasm designated for long-term storage to provide protection against extinction and as a source material for future restoration and recovery.	Prior to Finalizing the EIR	City of Carpinteria
REC-Bio-5-CEQA-Rare Plants	A weed management plan should be developed for the Project area and implemented during the duration of this Project. On-going soil disturbance promotes establishment	Prior to Finalizing the EIR	City of Carpinteria

	and growth of non-native weeds. As part of the Project, non-native weeds should be prevented from becoming established. The Project area should be monitored via mapping for new introductions and expansions of non-native weeds.		
MM-Bio-4-CEQA- Rare Plants Sensitive Vegetation Communities	CDFW recommends avoiding any sensitive natural communities found on the Project. If avoidance is not feasible, the Project proponent should mitigate at a ratio sufficient to achieve a no-net loss for impacts to special status plant species and their associated habitat. CDFW recommends all impacts to the 5 sensitive vegetation communities (4.32-acres) should be mitigated at a 3:1 ratio due to the overall decline of coastal bluff/scrub habitats region wide. All revegetation/restoration areas that will serve as mitigation should include preparation of a restoration plan, to be approved by CDFW prior to any ground disturbance. The restoration plan should include restoration and monitoring methods; annual success criteria; contingency actions should success criteria not be met; long-term management and maintenance goals; and a funding mechanism for long-term management. Areas proposed as mitigation should have a recorded conservation easement and be dedicated to an entity which has been approved to hold/manage lands (AB 1094; Government Code, §§ 65965-65968).	Prior to Finalizing the EIR	City of Carpinteria
MM-Bio-5-CEQA Sensitive Vegetation Communities	Success criteria should be based on the composition of the vegetation communities being impacted. Success should not be determined until the site has been irrigation-free for at least 5 years and the metrics for success have remained stable (no negative trend for richness/diversity/abundance/cover and no positive trend for invasive/non-native cover for each vegetation layer) for at least 5 years. In the revegetation plan, the success criteria should be compared against an appropriate reference site, with the same vegetation alliance, with as good or better-quality habitat. The success criteria shall include percent cover (both basil and vegetative), species diversity, density, abundance, and any other measures of success deemed appropriate by CDFW. Success criteria shall be separated into vegetative layers (tree, shrub, grass, and forb) for each alliance being mitigated, and each layer shall be compared to the success criteria of the reference site, as well as the alliance criteria in MCV2, ensuring one species or layer does not disproportionally dominate a site but conditions mimic the reference site and meets the alliance membership requirements. CDFW does not recommend topsoil salvage or transplantation as viable mitigation options. Several studies	Prior to Finalizing the EIR	City of Carpinteria

	have documented topsoil salvage had no effect on the recolonization of the target plant species (Hinshaw, 1998, Dixon, 2018). Based on the scientific literature available, relying on topsoil salvage alone to mitigate impacts to CEQA		

Response to Comment Letter S4

California Department of Fish and Wildlife
Erinn Wilson-Olgin
April 28, 2021

S4-1 The commenter provides an introduction, background information, and gives thanks for the opportunity to comment; however, the comment does not pertain to the adequacy of the EIR.

No response needed.

S4–2 The commenter identifies themselves, their jurisdiction, and divulges their responsibility by law to provide, as available, biological expertise during public agency environmental review efforts. The commenter describes that they are also submitting comments as a Responsible Agency under CEQA. The commenter describes that they have regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority, and recommends the City obtain appropriate authorization under the Fish and Game Code. Additionally, if the project may result in "take" of species protected under the California Endangered Species Act or the Native Plant Protection Act, the commenter again recommends the City obtain appropriate authorization under the Fish and Game Code. The comments do not pertain to the adequacy of the EIR.

No response needed.

S4-3 The commenter acknowledges the project location and project description/objectives. The commenter explains that their comments and recommendations are offered to assist the City in identifying the project's impacts and mitigation on fish and wildlife (biological) resources. The comments do not pertain to the adequacy of the EIR.

No response needed.

S4-4 The commenter raises the issue of adequacy of the CEQA evaluation for rare plants which lacks the number of individuals that would be impacted and falls short of a sufficient analysis on the significance of the impacts on each species. The commenter recommends that evaluating California Native Plant Society (CNPS) plants listed as California Rare Plant Rank (CRPR) 3 and 4 be evaluated for impact significance during preparation of the CEQA EIR. The commenter includes the CEQA Guidelines, §15125 (c) and/or §15380, for which the rare plants should be evaluated. The three plant species: cliff malacothrix (*Malacothrix saxatilis* var. *saxatilis*; CNPS CRPR 4.2), south coast branching phacelia (*Phacelia ramosissima* var. *austrolitoralis*; CNPS CRPR 3.2), and woolly seablite (*Suaeda taxifolia*; CNPS CRPR 4.2) are not considered locally rare in Santa Barbara County as they are not included on the Rare Plants of Santa Barbara County list (Wilken 2018); however they are considered locally rare in Ventura County as they are included on the Checklist of Ventura County Rare Plants (Magney 2020).

Section 3.3 Biological Resources has been updated to include a resource impact analysis for each of these plant species, notwithstanding that the entire project is located within Santa Barbara County. Research was conducted to define CEQA Guidelines §15125 (c) and/or §15380 as included below.

CEQA Guidelines §15125 Environmental Setting (c) states:

Knowledge of the regional setting is critical to the assessment of environmental impacts. Special emphasis should be placed on environmental resources that are rare or unique to that region and would be affected by the project. The EIR must demonstrate that the significant environmental impacts of the proposed project were adequately investigated and discussed, and it must permit the significant effects of the project to be considered in the full environmental context.

CEQA Guidelines §15380 Endangered, Rare, or Threatened Species states:

(a) "Species" as used in this section means a species or subspecies of animal or plant or a variety of plant.

(b) A species of animal or plant is:

(1) "Endangered" when its survival and reproduction in the wild are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, disease, or other factors; or

(2) "Rare" when either:

(A) Although not presently threatened with extinction, the species is existing in such small numbers throughout all or a significant portion of its range that it may become endangered if its environment worsens; or

(B) The species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered "threatened" as that term is used in the Federal Endangered Species Act.

(c) A species of animal or plant shall be presumed to be endangered, rare, or threatened, as it is listed in:

(1) Sections 670.2 or 670.5, Title 14, California Code of Regulations; or

(2) Title 50, Code of Federal Regulations Section 17.11 or 17.12 pursuant to the Federal Endangered Species Act as rare, threatened, or endangered.

(d) A species not included in any listing identified in subdivision (c) shall nevertheless be considered to be endangered, rare or threatened, if the species can be shown to meet the criteria in subdivision (b).

(e) This definition shall not include any species of the Class Insecta which is a pest whose protection under the provisions of CEQA would present an overwhelming and overriding risk to man as determined by:

(1) The Director of Food and Agriculture with regard to economic pests; or

(2) The Director of Health Services with regard to health risks.

Neither Section 670.2, Title 14 California Code of Regulations nor Section 670.5, Title 14 California Code of Regulations include cliff malacothrix, south coast branching phacelia, or woolly seablite.

Neither Section 17.11, Title 50 Code of Federal Regulations nor Section 17.12 Code of Federal Regulations include cliff malacothrix, south coast branching phacelia, or woolly seablite.

This comment has been addressed in Section 3.3 Biological Resources including an updated evaluation for impact significance for each California Native Plant Society (CNPS) California Rare Plant Rank (CRPR) 3 and 4 plant species based on the number of documented occurrences in Santa Barbara County and Ventura County, the type locality, occurrences at the periphery of a species' range, areas where the taxon is especially uncommon, areas where the taxon has sustained heavy losses (declining), occurrences exhibiting unusual morphology or occurring on unusual substrates, species maintained on Bureau of Land Management, U.S. Fish and Wildlife Service, or U.S. Forest Service sensitive species lists, and taxa associated with a habitat that is declining in California at a significant rate.

S4-5 The commenter raises the issue that the DEIR does not acknowledge the limited number of occurrences of the CNPS CRPR 3 and 4 species in Santa Barbara County and that this information is needed to assess the significance of the specific impact relative to each species.

This comment has been addressed in Section 3.3 Biological Resources including an updated evaluation for impact significance for each CNPS CRPR 3 and 4 plant species based on the number of documented occurrences in Santa Barbara County, the type locality, occurrences at the periphery of a species' range, areas where the taxon is especially uncommon, areas where the taxon has sustained heavy losses (declining), occurrences exhibiting unusual morphology or occurring on unusual substrates, species maintained on Bureau of Land Management, U.S. Fish and Wildlife Service, or U.S. Forest Service sensitive species lists, and taxa associated with a habitat that is declining in California at a significant rate.

S4-6 The commenter recommends that when analyzing the current range and extent of CNPS CRPR 3 and 4 plants, current status and trends for each species should be assessed in context with the local distribution and population status in the last 20 years.

This comment has been addressed in Section 3.3 Biological Resources including an updated evaluation for impact significance for each CNPS CRPR 3 and 4 plant species based on the number of documented occurrences in Santa Barbara County, the type locality, occurrences at the periphery of a species' range, areas where the taxon is especially uncommon, areas where the taxon has sustained heavy losses (declining), occurrences exhibiting unusual morphology or occurring on unusual substrates, species maintained on Bureau of Land Management, U.S. Fish and Wildlife Service, or U.S. Forest Service sensitive species lists, and taxa associated with a habitat that is declining in California at a significant rate.

S4-7 The commenter raises the issue that the DEIR does not provide any specific requirements to replace the number of cliff malacothrix, woolly seablite, and south coast branching phacelia individuals impacted.

This comment has been addressed in Section 3.3 Biological Resources including an updated evaluation for impact significance for each CNPS CRPR 3 and 4 plant species based on the number of

documented occurrences in Santa Barbara County, the type locality, occurrences at the periphery of a species' range, areas where the taxon is especially uncommon, areas where the taxon has sustained heavy losses (declining), occurrences exhibiting unusual morphology or occurring on unusual substrates, species maintained on Bureau of Land Management, U.S. Fish and Wildlife Service, or U.S. Forest Service sensitive species lists, and taxa associated with a habitat that is declining in California at a significant rate. Since the evaluation for impact significance for each CNPS CRPR 3 and 4 plant species concluded that impacts would be less than significant, no mitigation is required for CNPS CRPR 3 and 4 plant species.

S4-8 The commenter recommends the DEIR include mitigation that addresses the loss of CNPS CRPR 3 and 4 plant species as well as the land/habitat in which they grow.

This comment has been addressed in Section 3.3 Biological Resources including an updated evaluation for impact significance for each CNPS CRPR 3 and 4 plant species based on the number of documented occurrences in Santa Barbara County, the type locality, occurrences at the periphery of a species' range, areas where the taxon is especially uncommon, areas where the taxon has sustained heavy losses (declining), occurrences exhibiting unusual morphology or occurring on unusual substrates, species maintained on Bureau of Land Management, U.S. Fish and Wildlife Service, or U.S. Forest Service sensitive species lists, and taxa associated with a habitat that is declining in California at a significant rate. Since the evaluation for impact significance for each CNPS CRPR 3 and 4 plant species concluded that impacts would be less than significant, no mitigation is required for CNPS CRPR 3 and 4 plant species. Mitigation is included for native coastal bluff scrub and coastal scrub vegetation communities.

S4-9 The commenter recommends the project be redesigned to avoid impacts to CNPS CRPR 3 and 4 plant species. If avoidance cannot be achieved, the commenter recommends conserving a currently unprotected occurrence of these plant species, including a conservation easement and funding to manage the species in perpetuity.

This comment has been addressed in Section 3.3 Biological Resources including an updated evaluation for impact significance for each CNPS CRPR 3 and 4 plant species based on the number of documented occurrences in Santa Barbara County, the type locality, occurrences at the periphery of a species' range, areas where the taxon is especially uncommon, areas where the taxon has sustained heavy losses (declining), occurrences exhibiting unusual morphology or occurring on unusual substrates, species maintained on Bureau of Land Management, U.S. Fish and Wildlife Service, or U.S. Forest Service sensitive species lists, and taxa associated with a habitat that is declining in California at a significant rate. Since the evaluation for impact significance for each CNPS CRPR 3 and 4 plant species concluded that impacts would be less than significant, no mitigation is required for CNPS CRPR 3 and 4 plant species.

S4-10 The commenter recommends a weed management plan should be developed for the project area and implemented during the duration of the project.

Section 3.3 Biological Resources includes MM-BIO-4, a Habitat Mitigation and Monitoring Plan that includes a detailed maintenance plan to include removal of invasive non-native species within areas with native plant restoration. Since the project includes impacts to areas not included in the Habitat

Mitigation and Monitoring Plan, a new mitigation measure MM-BIO-6 Weed Management Plan was added to Section 3.3 Biological Resources to address invasive weed establishment and spread.

S4-11 The commenter raises concern that the 1:1 ratio for "temporary impacts" may not be adequate.

This comment has been addressed in Section 3.3 Biological Resources including Table 3.3-5 and associated text including required mitigation by updating all impacts to permanent impacts. It was determined that the impacts previously defined as temporary were more permanent in nature when associated with impacts to vegetation communities; therefore, all project impacts were updated to be permanent impacts. Furthermore, mitigation ratios for impacts to S3 native vegetation communities was updated to 4:1 and mitigation ratios for impacts to S4 and S5 native vegetation communities were updated to 2:1. These mitigation ratios apply to the associated vegetation communities and are not altered for on-site versus off-site mitigation native habitat restoration.

S4-12 The commenter raises a concern regarding the potential future need for mitigation outside of the project boundaries, and the lack of specific identification of other non-project properties that may or may not be suitable or even available for appropriate mitigation. Additionally, the commenter raised concerns that the previously mentioned CNPS CRPR 3 and 4 plant species may be impacted by establishing habitat restoration mitigation on non-impacted parts of the project site.

This comment has been addressed in Section 3.3 Biological Resources within MM-BIO-5 Habitat Mitigation and Monitoring Plan. Text has been updated to state that prior to identifying habitat restoration mitigation areas, both within the project area and adjacent lands, the habitat shall be surveyed for sensitive vegetation communities and special-status plant species, to ensure avoidance of impacts during habitat restoration implementation. Additionally, potential adjacent mitigation lands shall be assessed to ensure sites are suitable and appropriate for implementation of habitat restoration for the impacted native vegetation communities.

S4-13 The commenter states that to analyze if a project may have a significant effect on the environment, the location, species composition, and success criteria of proposed mitigation information is necessary to allow the commenter to comment on alternatives to avoid impacts, as well as assess the adequacy of mitigation proposed.

This comment has been addressed in Section 3.3 Biological Resources within MM-BIO-5 Habitat Mitigation and Monitoring Plan. The text has been updated to state that prior to grading, the project related native coastal bluff scrub and coastal scrub vegetation communities shall be assessed by vegetation community type for species composition, associated plant cover, and dominant plant species. This project site native vegetation community data shall be used to define performance standards for native habitat restoration by vegetation community type and for non-native plant species.

S4-14 The commenter states that removing a perennial plant from the ground is a permanent impact resulting in its death, replacing it is considered mitigation. All impacts that remove perennial plants from the ground should be considered under the same lens whether the restoration occurs in the same area as the impacts or in a new area.

This comment has been addressed in Section 3.3 Biological Resources including Table 3.3-5 and associated text including required mitigation by updating all impacts to permanent impacts. It was

determined that the impacts previously defined as temporary were more permanent in nature when associated with impacts to vegetation communities; therefore, all project impacts were updated to be permanent impacts. Furthermore, the mitigation ratio for impacts to S3 native vegetation communities was updated to 4:1 and the mitigation ratio for impacts to S4 and S5 native vegetation communities was updated to 2:1. These mitigation ratios apply to the associated vegetation communities and are not altered for on-site versus off-site mitigation native habitat restoration.

S4-15 The commenter recommends avoiding any sensitive natural communities found on the project. If avoidance is not feasible, the project proponent should mitigate at a ratio sufficient to achieve a no-net loss for impacts to special status plant species and their associated habitat. The commenter recommends all impacts to the S3 sensitive vegetation communities (California Brittle Bush – Ashy Buckwheat Scrub Alliance, Encelia californica Association and Lemonade Berry Scrub Alliance, Rhus integrifolia Association) should be mitigated at a 4:1 ratio and impacts to the S4 and S5 communities be mitigated at a 2:1 ratio due to the overall decline of coastal bluff/scrub habitat region wide.

This comment has been addressed in Section 3.3 Biological Resources including Table 3.3-5 and associated text including required mitigation by updating all impacts to permanent impacts. It was determined that the impacts previously defined as temporary were more permanent in nature when associated with impacts to vegetation communities; therefore, all project impacts were updated to be permanent impacts. Furthermore, mitigation ratios for impacts to S3 native vegetation communities were updated to 4:1 and mitigation ratios for impacts to S4 and S5 native vegetation communities were updated to 2:1. These mitigation ratios apply to the associated vegetation communities and are not altered for on-site versus off-site mitigation native habitat restoration.

S4-16 The commenter states that all revegetation/restoration areas that will serve as mitigation should include preparation of a restoration plan, to be approved by CDFW prior to any ground disturbance. The commenter recommends that the restoration plan should include restoration and monitoring methods; annual success criteria; contingency actions should success criteria not be met; long-term management and maintenance goals; and a funding mechanism for long-term management. The commenter recommends that the areas proposed as mitigation should have a recorded conservation easement and be dedicated to an entity which has been approved to hold/manage lands (AB 1094; Government Code, § 65965-65968).

This comment has been addressed in Section 3.3 Biological Resources MM-BIO-5 Habitat Mitigation and Monitoring Plan as this is a restoration plan. The text has been updated to state that the Habitat Mitigation and Monitoring Plan shall be approved by CDFW prior to any ground disturbance. The Habitat Mitigation and Monitoring Plan includes requirements for restoration and monitoring methods; annual success criteria; contingency actions should success criteria not be met; long-term management and maintenance goals.

S4-17 The commenter recommends that the success criteria should be based on the specific composition of the vegetation communities being impacted. The commenter recommends that the success should not be determined until the site has been irrigation-free for at least 5 years and the metrics for success have remained stable (no negative trend for richness/diversity/abundance/cover and no positive trend for invasive/non-native cover for each vegetation layer) for at least 5 years. The commenter recommends that in the revegetation plan, the success criteria should be compared against an appropriate reference site, with the same vegetation alliance, with as good or better-quality habitat.

The commenter recommends that the success criteria shall include percent cover (both basal and vegetative), species diversity, density, abundance, and any other measures of success deemed appropriate by the commenter, CDFW. The commenter recommends that success criteria shall be separated into vegetative layers (tree, shrub, grass, and forb) for each alliance being mitigated, and each layer shall be compared to the success criteria of the reference site, as well as the alliance criteria in MCV2, ensuring one species or layer does not disproportionally dominate a site but conditions mimic the reference site and meet the alliance membership requirements.

This comment has been addressed in Section 3.3 Biological Resources MM-BIO-5 Habitat Mitigation and Monitoring Plan. The text has been updated to state that the success criteria shall include percent cover (both basal and vegetative), species diversity, density, and abundance. This project site native vegetation community data shall be used to define performance standards for native habitat restoration by vegetation layers (tree, shrub, grass, and forb) for each vegetation community type and for non-native plant species. The text remains that the restoration areas shall be irrigation free for at least 3 years and the performance standards have remained stable (no negative trend for richness/ diversity/ abundance/ cover of native species and no positive trend for invasive/non-native cover for each vegetation layer) for at least 3 years.

S4-18 The commenter states that they, CDFW, do not recommend topsoil salvage or transplantation as viable mitigation options.

Comment noted. Proposed mitigation does not include topsoil salvage or transplantation.

S4-19 The commenter states that the project, as proposed, would have an impact on fish and/or wildlife resources, and assessment of filing fees is necessary. The fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by the commenter, CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (California Code of Regulations, tit. 14, § 753.5; Fish and Game Code, § 711.4; Public Resources Code, § 21089).

Comment noted. No response necessary.

S4-20 The commenter states that they, CDFW, appreciate the opportunity to comment on the DEIR to assist the City of Carpinteria in identifying and mitigating project impacts on biological resources.

Comment noted. No response necessary.

Comment Letter T1

Hello Nick,

NCTC supports the local tribal governments recommendations, thank you. T1-1

Mr. Nick Bobroff, Principal Planner
Community Development Department
City of Carpinteria
5775 Carpinteria Avenue
Carpinteria, CA 93013

Re: Rincon Trail Environmental Impact Report

Dear Mr. Bobroff:

I watched the online public hearing of April 13, 2021 concerning the recently published Environmental Impact Report (March 2021) for the proposed Rincon Trail to be built just south of Carpinteria. I have a few questions and concerns I would like to bring to the Planning Committee's attention. O1-1

1. Draining onto the Beach

These references are Slide 9 of the presentation and section 2.7.3 and 3.8.1 of the EIR Report

While the report concludes the five drainage pipes will adequately remove any storm water from the proposed trail, the report is silent about the effect of the water on the beach below. The conversation about an hour into the hearing did not consider you may be creating stream gullies across the sand to the water from the end of the pipes. We believe there is a significant possibility for the Bates Beach (northern) section to be split into several partitions over time from erosion cause by this water runoff, thus harming the enjoyment of that area by future beachgoers. While we concede that in the years when we experience heavier winter storms, sand does rebuild the beach's sand there, we are concerned there is no discussion about how the long-term "gullification" of the beach cannot be mitigated by this winter sand. We don't want to lose our future beach use for the convenience of the drainage from above. O1-2

2. Removal of Concrete Brik-Brak

Also, in previous proposal versions, the concrete "brik-brak" near drain #5 was slated to be removed as a safety hazard since it is the result of a landslide from above several years ago (see photo, left). It butts up against the retaining wall and eventually we feel it will break through that wall due to further erosion onto the beach. I see no mention of this in the report and the testimony of Mr. Roberts at the hearing indicates this safety hazard is going to be left in place. We think this is a mistake and we ask that it be removed since all the heavy equipment necessary to do so will be right there anyway during the trail construction. O1-3

3. Parking Lot ADA Non-Compliance

There is no mention in the EIR report about the potential danger at the terminus of the Alternative 3 Trail, the one most of the committee seems to favor, although there were a few comments made at the hearing about this. This trail alternative empties into the North Rincon (Bates) Beach parking lot, which, when filled, holds approximately 150 cars. During the summer, this lot is filled with overflow spilling into illegal areas and angles and also onto Bates Road below. Anyone who parks there will testify how hard it is to see oncoming or passing cars or bicyclists driving past when pulling out of these right-angled parking spots. Near misses are common. With the anticipated additional traffic from the trail through the parking lot we feel there will be an increased number of accidents and not just near misses. O1-4

Our recommendation: the parking lot be restriped so cars park at oblique angles instead of 90 degrees, in such a way as to increase visibility for drivers to see what is behind them. Also, that a designated bike lane be placed against the north side of the parking lot to help keep those exiting the Trail physically separate from the parked cars. This will have the net effect of slightly reducing the number of parking spaces, but it can be mitigated by installing an Uber/Lift pickup area near the restrooms so people can use alternative transport to the beach. O1-5

Also as has been noted in a previous hearing, the parking lot is at the top of a steep hill, one which exceeds the recommended slope angle for ADA compliance. The trail is supposed to be ADA-accessible with the idea that the parking lot will act as the connector between the Carpinteria part of the trail and the Ventura County section of the trail that begins at the bottom of the parking lot hill. In our opinion, the steep angle of the hill is unsafe for bikes, skateboards, and people using other motorized scooters who may want to continue on the trail from Carpinteria to Ventura. They wil pick up speed and be a danger to traffic at the intersection where the parking lot meets Bates Road. We have no suggestion for mitigation but feel someone smarter than us address this concern. O1-6

We point out that the Alternative 4 trail avoids all parking lot dangers, even though we see the committee members at the hearing wanting to prioritize the ability to see the ocean from the second half of the Alternative #3 option as its highest priority. Therefore, these safety concerns must be addressed. O1-7

We wish to add, however, that the EIR (page 2.15) states "Vehicle parking at the trailhead on the western end would be provided via an existing dirt lot adjacent to the Carpinteria Avenue terminus; no improvements to the informal dirt parking lot are proposed." This might solve the problem of reduced parking slots in the Rincon Beach parking lot, except that we see the city is considering using this area for an "auto camp" of permanent rental trailers. This park is not part of the Trail discussion, but we feel its possible intrusion must be considered as part of the parking lot discussion. O1-8

4. Bridge Safety

This references Section 2.7.2 of the EIR and specifically page 2-12.

The EIR says: *"...the bridge for the Carpinteria Rincon Trail will have some similar characteristics, except that UPRR requires high "safety fences" for the full length of the bridge to protect the trains from potential objects thrown from the bridge platform."*

There is no further description of these "high" fences, and we have a question about potential suicides from the bridge to the passing trains below. Can the committee please provide more complete information about this fencing and if they are designed to prevent any kind of climbing or jumping as well as the indicated tossing of objects onto the tracks below? O1-9

5. Wind Pattern Analysis and the Paragliders

This references Slide 19 of the presentation and also pages 3.3.6 of the EIR and several public speakers.

We sympathize with our friends in the paraglider community who claim that the loss of up to 30% of the wind uplift by Alternative #3 will effectively destroy their ability to exist at this beach. The testimony at the hearing downplayed this conclusion, as I heard at least one member of the panel claim the paragliders can operate safely with winds as low as a 10 to 20% loss (the EIR does not say that). The committee seems determined to ignore these hobbyists in favor of the hikers and bikers and the ocean view. We are sad to see this as the paragliders are a tradition at Bates Beach and definitely add to the ambiance and cultural heritage of the community. We are sorry to see the committee take their concerns so lightly. We want to go on record as supporting our flying friends and hope some compromise can be found. O1-10

In conclusion we appreciate the ability to comment on the findings of the Environmental Impact Report and we hope our concerns will be address by the committee at a future hearing. O1-11

Sincerely,

Gary Mussell
Director, Friends of Bate Beach

Response to Comment Letter O1

Friends of Bates Beach
Gary Mussell, Director
April 26, 2021

O1-1 The City acknowledges the comment as an introduction to comments that follow. No further response is required.

O1-2 The commenter expresses concern regarding effects of the water on the beach from the five drainage pipes that will be used to remove stormwater from the proposed trail and concerns regarding creation of stream gullies across the sand to the water from the end of the pipes. The commenter expresses concern that there is no discussion about long-term gullification associated with erosion.

Comment is acknowledged. The creation of drainage gullies across the beach are not anticipated from the project, due to several reasons. First, the drainage area of the trail surface is small compared to the area within the project alignment, and therefore run-off volumes from the trail surface would be limited. Second, the southern portion of the trail would be served by 5 separate drain outlets, thereby dividing the entire volume of trail run-off into one fifth for each of the outlets. Third, each of the drain outlets would have rock rip-rap at the openings to dissipate the energy of the released water, avoiding the creation of gullies on the beach face. Finally, surface water run-off from the trail would primarily occur in winter, when the beach profile is regularly reworked and replenished by winter storm wave action.

O1-3 The commenter suggests that the existing concrete brik-brak should be removed, as it is an existing safety hazard.

Comment is acknowledged; however, the concrete debris mentioned in the comment is associated with a former state highway, and it is not the responsibility of the project to remove these remnants.

O1-4 The commenter expresses safety concerns regarding Alternative 3, associated with cyclists traversing the parking lot located at the eastern terminus of the trail alignment.

It is assumed that the commenter is referencing both the proposed project and Alternative 3, which each involve termination of the proposed trail at the western end of the Rincon Beach County Park parking lot. As discussed in Section 3.12 (Transportation) of the Draft EIR, the City's consulting traffic engineer determined there would not be a significant hazard associated with introducing additional cyclists traversing the Rincon County Beach Park parking lot. Vehicle maneuvers in the parking lot involve low speeds, and signage in the parking area would alert drivers to cyclists passing through the area. Signage at the terminus of the trail leading into the parking area would also alert cyclists to reduce speed and employ appropriate caution when riding through the parking lot.

O1-5 The commenter provides recommendations for improving safety.

The City acknowledges and appreciates the commenter's suggestions regarding bicycle safety. See Response O1-4 (above) for a response to bicycle safety concerns. No further response is required

because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR.

01-6 The commenter expresses concern regarding ADA compliance associated with the proposed project.

As discussed in Section 2.5 of the EIR, the existing benched slope with steep surface angle would be regraded in order to achieve compliance with ADA pathway slope requirements, making the project consistent with ADA requirements. It should be noted the refined Alternative 3 would incorporate a trail surface slope that marginally exceeds the maximum acceptable slope of 5 percent (the trail would have a slope of 6 percent) for a 690 foot portion of the segment south of the UPRR alignment. This marginally steeper slope surface may not result in a practical limitation to access by mobility challenged individuals, and an exception may be available in accordance with U.S. Access Board (USAB) guidelines for the 690-foot trail segment exceeding 5%, such that the entire trail could potentially achieve ADA compliance.

01-7 The commenter expresses support for Alternative 4, in particular relating to safety issues. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR.

The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

01-8 The commenter states that vehicle parking provided at the trailhead on the western end may solve the problem of reduced parking. However, the commenter expresses concern that the City is considering this location for an auto camp of permanent rental trailers and suggests that possible intrusion is considered in the EIR.

Comment is acknowledged. The informal dirt parking area at the eastern terminus of Carpinteria Avenue is within the City-owned right-of-way for Carpinteria Avenue and would not be affected by potential future development of an auto camp on the adjacent privately-owned parcel.

01-9 The commenter expresses safety concerns regarding the proposed bridge, especially regarding climbing, jumping, and tossing objects into the tracks below.

As a facility constructed within their right-of-way, UPRR has approval authority for the final bridge design and will ensure it is consistent with their safety standards regarding the expressed concerns of the commenter. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

01-10 The commenter expresses concern regarding the loss of 30 percent of wind uplift and expresses support for the soaring community and their inability to use this site once the project is approved.

Please refer to Global Response GR1.

01-11 The commenter provides a concluding statement.

The City acknowledges the comment and notes that it provides concluding remarks that do not raise new or additional environmental issues concerning the adequacy of the Draft EIR. No further response is required or provided.

Subject: **Support of the Steeper Slopes/Reduced Earthwork Alternative (Alternative 3) as the environmentally superior alternative in the Carpinteria Rincon Multi-Use Trail Draft Environmental Impact Report (DEIR).**

Dear Mr. Roberts:

Thank you for the opportunity to review and provide comment on the DEIR for the Carpinteria Rincon Multi-Use Trail project (project). SBCAG appreciates its partnership with the City of Carpinteria to advance this project to complete a long-standing gap in the statewide California Coastal Trail, improve public safety, and enhance non-vehicular travel alternatives along the Highway 101 corridor that connects communities and regional coastal resources. SBCAG respectfully submits the following comments in support of Steeper Slopes/Reduced Earthwork Alternative (Alternative 3), as the environmentally superior alternative as expressed in the project's DEIR. L1-1

SBCAG agrees that Alternative 3 meets stated project objectives while reducing overall environmental impacts, including reducing the volume of earthwork required for the project i.e., 15,000 less cubic yards (approximately an eight percent reduction) translating to fewer haul trucks and greenhouse gas emissions during construction. It also reduces construction-related noise impacts and has less of an impact upon recreational options, specifically in regard to concerns expressed for paragliding and hang-gliding activities occurring on private properties above the trail alignment. In addition to the DEIR, SBCAG recognizes that Alternative 3 reflects a design that has advanced and gained approvals from Union Pacific Railroad, California Public Utilities Commission, and other stakeholders. It is also the only alternative that can be delivered within the timeline for construction to meet a funding deadline of June 2022, since other alternatives are more preliminary in nature and would require significant re-design efforts. L1-2

Again, SBCAG appreciates the opportunity to provide comments on the DEIR and looks forward to reviewing the Final Environmental Impact Report. SBCAG has long valued coordination with partner agencies like the City of Carpinteria to bring about important multi-use opportunities in our region and along the Highway 101 corridor. If you have any questions regarding this response, please call Fred Luna, SBCAG Director of Project Delivery and Construction, at (805) 961-8926 or by email at fluna@sbcag.org. L1-3

Sincerely,

Marjie Kirn, Executive Director
Santa Barbara County Association of Governments

INTENTIONALLY LEFT BLANK

Response to Comment Letter L1

Santa Barbara County Association of Governments
Marjie Kirn
April 15, 2021

L1-1 The City acknowledges the comment as an introduction to comments that follow. No further response is required.

L1-2 The commenter provides general support for Alternative 3 and agrees that it would reduce potential environmental impacts. The comment does not raise any issue concerning the adequacy of the Draft EIR. No response is required.

L1-3 The City acknowledges the comment as conclusionary remarks. No further response is required.

INTENTIONALLY LEFT BLANK

Comment Letter L2

Hi Nick –

The Carpinteria Sanitary District commented on this project in late 2019. Refer to the attached letter, which we suggest be added to the record for CEQA purposes. Based on the critical nature of sewer infrastructure in the vicinity of the City's proposed project, we offer the following additional comments on the DEIR. L2-1

- Extension of the trail on the freeway side of the bluff east of the railroad crossing, if this is the selected or preferred alternative, must not interfere with or in any way compromise the District's existing 4-inch diameter HDPE force main in this location. Civil design should be coordinated to ensure this outcome. L2-2
- Within the entire project area, the trail design should ensure that the District has continued access to the 4-inch diameter HDPE force main located parallel to US 101 and approximately 5 feet south of the southbound shoulder. The proposed trail should not inhibit or impair future access, up to and included excavation for repair and/or replacement of the existing pipeline. L2-3
- DEIR Appendix K evaluates extended routes through the Rincon Beach Park. Aerial images for the graphics in this appendix do not show the District's wastewater lift station. Although this critical infrastructure is mentioned in the narrative, it is unclear how the City intends to construct a pathway in proximity to this facility. It is crucial that this facility remain accessible at all times for emergency response and that pipelines and buried infrastructure be protected. The District has a legal easement from the County of Santa Barbara in this vicinity for both buried and surface improvements. L2-4

Thank you for the opportunity to comment on this project. L2-5

Community Development Department
City of Carpinteria
5775 Carpinteria Avenue
Carpinteria, California 93013

Subject: Project No. 19-2015-CUP/CDP
Carpinteria Rincon Trail Project

Dear Mr. Bobroff;

Thank you for the opportunity to provide comments on the subject project. The project applicant proposes to construct a 2,800-foot long paved multi-use trail extending from the eastern terminus of Carpinteria Avenue in the City of Carpinteria to Rincon Beach Park in the County of Santa Barbara, near the Ventura County line. The proposed trail would be 16 feet in width (comprised of a 10-wide path with a 3-foot paved shoulder along each side of the trail). The trail project includes a new 160-foot long clear span pre-fabricated bridge crossing over the UPRR alignment. Grading and earthwork quantities necessary to cut the trail bench and stabilize slopes in the project area estimated at 104,000 cubic yards of cut, 10,300 cubic yards of which would be used for fill on-site. The remaining 94,000 cubic yards of cut material would be exported offsite. A storm drain collection system is proposed for the trail alignment, with new drain outlets to the ocean. L2-6

The Carpinteria Sanitary District (District) has the following initial comment:

- The District has a 4-inch diameter HDPE sewer force main that is located immediately north (5 feet to 30 feet) of the proposed trail alignment. At stations 21 through 23.5, the proposed trail is approximately five (5) horizontal feet from the force main. It also appears the proposed trail is 5 to 10 vertical feet from the force main. This force main is a high priority subsurface installation that provides sewer service to the Rincon Point community. L2-7

- Contractors excavating, boring, drilling, sinking fenceposts or other subsurface work must take extreme precaution to ensure the force main is protected during the construction of the trail. The District should be notified when excavation activities are occurring between stations 21 through 24. This should be noted on the construction drawings. L2-8

If you have any questions regarding the comments provided by the District, please contact me at (805) 684-7214, ext. 13.

L2-9

Sincerely,
CARPINTERIA SANITARY DISTRICT

INTENTIONALLY LEFT BLANK

Response to Comment Letter L2

Carpinteria Sanitary District
Craig Murray, PE
March 15, 2021

L2-1 The comment references a previous letter, provided to the City by Carpinteria Sanitary District. Responses to the referenced letter are provided in comments L2-6 through L2-9, below. The comment also introduces comments that follow. No further response is required.

L2-2 The comment expresses concern regarding potential interference with Carpinteria Sanitary District's 4-inch high-density polyethylene (HDPE) force main associated with extension of the proposed trail on the freeway side of the bluff, east of the railroad crossing.

The location of the force main and the need to exercise extreme caution during project construction located in close proximity to the force main will be noted on plans; in order to heighten overall awareness, the sewer force main location will be surveyed and flagged in the field for those sections immediately adjacent to project construction work zones..

L2-3 The comment expresses concern regarding access to the 4-inch HDPE force main.

The location of the force main and requirements to preserve access to this force main location following project construction will be noted on plans; in order to heighten overall awareness, the sewer line location will be surveyed and flagged in the field for those sections immediately adjacent to project construction work zones. The City will also make compliance with the comments in this letter a project condition of approval of the CUP/CDP.

L2-4 The comment expresses concern regarding the Carpinteria Sanitary District's wastewater lift station and ensuring that this facility remains accessible at all times for emergency response and that pipelines and buried infrastructure are protected.

Comment is noted. The existing wastewater lift-station along the north side of the Rincon Beach County Park would only be within the potential alignment for Alternative 4. Should Alternative 4 be implemented for development of the trail, the final trail engineering design would be required to avoid impacts to the wastewater lift station and connected sewer lines.

L2-5 The City acknowledges the comment as conclusionary remarks. No further response is required.

L2-6 This comment provides an accurate summary of the project and does not raise any issue concerning the adequacy of the Draft EIR. No response is required.

L2-7 This comment outlines the location of the 4-inch HDPE force main.

Thank you for identifying the location of District sewer collection lines in the project vicinity.

L2-8 The comment expresses concern regarding the existing HDPE force main and requests that the City takes precaution during construction in this area. The commenter requests that the City notifies the

Carpinteria Sanitary District when excavation occurs between stations 21 through 24 and requests the location of these facilities be identified on construction drawings.

The location of sewer lines and the need to contact the District for work near these lines will be noted on plans. In order to heighten overall awareness, the sewer line location will be surveyed and flagged in the field for those sections immediately adjacent to project construction work zones. The City will also make compliance with the comments in this letter a project condition of approval of the CUP/CDP.

L2-9 The City acknowledges the comment as conclusionary remarks. No further response is required.

Re: Carpinteria Rincon Multi-Use Trail Notice of Preparation for an Environmental Impact Report – Public Comment

Dear Mr. Bobroff:

The County of Santa Barbara Planning and Development Department reviewed the City of Carpinteria's Rincon Multi-Use Trail Environmental Impact Report (EIR) and appreciates the opportunity to provide the comments listed below. L3-1

1. **Alternatives Analysis** L3-2
   - The County of Santa Barbara requests that the alternatives in the EIR are analyzed such that any alternative can be approved during the County of Santa Barbara's permitting process. Specific analysis, such as project information, grading quantities, and mitigation measures for each project alternative, is requested to be included in the EIR.

2. **Trail Location** L3-3
   - The alternatives analysis should discuss the ocean views visible from the trail and access to coastal resources as well as the required earthwork for the proposed alignment and for all alternative alignments.

3. **Policy Consistency** L3-4
   - The County's permit will include a policy consistency analysis with the County's Comprehensive Plan. It is recommended that the EIR provide information throughout the document, and specifically in the Land Use section, to address the relevant County policies, including:

     Recreation
     - **Coastal Land Use Plan Policy 7-33**: To encourage walking and biking as alternatives to travel by automobile, the County shall strongly encourage development of

new pedestrian and/or bicycle-friendly paths along the highway corridor. Improvements to Highway 101 shall not remove existing bikeways or pedestrian paths or preclude the development of proposed bikeways or pedestrian paths that are identified in the County's Comprehensive Plan, Coastal Land Use Plan and community plans, without providing comparable or better replacement facilities.

- **Coastal Act 30211**. Development shall not interfere with the public's right of access to the sea where acquired through use, custom, or legislative authorization, including, but not limited to, the use of dry sand and rocky coastal beaches to the first line of terrestrial vegetation.

- **Coastal Act Policy 30252**. The location and amount of new development should maintain and enhance public access to the coast by: (1) facilitating the provision or extension of transit service; (2) providing commercial facilities within or adjoining residential development or in other areas that will minimize the use of coastal access roads; (3) providing non-automobile circulation within the development; (4) providing adequate parking facilities or providing substitute means of serving the development with public transportation; (5) assuring the potential for public transit for high-intensity uses such as high-rise office buildings, and by (6) assuring that the recreational needs of new residents will not- overload nearby coastal recreation areas by correlating the amount of development with local park acquisition and development plans with the provision of on-site recreational facilities to serve the new development.

- **Coastal Act Policy 30210**. In carrying out the requirement of Section 4 of Article X of the California Constitution, maximum access, which shall be conspicuously posted, and recreational opportunities shall be provided for all the people consistent with public safety needs and the need to protect public rights, rights of private property owners and natural resource areas from overuse.

- **Coastal Act Policy 30212.5** Wherever appropriate and feasible, public-facilities, including parking areas or facilities, shall be distributed throughout an area so as to mitigate against the impacts, social and otherwise, of overcrowding or overuse by the public of any single area.

- **Coastal Act Policy 30213**. Lower cost visitor and recreational facilities shall be protected, encouraged, and, where feasible, provided. Developments providing public recreational opportunities are preferred.

- **CLUP Policy 7-8**: Increased opportunities for beach access shall be provided in the Carpinteria planning area.

L3-4
Cont.

Geologic:

- **CLUP Policy 3-13:** Plans for development shall minimize cut and fill operations. Plans requiring excessive cutting and filling may be denied if it is determined that the development could be carried out with less alteration of the natural terrain.

- **CLUP Policy 3-14:** All development shall be designed to fit the site topography, soils, geology, hydrology, and any other existing conditions and be oriented so that grading and other site preparation is kept to an absolute minimum. Natural features, landforms, and native vegetation, such as trees, shall be preserved to the maximum extent feasible. Areas of the site which are not suited for development because of known soil, geologic, flood, erosion or other hazards shall remain in open space.

Environmentally Sensitive Habitat:

- **Coastal Act Policy 30240 (b).** Development in areas adjacent to environmentally sensitive habitat areas and parks and recreation areas shall be sited and designed to prevent impacts which would significantly degrade such areas, and shall be compatible with the continuance of such habitat areas.

Visual:

- **Coastal Act Policy 30251.** The scenic and visual qualities of coastal areas shall be considered and protected as a resource of public importance. Permitted development shall be sited and designed to protect views to and along the ocean and scenic coastal areas, to minimize the alteration of natural land forms, to be visually compatible with the character of surrounding areas, and, where feasible, to restore and enhance visual quality in visually degraded areas.

- **CLUP Policy 4-3:** In areas designated as rural on the land use plan maps, the height, scale, and design of structures shall be compatible with the character of the surrounding natural environment, except where technical requirements dictate otherwise. Structures shall be subordinate in appearance to natural landforms; shall be designed to follow the natural contours of the landscape; and shall be sited so as not to intrude into the skyline as seen from public viewing places.

Transportation:

- **Circulation Element Policy 5C:** The County shall continue to develop programs that encourage the use of alternative modes of transportation including, but not limited to, an updated bicycle route plan, park and ride facilities, and transportation demand management ordinances.

Response to Comment Letter L3

County of Santa Barbara Planning and Development
Lisa Plowman
May 3, 2021

L3-1 The City acknowledges the comment as an introduction to comments that follow. No further response is required.

L3-2 The commenter requests that the City analyzes each alternative outlined in the DEIR, and includes specifics such as project information, grading quantities, and mitigation measures.

Per CEQA Guidelines Section 15126.6(d), an EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed. (*County of Inyo v. City of Los Angeles* (1981) 124 Cal.App.3d 1). The analysis of the project did not identify any unavoidable significant impacts, which is the paramount consideration for the development of alternatives to the proposed action. However, given potentially significant impacts were identified, the EIR included four distinct alternatives to the project, each with an intent to lessen or avoid the significant impacts of the proposal. Information on each alternative, including involved grading quantities, has been provided in Section 6.0; the relative severity of each impact is also compared to the project, and the necessity under each alternative for implementation of mitigation measures identified for project impacts is identified. Therefore, per CEQA Guidelines Section 15126.6(d), a full analysis of each proposed alternative, including specific mitigation measures to address unique impacts of such an alternative, is not required.

Rather, the alternatives analysis is intended to identify whether the proposed project, or an alternative to the proposal, has the greatest potential for minimization of environmental impacts, while achieving the primary objectives of the proposed project. Insofar as several alternatives appear to offer opportunities to reduce impacts as compared to the proposed project, as much detail as possible is provided regarding the impacts and mitigations associated with each of the alternatives, although subsequent environmental review to satisfy CEQA may need to be performed in some issue areas if one of the alternatives is selected for implementation in favor of the proposed project.

L3-3 The commenter requests that the alternative analysis discusses ocean views visible from the trail, access to coastal resources, and required earthwork for the proposed alignment and all alternative alignments.

See response L3-2, above. The alternative analysis included an analysis of aesthetic and recreational impacts, as they compare to the proposed project, consistent with CEQA Guidelines Section 15126.6(d). In addition, per Section 6.6 of the Draft EIR, Alternative 2 would result in 46,000 cubic yards (CY) of cut and 10,500 CY of fill; Alternative 3 would result in 96,077 CY of cut and 10,570 CY of fill, and Alternative 4 would result in 105,300 CY of cut and 710 CY of fill.

L3-4 The commenter suggests that various policies from the County of Santa Barbara (County's) Comprehensive Plan should be included in the EIR. These policies have been added in Section 3.9.2 of the EIR (see Chapter 3, Errata).

L3-5 The commenter requests that future notices are sent to addresses for County representatives provided in this comment. The City will provide notices to the County representatives at addresses indicated in this comment. No further response is required.

Comment Letter L4

COUNTY of VENTURA

RESOURCE MANAGEMENT AGENCY
CHARLES R. GENKEL
Environmental Health Director

April 27, 2021

City of Carpinteria

Carpinteria, CA 93013
ATTN: Nick Bobroff, Principal Planner

Carpinteria Rincon Trail, Environmental Document Review – Notice of EIR Preparation, (RMA REF # 19-012-1)

Ventura County Environmental Health Division (Division) staff reviewed the information submitted for the subject project. Proposed Carpinteria Rincon Multi-Use Trail (Project) includes the construction of:

- A shared use trail;
- A clear-span bridge;
- A stormwater drainage collection system with new drain outlets to the ocean up to the western end of Rincon Beach County Park and the Ventura County Line in Santa Barbara County.

L4-1

The Division provides the following comments:

1. Project includes the construction of three new stormwater drainage outlets south of the Union Pacific Railroad alignment. California Health and Safety Code, Section 115880 (c) (4) (B), requires that testing shall be conducted on a weekly basis if the beach is located on an area adjacent to a storm drain that flows in the summer. Contact the State Water Resources Control Board, Ocean Standards Unit for any changes with Santa Barbara County's sampling sites.

L4-2

2. The construction and use of the stormwater drainage outlets have the potential for proliferation of vectors, including mosquitoes. Monitoring and controlling mosquito activities from these sites can reduce exposure of the public from vector-borne diseases.

L4-3

If you have any questions, please contact me at 805/654-5040 or Paolo.Quinto@ventura.org.

Response to Comment Letter L4

County of Ventura Community Development Department
Paolo Quinto
April 27, 2021

L4-1 The City acknowledges the comment as an accurate overview of the project and an introduction to comments that follow. No further response is required.

L4-2 The commenter states that weekly testing shall be conducted for the new stormwater drainage outlets, which should be coordinated with the State Water Resources Control Board, Ocean Standards Unit.

This comment does not raise any issue concerning the adequacy of the Draft EIR. Testing and sampling of proposed stormwater drainage outlets shall be performed in accordance with all existing laws and regulations. No further response is required.

L4-3 The commenter expresses concern regarding the proliferation of vectors, including mosquitoes, associated with new stormwater drainage outlets and recommends monitoring and controlling mosquito activities from these sites to reduce exposure to vector-borne diseases.

This comment does not raise any issue concerning the adequacy of the Draft EIR. The City appreciates the recommendation regarding monitoring and control of mosquitos; it is anticipated that the City and County will both follow guidelines and practices established by the Mosquito and Vector Management District of Santa Barbara County in the maintenance procedures for their respective portions of the trail alignment. No further response is required.

Mr.Nick

8 very much disturbs me. That the EIR, still does not have the monarch butterfly habitat that is there. It doesn't have the migratory bird act. I2-1

The monarchs are in the eucalyptus trees on the East Side of the freeway there as well as the multi million dollar homes each year. The migratory birds fly up-and-down that cliff face by weekly to Tri weekly from the carpenter Rhea salt March to the Venter a salt marsh all of these are going to be affected drastically! The endangered species of plant life on the front of that cliff face isn't even being considered. How is this possible under federal law? How is this no concern to your environmental impact report? I2-2

Response to Comment Letter I2

E. Arciniega
April 9, 2021

I2-1 The commenter expresses concern regarding the presence of monarch butterfly habitat, stated in the comment letter to be present in eucalyptus trees on the East Side of the freeway and the absence of discussion regarding the Migratory Bird Treaty Act.

As discussed in Section 3.3.4, impacts to monarch butterfly individuals and monarch butterfly overwintering sites would be less than significant. Although monarch butterflies are known to occur near the project site along Bates Road just north of U.S. Highway 101 in a eucalyptus stand associated with Rincon Creek, no impacts to this monarch overwintering site are anticipated since the overall height of the slope within Rincon Beach County Park south of Highway 101 will not be reduced, as work includes proposed terraces to stabilize the hill but will not decrease its overall height, and therefore no changes to the wind conditions at the overwintering site are expected. Additionally, this overwintering site is largely protected by the hill below the single residential development at 637 Bates Road, and any possible changes to weather and wind patterns due to project implementation would not affect the protective contour this hill independently provides. In addition, as discussed in Section 3.3.4, 22 species of native birds were detected on site, including several with the potential to nest there. Nests, eggs and nestlings of all native bird species are protected by the Migratory Bird Treaty Act and the California Fish and Game Code, as discussed in Section 3.3.4 of the Draft EIR. Vegetation clearing and grading, if occurring during the nesting season (typically mid-February to August), have the potential to destroy nests, eggs and nestlings, which could violate these regulations. However, with implementation of MM-BIO-1, MM-BIO-2, and MM-BIO-6, project impacts to nesting and migratory birds would be reduced to less than significant.

I2-2 The commenter expresses concern regarding endangered plant species on the cliff face.

As discussed in Section 3.3.4, no special-status plant species were observed; thus, impacts to special-status plant species would be less than significant.

Comment Letter I3

****EXTERNAL EMAIL****

CAUTION: This email originated from outside the City of Carpinteria. DO NOT OPEN attachments or CLICK on links unless you are sure they are safe. Remember, reputable vendors, banks, etc. will not ask you to disclose passwords or other sensitive information.

Ok so....
Mr.Nick

It still very much disturbs me. That the EIR, still does not have the monarch butterfly habitat that is there. It doesn't have the migratory bird act. It doesn't even have a true Wind report on it! I3-1 I3-2

The monarchs are in the eucalyptus trees on the East Side of the freeway there as well as the multi million dollar homes each year. That will be highly affected by your committees ignorance. The migratory bird act, that fly up-and-down that cliff face bi to Tri weekly from the Carpinteria salt Marsh. to the Ventera salt marsh all of these are going to be affected drastically! The endangered species of plant life on the front of that cliff face isn't even being considered. How is this possible under federal law? How is this no concern to your environmental impact report? I3-3

How is this Committee Bypassing FEDERAL LAW? How are you ignoring a nearly endangered Species monarch butterfly flies?
The TUFFEST migratory bird acts known thruout the USA? Based here in CA?
Endsngered plant life Species that a big growing on the front of that Hill for well since the old highway was there they've been there for decades one of very few areas they actually grow in our whole state I3-4

Turning a blind eye, to these things, will get you nowhere. Want you start your gonna have to replace at all. Costing you hundreds of millions of dollars. For the 6 million dollars year after. I3-5
To top it off this trail is not Ada compliant. Simply because it is Ada compliant from highway 150 down to the park it does not meet Ada compliancy down through the parking lot to connect to the other trail. That is also not Ada compliant coming out of the parking lot. I3-6

Response to Comment Letter I3

E. Arciniega
April 9, 2021

I3-1 The commenter expresses concern regarding an absence of reference in the EIR to monarch butterfly habitat and the Migratory Bird Treaty Act.

See response I2-1, above.

I3-2 The commenter states that no true wind report was included.

A detailed analysis of the alterations to air flow patterns above the bluffs resulting from project implementation was completed for the EIR; the Airflow Analysis report was provided as Appendix I of the Draft EIR. The comment does not pertain to the adequacy of the EIR. No further response is required.

I3-3 The commenter expresses concern regarding the presence of monarch butterfly habitat, stated in the comment letter to be present in eucalyptus trees on the East Side of the freeway; the Migratory Bird Treaty Act; and endangered plant species. The commenter believes that the project does not comply with federal law regarding monarch butterflies and the Migratory Bird Treaty Act.

See response I2-1, above.

I3-4 The commenter expresses concern regarding endangered plant species.

See response I2-2, above.

I3-5 The commenter expresses general opposition to the project and economic concerns. The comment does not pertain to the adequacy of the EIR. No response is required.

I3-6 The commenter expresses concern that the proposed trail is not compliant with the Americans with Disabilities Act of 1990 (ADA).

As discussed in Section 2.5 of the EIR, the existing benched slope would be regraded in order to achieve compliance with ADA pathway slope requirements, making the project consistent with ADA requirements. It should be noted the refined Alternative 3 would incorporate a trail surface slope that marginally exceeds the maximum acceptable slope of 5 percent (the trail could have a slope of 6 percent) for a 690 foot portion of the segment south of the UPRR alignment. This marginally steeper slope surface may not result in a practical limitation to access by mobility challenged individuals, and an exception may be available in accordance with USAB guidelines for the 690-foot trail segment exceeding 5 percent, such that the entire trail could potentially achieve ADA compliance. The comment does not pertain to the adequacy of the EIR. No further response is required.

Comment Letter I4

Hi Nick, I encourage you to take a progressive approach to parks and rec and embrace the unique sport of paragliding and hang gliding in Carpinteria. I4-1
There are no federal rules that prevent free flight on the bluff and any local rules would be superceded by the Federal Aviation Administration. I4-2

Dubai built a 1200 foot high mini mountain just for free flight that people come to from all over the world. I am sure you can create a one of a kind flight park at the Bluff and have a bike path too. What a tourist attraction that would be! I4-3

Love ya mahn!

Aaron

Aaron LaPlante
Carpinteria Unified School District
805-886-1435
aaron@cusd.net

Response to Comment Letter I4

Aaron LaPlante
March 12, 2021

I4-1 The commenter expresses general opposition to the project, which does not pertain to the adequacy of the EIR. No further response is required.

I4-2 The commenter states that no existing federal rules prevent free flight at the project site and local rules would be superseded by the Federal Aviation Administration. This comment does not pertain to the adequacy of the EIR. No further response is required.

I4-3 The commenter provides a description of an artificial 1,200-foot high mountain that was constructed to support free flight opportunities and suggests that the City consider creating something like this instead of the proposed project. This comment does not pertain to the adequacy of the EIR. No further response is required.

It still very much disturbs me. That the EIR, still does not have the monarch butterfly habitat that is there. It doesn't have the migratory bird act. It doesn't even have a true Wind report on it! I5-1 I5-2

The monarchs are in the eucalyptus trees on the East Side of the freeway there as well as the multi million dollar homes each year. That will be highly affected by your committee's ignorance. The migratory bird act, that fly up-and-down that cliff face bi to Tri weekly from the Carpinteria salt Marsh. to the Ventera salt marsh all of these are going to be affected drastically! The endangered species of plant life on the front of that cliff face isn't even being considered. How is this possible under federal law? How is this no concern to your environmental impact report? I5-3

How is this Committee Bypassing FEDERAL LAW? How are you ignoring a nearly endangered Species monarch butterfly flies?
The TOUGHEST migratory bird acts known throughout the USA? Based here in CA?
Endangered plant life Species that a big growing on the front of that Hill for well since the old highway was there they've been there for decades one of very few areas they actually grow in our whole state I5-4

Turning a blind eye, to these things, will get you nowhere. Once you start you're gonna have to replace it all. Costing you hundreds of millions of dollars. For the 6 million dollars a year after. I5-5
To top it off this trail is not Ada compliant. Simply because it is Ada compliant from highway 150 down to the park it does not meet Ada compliance down through the parking lot to connect to the other trail. That is also not Ada compliant coming out of the parking lot. This trail is a True FAILURE on Both ends!!! It is going to cost the city Millions of dollars in the end. I5-6
The Air flow report IS Not one done in that area. It does not even correspond to the project. OUR MILLION Dollar homes are going to be SEVERELY AFFECTED! Once this hill is CUT away at such a slope. The perfect Wind Shadow that is built by Nature and the Current slope. SHIELDs our Homes from MOST of the 40-50MPH winds post frontal with each storm. Allowing the Monarchs to be here throughout the winter protected in all of our trees. I5-7

A true Fallacy, is being pushed in search of exactly what?

A State ruling that is not in compliance with Regulations and FEDERAL LAW!~! All being ignored!~! I5-8

Response to Comment Letter I5

E. Arciniega
April 14, 2021

I5-1 The commenter expresses concern regarding the presence of monarch butterfly habitat and an apparent neglect of requirements of the Migratory Bird Treaty Act.

See response I2-1, above.

I5-2 The commenter states that no wind report was included.

See response to I3-2, above.

I5-3 The commenter expresses concern regarding the presence of monarch butterfly habitat, stated in the comment letter to be present in eucalyptus trees on the East Side of the freeway; the Migratory Bird Treaty Act; and endangered plant species. The commenter believes that the project does not comply with federal law regarding monarch butterflies and the Migratory Bird Treaty Act.

See response I2-1, above.

I5-4 The commenter expresses concern regarding endangered plant species.

See response I2-2, above.

I5-5 The commenter expresses general opposition to the project and economic concerns. The comment does not pertain to the adequacy of the EIR. No response is required.

I5-6 The commenter expresses concern that the proposed trail is not compliant with ADA and expresses economic concerns associated with the project.

As discussed in Section 2.5 of the EIR, the existing benched slope would be regraded in order to achieve compliance with ADA pathway slope requirements, making the project consistent with ADA requirements. The proposed project would terminate at the west (north) end of the parking lot for Rincon Beach County Park, and would not modify conditions present in the parking lot or the roadway segment at the south end of the parking lot; as such, the concerns expressed by the commenter regarding ADA compliance of the parking lot and southern vehicle exit to the parking area are not applicable to the proposed project. In addition, the City acknowledges that this comment raises economic issues that do not appear to relate to any physical effect on the environment. No further response is required because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. No further response is required.

I5-7 The commenter expresses concern regarding the Airflow Analysis provided as part of the Draft EIR and states that this Airflow Analysis does not correspond to the project. In addition, the comment expresses economic concerns associated with proposed cut slopes, and concerns regarding the monarch butterfly.

Refer to global response GR1 regarding the air flow analysis and determination of project impacts on existing soaring opportunities. Regarding the commenter's economic concerns, the City acknowledges the comment and notes that it raises economic, social, or political issues that do not appear to relate to any physical effect on the environment. Regarding monarch butterfly concerns, please refer to response I2-1, above. No further response is required.

I5-8 The commenter express general opposition to the project and states that the project is not in compliance with federal law.

The comment does not pertain to the adequacy of the EIR. Regarding the commenter's previous concerns associated with compliance with federal law regarding monarch butterflies and the Migratory Bird Treaty Act, please see response I2-1, above. No further response is required.

Comment Letter I6

Nick, I understand their are some changes to the Bates soaring hill in Carpenteria. I've traveled to Carpenteria many times to bike and also fly Bates, with the proposed changes to accommodate a bike trail. I must tell you that the bike trail would probably be best on the other side to avoid the congestion of a parking lot and as a pilot I believe the change to the Bates hill will significantly reduce the available lift.

With Bates soaring ruined I'll no longer visit Carpenteria. I hope you value the input from pilots who love Bates and select an alternative bike path Thank you for your attention S. Wuebber Belgrade, MT

I6-1

Response to Comment Letter I6

Scott Wuebber
April 16, 2021

I6-1 The commenter expresses support for the construction of the proposed trail on the freeway side of the ridge-top (Alternative 4) to avoid congestion of the parking lot and to prevent project-related reductions in the existing available lift along the bluff-top for soaring activities.

It is assumed that the commenter supports Alternative 4 instead of the proposed project. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

Comment Letter I7

Hi Nick, I've written to you before but wanted to reach out again and ask that you consider all proposals that would allow all users of the area under discussion to enjoy this magic spot.

As an active cyclist living in Ojai, I have to tell you that the section of 101 that we take from the overpass down to the offramp is a stretch I look forward to as I can coast and hit decent speed, oftentimes giving me a nice break before that long exposed stretch past Rincon and La Conchita.

I7-1

Paragliding is another passion of mine and Bates is a world class site. Surely we can find a way that works for everyone.

Please do everything you can to help ensure that we don't lose this site.

I'm happy to discuss at any time and appreciate your consideration and time.

Best,

M.

April 16, 2021

I7-1 The City acknowledges the comment and notes that it expresses opposition for the proposed project but does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

Comment Letter I8

Nick Bobroff

April 16, 2021

Principal Planner

Community Development Department

City of Carpinteria 5775 Carpinteria CA 93013

Hello Mr. Bobroff and readers of this letter,

During the Zoom Webinar meeting on April 13, 2021, Alternative #4, which would mostly be built next to the Southbound 101 freeway, was unanimously supported by the Environmental Review Committee, as the "Environmentally Superior Alternative." I agree. I8-1

Several questions asked during the meeting, were left unanswered and several conclusions, of the Focused Environmental Impact Report, did not seem to be an adequate or a complete analysis. I hope those questions can be answered and given to the public and the summary of the conclusions can be adjusted to be more reasonable and be supported by applicable information and facts, for the previous Alternative, and the recommended Alternative. I8-2

In the City of Carpinteria, except for that portion of the current bike route that is on the Southbound, US highway 101 bridge, between highway 150 and Bates Road, which is approximately 14 feet wide, there is no portion of the bike route, that is close to being 16 feet wide. With the choice of the Committee being Alternative #4, that width can and should be no wider, than 8 feet (with a few exceptions, for "Switchbacks,"). This will be more in harmony with the landscape and closer to the Project Description (see attachment 1). Reducing the width of the bridge over the Union Pacific Railroad Crossing to 8 feet wide and making it more in line with the Southbound 101 freeway, will be a significant cost savings and less intrusive, to the environment. I8-3

The presentation on April 13, showed an aerial depiction of the "Little Diamondhead," Bluff (to the west of the County parking lot) as having "...existing drainage pipes." There are rusted remnants of corrugated drain pipes, but there are no existing, functional drain pipes, as depicted by the diagrams presented (See attachments 2, 2a, 2b, 2c, 2d.) in the Zoom meeting. My attachments (except #2) show current conditions, but do reflect conditions, that I have seen, in 15 years of flying at Bates. One large, rusted section, ended up on the beach, and laid there for months, until high tide, took it out to sea. I8-4

I will submit additional comments and questions and attachments, during the public comment window to do so. I8-5

Respectfully,

Ottis Gillespie

Oxnard, CA 93036

2

Drainage

The proposed trail project includes an integrated storm drainage system to ensure storm water run-off from the recontoured bluff face and the trail surface is conveyed to the ocean efficiently, avoiding potential erosion of slopes along the trail alignment. Along the portion of the trail north of the UPRR alignment, a concrete swale (v-ditch) would convey water along the trail edge, where it would be released into an existing surface drainage swale now serving US Highway 101. This swale connects to an existing storm drain that crosses underneath the UPRR alignment, and then descends to the beach level. This storm drain is labelled as "1" in illustration 6. No improvements are proposed to storm drain 1, and the trail storm drain volumes contributed to this storm drain would be negligible compared to existing flows already contributed from portions of US Highway 101.

SOURCE: Bengal Engineering

Illustration 6 Major Storm Drainage Components of the Project

On the south side of the UPRR alignment, a concrete drainage swale would also carry surface run off from the recontoured bluff face and trail, conveying such drainage along the side of the trail until it reaches one of the storm drain inlets lower in elevation. A total of 5 vertical storm drains would convey this storm water from the trail to the beach elevation, for the trail segment south of the UPRR alignment (refer to Illustration 6). Drains #3 and #6 (shown in light blue in illustration 6) are existing and would be re-used, including rehabilitation of existing piping; drains #2,# 4, and #5 (shown in magenta in illustration 6) would be newly developed for the project.

Response to Comment Letter I8

Ottis Gillespie
April 16, 2021

I8-1 The commenter expresses support for Alternative 4. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I8-2 The commenter states that questions were left unanswered during the meeting held on April 13, 2021, pertaining to the adequacy and conclusions of the Draft EIR. The commenter hopes that these questions are answered and that conclusions are adjusted.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not identify specific questions left unanswered from the environmental review committee hearing, nor does it raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I8-3 The commenter suggests that the width of the proposed bike route should be no wider than 8 feet, with the exceptions of switchbacks. The commenter explains potential benefits associated with limiting the proposed trail width to 8 feet.

The City acknowledges the comment and notes that it raises issues, including economic issues, that do not appear to relate to any physical effect on the environment. No further response is required because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR.

I8-4 The commenter states that no existing, functional pipes are present at certain locations depicted in the Draft EIR, based on photographs shown in comment I8-6. The drainage pipes referenced in this comment are represented as drains #2, #4, and #5 in Illustration 6 of the Draft EIR.

The City notes that the comment provides background information relative to the existing condition of drainage structures identified in the EIR. The project description indicates that existing drainage structures would be repaired/replaced, and three new drainage outlets would be developed under the proposed project. The comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. No further response is required or provided.

I8-5 The commenter states that they will provide additional comments during the public review period. The comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I8-6 The commenter provides illustrations of current conditions of the existing drain pipes on site compared to excerpts taken from the Draft EIR. Please refer to response I8-4, above. No further response is required because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR.

Comment Letter I9

Good afternoon Nick,

I hope this email finds you well. I have recently joined the paragliding community here in Santa Barbara but have been enjoying outdoor recreation up here my entire life. As a cyclist and someone that loves to ride the route from Santa Barbara down to Ventura, I was excited to hear of a route that would keep me off the freeway. I greatly appreciate all the work that has gone in to planning this bike route, but I would love to see some small changes. I am also someone who has dreamed of paragliding off Bates since I first saw some pilots there 5 years ago when officially moving to Santa Barbara. It was not until taking up the sport myself that I realized how important air flow is to the sport of flying. Without the right air flow, it is either unsafe or impossible to stay up in the air. I hope that the new bike path being constructed can keep both of my hobbies safe and possible in the future. I9-1 I9-2

I did sign the petition that was created with approximately 2000 signatures, but I wanted to do more in reaching out to you. I loved that ten environmental review committee recommended the alternate 4 route that would build a bike path on the North side of bates. Coastal soaring at bates makes Carpinteria truly special and unique and should not be lost due to this bike route. I appreciate the cities consideration in reaching out to the soaring community to truly understand the impact that this bike route could potentially create. I look forward to a bike route that is safe for bikers as well as the soaring community. I9-3 I9-4

Thank you for your time and consideration,

Laura Davalos, PT, DPT

Response to Comment Letter I9

Laura Davalos
April 19, 2021

I9-1 The commenter provides personal background and introductory remarks regarding the proposed project. The City acknowledges the comment as an introduction to comments that follow. No further response is required.

I9-2 The commenter expresses the importance of airflow in paragliding and expresses hope that implementation of the proposed project would not hinder both bicycling and paragliding.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I9-3 The commenter expresses support for Alternative 4. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I9-4 The City acknowledges the comment and notes that it provides concluding remarks that do not raise new or additional environmental issues concerning the adequacy of the Draft EIR. No further response is required or provided.

It still very much disturbs my self and others in our small group of houses. That the EIR, still does not have the monarch butterfly habitat that is here and across the freeway in the Eucalyptus trees. It doesn't have the migratory bird act. The sea birds fly up an down our coast multiple times a week! It doesn't even have a true Wind report on it! As a life time pilot (Private,military, commercial) The wind report is 100% wrong! WE have a perfect wind shadow. Created by the Current bluff/cliff face. I10-1

Think of putting a 800-1000' horse shoe over the freeway and our homes!
You will DESTROY it. Creating a Extremely large Coriolis spin to the air that will come straight off the back of the 45° bluff, across the freeway 2 times! Right through our homes. Potentially even causing car accidents as cars swerve vack an forth passing thru it! I10-2

The monarchs are in the eucalyptus trees on the East Side of the freeway there as well as within our multi million dollar homes each year. Harbored here all Winter throught our trees! That will be highly affected by your committee's ignorance.
The migratory bird act, that all fly up-and-down the current cliff face bi to Tri weekly from the Carpinteria salt Marsh. to the Ventera salt marsh all of these are going to be affected drastically!
The endangered species of plant life on the front of that cliff face isn't even being considered. I ask you, How is this possible under federal law? How is this no concern to your environmental impact report? I10-3

How is this Committee Bypassing FEDERAL LAW? How are you ignoring a nearly endangered Species monarch butterflies? The TOUGHEST migratory bird acts known throughout the USA? Based here in CA?
Endangered plant life Species that are growing on the front of that Cliff/Hill since the old highway was there. They have been there for decades one of very few areas they actually grow in our whole state. I10-4

Turning a blind eye, to these things, will get you nowhere. Once you start you're gonna have to replace it all. Costing you hundreds of millions of dollars. For the 6 million dollars a year that you are all after. I10-5

To top it off this trail is not of Ada compliance. Simply because it is Ada compliant from highway 150 down to the park it does not meet Ada compliance down through the parking lot! Or to connect to the other trail that goes Behind our homes!. That is also not Ada compliant coming out of the parking lot. This trail is a True FAILURE on Both ends!!! It is going to cost the city Millions of dollars in the end. I10-6

The Air flow report IS Not one done in that area. It does not even correspond to the project. OUR MILLION Dollar homes are going to be SEVERELY AFFECTED! Once this hill is CUT away at such a slope. The perfect Wind Shadow that is built by Nature and the Current slope. SHIELDs our Homes from MOST of the 40-50MPH winds post frontal with each storm. Allowing the Monarchs to be here throughout the winter protected in all of our trees. I10-7

A true Fallacy, is being pushed in search of exactly what? FAILURE? I10-8
Trail 4 is the only proposal that virtually eliminates all the Above!! Yet still not compliant down through the parking lot. I10-9

A State ruling that is not in compliance with Regulations and FEDERAL LAW!~! How is your one little rule book ignoring all the Above?! I10-10

I truly question this boards actions. That will not meet the objectives! Or finances

Response to Comment Letter I10

E. Arciniega
April 20, 2021

I10-1 The commenter expresses concern regarding the presence of monarch butterfly habitat and the neglect of requirements under the Migratory Bird Treaty Act.

See response I2-1, above.

I10-2 The commenter states that no wind report was included; states that the wind report is incorrect; and expresses concern regarding impacts to freeways, homes, and car accidents associated with wind.

See response to I3-2, above. In addition, please refer to Global Response GR1, Air Flow Analysis.

I10-3 The commenter expresses concern regarding the presence of monarch butterfly habitat, stated in the comment letter to be present in eucalyptus trees on the East Side of the freeway; the Migratory Bird Treaty Act; and endangered plant species. The commenter believes that the project does not comply with federal law regarding monarch butterflies and the Migratory Bird Treaty Act.

See response I2-1, above.

I10-4 The commenter expresses concern regarding endangered plant species.

See response I2-2, above.

I10-5 The commenter expresses general opposition to the project and economic concerns. The comment does not pertain to the adequacy of the EIR. No response is required.

I10-6 The commenter expresses concern that the proposed trail is not compliant with the ADA and expresses economic concerns associated with the project.

See response I5-6, above.

I10-7 The commenter expresses concern regarding the Airflow Analysis provided as part of the Draft EIR and states that this Airflow Analysis does not correspond to the project. In addition, the comment expresses economic concerns associated with proposed cut slopes, and concerns regarding the monarch butterfly.

Please refer to Global Response GR1, Air Flow Analysis; Global Response GR2, Landform Modification; and response I2-1 regarding monarch butterfly impacts.

I10-8 The commenter expresses general opposition to the project. The City acknowledges the comment and notes that it expresses opposition to the proposed project, but does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I10-9 The commenter expresses support for Alternative 4, but states that Alternative 4 is still not ADA-compliant through the parking lot.

The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. Regarding ADA compliance, see response I5-6, above. Alternative 4 would not route any portion of the trail through the Rincon Beach County Park parking lot, instead aligning the path along the northern side of the parking lot, and achieving a trail slope that is ADA compliant. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I10-10 The commenter states that the project is not in compliance with federal law and states that the project will not meet objectives or finances.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Regarding the commenter's previous concerns associated with compliance with federal law regarding monarch butterflies and the Migratory Bird Treaty Act, please see response I2-1, above. No further response is required.

Comment Letter I11

Nick Bobroff

April 21, 2021

Principal Planner

Community Development Department

City of Carpinteria 5775 Carpinteria Ave. Carpinteria, CA 93013

Hello Mr. Bobroff and readers of this letter,

This is my second reply to the Zoom webinar meeting on April 13,2021 of the Environmental Review Committee. The presentation summary by Dudek and Bengal Engineering seemed to exclude completed construction details and their costs. Is the completion of "earth work," and a concrete reinforced bridge buttress, on the terrace, almost level, to the Southbound US 101, near the eastern edge of the King property (see attachments 1, 1a,), included, in the estimated two-year construction window? What were the costs and under what guidelines and environmental usage parameters were used? I11-1

We have been shown grey scale illustrations, yellow and magenta line drawings and sandy scale drawings of the proposed sections of the Multi Use Trail, that start from highway 150 and terminate in the County parking lot (see attachments 2.1, 2.2, 2.3). What does the complete M.U.T., with support bracing, drain pipes, landscaping, bridge size, safety fencing, look like? How much will it cost? What are the costs, to date? With California Department of Transportation employees, taking a ten percent, salary cut, is it prudent to continue? Can traffic barriers, be placed on the existing Southbound US 101 bridge, on and off ramps at highway 150 and Bates Road, to protect bicyclists? Will the Southbound US 101 traffic off ramp at Bates Road be realigned, to the North, to allow more space, for bicyclists? I11-2

Committee member Lohaus pointed out that a small portion of the M.U.T., at Little Diamondhead, will not have a Pacific Ocean view with Alternative #4. How will this be different, from the lack of a Pacific Ocean view, on the north side of the King property? The Pacific Ocean is clearly visible for the 10-mile stretch of the existing bike path into Ventura. I11-3

The summary presentation, included a statement that there would be, "...no significant impact on soaring activities...." I would like to submit the link, to the Santa Barbara Soaring Association's, Aaron LaPlante's video, "Preserving Free Flight at Bates Bluff (see attachment video link)." I described in the Zoom meeting, that it is the deflection, of the prevailing South west wind, that generates lift and the lift band, that we paragliders and hang gliders, fly in. Little Diamondhead, for free flight, is like Cape Canaveral for powered rocket and Shuttle launches. There was a perception, that only "wind speed," which would not be affected, was the only factor, in considering, free flight opportunities at Little Diamondhead. Wind velocity is a factor, for paraglider and hang glider pilots, but not the only one for ridge soaring. There would be an almost 95% reduction, in ridge soaring opportunities, if Little Diamondhead is destroyed, and a reconfigured land mass, with; support structures, drain pipes, lower angle of inclination, and a elevated man- made pathway (with unsightly safety fencing), were to be built. I11-4

I will submit additional comments and questions and attachments, during the public comment window to do so. I11-5

April 21, 2021

Respectfully,

Ottis Gillespie 4/21/2021

Response to Comment Letter I11

Ottis Gillespie
April 21, 2021

I11-1 The commenter states that the April 13, 2021 presentation omitted details regarding construction and costs. The commenter asks if various components associated with construction of the project would occur within the two-year construction window.

Regarding the construction window, as stated in Section 3.2.4, it was assumed that construction would commence in March 2022[1] and would be completed by approximately March 2024. This construction schedule includes site preparation (2 months); grading (11 months); trail construction (5 months); bridge construction (1 month); paving (2 months); and architectural Coating (1 month). Regarding the commenter's economic concerns, the City acknowledges the comment and notes that it raises economic, social, or political issues that do not appear to relate to any physical effect on the environment. No further response is required because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR.

I11-2 The comment pertains to Illustrations 4, 5, and 6 of the Draft EIR, which have been included in this letter (see comments I11-6). The commenter asks what the complete proposed trail would look like and expresses economic concerns regarding the proposed project. The commenter suggests implementation of traffic barriers to protect cyclists and asks if the Southbound U.S. 101 off ramp would be realigned to account for the proposed project.

Visual simulations of the proposed project have been included as Figure 3.1-2 of the Draft EIR. Regarding the commenter's economic concerns, the City acknowledges the comment and notes that it raises economic, social, or political issues that do not appear to relate to any physical effect on the environment. The City also acknowledges and appreciates the commenter's suggestions regarding traffic barriers and notes there are no plans for realignment of the Southbound U.S. 101 off ramp at this time. No further response is required because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR.

I11-3 The comment expresses concern regarding lack of an ocean view associated with a portion of Alternative 4.

The City acknowledges that a portion of the trail proposed under Alternative 4 would not have an ocean view. Although it could affect Alternative 4's ability to meet all or most project objectives, this does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I11-4 The comment expresses concern regarding the loss of wind and velocity associated with the proposed project.

[1] The analysis assumes a construction start date of March 2022, which represents the earliest date construction would initiate. Assuming the earliest start date for construction represents the worst-case scenario for criteria air pollutant emissions because equipment and vehicle emission factors for later years would be slightly less due to more stringent standards for in-use off-road equipment and heavy-duty trucks, as well as fleet turnover replacing older equipment and vehicles in later years.

See Global Response GR1, Air Flow Analysis.

I11-5 The commenter states that they will provide additional comments during the public review period. The comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I11-6 The comment provides illustrations of several existing benches used informally as a pedestrian path and excerpts of the Draft EIR. The comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. No further response is required or provided.

Comment Letter I12

Hello Nick, having just heard the good news, I just wanted to extend my heartfelt thanks to you and the environmental review committee for choosing the bike path extension alternative which allows both paragliding the Little Diamondhead bluff and biking or walking on the bike path to coexist, a very wise choice indeed. Many thanks to you all.

I12-1

Sent from my iPad

Response to Comment Letter I12

Desmond
April 23, 2021

I12-1 The commenter expresses support for Alternative 4 and would like to thank the City for choosing this alternative. As a clarification, the Environmental Review Committee voted to recommend approval of the EIR to the Planning Commission with revisions, and expressed a preference for Alternative 4. This vote by the ERC does not constitute a decision for the City to move forward on approval of the project or any of the alternatives in the EIR. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. It should be noted that the City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

Comment Letter I13

Hi Nick,

Writing again to let you know I fully agree with the Environmental Review Committee's decision to recommend Alternate 4, building on the North side of Bates ridge, preserving the soaring recreation. We'd be thrilled to see the city also support this compromise solution. I13-1

Thank you!

Comment Letter I14

Good morning Nick,

Mike Hilbreath here. I am an avid hang gliding pilot and have frequented the Bates flying site in the past. I have stayed local and spent money at the local restaurants and businesses. I feel that the Bates Flying Site could be preserved, and the cycling community could be served with proper design of the changes to the Bates Site. And, Carpinteria would retain a facility that brings in revenue to the city and the business people who live and work in Carpinteria. I14-1

If you would like to discuss this subject more, I could be available at any time. Thank you Nick.

-
Best regards,
Michael

Response to Comment Letter I14

Michael Hilbreath

I14-1 The City acknowledges the comment and notes that it expresses general opposition for the proposed project but does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

Comment Letter I15

Good morning,

I appreciate the work that the city is attempting to do to put in a new bike path. I realize that planning this is a lot of work and I appreciate the work on this to help bikers. However, I would like the city to follow the recommendation of the Environmental Review committee to use Alternate 4, building on the North side of Bates ridge, preserving the soaring recreation. I15-1

Free flight is a very special sport that does not have a ton of locations where it can be done. Biking on the other hand can be done basically anywhere. Please do not destroy the coastal soaring site with the initial bike path route.

Coastal soaring sites in California draw thousands of pilots from all over the globe who want to experience the magical costal soaring sites. It would be unwise to destroy this form of tourism and reduce the cash inflows to the city and reduce the business that soaring tourists bring. I15-2

Please follow the recommendation for Alternate 4 and preserve free flight soaring at Bates! I15-3

Sincerely,
Brandon Stringham

Response to Comment Letter I15

Brandon Stringham

I15-1 The commenter expresses appreciation to the City regarding planning a new bike path and expresses support for Alternative 4. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I15-2 The commenter expresses the importance of free flight and expresses general opposition towards the proposed project. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I15-3 The commenter expresses support for Alternative 4. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

Comment Letter I16

Dear Nick,

The draft EIR for the Rincon Trail Project dismisses the significant impact of the project on recreation. Pilots leave no trace and have been using the ridge as-is for decades. The extensive earth moving on the south face of the bluff will significantly change wind flow and cancel flying. I16-1

Rather than reach out to any local pilots, the City of Carpinteria paid for a wind study that estimates a maximum 30% reduction in velocity - and then asserts that 30% is insignificant. That magnitude of change is quite significant to those who use the ridge for soaring. I16-2

The City is brushing aside pilots to muscle through a project involving soil removal, concrete and chain link fences, all to maintain an ocean view for cyclists for a mere few tenths of a mile. The draft EIR downplays the blight this will create for millions of motorists. I16-3

A bike path on the north side of Bates bluff would safely link the bike paths and preserve free flight. I agree with the Environmental Review Committee's decision to recommend Alternative 4. I16-4

It seems a big waste of taxpayer funds to try and prop up a lot more concrete on the south facing side of the Bates bluff, and downright unnecessary to destroy a coastal soaring site. I16-5

Coastal soaring at Bates makes Carpinteria truly special and unique. I'm writing to express hopes for a compromise on an ocean view for the short stretch of the bike path extending along Bates bluff, and for the City to proceed with Alternative 4. I16-6

Thank you for your time and consideration.

Sincerely,

Jamie Bishop, Santa Barbara Soaring Association member, Santa Barbara resident, and cyclist

Response to Comment Letter I16

Jamie Bishop
April 23, 2021

I16-1 The commenter states that the Draft EIR dismisses significant impacts to recreation resulting from wind flow. The proposed project's impacts to recreation, associated with wind flow, have been analyzed in Section 3.11. As discussed in this section, impacts to recreation would be less than significant. In addition, see Global Response GR1.

I16-2 The commenter states that the maximum 30 percent reduction in velocity is significant to soaring. See Global Response GR1.

I16-3 The comment expresses general opposition towards the proposed project. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I16-4 The commenter expresses support for Alternative 4. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I16-5 The comment expresses concern regarding tax-payer funds to be expended on construction and maintenance associated with the proposed project. The City acknowledges the comment and notes that it raises economic, social, or political issues that do not appear to relate to any physical effect on the environment. No further response is required or provided.

I16-6 The commenter expresses support for Alternative 4. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

Comment Letter I17

Dear Nick, et.al.,

Thank you for your detailed study and continued planning of the bike path reroute along Bates Ridge. I am a long time hang-glider pilot and recently signed the petition to maintain Bates Ridge in a manner to preserve the hang-gliding activities that have been enjoyed there for decades. I hope you appreciate the special place this is, and support it's preservation.

Hang-gliding is suffering a loss of flying sites all over the country.
Mainly this is due to development around the sites and the associated loss of landing zones and access to launches. In some situations, it is a result of changing geography and impact to wind conditions. Please help preserve the few remaining sites. This is true for special sites like Bates Ridge.

I17-1

Thank you,
Wayne Michelsen
USHPA pilot #72939

Response to Comment Letter I17

Wayne Michelsen
April 23, 2021

I17-1 The comment expresses general opposition towards the proposed project. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

Comment Letter I18

I am a paraglider pilot who lives in Los Angeles (Woodland Hills, to be exact). I have been coming up to Bates to fly for twenty years. I appreciate your hard work on improving this area for cyclists, as I am also a cyclist who rides here. I would absolutely prefer to use a bike path on the north side of Bates bluff (Alternate 4), as recommended by the Environmental Review Committee. I believe this will best serve everyone's needs. I18-1

Sincerely,
Randall McCormick

Response to Comment Letter I18

I18-1 The commenter expresses support for Alternative 4. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

Comment Letter I19

The new bike trail will be great, but it needs to be alternative number 4 please. The completely inaccurate assessment of what will occur with airflow, and dismissal of our recreational flying use of that sight will forever negatively impact our flying future there. Please consider us, the flying community. We have a huge stake in this. And please reconsider which plan you move forward with, and choose an alternative which does not destroy our flight park.
Thank you for your consideration. I19-1

Mike Harrington
Activities Director

Response to Comment Letter I19

Mike Harrington
April 23, 2021

I19-1 The commenter expresses support for Alternative 4 and also provides the opinion that the air flow analysis is completely inaccurate.

The City acknowledges the commenter's preference for Alternative 4; the City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided. With regard to the comment on accuracy of the air flow analysis, please refer to global response GR1.

Comment Letter I20

Hello thank you for taking the time to consider with care your impactful work plans. I signed a petition to preserve Bates Ridge that has over 2,000 signatures and 60 comments. I20-1

It's actually an important matter to get right for our future.
The communities can complement each other .

I fully agree with the Environmental Review Committee's decision to recommend Alternate 4, building on the North side of Bates ridge, preserving the soaring recreation. I20-2

I don't understand why the City is planning alienate the soaring community.
It seems like the EIR draft authors refuse to listen to the pilots who have been recreating at Bates for over 40 years.
Coastal soaring at Bates makes Carpinteria truly special and unique, don't diminish that. I20-3
Let's build a better path. I believe building a bike path on the North side of Bates bluff is best for all recreational users, it is a safer, more direct path for cyclists. I20-4
It also keeps picketing protests off your news cycle.
Please be reasonable.
Save Bates!

I20-1 The commenter thanks the City for consideration of the commenters' petitions.

The City acknowledges the comment as an introduction to comments that follow. No further response is required.

I20-2 The commenter expresses support for Alternative 4. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I20-3 The commenter states that the City is alienating the soaring community by not giving consideration to statements about the history of soaring at the site.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. The recreation section of the Draft EIR (3.11) describes existing soaring activities above the project alignment, including an indication that these soaring activities have occurred over a substantial time span. No further response is required or provided.

I20-4 The commenter expresses support for Alternative 4. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

Comment Letter I21

Hello again Nick,

Just saw this on youtube. Hard to "imagine," that this route, with a Pacific Ocean View exists.

https://youtu.be/s_bm_VFaPfM

I21-1

Incredible!

Ottis Gillespie

Response to Comment Letter I21

Comment Letter I22

Hello Nick!

I am one of the people who is concerned about the development the city of Carpinteria is planning for the Bates Bluff area. I wanted to reiterate my support for preserving this area and moving the proposed bike path out closer to the highway. Below are some of my thoughts and concerns on this topic. I22-1

- I appreciate the work that has gone into planning this bike trail, but I want to see it improved.
- I am devastated that the Draft EIR considers the impact to my flying recreation to be 'insignificant'. I22-2
- I signed a petition to preserve Bates Ridge that now has 2,000 signatures and over 60 comments. I22-3
- I fully agree with the Environmental Review Committee's decision to recommend Alternate 4, building on the North side of Bates ridge, preserving the soaring recreation.
- I believe building a bike path on the North side of Bates Bluff is best for all recreational users, as it is a safer, more direct path for cyclists, giving them a path that avoids the crowded, steep, and dangerous Rincon parking lot. I22-4
- I am a cyclist and want a direct route on the North side, rather than an Ocean view. Seeing the Ocean shouldn't be a requirement for this project because I get plenty of views along the whole bike path to Ventura. I22-5
- You are concerned the current plan will require maintenance against rising seas as it is being built near an eroding seawall. Relocating to the other side of the ridge is financially responsible given this concern. I22-6
- I appreciate the wind study done by the engineers, however this study specifically states that it is based on theory and not intended for this purpose. Even if accurate, 20-30% loss of lift is very significant to me, especially on average wind days where lighter wind flow will be exponentially impacted by this project. I22-7
- I feel its inappropriate for the EIR to discuss free flight rules or launches, as this is outside the scope of the document and project. The focus of the EIR and CEQA is preserving recreation at the project site. I22-8
- I don't understand why the City continues to brush me aside and has failed to reach out to the soaring community. There are inaccurate statements in the Draft EIR because the authors refuse to listen to the pilots who have been recreating at Bates for over 40 years. Let's build a better path together. I22-9
- Coastal soaring at Bates makes Carpinteria truly special and unique. I can bike almost anywhere, but I travel to Carp for the flying at Bates and spend my money there. I have spent money in Carpinteria restaurants, coffee shops, grocery stores, and motels, due to the flying there. I22-10

Many thanks for your favorable consideration on this issue!

Regards,

Robin Cushman

Response to Comment Letter I22

Robin Cushman
April 24, 2021

I22-1 The City acknowledges the comment and notes that it expresses opposition to the proposed project and support for Alternative 4. The comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I22-2 The comment expresses concern that impacts to recreation associated with the proposed project were determined to be insignificant in the Draft EIR.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I22-3 The comment references the petition to preserve Bates Ridge.

The City acknowledges the comment and notes that it does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided

I22-4 The City acknowledges the comment and notes that it expresses support for Alternative 4. The comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I22-5 The commenter states that an ocean view should not be a requirement for the project and provides support for Alternative 4. The comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I22-6 The commenter expresses concern regarding the impacts rising sea level and erosion would have on the proposed project and states that Alternative 4 is more financially responsible.

The sea level rise comment is acknowledged; the hydrology section of the Draft EIR (3.8) discusses impacts associated with potential sea level rise, while the Alternatives Section (6.0) addresses such impacts for each of the identified project alternatives. Regarding the commenter's economic concerns, the City acknowledges the comment and notes that it raises economic, social, or political issues that do not appear to relate to any physical effect on the environment. No further response is required or provided.

I22-7 The commenter expresses concern regarding 20-30 percent loss of wind and states that this is significant.

See Global Response GR1.

I22-8 The commenter feels that it is inappropriate for the EIR to discuss flight rules or launches, and states the focus of the EIR should be to preserve recreation.

See Global Response GR1.

I22-9 The commenter states that the City has failed to reach out to the soaring community, resulting in inaccurate statements in the Draft EIR.

The City acknowledges the comment and notes that it does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. The City has received a number of comments from the soaring community on the project's Notice of Preparation and has accounted for these comments in the preparation of the Draft EIR. Therefore, no further response is required or provided.

I22-10 The commenter explains the uniqueness of the project site with respect to existing soaring opportunities afforded above the project trail alignment.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

Comment Letter I23

Dear Nick,

I appreciate the work that has gone into planning this bike trail, but want to see it improved and am in shock how the flying community is being ignored during this process. I travel from Fresno to fly this site and spend money in YOUR community.

If flying becomes interrupted or impeded, I will choose to fly somewhere else, thus taking my money I spend in your area elsewhere. I23-1

The wind study specifically states that it is based on theory and not intended for this purpose. Even if accurate, 20-30% loss of lift is very significant, especially on average wind days where lighter wind flow will be exponentially impacted by this project. I23-2

I don't understand why the City continues to brush me aside and has failed to reach out to the soaring community. There are inaccurate statements in the Draft EIR because the authors refuse to listen to the pilots who have been recreating at Bates for over 40 years. Let's build a better path together. I23-3

Coastal soaring at Bates makes Carpinteria truly special and unique, I can bike almost anywhere, but I travel to Carp for the flying at Bates and spend my money there. I23-4

Please consider this in your decision making process.

I23-1 The commenter expresses appreciation to the City regarding planning a new bike path; states they would like to see improvements; expresses concerns regarding involvement of the soaring community; and states they will not spend their money in the City if the project were to be approved.

The City acknowledges the comment as an introduction to comments that follow. Regarding economic concerns, the City acknowledges the comment and notes that it raises economic, social, or political issues that do not appear to relate to any physical effect on the environment. Regarding involvement of the soaring community, the City has received a number of comments from the soaring community on the project's Notice of Preparation and has accounted for these comments in the preparation of the Draft EIR. The comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I23-2 The commenter expresses concern regarding 20-30 percent loss of wind and states that this is significant.

See Global Response GR1.

I23-3 The commenter states that the City has failed to reach out to the soaring community, resulting in inaccurate statements in the Draft EIR. The City acknowledges the comment and notes that it does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. The City has received a number of comments from the soaring community on the project's Notice of Preparation and has accounted for these comments in the preparation of the Draft EIR. Therefore, no further response is required or provided.

I23-4 The commenter explains the uniqueness of the project site with respect to existing soaring opportunities afforded above the project alignment.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

Comment Letter I24

This email contains my overall comments regarding the Carpinteria Rincon Trail Project Draft EIR of March, 2021 and are provided subsequently to the Carpinteria Environmental Review Committee (ERC) meeting of April 13, 2021. I24-1

As a Carpinteria resident, bluffs user, active cyclist, and inactive paraglide pilot, I support the ERC's recommendation of Alternative Four as the preferred trail alternative. It has the least impact to recreational soaring, eliminates massive beachside earthworks, eliminates installation of beachside storm drainage and piping, and removes the resultant permanent visual impacts of such to views of the area from viewpoints near the Harbor Seal Sanctuary RR crossing and the Seal Sanctuary overlook, and eliminates potential bicycle/pedestrian/vehicle conflicts in the Rincon County Park parking lot by routing cyclists directly to Bates Rd. It also provides additional security to the park in terms of eliminating access and resulting potential vandalism from direct after-hours bike-to-park trail access. In terms of lifecycle costs, it is likely that the cost of maintaining the cycling trail within the 101 corridor would be much less than maintaining the trail along the southern beachside bluffs exposed to wind and rainstorm erosion. I24-2

I do understand that the primary purpose of the original Alternative 2 and the modified "less cut/fill" Alternative 2 was to provide "...a sweeping view of the ocean, beach, and Channel Islands", and that cycling within the Highway 101 Corridor would not be nearly as pleasant and not much of an "Instagram" photo op except from the bridge crossing. It is, however, a relatively short section of highway-adjacent trail on a longer trail that to the East/South runs almost entirely along the ocean to Ventura. Views are still available from the Rincon Bluffs, and of course from Rincon Beach Park for those cyclists who care to stop to seek them out. I24-3

While it is unfortunate that the Santa Barbara Soaring Association and local pilots were not initially contacted and consulted in the preparation of the EIR, I think that their concerns have been heard and the City now has a better understanding of the impacts of modification of the bluffs having the real potential to eliminate this recreational soaring site that is regarded as a jewel of flying along the California coast. I am personally aware of this site's reputation in the soaring community and have met many pilots at the launch site who have come specifically to Carpinteria and this site to practice their skills and learn from and enjoy the company of experienced local pilots who provide encouragement and support to the soaring community and openly answer questions from curious visitors. I24-4

One small concern that will have to be addressed with Alternative Four is that there will be a strong desire for people to develop an informal short-cut trail from either end of the bridge down I24-5

to the existing RR/ocean cutbank bluff trail. Both pedestrians and more fearless mountain bikers will likely want to use that short-cut to access the Rincon Beach parking lot and facilities. The trail near the bridge will need to be designed and built to dissuade that behavior. I24-5 Cont.

Alternative Four has some great potential for creative, inviting design that would mitigate the 101 corridor downsides. Even without the direct ocean and beach views on this particular trail segment, it is still a wonderful addition to the area and the coastal bike path. Kudos to the City of Carpinteria for bringing the vision of the trail to a reality while threading the needle in this complex multi-faceted project. I24-6

/s/ Jon Lewis, Carpinteria CA

Response to Comment Letter I24

Jon Lewis
April 24, 2021

I24-1 The City acknowledges the comment as an introduction to comments that follow. No further response is required.

I24-2 The comment provides support for Alternative 4. The comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I24-3 The comment provides an overview of Alternative 2 and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I24-4 The commenter states that the soaring community was not initially contacted but states they believe the City has heard the soaring community's concerns. The comment also provides background on the project site, as it relates to soaring activities.

The City has received a number of comments from the soaring community on the project's Notice of Preparation and has accounted for these comments in the preparation of the Draft EIR. The City acknowledges the comment and notes that it does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I24-5 The commenter states that, with implementation of Alternative 4, people will want to develop informal shortcuts and suggests the trail is designed to dissuade that behavior.

The City appreciates the commenter's recommendations. No further response is required because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR.

I24-6 The commenter expresses support for Alternative 4. The comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

Comment Letter I25

Dear Mr. Bobroff:

Is it true the City is working to override the decision of the Environmental Review Committee's decision regarding Bates? I25-1

I fully agree with the ERC's decision to recommend alternate 4, building on the north side of Bates Ridge, preserving the soaring recreation. I25-2

It's outside the scope of the EIR to discuss free flight rules or launches. Shouldn't the focus be preserving recreation at the project site? I25-3

Bates makes Carpinteria unique because of coastal soaring. I can bike anywhere. I25-4

Sincerely,
Betty Winholtz

Response to Comment Letter I25

Betty Winholtz
April 24, 2021

I25-1 The commenter asks if the City is working to override the decision of the Environmental Review Committee regarding Bates.

The commenter is seeking verification of whether the City Planning Department will follow the recommendation of the ERC to implement Alternative 4 for approval of the Rincon Trail project. The City acknowledges receipt of the comment; the City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I25-2 The commenter expresses support for Alternative 4. The comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I25-3 The commenter feels that it is inappropriate for the EIR to discuss flight rules or launches, and states the focus of the EIR should be to preserve recreation.

See global response GR1.

I25-4 The commenter explains the uniqueness of the project site with respect to the existing soaring opportunities it affords.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

Comment Letter I26

Greetings,

Firstly; thank you for the fantastic work you've been doing to build infrastructure for our communities. We know it's never straightforward. I'm reaching out to suggest strong reconsideration by touching on a couple of points regarding the Bates bike path project.

My name is Riebeeck van Niekerk and I'm a relatively new paragliding pilot. I've spent time going through some of the public information and EIR briefly covered by DUDEK and the engineering teams overseeing the development work for the Bates bike path. I26-1

My ultimate input on the matter echoes much of what you are probably hearing from the rest of the Flying community. Please consider the following points below:

1. **Significance of Impact:** I am a mechanical engineer by trade and from the pure perspective being both a cyclist and a pilot; I see quite a few shortgivings with the primary design option/options presented over zoom a couple weeks ago. Alternative 4 should be given the priority OR another alternative should be engineered to ensure no impact is had on recreational flying in the area. A designation of **'no significant impact'** as far as recreational activities are concerned stems from the lack of engagement with the flying community and from either a lack of insufficient design, engineering, or worse, both. I26-2
2. **Lift Technicals -** From a technical standpoint I have serious reservations about the reported average "20-30% change in wind speed" as well as the reported loss of lift/wind speed/venturi effect based on changing slope gradient. **I would like to see the CFD models used to report those average changes in wind speed. I would like to request plan/side/front/geometric projections for vector distribution plots of wind speed for varying wind direction (60 deg to 290 deg would be sufficient if you don't have a full 360 CFD/EFA study) and wind velocity for all design alternatives.**
    - If a full **CFD/EFA** analysis of the terrain was not conducted, **I would strongly advise** this be done before any considerations are made.
    - Even if that reported average value is accurate; how was the determination made that this has 'no significant effect'?
    - Wind velocity has a squared (quadratic) relationship to drag force which ultimately holds a relationship to lift and therefore **a small change in wind velocity has a significant impact on lift.** The point here is that if; 20-30% reduction is being reported, this will have a massive/significant/noticeable impact on lift and our ability to practice our sport and draw in eco/adventure tourism dollars (discussed more in point 4 below). I26-3
3. **Cyclist Sentiment -** We have surveyed over 100 cyclists who travel through the area regularly somewhere around 2%-3% responded with a desire to have an ocean view on that stretch. The rest just want a direct route - there's plenty of ocean views on the majority of the other sections. I26-4

4. **Tourism and Economics -** from a pure travel and tourism perspective; there's a huge international community of pilots who specifically travel to this area each year to specifically paraglide at bates and other areas around the Ventura/Santa Barbara area. I26-5
5. **Flying Community -** I'm surprised that in a first world country we still have to point this out but; **the engineering/development teams should be working together with the flying community to come up with a workable solution.** We stand ready to lean in to provide SME input on the matter but have yet to hear a word from anyone involved with development of this project. I26-6
6. **Heritage -** We have few places to practice our sport and this is one that is world renowned for being a classic ridge soaring location. This project has the potential to seriously ruin this site for flying forever and it would be a national shame within our community and for our wider global community abroad. I26-7

Again we understand the challenges and my main expectation is that these very real implications are properly considered; and efforts are made to reach out and work with the flying community to converge on a workable solution that will benefit everyone. I26-8

Thank you for hearing me out and look forward to seeing where we can assist.

Kind Regards,
Riebeeck van Niekerk
+1.832.235.0531

Response to Comment Letter I26

Riebeeck van Niekerk
April 25, 2021

I26-1 The comment expresses appreciation to the City regarding planning a new bike path, provides an introduction for the comments to follow, and provides personal background on the commenter.

The City acknowledges the comment as an introduction to comments that follow. No further response is required.

I26-2 The commenter expresses support for Alternative 4 and states that the significance determination for recreational impacts stems from lack of engagement with the flying community and the lack of sufficient design, engineering, or both.

Regarding Alternative 4, the City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. Regarding recreational impacts, the City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise any specific issue related to the adequacy of any particular section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I26-3 The commenter expresses concern regarding the 30 percent change in wind speed and requests computational fluid dynamics (CFD) models as well as plan/side/front/geometric projections for vector distribution plots of wind speed. Fluid dynamics is the study of the motion of fluids, usually in the presence of an object. Typical fluid flows of interest to engineers and scientist include flow in pipes, through engines, and around objects, such as buildings, automobiles, and airplanes. Computational fluid dynamics (CFD) is the study of these flows using a numerical approach. The commenter advises the preparation of a full CFD study. The commenter asks for clarification of why impacts to recreation were considered not significant and states that a small change in wind velocity would have a significant impact on lift.

See Global Response GR1. As described in the airflow analysis report, the analysis provided predictions based on existing data from field measurements of air flow over large-scale topographic features, from aerodynamic experiments conducted with scaled models in wind tunnels, from engineering standards for wind stress on buildings, and from published literature addressing wind flow over topography as related to soaring activities.

Through careful examination of this existing research, appropriate physically-based equations have been applied in order to predict the reduction in horizontal and vertical wind velocities from modification of the bluff face as proposed. The range in predicted wind velocity reduction represents the application of two modeling approaches, one using the mean slope angle across the entire slope face, and the other employing the mean slope angle for the upper portion of the slope. The EIR uses the greater predicted wind velocity reduction for the project and for Alternative 3, as the more conservative conclusion.

For context, Computational Fluid Dynamics (CFD) modeling is typically employed in engineering to address critical operational parameters during design development of equipment, systems and

structures. CFD provides results that are most reliable when examining flow over streamlined and smooth objects, such as an aircraft wing. CFD also requires numerous assumptions, including choices of computational grid size, boundary conditions, and turbulence modeling; to avoid erroneous conclusions, CFD requires careful validation against experimental measurement when applied to a new problem. Validation studies have shown that CFD of complex terrain can provide inaccurate predictions under some atmospheric conditions (see for example El Bahlouli et al. 2020). Relatively more reliable computational approaches (such as Large Eddy Simulation, LES) require vastly greater computational power, and are currently in the domain of research rather than commercial use (see Pirooz & Flay 2018). Due to the scale and complexity of the ocean bluffs along the project alignment, development of a CFD model to evaluate air flow conditions from project changes was not considered suitable or cost-effective.

In order to consider a worst-case scenario, the air flow analysis is based upon the grading plan cross-section of the bluff face with the greatest alteration from existing slope profile to project-resultant slope. The air flow analysis examines incoming horizontal wind that is perpendicular to the bluff crest. Although numerous effects are considered, it may be helpful to recap here the two main effects, namely: (1) amplification in wind magnitude as the flow is constrained to pass over the bluff (the "Venturi" mentioned by the question), and (2) the induction of a vertical wind component as the air must flow at an upward angle over the bluff.

Wind tunnel experiments and field measurements on bluffs have shown that, as long as the mean slope remains above approximately 30 degrees, the amplification in wind magnitude (combining both horizontal and vertical components) will not change significantly (see for example Bowen & Lindley 1977; Bowen 1980). However, the extent and location of the Venturi region, as well as the vertical component of the wind will of course change. The simplest estimate of the vertical velocity component is obtained by multiplying the wind magnitude by the sine of the bluff angle; this approach is used for example in the book on soaring by Pagen (1992), to compile his figure 139. More refined methods of estimation are described in the Air Flow Analysis report. (Luzzatto-Feliz, January 2021).

Reductions in the vertical wind speed associated with changes to the topography are expected to be maximal in the perpendicular wind scenario. This is due to the fact that, when the wind is at a yaw angle to the bluff crest, the bluff will deflect it further along the crosswind direction, implying that the flow that travels over the bluff will be reduced. This effect will decrease ridge lift, as shown by the wind tunnel experiments of Crawley & Schmanske (1994); for an illustration in the soaring literature, see p. 336 of Pagen (2001).

Gentler slopes induce a smaller crossflow deflection, and therefore produce a smaller decrease in ridge lift through this crossflow mechanism (this is also illustrated in fig. 142 of Pagen 1992). Percentage differences between the vertical wind velocities associated with the existing versus proposed bluff profiles would therefore also be smaller than for the analyzed condition with wind perpendicular to the bluff face. Finally, it should be noted that lift for aircraft results from the horizontal wind speed flowing over the wing (or the sail), and that horizontal wind speed over the bluff top is not anticipated to be altered by the proposed regrading. Consequently, horizontal wind conditions that support launching of hang-gliders and para-gliders adjacent to the project alignment would not be affected by the project.

The wind flow analysis and EIR discussion include no attempts to estimate future climatic conditions, including localized wind patterns that could influence the number of days on an annual basis when air flow conditions above the property would support soaring activities, for either the existing bluff profile or those resultant from the proposed project or Alternative 3.

I26-4 The commenter presents the results of a survey stating that cyclists don't mind not having an ocean view on a certain stretch.

It is assumed that this comment provides support for Alternative 4, which would not include an ocean view for a small stretch. The comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I26-5 The comment relates to travel and tourism associated with the existing project site.

The City acknowledges the comment and notes that it raises economic, social, or political issues that do not appear to relate to any physical effect on the environment. No further response is required because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR.

I26-6 The commenter suggests that the engineering/development teams should be working together with the flying community and states that they have yet to hear from anyone involved in the project. The City has received a number of comments from the soaring community on the project's Notice of Preparation and has accounted for these comments in the preparation of the Draft EIR. The City acknowledges the comment and notes that it does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I26-7 The comment explains the importance of the site when it comes to soaring. The City acknowledges the comment and notes that it expresses opposition for the proposed project but does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

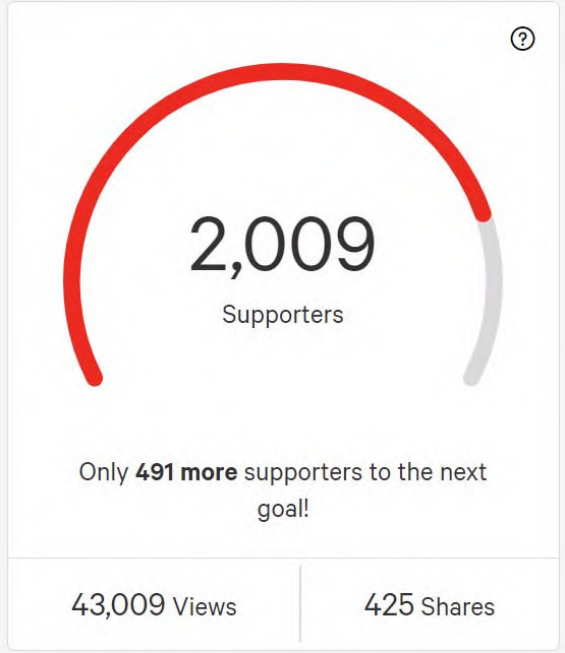
I26-8 The commenter would like to see all implications properly considered and efforts made to reach out and work with the flying community.

The City acknowledges the comment and notes that it provides concluding remarks that do not raise new or additional environmental issues concerning the adequacy of the Draft EIR. Regarding coordination with the soaring community, please refer to response I26-6. No further response is required or provided.

Comment Letter I27

Hi Nick,

Thanks for your hard work in overseeing the planning and designing of the Rincon Trail. I know it's difficult coordinating with all the stakeholders involved in this complex project. I'm hopeful we can find a solution for everyone. I27-1



As a cyclist and a pilot, I believe we can build a better bike path together. The first step is considering flying recreation to be significant in the EIR, and addressing the outpouring of concern from the community about losing this recreation. On the day the Draft EIR was released for public comment, we started a petition to preserve the ridge at Bates which now has over 2,000 signatures and more than 60 comments. The metrics and comments are provided below for public record. This clearly demonstrates significant recreation under CEQA. I27-2

I was heartened to hear the Environmental Review Committee's decision to recommend Alternate 4. Building on the North side of Bates ridge will save soaring at Bates and create a safer, more direct path for cyclists that avoids the crowded and steep Rinon parking lot. Seeing the Ocean shouldn't be a requirement for this project because there are plenty of views along the way like the whole bike path to Ventura. I27-3

I appreciate the wind study, however, this document specifically states that it is based on theory and not intended for this purpose. Even if there is a correlation with reality, 20-30% loss of lift is very significant for pilots, especially on average wind days where the vertical lift component of lighter winds will be exponentially impacted by the benches and grades of this project. There are many days when the existence of this ridge is the sole reason pilots are able to maintain flight. It is the last natural remaining feature in this corridor and a truly unique recreational area that should be protected because it makes Carpinteria special. I27-4

I believe the goal of the EIR is to address the impacts of the project, including a review of how recreation will be changed. Under CEQA, all recreation is valued equally if it exists. It is inappropriate for the EIR to impose judgements on recreational users or analyze rules governing their sport or how they gain access. All of these things are outside of the scope of the document and the project itself. Why does the EIR discuss flying rules, launch locations, and wing practices? Not only are these comments frequently inaccurate, something the Santa Barbara Soaring Association attempted to correct with a detailed letter submitted 8 months ago, but they are not relevant to preserving recreation. It seems the City is more concerned with marginalizing our recreation, repeating these vague technicalities, than supporting us. As a tax paying citizen of Carpinteria who moved here from across the country to paraglide, I don't understand why the City is ignoring this opportunity to save a special place and its continued recreation. When will the City start listening to the pilots who have been recreating here for over 40 years? Let's build a better bike path together and explore the possibilities of Alternate 4 on the North side of the ridge. Thank you! I27-5 I27-6 I27-7

Petition metrics and comments:

DAVID RAYBOURN

I can ride my bike anywhere but there are only a few special and rare places to participate in foot-launched Aviation.
If the Historic Launch at Bates cannot be saved, then an alternative site should be created just for hang gliding and paragliding as mitigation.

Ridge soaring and flying non powered aircraft like paragliders requires these beautiful and unique sites to be able to fly. Since these type of craft were designed people have been enjoying the purest for of flight without interfering with the land. There flying sites are a geographical creation of nature taking hundreds of not thousands of years in their making. A bike path can be laid almost anywhere and anytime. Let's preserve what nature has provided for us and build the bike path elsewhere. Thank you □□

Too much of Florida has been lost, destoryed and replaced by much worse than a bike trail. However, digging up hundreds of thousand pounds of soil that will ruin airflow? Playing with mother earth in this manner has got to stop. Heck, I won't even pick up a rock in a rivier because I worry about disrupting the flow of water. We must be more responsible, less greedy with an aware ego. Good luck TJ!

Response to Comment Letter I27

Jeffrey A Longcor
April 25, 2021

I27-1 The comment expresses appreciation to the City regarding planning a new bike path, provides an introduction for the comments to follow, and provides personal background on the commenter.

The City acknowledges the comment as an introduction to comments that follow. No further response is required.

I27-2 The comment expresses that, based on the petition to preserve the site that gained over 2,000 signatures and more than 60 comments, impacts to recreation should be considered significant under CEQA.

See Global Response GR1. The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I27-3 The commenter expresses support for Alternative 4. The comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I27-4 The commenter expresses concern regarding the wind study and believes that 20-30 percent loss of wind should be considered significant.

See Global Response GR1.

I27-5 The commenter states that it is inappropriate for the EIR to impose judgements on recreational uses or analyze rules governing the sport or how they gain access.

Please see Global Response GR1 regarding the inclusion of soaring fundamentals, existing launch practices, and FAA regulations in the Recreation Section of the EIR. The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I27-6 The commenter feels that it is inappropriate for the EIR to discuss flight rules or launches, and that this has been described incorrectly in the Draft EIR. The comment also provides general dissatisfaction with the City and the project.

Regarding the discussion of flight rules or launches, see Global Response GR1. In addition, the City acknowledges the comment and notes that it expresses the opinions of the commenter and general opposition for the proposed project but does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I27-7 The City acknowledges the comment and notes that it expresses general opposition for the proposed project but does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I27-8 The commenter provides a sample of the approximately 2,000 responses to a survey they circulated regarding "preservation of the ridge at Bates." The City acknowledges the survey responses submitted with the comment, and notes they expresses general opposition for the proposed project but do not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

Hi Nick, I'm a Colorado native and have been spending my winters here in SB I for some time now mostly because of the variety, and quality of the paragliding it offers. It's a very special place with an amazing history of free flight. Bates is one of the top spots in the country for coastal soaring offering a very rare opportunity for the pilot to "climb out" in the lift where the wind sock is located and fly cross country south towards Ventura. I don't know of any coastal sites in the US where paragliders and hangliders are that blessed! Kind of similar to surfing Rincon, it's just that special. Thanks for reading Nick, I share the same feelings of many others that the history of free flight there should be saved and the bike path on the 101 side makes sense.

I28-1

Cheers,
Jason Lombard

Response to Comment Letter I28

Jason Lombard
April 26, 2021

I28-1 The comment provides general background on the opportunities for recreation the project site provides for paragliders and hang gliders.

See Global Response GR1. The City acknowledges the comment and notes that it expresses general opposition for the proposed project but does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

Comment Letter I29

4-25-2021

Thank you for the opportunity to comment on the draft EIR for the path.

It should by now be quite obvious to all that the plan to have the path on the ocean side of the main bluff will never be permitted, as there simply **is no mitigation possible** for the very significant impact to existing recreation. I29-1

The focus from this point forward should **ONLY** go towards some version of **ALTERNATIVE 4** that does not remove any aspect of the south-west or west area of the main bluff**.** Not transitioning to a more acceptable design **NOW** will only delay the permitting process and cost taxpayers more unnecessary expense.

Instead of just using the current design on the north side of the RR tracks for the start of alt 4, please re-design/engineer the alternative 4 concept to have the north side of the bridge closer to the freeway and then rotate the bridge about 10 degrees counter-clockwise--moving the south end of the bridge to the east. Although the repositioning would likely require more substantial bridge supports to accommodate the slightly longer span on the cuts above the RR tracks if using the same length of pre-fab bridge, moving the south-side bridge terminus further to the east would result in a considerable reduction of the earthwork needed as compared to what is stated in the current EIR draft for alternative 4. I29-2

Please don't be misled by the conclusions within the draft that are primarily derived from statements from the preceding MMD that are most likely from the input of just **one** person, **the applicant**. Consider the reasons why public entities often save money and time when they contract with private planning/permitting services for projects that can be cumbersome. I29-3

Thank You,

John Greynald

805 886-6160

Response to Comment Letter I29

John Greynald
April 26, 2021

I29-1 The commenter states that the project cannot be permitted as there is no mitigation possible for the very significant impact to recreation.

See Global Response GR1. The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I29-2 The commenter expresses support for Alternative 4 over the proposed project but proposes certain revisions to the design of Alternative 4.

The City appreciates the commenter's recommendations. No further response is required because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR.

I29-3 The commenter states that the Draft EIR conclusions are derived from the previous MND that were based only on the opinions of the applicant.

It is assumed that the commenter is referencing the 2015 MND and the 2019 Subsequent MND, prepared for the proposed trail. The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

Comment Letter I30

Greetings,

My name is Ajay Rajamani and I am a local paraglider pilot and cyclist. Having biked the entire pacific coast from SF to LA, I really appreciate the effort to allow cyclists to keep off the highway between Carpinteria and Ventura. However, after attending the town hall meeting last week I strongly feel that Alternate 4 is the best plan to move forward with the project. That is, building the path on the north side of Bates Ridge to preserve freeflight and limit erosion damage to the cliff face.

I30-1

While seeing the ocean is nice, there are already miles of oceanside bike paths between SB and Ventura, in particular immediately after the proposed extension there is ~4 miles of prime oceanside bike path from the Rincon parking lot to Mussel Shoals. I don't think it's worth destroying a nationally renowned flying site that attracts pilots from all over the country for less than 400m of additional seaside views. In addition, I am highly concerned over the erosion and construction impact of building on the south side, which would likely wash tons of soil and chemicals into the ocean.

I30-2

Thank you for considering my comments. I hope we can arrive at a solution for this project that satisfies all user groups.

I30-3

-Ajay Rajamani

Response to Comment Letter I30

Ajay Rajamani
April 26, 2021

I30-1 The commenter expresses support for Alternative 4. The comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I30-2 The commenter expresses concern regarding erosion and construction impacts of building on the south side, which could wash soils and chemicals into the ocean.

The proposed project's impacts to erosion have been analyzed in Section 3.5.4. As discussed in this section, implementation of mitigation measure MM-GEO-3, which includes recommendations from the geotechnical report regarding slope construction, would reduce impacts to less than significant with mitigation. In addition, the project's impacts to water quality have been analyzed in Section 3.8.4. As discussed in this section, with implementation of mitigation measures MM-WAT-1 through MM-WAT-5, potential project impacts to surface water quality would be reduced to less than significant. In addition, per Section 3.8.4, release of project storm drainage along the beach would not result in substantial erosion, as the introduction of impervious surfaces would be minimal compared to the overall project drainage area and the trail drainage will be divided into 6 separate outlets to minimize the discharge volume from any of the outlets.

I30-3 The commenter provides appreciation to the City for considering their comments. The City acknowledges the comment and notes that it provides concluding remarks that do not raise new or additional environmental issues concerning the adequacy of the Draft EIR. No further response is required or provided.

Comment Letter I31

Hello Nick,

The current plans for the Carpinteria-Rincon Trail project will impact paragliding and hang gliding in the Carpinteria, Santa Barbara and greater SoCal areas. I am a representative of the paragliding and hang gliding community in Santa Barbara County, and myself and other members from this community were sad to find that the new plans for the trail will involve significantly cutting into Bates Ridge, which would effectively end paragliding and hang gliding in the area. I31-1

We are asking the city to consider putting the trail on the north side of Bates Ridge (between the highway and the ridge), rather than cut into the ocean-facing side where the lift for flying is generated. The planned grading profile on the ocean-facing side of the ridge will decrease the steepness of the ridge, reducing or eliminating the strong upward draft necessary to fly. The grading will also decrease the distance between pilots and pedestrians/obstacles/the ground, making for dangerous conditions. Additional grading shelves will likely disrupt airflow and/or make it too turbulent. I31-2

Ninety percent of the flying at Bates occurs on this ridge, which is one of only three ridges available for flying between San Diego and Big Sur. Hang gliders and paragliders have been flying here for 30-plus years—it is a historic site with hundreds of pilots flying here every year. Pilots have moved to Carpinteria specifically for the flying. Many paragliders and hang gliders are also cyclists, roller bladers or runners—we think the bike path is a great idea. We would like to work with the city to find an option that does not destroy this beautiful, historic site.

I appreciate the work that has gone into planning this bike trail, but want to see it improved. I31-3

I am devastated that the Draft EIR considers the impact to my flying recreation to be 'insignificant' I31-4

I signed a petition to preserve Bates Ridge that has 2,000 signatures and over 60 comments. I31-5

I fully agree with the Environmental Review Committee's decision to recommend Alternate 4, building on the North side of Bates ridge, preserving the soaring recreation.

I believe building a bike path on the North side of Bates bluff is best for all recreational users, it is a safer, more direct path for cyclists, giving them a path that avoids the crowded, steep, and dangerous Rincon parking lot. I31-6

I am a cyclist and want a direct route on the North side, rather than an Ocean view. Seeing the Ocean shouldn't be a requirement for this project because I get plenty of views along the way like the whole bike path to Ventura. I31-6 Cont.

I am concerned the current plan will require maintenance against rising seas as it is being built near an eroding seawall. Relocating to the other side of the ridge is financially responsible. I31-7

I appreciate the wind study done by the engineers, however, this study specifically states that it is based on theory and not intended for this purpose. Even if accurate, 20-30% loss of lift is very significant to me, especially on average wind days where lighter wind flow will be exponentially impacted by this project. I31-8

I feel it's inappropriate for the EIR to discuss free flight rules or launches, this is outside the scope of the document and project, the focus of the EIR and CEQA is preserving recreation at the project site. I31-9

I don't understand why the City continues to brush me aside and has failed to reach out to the soaring community. There are inaccurate statements in the Draft EIR because the authors refuse to listen to the pilots who have been recreating at Bates for over 40 years. Let's build a better path together. I31-10

Coastal soaring at Bates makes Carpinteria truly special and unique, I can bike almost anywhere, but I travel to Carp for the flying at Bates and spend my money there. I31-11

Thank you

Rob Sporrer
Santa Barbara Resident since 1995

Response to Comment Letter I31

Rob Sporrer

April 26, 2021

I31-1 The commenter expresses concern regarding the loss of paragliding and hang gliding associated with the project.

Please see Global Response GR1. The City acknowledges the comment and notes that it expresses opposition for the proposed project but does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I31-2 The commenter expresses support for Alternative 4, providing the opinion that the proposed recontouring of the ocean-facing side of the ridge would reduce or eliminate the strong upward draft necessary to fly.

Please see Global Response GR1 that discusses the air flow analysis and project impacts on existing soaring opportunities. The comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I31-3 The comment provides background on the project site, as it relates to soaring activities, and states the site is a historic site.

The City acknowledges the comment and notes that it does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. The project's impacts on historic resources were analyzed in Section 3.4.4. As discussed in this section, no historical built environment resources exist within or near the proposed project site. Therefore, no further response is required or provided.

I31-4 The comment expresses concern that impacts to recreation associated with the proposed project were determined to be insignificant in the Draft EIR.

See Global Response GR1. The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I31-5 The commenter states that they signed a petition that had 2,000 signatures and more than 60 comments to preserve the site.

The City acknowledges the comment and notes that it does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I31-6 The commenter expresses support for Alternative 4 over the proposed project but proposes certain revisions to the design of Alternative 4.

The City appreciates the commenter's recommendations. No further response is required because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR.

I31-7 The commenter expresses concern regarding eroding seawalls and rising sea levels, and states that Alternative 4 is more financially responsible.

See response I22-6, above.

I31-8 The commenter expresses concern regarding the accuracy of the wind study and believes that 20-30 percent loss of wind should be considered significant.

See Global Response GR1.

I31-9 The commenter feels that it is inappropriate for the EIR to discuss flight rules or launches, and states the focus of the EIR should be to preserve recreation.

See Global Response GR1.

I31-10 The commenter states that the City has failed to reach out to the soaring community, resulting in inaccurate statements in the Draft EIR.

The City acknowledges the comment and notes that it does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. The City has received a number of comments from the soaring community on the project's Notice of Preparation and has accounted for these comments in the preparation of the Draft EIR. Therefore, no further response is required or provided.

I31-11 The commenter explains the uniqueness of the project site relative to soaring opportunities afforded by existing conditions within the project alignment.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

Comment Letter I32

Nick Bobroff April 25, 2021

Principal Planner

Community Development Department

City of Carpinteria 5775 Carpinteria Ave. Carpinteria, CA 93013

Hello Mr. Bobroff and readers of this letter,

This is my third reply to the Zoom webinar meeting on April 13, 2021 of the Environmental Review Committee concerning the Multi Use Trail (M.U.T.). The M.U.T. has certain uses that will be banned. The presented proposal will not provide; improved public coastal access, recreational opportunities, or add to regional coastal resources. The "shared-use," trail will be limited to less than, "multiple," or "shared," uses. I32-1

The ever increasing, electric powered bicycles, already "illegal," (as mentioned, by Matt Roberts), on any bike path in the City of Carpinteria, are to be specifically banned. They are currently in use on all bike routes, within the City. What about skateboards? Electric powered skateboards? Roller blades/skates? Radio controlled cars? Street Luge? Sidewalk surfers? Scooters? Minibikes? Wagons? Horses (ten foot wide "path," with 3-foot-wide paved shoulder?)? Are the primary users, bicyclists, relegated to the shoulder? (see attachments 3.1, 3.2,3.3)? The proposed sixteen-foot width of the M.U.T. will attract these, and other users, and result in substantial conflicts with primary users and pedestrians. I32-2

The proposed removal of 92,526 cubic yards of the existing Little Diamondhead Bluff, will be an elimination of a regional coastal resource (see attachments 3.4, 3.5.). An average dump truck can haul 10 cubic yards of dirt. If there are 10 dump trucks, per day removing dirt and debris, seven days a week, it would take almost three years, to remove. The resulting traffic, inevitable debris removal complications, cultural resource discovery and preservation, aesthetics, biological and environmental issues, equipment exhaust and staging, noise, freeway lane, road, bike path, parking lot, and beach closures will expand the expected costs, and timeline to complete. More and larger dump trucks will be the City's most likely response to shorten the debris removal and construction timetable. Where will 14,860 cubic yards of dirt and debris, be staged, on the construction site? I32-3 I32-4 I32-5

A survey of road bicyclists (see attachment 3.6) agrees with the Committee. Alternative #4, should have an external width (except for two switchbacks, to reduce speed of bicyclists crossing Bates Road) of no more than eight feet. Final grade, and accessibility, will follow ADA requirements. This will substantially lessen the costs, and construction timeline, and environmental impact. It should continue to be constructed by the California Department of Transportation. No private contractors should be used. Preserve Little Diamondhead! I32-6

Respectfully,

Ottis Gillespie

MULTI USE TRAIL BICYCLISTS SURVEY 2020

A survey of 100 bicyclists, that stopped on the King property, to watch paragliders, and enjoy the view, was conducted by me. I introduced myself, stated I was a paraglider pilot, and asked them, if they would mind, taking a verbal, two question, survey, concerning the M.U.T. This survey was in July through September, 2020

1) Are you a local resident, or from out of town?
2) Considering the prevailing Southwest wind, would you prefer to have the bike path extended across the Pacific Ocean side of that Bluff (as I pointed to Little Diamondhead), or on the freeway side?

The bicyclists that responded verbally as" local,"		87
Respondents from "out of town,"		13
Total		100
Pacific Ocean side preference:		3
Local	2	
Out of town	1	
Freeway side preference:		96
Local	83	
Out of town	13	
Abstention from choosing :		1

I32-9

Response to Comment Letter I32

Ottis Gillespie
April 25, 2021

I32-1 The commenter notes his letter is in response to the April 13, 2021 presentation on the proposed project. The commenter believes that certain uses would be banned under the project and that the project would not provide adequate recreational uses.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I32-2 The commenter expresses concern that the proposed project would attract electric bikes, skateboards, roller blades/skates, horses, wagons, and other uses.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I32-3 The commenter states that the removal of the bluff would be a removal of a regional coastal resource and references attachments 3.4 and 3.5 (see response I32-8).

Please refer to Global Response GR1 for discussion regarding the air flow analysis and project impacts upon recreation (soaring opportunities). The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I32-4 The comment expresses concern regarding the environmental impacts associated with earth materials removal.

The environmental impacts associated with export of the soils on-site have been analyzed throughout Chapter 3 of the Draft EIR. The commenter does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I32-5 The commenter states that the City will likely require more and larger trucks to shorten debris removal and the construction schedule and asks where staging of debris would occur.

The City acknowledges the comment and notes that it expresses the opinions of the commenter. The project's construction schedule and number of haul trips associated with the project are outlined in Section 3.2.4 of the Draft EIR. Excavated soil materials would loaded into haul trucks simultaneous with the grading activity; a limited volume of soil stock-piling would occur in the vicinity of active grading (within the project site) between the loading operations for individual haul trucks.

I32-6 The commenter expresses general support for Alternative 4. The commenter suggests that the width of the proposed bike route should be no wider than 8 feet, with the exceptions of switchbacks. The comment provides additional recommendations for Alternative 4.

The City acknowledges the comment and appreciates the commenter's suggestions regarding the 8-foot path width. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I32-7 The commenter provides illustrations of sports activities referenced in comment I32-2. The comment does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I32-8 The commenter provides photographs of the ridge area commonly called "Little Diamond Head." See response I32-3. The comment does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I32-9 The comment provides the results of a survey. The comment does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

Comment Letter I33

Hi Nick,

I am writing to comment about the bike path that could potentially destroy a natural resource for the flying community in SB county. I am very appreciative of the work that has been done thus far and am hopeful that you will look beyond the Draft EIR which stated that the impact would be "insignificant." I33-1

As a pilot for almost 20 years, I can attest that removing earth on the South Side of the bluff to build the bike path would ruin our ability to soar those bluffs. I agree with the Environmental Review Committee's decision to recommend "Alternate 4" in order to preserve our soaring ability on the South Side of the bluff.

As an avid bike rider, I also agree with building on the North side of the bluff. I can't imagine the craziness in the summer of trying to negotiate the busy parking lot. It makes sense for fluidity and speed to route the path on the North side of the bluff. I33-2

I hope that as we move forward in this plan, you reach out and listen to our community of pilots and professionals. We are fighting to save this place because it is special in the hearts of hundreds of pilots nationwide and a real treasure in our area. Please make the best choice for all involved. I33-3

Respectfully,

Tim Barker

Response to Comment Letter I33

Ottis Gillespie
April 25, 2021

I33-1 The commenter expresses the opinion that the bike path could destroy a natural resource for the flying community.

Please see Global Response GR1. Further, the City acknowledges the comment and notes that it expresses general opposition to the project but does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I33-2 The commenter opines that removing earth on the south side of the bluff would ruin the ability to soar these bluffs and expresses general support for Alternative 4.

Please see Global Response GR1. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I33-3 The commenter makes general remarks about future coordination with the City and the soaring community. The comment does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

Comment Letter I34

Im sending this email in protest of the Draft EIR statement that there is an insignificant impact to the flying at the Bates Launch.
30 % reduction in lift will ruin the flying on the hill as that small margin of lift is needed for soaring flight. I34-1

I have contacted Dennis Page, whose work and calculations were used in the Draft EIR and he pointed some flaws in the study. I have asked him to draw up some drawing to show why there is such a big impact. I have known Dennis for 35 years and so he is willing to draft them up for us. I34-2

I was happy to hear that the community is willing to look at the North side path that works to not affect the flying on the south side of the hill I34-3

There is a Petition to preserve Bates Ridge that 2000 people have now signed it will be presented to the city. . I believe this shows a strong desire to preserve flying while still being able to get a bike path down to the beach. We have spoken with many bike groups and they are in support of running the trail down to connect with the other trail. I34-4

Thanks Karl Cameron

Response to Comment Letter I34

Karl Cameron
April 26, 2021

I34-1 The commenter states the opinion that the proposed project would ruin the opportunity of flying over the bluffs area due to the 30 percent reduction in lift.

Please refer to Global Response GR1.

I34-2 The commenter indicates they will be contacting Dennis Page to create a drawing that illustrates how the air flow analysis is flawed. However, no specific critique of the air flow analysis is provided in the comment.

Please refer to Global Response GR1.

I34-3 The commenter expresses general support for Alternative 4. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I34-4 The commenter references the petition to preserve the site. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

Comment Letter I35

March 3, 2020

RE: **Carpinteria Rincon Trail Project**

To Whom it may concern:

On a recent trip to the Ventura and Carpinteria area, specifically to the Bates Paragliding site I was told of the proposal to put in a new bike path. After hearing of the proposal and looking at the proposed alignment a letter seemed in order. I am a Professional Civil Engineer, avid bicycle rider, both road and mountain and a paraglider pilot.

I currently live in Nevada City, California and for the past eight years have made several trips each year to the area. If conditions are right each trip involves surfing, flying and bike riding. The Bates flying site represents a very special and unique feature that is found in only a handful of places along the coast of California especially in regards to the accessibility of the site. Not only are the views awe inspiring and incredible, the drive-up nature of the site makes it extremely appealing. As a bicycle rider I also appreciate the bike paths that have been made in an attempt to keep cyclists safe from traffic. I35-1

Looking at this proposed path alignment, the main goal of it seems to be maximizing ocean views, which it does well. Other significant factors appear to have been neglected and or overlooked. I'll list three here. First, this path creates a potential conflicting and hazardous interaction between two recreational activities, paragliding and bike riding. In low wind conditions paraglider pilots often find lift by flying close to hill or mountainsides. Picture a bicyclist descending the path with a paraglider pilot 6' off the ground in an oncoming direction. Second, this path puts bicyclists directly at the end of an already congested and narrow parking lot. As a road bike rider, myself and most others I know go will go to lengths to avoid riding through busy parking lots. The variability of drivers and non-predictability is high. Riding in a bike lane alongside traffic represents for the most part a more predictable outcome. Drivers are in a lane heading in a particular direction. A parking lot is far more prone to vehicle randomness and thus undesirable and dangerous, to the rider, interaction. Third, tax payer expense both short term and over the course of time. Pursuing this alignment is no small feat in regards to labor, earthwork quantities and the potential building of a bridge. I believe exact earthwork quantities have been presented in other letters. Longevity of the project is questionable as it would be built atop a slope with marginal stability. One need only walk down to the Bates beach and look at the hillside to see what time and environmental factors do the soil at hand.

I35-2
I35-3
I35-4
I35-5
I35-6

William C. Prechter
Civil Engineer
PO Box 454 Nevada City, CA 95959
(530) 265-0733

In my own consulting practice I strive to keep architectural design and aesthetics as a main priority. As such I can appreciate what this path is attempting to do. There are at times moments where overall functionality, practicality and macro perspective can be forgotten in one's attempt to hold too firm a grasp to a single idea. This appears to be the case here. I strongly encourage the thorough investigation of other options prior to the approval of this particular path. As it would appear all factors have not been considered.

I35-7

Sincerely,
William Prechter PE

Response to Comment Letter I35

William Prechter
March 3, 2021

I35-1 The commenter provides personal background and explains the uniqueness of the project site. The City acknowledges this comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I35-2 The commenter provides the opinion the trail design appears to maximize the objective of providing ocean views but neglects other important factors. The City acknowledges the comment as an introduction to comments that follow. No further response is required.

I35-3 The comment expresses concern regarding conflicts between paragliding and bike riding, specifically pointing out the potential for collisions between cyclists and low altitude paragliders.

The City acknowledges the comment. As discussed in the Air Flow Analysis (Appendix I of the EIR), the zone of greatest vertical air velocity (i.e., "lift") occurs above the front edge (windward edge) of the ridge, not along the slope face. The proposed trail would be situated on a bench cut within the slope face, below the elevation of the ridge top. The only area where the trail would be the same elevation as the ridge would be at the bridge over-crossing of the UPRR corridor. The visibility between pedestrians/cyclists and paragliders would be unobstructed in this section of the trail, minimizing any potential for accidents involving conflicts between trail users and soaring activities.

I35-4 The comment expresses additional bicycle safety concerns involving conflicts between cyclists and vehicle maneuvers in the Rincon Beach County Park parking lot.

As discussed in Section 3.12 (Transportation) of the Draft EIR, the City's consulting traffic engineer determined there would not be a significant hazard associated with introducing additional cyclists traversing the Rincon Beach County Park parking lot. Vehicle maneuvers in the parking lot involve low speeds, and signage in the parking area would alert drivers to cyclists passing through the area. Signage at the terminus of the trail leading into the parking area would also alert cyclists to reduce speed and employ appropriate caution when riding through the parking lot.

I35-5 The comment expresses concerns regarding expenditure of tax-payer funds to construct and maintain the proposed trail.

The City acknowledges the comment and notes that it raises economic issues that do not appear to relate to any physical effect on the environment. No further response is required because the comment does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR.

I35-6 The comment expresses concern regarding landform alteration.

See Global Response GR2.

Comment Letter I36

Good afternoon Mr. Nick,

I appreciate the work that has gone into planning this bike trail, but want to see it improved. I36-1

I am devastated that the Draft EIR considers the impact to my flying recreation to be 'insignificant' I36-2

I signed a petition to preserve Bates Ridge that has 2,000 signatures and over 60 comments. I36-3

I fully agree with the Environmental Review Committee's decision to recommend Alternate 4, building on the North side of Bates ridge, preserving the soaring recreation.

I believe building a bike path on the North side of Bates bluff is best for all recreational users, it is a safer, more direct path for cyclists, giving them a path that avoids the crowded, steep, and dangerous Rincon parking lot.

I am a cyclist and want a direct route on the North side, rather than an Ocean view. Seeing the Ocean shouldn't be a requirement for this project because I get plenty of views along the way like the whole bike path to Ventura. I36-4

I am concerned the current plan will require maintenance against rising seas as it is being built near a eroding seawall. Relocating to the other side of the ridge is financially responsible. I36-5

I appreciate the wind study done by the engineers, however, this study specifically states that it is based on theory and not intended for this purpose. Even if accurate, 20-30% loss of lift is very significant to me, especially on average wind days where lighter wind flow will be exponentially impacted by this project. I36-6

I feel it's inappropriate for the EIR to discuss free flight rules or launches, this is outside the scope of the document and project, the focus of the EIR and CEQA is preserving recreation at the project site. I36-7

I don't understand why the City continues to brush me aside and has failed to reach out to the soaring community. There are inaccurate statements in the Draft EIR because the authors refuse to listen to the pilots who have been recreating at Bates for over 40 years. Let's build a better path together. I36-8

Coastal soaring at Bates makes Carpinteria truly special and unique, I can bike almost anywhere, but I travel to Carp for the flying at Bates and spend my money there. I36-9

Thank you very much.

Kindest regards,

JG

I36-1 The commenter expresses appreciation to the City regarding planning a new bike path but would like to see improvements.

The City acknowledges the comment as an introduction to comments that follow. No further response is required.

I36-2 The comment expresses concern that impacts to recreation associated with the proposed project were determined to be insignificant in the Draft EIR.

Please refer to Global Response GR1.

I36-3 The commenter references the petition to preserve the site. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I36-4 The commenter expresses general support for Alternative 4. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I36-5 The commenter expresses concern regarding eroding seawalls and rising sea levels, and states that Alternative 4 is more financially responsible

See response I22-6, above.

I36-6 The commenter expresses concern regarding the accuracy of the wind study and believes that 20-30 percent loss of wind should be considered significant.

See Global Response GR1.

I36-7 The commenter feels that it is inappropriate for the EIR to discuss flight rules or launches, and states the focus of the EIR should be to preserve recreation.

See Global Response GR1.

I36-8 The commenter states that the City has failed to reach out to the soaring community, resulting in inaccurate statements in the Draft EIR.

The City acknowledges the comment and notes that it does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. The City has received a number of comments from the soaring community on the project's Notice of Preparation and has accounted for these comments in the preparation of the Draft EIR. Therefore, no further response is required or provided.

I36-9 The commenter explains the uniqueness of the project site relative to the existing soaring opportunities afforded by the site.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

Comment Letter I37

Dear Nick,

Please accept this letter in response to the comment period for the Rincon Trail Draft EIR.

The decision to build the Rincon Trail as currently proposed would have an irreversible impact on the paragliding and flying community. From my perspective, having paraglided from Bates County Park Bluff area for over 10 years, constructing the trail on our precious bluff would be akin to draining the ocean, stopping the wave pattern for surfers at Rincon and render this spot use less. I37-1

To us pilots who currently utilize the updraft of wind to fly, modifying this wind draft would render our site useless. How harsh and horrible would it be for surfers to lose their ocean? In essence, the currently proposed M.U.T. takes our wind away and obliterates all paragliders recreational activity. I37-2

These paragliding flying sites are very rare and to have one in our backyard is an esteemed treasure and a prize recreational attraction for pilots, locals and visitors from all over the world. Every time I fly, I meet someone who has arrived in Carpinteria to paraglide. I've met thousands of people, including individuals from Germany, France, Italy, South America and several European and US locations.

Paragliding is a vital part of the Queen of the Coast along with the Rincon surf spot it is a world-renowned destination which creates millions of dollars of tourist income for the City of Carpinteria and the County of Santa Barbara. I37-3

I am constantly asking local community members, cyclists, and visitors what they think of the proposed Rincon Trail Project which cuts into our flying site and takes thousand of tons of dirt from the bluffs. Nearly 100% of those I spoke with say the project shouldn't be built if paragliding is lost to gain a bike/pedestrian pathway. I37-4

Santa Barbara County is currently surveying local residents as to how they can provide more recreational activities for the community. There are supposedly grant funds available to increase recreational activities for our citizens. Why then is Carpinteria City proposing the Rincon Trail Project which would ultimately take away paraglider's recreational activity? I37-5

There is no logical reason for paragliders to lose their last remaining little gem for our recreation and leisure experience. Option number #4, constructing the bike/pedestrian path on the north side of the bluff along the 101-freeway corridor makes sense and preserves recreational activities for cyclists, surfers, paragliders and hikers. This can be a win-win situation. If we spend half the time developing a plan for Option # 4 rather than wasting time, money and efforts on the over complicated, over engineered, and ridiculously costly currently proposed Rincon Trail plan. Our community, including wildlife and fauna will thrive rather than run from the concrete jungle. We need to keep the coast and the bluffs of Carpinteria California open, undeveloped, and undisturbed to all the public for future generations to recreate and enjoy. I37-6

Thank-you for the opportunity to respond. Please include this letter in the Draft EIR Public Comments. I37-7

Respectfully Submitted,

George Jimenez

April 26, 2021

Response to Comment Letter I37

George Jimenez
April 26, 2021

I37-1 The City acknowledges the comment as general opposition to the project. No further response is required.

I37-2 The comment expresses concern regarding loss of paragliding opportunities above the site as a result of the project.

Please see Global Response GR1.

I37-3 The comment provides background on paragliding and identifies the uniqueness of the project site with respect to the soaring opportunities it currently affords.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

I37-4 The comment expresses concern regarding loss of paragliding activity as a result of the project.

Please see Global Response GR1. The City acknowledges the comment and notes that it expresses opposition for the proposed project but does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I37-5 The comment provides background on the County's efforts to increase recreational activities, referencing the existence of grant funding to increase recreational activities, and expressing the opinion the project would take away paragliding opportunities over the project alignment.

Please refer to Global Response GR1. The City acknowledges the comment and notes that it does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

I37-6 The commenter expresses general support for Alternative 4. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I37-7 The City acknowledges the comment and notes that it provides concluding remarks that do not raise new or additional environmental issues concerning the adequacy of the Draft EIR. No further response is required or provided.

Comment Letter I38

I am writing as a member of the Santa Barbara Soaring Association and part of the paragliding community. I am writing asking (pleading!) that you chose a bike path plan that will not destroy our flying site at Bates/Rincon. The change of the face to a 1:1 slope, the inclusion of a wide (18ft?) path, and the removal of vast amounts of dirt will permanently destroy our flying site. While "wind experts" have weighed in on thus there has been no contact made with pilots who actually fly there or the SBSA. I can tell you from experience that the changes proposed in the main plan will destroy our flying site. For that reason I urge you to build the path on the freeway side of the hill for that brief distance. We in the SBSA are in favor of the bike path and would love to see it put in. But please, do not do this at the cost of destroying one of the most amazing flying sites on the California Coast. This will be devastating loss, not only to our community but to the literally thousands of people who travel to Carpinteria to fly the site and the income they bring to the region. I38-1

Thank you. Please do not hesitate to contact me if you have any questions.
Mark

Mark Rayburn Patterson, PhD

Response to Comment Letter I38

Mark Rayburn Patterson, PhD
April 26, 2021

I38-1 The comment expresses general opposition to the project and support for Alternative 4. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

Comment Letter I39

Hello,
I just wanted to add my comments about the bike proposed bike path on Rincon bluffs.

We in the flying community have hopefully made it clear by now that the initial bike path proposal is anathema with free flight. It takes away opportunity for flight while at the same time giving cyclists and pedestrians a poorly designed path for their uses.

Nobody wants a bike path that routes directly through a busy parking lot. Not cyclists, not pedestrians, not pilots. I39-1

Nobody wants a bike path that is going to unnecessarily remove massive amounts of earth from the bluff face, all for a few more ocean views and way more engineering requirements.

Over 2,000 people, myself included, have signed a petition to save this cherished bluff face. Please see that this is an incredibly important issue that both locals and visitors alike care about.

Option #4 that has been proposed is by far our preference in the flying community, since it is routed on the north side of the slope and avoids the parking lot for cyclists while also preserving the southern bluff face. I39-2

The cursory wind study that was done is inaccurate and needs to be reassessed by real experts in the field. I39-3

This is just a special bluff face. It must be protected! Please help us protect it! I39-4
-Derek Musashe

Response to Comment Letter I39

Derek Musashe
April 26, 2021

I39-1 The comment expresses general opposition to the project, indicating it will impact free flight opportunities, that cyclists will need to traverse a parking lot to connect to the regional trail system to the south, and that massive volumes of earthwork would be required.

Please refer to Global Response GR1 for discussion of the air flow analysis and alterations to soaring opportunities from project implementation. Please refer to response to comment I35-4 (above) for discussion regarding the traverse of the Rincon Beach County Park parking lot by cyclists. Please refer to Global Response GR2 for discussion of earth form modification.

I39-2 The comment expresses general support for Alternative 4. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I39-3 The commenter expresses concern regarding the accuracy of the wind study.

See Global Response GR1.

I39-4 The commenter asserts the bluff face is special and must be preserved. The City acknowledges the comment and notes that it provides concluding remarks that do not raise new or additional environmental issues concerning the adequacy of the Draft EIR. No further response is required or provided.

Comment Letter I40

Good afternoon Mr. Nick,

First and foremost we appreciate the work that has gone into planning this bike trail, but want to see it improved. I40-1

I am devastated that the Draft EIR considers the impact to my flying recreation to be 'insignificant' I40-2

I signed a petition to preserve Bates Ridge that has 2,000 signatures and over 60 comments. I40-3

I fully agree with the Environmental Review Committee's decision to recommend Alternate 4, building on the North side of Bates ridge, preserving the soaring recreation.

I believe building a bike path on the North side of Bates bluff is best for all recreational users, it is a safer, more direct path for cyclists, giving them a path that avoids the crowded, steep, and dangerous Rincon parking lot. I40-4

I am a cyclist and want a direct route on the North side, rather than an Ocean view. Seeing the Ocean shouldn't be a requirement for this project because I get plenty of views along the way like the whole bike path to Ventura.

I am concerned the current plan will require maintenance against rising seas as it is being built near an eroding seawall. Relocating to the other side of the ridge is financially responsible. I40-5

I appreciate the wind study done by the engineers, however, this study specifically states that it is based on theory and not intended for this purpose. Even if accurate, 20-30% loss of lift is very significant to me, especially on average wind days where lighter wind flow will be exponentially impacted by this project. I40-6

I feel it's inappropriate for the EIR to discuss free flight rules or launches, this is outside the scope of the document and project, the focus of the EIR and CEQA is preserving recreation at the project site. I40-7

I don't understand why the City continues to brush me aside and has failed to reach out to the soaring community. There are inaccurate statements in the Draft EIR because the authors refuse to listen to the pilots who have been recreating at Bates for over 40 years. Let's build a better path together. I40-8

Coastal soaring at Bates makes Carpinteria truly special and unique, I can bike almost anywhere, but I travel to Carp for the flying at Bates and spend my money there. I40-9

Thank you very much.

Kindest regards,

Morgan Granier

Response to Comment Letter I40

Morgan Granier
April 26, 2021

I40-1 The commenter expresses appreciation to the City regarding planning a new bike path but would like to see improvements.

The City acknowledges the comment as an introduction to comments that follow. No further response is required.

I40-2 The comment expresses concern that impacts to recreation associated with the proposed project were determined to be insignificant in the Draft EIR.

See Global Response GR1.

I40-3 The commenter references a petition to preserve the site. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I40-4 The commenter expresses general support for Alternative 4. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. The City and County will be determining what approval action to take with the benefit of the environmental review contained in the EIR. No further response is required or provided.

I40-5 The commenter expresses concern regarding eroding seawalls and rising sea levels, and states that Alternative 4 is more financially responsible

See response I22-6, above.

I40-6 The commenter expresses concern regarding the accuracy of the wind study and believes that 20-30 percent loss of wind should be considered significant.

See Global Response GR1.

I40-7 The commenter feels that it is inappropriate for the EIR to discuss flight rules or launches, and states the focus of the EIR should be to preserve recreation.

See Global Response GR1.

I40-8 The commenter states that the City has failed to reach out to the soaring community, resulting in inaccurate statements in the Draft EIR.

The City acknowledges the comment and notes that it does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. The City has received a number of comments from the soaring community on the project's Notice of Preparation and has accounted for these comments in the preparation of the Draft EIR. Therefore, no further response is required or provided.

I40-9 The commenter explains the uniqueness of the project site with respect to the soaring opportunities afforded by existing conditions within the project alignment.

The City acknowledges the comment and notes that it expresses the opinions of the commenter and does not raise an issue related to the adequacy of any specific section or analysis of the Draft EIR. Therefore, no further response is required or provided.

Comment Letter I41

Dear Sirs,

Coastal soaring at Bates is unique and special for my family and i as we visit from out of town especially to enjoy the beach and the paragliding. We typically visit for a few days and stay in local hotel accommodations and also enjoy dining out at all the local restaurants. If it was not for the paragliding at Bates we would not visit. I41-1

Pls preserve this unique soaring site.

Yours sincerely,

Derek Arculli

Response to Comment Letter I41

Derek Arculli
April 26, 2021

I41-1 The comment expresses general opposition to the project. The City notes that the comment does not raise any issue concerning the adequacy of the Draft EIR. No further response is required or provided.

Verbal Comments Presented During

Environmental Review Committee Hearing on Draft EIR

April 13, 2021

The Carpinteria Environmental Review Committee (ERC) held a public meeting specifically to discuss the Draft Environmental Impact Report on April 13, 2021. The minutes from the ERC meeting are provided on the following pages.

The minutes reflect three different categories of verbal testimony at the meeting:

(1) Questions presented by ERC members regarding the project or environmental analysis
(2) Comments from members of the public on the project and on the adequacy of the environmental analysis
(3) Comments from the ERC members on the adequacy of the Draft EIR

For the first category (1), staff provided answers in real time at the meeting to ERC member questions that are considered adequate, and which are captured in the minutes. No further responses are necessary or have been provided in regard to answering ERC questions.

For the second category (2), verbal comments presented during the meeting reflect the same content as written comments on the Draft EIR submitted by these individuals. Detailed responses to written comments submitted by these individuals are provided in the immediately preceding sub-section of this chapter and are considered adequate to address both submitted written comments and the verbal comments delivered during the ERC meeting.

Responses to ERC member comments (3) are provided following the ERC meeting minutes.

Carpinteria Rincon Trail
Draft Environmental Impact Report

Environmental Review Committee Minutes
April 13, 2021
4:00 p.m. Virtual Meeting (Zoom Webinar)

The meeting was called to order at approximately 4:00 p.m. by Steve Goggia, Chair.

ROLL CALL

Members present: Steve Goggia, Chair
John Ilasin
Natasha Lohmus
Vince Semonsen
Erin Maker

OTHERS PRESENT: Nick Bobroff, Principal Planner
Matt Roberts, Project Applicant
Scott Onishuk, Project Engineer
Jonathan Leech, Environmental Consultant
Mack Carlson, City Attorney's Office

Approximately 40 members of the public were in attendance.

PUBLIC COMMENT ON ITEMS NOT ON THE AGENDA

None

PROJECT PRESENTATION

Nick Bobroff and Jonathan Leech described the public review process, provided an overview of the project description, and disclosed the findings of the Draft Environmental Impact Report (DEIR), including all of the identified potentially significant impacts and proposed mitigation measures. The project alternatives considered as part of the DEIR were also described and a brief analysis of their respective impacts compared to the proposed project was provided.

ERC MEMBER QUESTIONS

Erin Maker

- Who will be responsible for maintaining the various elements of the trail, including but not limited to storm drains and drain outlets?
    - Staff explained that the details of a City-County Maintenance Agreement are still being worked out, but the proposed arrangement is that the County would be responsible for the bridge structure and the City responsible for the bridge/trail surfacing. For the storm drains, Caltrans would continue to be responsible for maintaining their existing storm drain facilities; the County would take on responsibility for the new outlets on County Parks property.
- Where will the storm drain filters be installed? We don't want them to be located somewhere that would allow them to be clogged with sediments.
    - Staff clarified that the filters would be installed in inlets just off the shoulder of the trail.
- What is the status of the project proposed for the Bluffs III parcel where the soaring participants launch from?
    - Staff explained that a proposal for a private campground/resort was recently considered at a

conceptual level by the Architectural Review Board, Planning Commission, and City Council at a joint conceptual review meeting.

- Requested information about the project costs for the proposed project and the project alternatives; asked if any one of the alternatives was most cost-effective.
    - Staff explained that Alternative "2" was abandoned due to challenging construction conditions related to unstable geologic conditions, and a need for significant retaining walls. The costs of these challenges made this Alternative likely financially infeasible. The proposed project was anticipated to be far less expensive to build, on the order of $1-2 million less, despite requiring more earthwork than Alternative "2." Alternative "3", by further reducing earthwork, would save additional money as compared to the proposed project. Alternative "4" is expected to be more expensive due to its increased length, more grading, more concrete, and more retaining walls. Staff cautioned, however, that construction costs were not a significant factor in developing project alternatives; instead developing the best facility for the community was the main driver in designing the project alternatives.

Natasha Lohmus

- Will the exposed drainage outlets be placed at the beach elevation or will there be a vertical drop to the beach from the outlets, which could create erosion? She noted the existing drainages all have created erosional features. She asked if any energy dissipation features would be installed.
    - Staff answered that the new and replaced outlets are intended to have a 90° outlet at the beach elevation and would be protected with rock rip-rap or similar at the outlet.
- Where do the soaring participants launch from relative to the project site?
    - Staff explained that the pilots launch from an area on private property to the southwest of the trail alignment, and confirmed that the trail would have no impacts on the launch area.
- In Alternative "4," if the bridge were rotated toward the highway, could the earthwork be modified to bring the trail up to the bridge deck elevation rather than directing the bridge/trail out toward the ocean and then having to swing back in toward the highway, and impacting the use of the ocean-side ridge for soaring? She did not feel that preserving ocean views from the trail was critical, and expressed more concern for impacts to soaring activities and the negative economic effects of such impacts to use of the area by the soaring community.
    - Staff responded that there are a number of problems, including existing utility infrastructure, which make such an alternative alignment problematic. In addition, one of the primary project objectives as identified in the EIR was to preserve ocean views from the new trail.

Vince Semonsen

- What is the anticipated duration of the construction effort? Will construction extend through a rainy season? He is skeptical of any Best Management Practices (BMPs) that would be sufficient to protect exposed soils given the extensive amount of earthwork anticipated on a steep slope during heavy winter rain events. The restoration/revegetation effort will also be exposed to winter rains/erosion.
    - Staff answered that the project is expected to take approximately 24 months to complete.
    - Staff added that the project will be operated in 2 separate grading operations, one above the UPRR corridor and one below. The earthwork area above the UPRR corridor will be able to utilize the existing, established storm drain system for capturing and diverting runoff. On the ocean side of the UPRR corridor, careful and thorough erosion control will be more critical and will need to be timed to occur outside of winter, if possible. The Las Positas bike path project in Santa Barbara was cited as an example of how projects can be completed during winter with appropriate BMPs in place.
- He questioned the efficacy and reality of the woodrat and legless lizard relocation efforts given the challenging terrain. Relocating the woodrat middens seems unlikely; the woodrats are likely to run away

when their nests are disturbed.

- He questioned whether the finding of a 30% reduction in air currents relied upon by the soaring enthusiasts was accurately classified as "less than significant."
    - Staff clarified that the impact was identified as being up to a maximum of a 30% reduction, and that based upon the range of suitable wind conditions that allow for soaring opportunities, soaring opportunities within the suitable wind range would remain albeit at this reduced level. It was also clarified that the environmentally superior alternative (Alternative "3") was found to result in closer to a 20% reduction, and this in part, was why this Alternative was found to be environmentally superior.
- Why does Alternative 4 increase the amount of earthwork compared to the proposed project?
    - Staff confirmed this was correct and explained that the slope above the highway would need to be modified and re-worked for the entire length east of the UPRR crossing to create the new trail bench. Additionally, the Alternative 4 trail is considerably longer in length. It was also clarified that this Alternative requires retaining walls above and below the trail for a stretch towards the eastern end.
- Was there a previous Alternative that contemplated using the existing freeway bridge or attaching to the freeway bridge to cross the tracks and continuing the trail along the highway shoulder?
    - Staff responded that it was looked at early on but found to be infeasible due to the cost and constructability challenges with adding onto, or attaching a new bridge to the existing freeway overpass above the UPRR alignment. Matt Roberts clarified that Caltrans did not support such an option for further consideration and wanted to see a completely independent bridge structure for the trail to cross the railroad alignment. The proposed Alternative 4 is an attempt to retain some ocean vista views, and make use of a shorter bridge span. It also makes use of the work already completed with the California Public Utilities Commission (CPUC) with respect to gaining approvals and easements for the rail corridor crossing.
- He questioned the importance and emphasis given to providing or maintaining coastal views for this short trail segment given the availability of coastal views for the remainder of the trails to the north and south of the trail. He found it hard to justify in light of the amount of earthwork necessary to accommodate a trail with a continuous ocean view.
    - Matt Roberts clarified that Alternative 3, the environmentally superior alternative, requires less earthwork than the proposed project while still meeting the project objectives of providing an ocean vista trail.
- How much earth removal would occur in Alternative "4"?
    - Anticipating ~94,100 cubic yards of export (i.e., earth removal).
- In the Alternative "4" scenario, could the bridge be turned to be parallel, or closer to parallel, to the freeway to create a shorter bridge?
    - Staff replied that the current bridge design, which is nearly perpendicular to the railroad tracks, is the shortest crossing of the rail corridor (at ~160' in length). Staff clarified that various alternatives have been examined in an effort to minimize the bridge spans and needed earthwork. Alternative "4" as shown also fits other project constraints related to easements, rights-of-way, construction staging, etc. At 160' length, we are reaching the maximum length that can be accomplished with a clear span bridge. There were no significant constructability benefits observed from rotating the bridge.
- In the Alternative "4" scenario, none of the earthwork shown in the renderings on the ocean side of the bluff would occur, correct? Then where would the 94,000 cubic yards of net export come from in Alternative "4"? He asked to see a rendering or similar exhibit showing where the earthwork quantities would be coming from.
    - Staff explained that the numbers are accurate having been determined using highly detailed models of the project area, and that the earthwork is necessary to create a trail bench along the

entire length of the ridge.

John Ilasin

- He asked to hear from the project design team in response to some of the questions raised by the other ERC members.

Steve Goggia

- In Alternative "4", could the trail be placed on top of the ridge instead?
    - Staff explained that at the bridge crossing, the bridge is near the same elevation as the freeway. In order to run down the ridgeline towards Bate Rd, the bridge would have to be increased in height 40 feet which would in turn result in a much longer bridge (current 160' bridge expanded to 250'+ bridge length) with much more significant visual and construction impacts.
- In Alternative "4", does the trail need to still be 16 feet wide? Could it be narrower if it were higher up on the ridge if it didn't need to carry so much of the uphill slope?
- Any chance of using something like an ADA-compliant spiral ramp to gain the necessary elevation to reach the ridge?
    - Staff replied that such a feature would not meet the design criteria for a trail or bike path, nor would it seem to fit the physical setting.

PUBLIC COMMENT

John Greynald

- The study is flawed and it will be easy for the soaring community to demonstrate the failings of the study and the attempts to delegitimize the recreational impacts to the soaring community.
- Believes the analysis with respect to recreational impacts is illegal.
- Disagrees with the conclusion that a 30% reduction in wind velocities is less than significant.
- Nobody from the project team attempted to contact or consult with the soaring community.
- Believes the wind study is flawed and incomplete.
- Alternative 4 is the only viable option that could be permitted. Stop wasting the taxpayers' money on studying other project alternatives.

Karl Cameron

- There hasn't been much erosion on the ocean bluff face over the last 20 or 30 years based on personal observations, except in the areas near the failing retaining walls.
- Believes the wind study is incomplete and flawed. A 30% reduction in lift would have a drastic impact on the flying conditions.
- The soaring community has been exploring additional options for launch sites along the buffs, in addition to the existing launch site on the "King" property.
- The soaring community was not opposed to the original project alignment (now referred to as Alternative "2"), however they believe Alternative "4" is a better alternative because it delivers cyclists to the continuation of the bike path south of Bates Rd and doesn't have any impacts to the ocean-facing bluff face.
- Asserts that they soaring activities are fully legal and sanctioned to fly in the area.
- Requests that the design team consult with and engage the soaring community in the design of the trail.

Ottis Gillespie

- What is the difference between the described "earthwork" and "earth removal" in the DEIR?
    - Staff explained that "earthwork" is a general term for cut and fill, whereas "earth removal" refers specifically to excavation or cut. Projects balance onsite wherever possible.

- Please provide more details on the anticipated retaining walls in Alternative 4 (length, height, etc.). It doesn't seem this would be a major obstacle to pursuing this Alternative.
- The existing storm drains are not in good condition. The depiction of the existing and proposed storm drains is inaccurate since these "existing" storm drains need to be repaired/replaced.
- In addition to natural erosion, there has also been mechanical intrusion into the asphalt along the existing bench. Provide close-up photos/images of what this bluff would look like.
- Alternative 4 is the best option. It would not deliver cyclists at speed into the Rincon Beach County Park parking lot, which would be a significant safety issue. Cyclists won't slow down just because they're exiting the trail and entering a parking lot.
- Disagreed with the finding of no significant impact on soaring activities. The important element at this site is less about the wind velocity and more about the wind deflection from the bluff causing ridge lift. Alterations that affect that ridge lift will disrupt our ability to fly at this site. Refer to the video submitted by Aaron LaPlante during the public comment period on the previous Subsequent Mitigated Negative Declaration (SMND).
- Surveyed more than 100 cyclists asking whether they would prefer a path on the ocean side or inland side of the trail considering wind exposure.

Dr. Mark Patterson

- Appreciates the complexity of the project.
- Discounts the findings of the wind study, noting that even minor features or changes can affect the wind and uplift conditions dramatically. Comparatively, laying back the existing steep slow to a 1:1 slope will have a significant impact on flying conditions. Asked whether the wind expert has any flying experience?
- Recommended the project team consult with the experts from the Santa Barbara Soaring Association; they are the local experts of flying at this location. It doesn't matter what experts say about wind over hills; talk to the people who actually fly the hills.
- This project would not affect the launch area, however we rely on the ocean-facing bluff face where the trail is proposed to be located to catch lift and continue with our flights. The bluff orientation, slope angle, and smoothness all factor into this, and if you change any of these features, it will ruin our flying conditions.
- There is a safety consideration too. This is a great beginner site because it doesn't require much wind. The proposed changes would make it flyable only during periods of higher wind speeds which would make it less safe for less experienced pilots. It would increase the potential for injuries, crashes, and landings on the bike path.
- Prefer Alternative "4" to finish the bike path while preserving our ability to continue to fly here at this site.
- Alternative "4" also avoids delivering cyclists into a busy parking lot.

George Jimenez

- Agree with many of the comments from the others.
- The project is being promoted as improving safety, but no reports or statistics on bike crashes or incidents along the existing Caltrans shoulder have been provided to demonstrate a need for the trail. There have, however, been incidents with cyclists crashing into the non-compliant parking in the County Beach parking lot.
- Asked why is it okay for the public to cross the railroad tracks in other parts of town, but not here?
- The wind study incorrectly looks at wind velocity rather than uplift.
- Why hasn't the City explored any other routes or possibilities? Explore other options and do a better study of other possible options.

Barry Remis, COAST and SB Bicycle Coalition

- Appreciates the examination of project alternatives.
- We believe the primary objective is to create a multi-use trail to allow improved pedestrian access and bridge a gap in connectivity. Therefore, we believe Alternative "4" is best as it provides a direct connection to the continuation of the bike path south of Bates Rd.
- Pedestrian and cyclist safety concerns in passing through the County Beach parking lot are considerable.
- Avoidance of wind for cyclists through Alternative "4" could be preferable.
- Alternative "4" best meets the ultimate project objective with the least amount of exposure to risk to trail users.

Jeff Longcor

- Members of the soaring community are deeply concerned about this project. We're feeling marginalized by findings of "less than significant" impacts to our soaring activities. Nobody has taken a realistic approach to the wind, or taken the opportunity to consult with us.
- Santa Barbara Soaring Association (SBSA) previously refuted language in the SMND concerning our rights to use these areas and alleged violations of rules, and continue to disagree with this language being used in the DEIR.
- SBSA disputes raising issues over the long-term viability of the launch site. There have been allotments for the soaring community in the past and they can launch from elsewhere along the bluffs to arrive at the ridge, if needed.
- Pilots can only continue to enjoy our flying if the existing ridge is maintained and not altered.
- The soaring community submitted over 100 pages of comments in the appendices. The ERC should read the comments.
- The soaring community has a petition with over 2,000 signatures and 60 comments in support of protecting this ridge, including many visitors from outside of the community.
- This is an excessive amount of construction and earthwork for a 0.2-mile trail and would destroy the existing important soaring opportunities.
- If "recreation" exists under CEQA, then it needs to be considered. Based on the expert testimony provided by the soaring community on record, the described impacts should be found significant.
- The expert wind study is unrealistic. It only deals with a parallel wind path which doesn't reflect the site conditions, which hits at a tangent.
- If wind speed is reduced even just a little bit, there is an exponential decrease in lift. When wind is light, we can only fly along this ridge.

COMMITTEE MEMBER COMMENTS

Natasha Lohmus

- Concerning the proposed mitigation measures for the legless lizards and woodrats, perhaps consider some alternative options that would be easier and more realistic to accomplish.
- For bird nesting, the mitigation measure should require compliance with state and federal regulations (e.g., 300' buffer from an occupied nest; 500' for raptors) for noise-producing construction activity and heavy equipment use.
- Where would off-site mitigation occur? Can receiver sites be identified or proposed?
- For hydrology, concerns with impacts from concrete need to be addressed. Wet concrete is highly hazardous to wildlife. If concrete will be poured during the wet season, it should have a quick drying additive. Provide guidelines for when and how concrete will be poured for trail surfaces and v-ditches to avoid runoff-related impacts.
- Enhanced and more detailed explanations of proposed measures to address erosion during the rainy season are needed.

- Comments provided by the public have a lot of value. I support the idea of constructing a coastal trail, but it should not come at the expense of eliminating another group's recreational use of the area, especially a group that contributes to the local economy through tourism dollars. The financial benefit of preserving the soaring community's use of the area should be considered and addressed in the environmental document.
- Identified impacts to recreational use by the soaring community are significant. More analysis/work is needed on this section.
- If Alternative "4" is more expensive to build, perhaps additional grants can be pursued to help cover construction costs.

John Ilasin- No additional comments.

- Mr. Ilasin recused himself from further participation or voting on the Draft EIR, citing a potential for a conflict of interest due to his role in administering capital projects, including the subject project, on behalf of the City of Carpinteria.
    - Mack Carlson, legal counsel for the City of Carpinteria, agreed and recommended Mr. Ilasin abstain from any votes on the project.

Erin Maker- No additional comments.

Steve Goggia

- Acknowledged that ERC members would like to see additional information and details about Alternative "4". Asked the other ERC members if they would need additional information on Alternative "4" before making a recommendation on the EIR, or if sufficient information has been provided.
    - Vince Semonsen responded that he believes the current document provides sufficient information, although he would like to see a graphic depicting the earthwork for Alternative "4."
    - Mack Carlson, legal counsel for the City of Carpinteria, clarified the options that the Board could pick from concerning how to take action on the Draft EIR. The Board could direct staff to provide additional details on any of the project alternatives, and/or request a continuance to present that additional information back to the ERC at a subsequent meeting. The Board could also direct staff to reformulate one of the Alternatives, which would then need to be evaluated to determine whether it would trigger a need to recirculate the Draft EIR. Lastly, the Board could make a recommendation to the Planning Commission to accept the EIR based on one or more of the project alternatives presented.

Vince Semonsen

- He noted a preference for Alternative 4 due to its avoidance of the ocean-facing bluff and impacts to the soaring community. He stated he does not trust the wind study prepared for the EIR.
- He felt Alternative "4" would move less soil than the other options and avoided exposed steep slopes on the south-facing side of the ridge that would be prone to storm damage. He did not feel that any BMPs would be adequate to protect the slope from this type of damage.
- Agreed with public comments concerning the safety risks of depositing cyclists into the parking lot. He felt cyclists would prefer the ability to continue directly on to the continuation of the bike path at Bates Rd rather than having to pass through the parking lot. In particular, he felt that electric bikes pose a hazard due to their high travel speed if passing through the parking lot.
    - Natasha Lohmus expressed her agreement with this, noting that the lot is often busy during summer months and cyclists would be exposed to potential injury or accidents. She also asked how enforcement of the prohibition on motorized bikes would be enforced.
    - Matt Roberts explained that the design had been reviewed by a traffic engineer and found to not pose unreasonable safety hazards. He added that traffic calming improvements would be included

at the trail ends to warn cyclists of the changing traffic patterns. He also clarified that motorized bikes would not be legal on an un-motorized trail, and many agencies are beginning to establish speed limits on trails for these sorts of reasons. Mr. Roberts explained that enforcement would likely come through financial responsibility in the event of an accident along with periodic enforcement of regulations (e.g., citations).

ACTION:
Motion 1 by Committee member Lohmus, seconded by Committee member Semonsen, to recommend revisions to the Draft Environmental Impact Report to address the Committee's comments, recommendations, clarifications, additional mitigation measures and corrections, including providing additional project details for Alternative "4".

Motion 2 by Committee member Semonsen, seconded by Committee member Lohmus, to recommend approval of the Draft Environmental Impact Report to the Planning Commission with a preference for Alternative "4" and an understanding that the previous motion's comments would be incorporated into the EIR.

VOTE:
Motion 1: 4-0 (Ilasin abstain)
Motion 2: 4-0 (Ilasin abstain)

MEETING ADJOURNED: 6:40 p.m.

Response to Verbal Comments Presented During Environmental Review Committee Hearing on Draft EIR

Response to **Natasha Lohmus** Comments

- Legless Lizard/Woodrat relocation – the identified methods have been successfully used on other projects, CDFW did not recommend alternative methods.
- Nest construction activity setbacks - Refer to revisions in the Biology Section; the 300 foot and 500 foot radii for nests are included.
- Off-site mitigation – Rincon Bluffs (City) and Rincon Beach Park (County) are immediately adjacent to the project and would represent off-site mitigation opportunities, as necessary.
- Impacts from concrete construction on biology – the prevention of impacts from concrete construction are addressed in MM-WAT-2 in the Hydrology and Water Quality Section of the EIR
- Erosion control – MM-WAT-3 requires the preparation of a detailed Erosion and Sediment Control Plan, to be based upon the final earthwork design. Sample erosion control techniques, measures, and equipment are identified in MM-WAT-3, but the final erosion control plan will be designed to specifically address the earthwork design and erosion control needs.
- Financial benefits of preserving soaring opportunities – the CEQA guidelines do not require the evaluation of the financial impacts of a project.
- Recreation impacts – Please refer to Global Response GR1 with respect to project impacts on soaring opportunities.
- Alternative 4 Costs – this comment does not address the adequacy of the Draft EIR; no response is necessary.

Response to **John Ilasin** Comments

- This comment does not address the adequacy of the Draft EIR; no response is necessary.

Response to **Steve Goggia** Comments

- Sufficiency of information Regarding Alternative 4 – Vince Semonsen proffered the opinion that the existing Draft EIR provides adequate information addressing Alternative 4 to the Proposed Project. The EIR preparers agree with the opinion expressed by Mr. Semonsen.
- The legal direction provided by Mack Carlson clarified the actions available to the ERC with regard to requesting the inclusion of further analysis, or a recommendation to the Planning Commission pertaining to the acceptance of the Draft EIR.

Response to **Vince Semonsen** Comments

- Legless Lizard/Woodrat relocation – (from the ERC Questions section) the identified methods have been successfully used on other projects, CDFW did not recommend alternative methods.
- Alternative 4 Preference – the commenter is correct that Alternative 4 would avoid modification of the ocean-facing bluff south of the UPRR corridor. Please refer to Global Response GR1 for further discussion pertaining to the wind study prepared for the EIR.
- Alternative 4 Minimization of Earthwork – The commenter is not correct in identifying Alternative 4 as involving the least amount of earthwork of all the project options. Alternative 3 would have the least total earthwork volume of all the options explored (including the proposed project and Alternative 1-4). MM-WAT-3 requires the preparation of a detailed Erosion and Sediment Control Plan, to be based upon the final earthwork design. Sample erosion control techniques, measures, and equipment are identified in MM-WAT-3, but the final erosion control plan will be designed to specifically address the earthwork design and erosion control needs.

- Bike Safety Within Rincon Beach State Park Parking Lot – The City requested their professional consulting traffic engineer evaluate the potential for safety risks associated with the conflict between cyclists entering the Rincon Beach County Park from trail segments connecting to the parking lot from the east or west. The traffic engineer concluded that the proposed design configuration which would convey cyclists through the parking lot would not pose substantial safety risks from conflicts between cyclists and maneuvering vehicles. Parking maneuverers tend to be low speed, visibility is good in the parking lot, and signage warning cyclists and motor vehicle operators would be effective in eliminating potential safety risks.

3 Changes to the Draft EIR

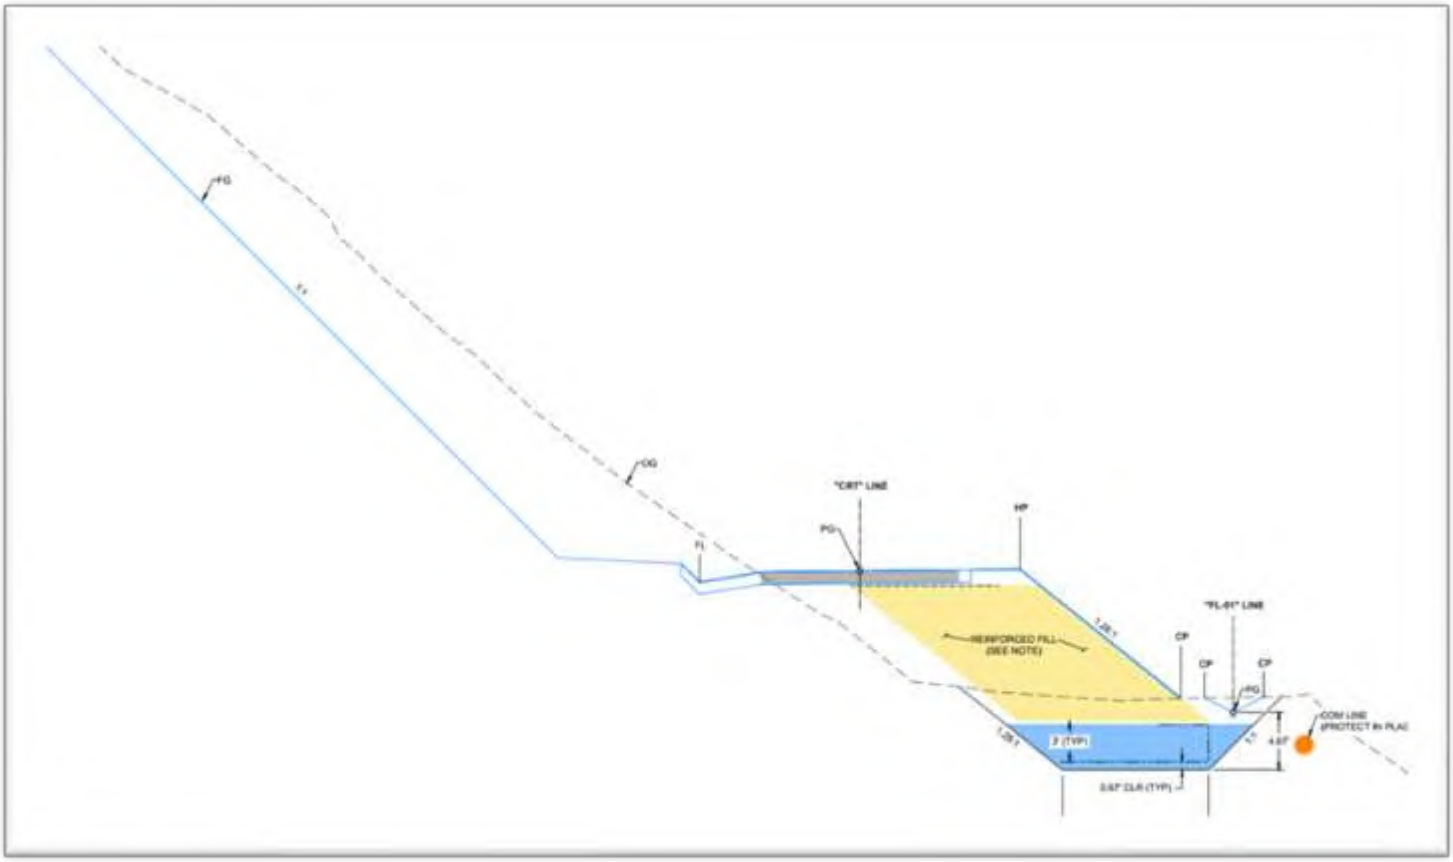
3.1 Introduction

The comments received by the City of Carpinteria (City) during the public review period for the Draft EIR included information that has resulted in minor revisions to the text of the Draft EIR. These revisions are shown below and are categorized by section number. Text from the Draft EIR that has been removed is shown in strikethrough (i.e., ~~strikethrough~~), and text that has been added as part of the Final EIR is shown as underlined (i.e., underline). Revisions are shown with surrounding sentences or paragraphs for context. These errata merely clarify and correct minor facts and do not constitute "substantial revisions" requiring recirculation of the Draft EIR, as set forth in CEQA Guidelines, Section 15073.5.

The engineering design of the Project has also been refined since the Draft EIR, resulting in two notable revisions to the overall Project. First, the previously proposed bench along the slope above the trail has been removed from the design for the trail segment south of the UPRR alignment. Second, the number of vertical storm drains serving the trail south segment of the UPRR alignment has been reduced from a total of 5 to 4. Revisions to the Draft EIR language to reflect these Project refinements are also included in the Errata section below.

3.2 Errata

2.7 Project Description



2.7.1 Earthwork

The trail design has been engineered to incorporate pathway travel slopes that are consistent with ADA standards. The design also avoids an area with deep landslides, south and west of the crossing point over the UPRR alignment, which were identified in geotechnical testing. The majority of project earthwork will occur on existing engineered slopes that were constructed as part of past road, highway and railroad projects; these manufactured slope faces in many instances are steeper than natural conditions, leading to increased erosion potential, which the project intends to correct though re-contouring to reduce slope angles. Construction of the proposed path design would involve a total of ~~107,386~~ 96,040 cubic yards of cut, a total of ~~14,860~~ 10,519 cubic yards of fill, and the export of a total of ~~92,526~~ 85,521 cubic yards of earth material. The re-contouring of existing engineered topography along the path alignment to achieve more stable conditions is described in more detail below

2.7.1.2 Pathway Slope Profiles South of UPRR Alignment

For the portion of the path on the ocean side of the UPRR alignment, the regraded slopes for the trail "bench" would employ cut slopes with a ratio of 1:1 above the trail, while a ratio of 1.25:1 would be employed for the "reinforced" fill slopes below the trail. The earthwork would alter the elevation of the bench on which the trail would be aligned, but would not alter the top elevation of the hill/ridge. Illustration 2-3 presents an example of the existing versus proposed slope profile for earthwork modifications above and below the trail.

Note in Illustration 2-3 that the proposed cut-slopes are less-steep than those constructed for the railroad alignment in this area (illustrated with a dashed profile labeled as "OG" ~~above~~) in order to provide an adequate margin of safety for the long-term stability of the slopes. ~~Note there is also a proposed bench above the trail that would intercept rainwater and also prevent rock fall on the path below. The bench would also provide maintenance access for the manufactured slopes and path.~~

SOURCE: Bengal Engineering

Illustration 2-3 Pathway Grading Profile South of UPRR Alignment

2.7.3 Drainage

The proposed trail project includes an integrated storm drainage system to ensure stormwater runoff from the recontoured bluff face and the trail surface is conveyed to the ocean efficiently, avoiding potential erosion of slopes along the trail alignment. Along the portion of the trail north of the UPRR alignment, a concrete swale (v-ditch) would convey water along the trail edge, where it would be released into an existing surface drainage swale now serving U.S. Highway 101. This swale connects to an existing storm drain that crosses underneath the UPRR alignment, and then descends to the beach level. This storm drain is labelled as "1" in Illustration 2-6. No improvements are proposed to storm drain 1, and the trail storm drain volumes contributed to this storm drain would be negligible compared to existing flows already contributed from portions of U.S. Highway 101.

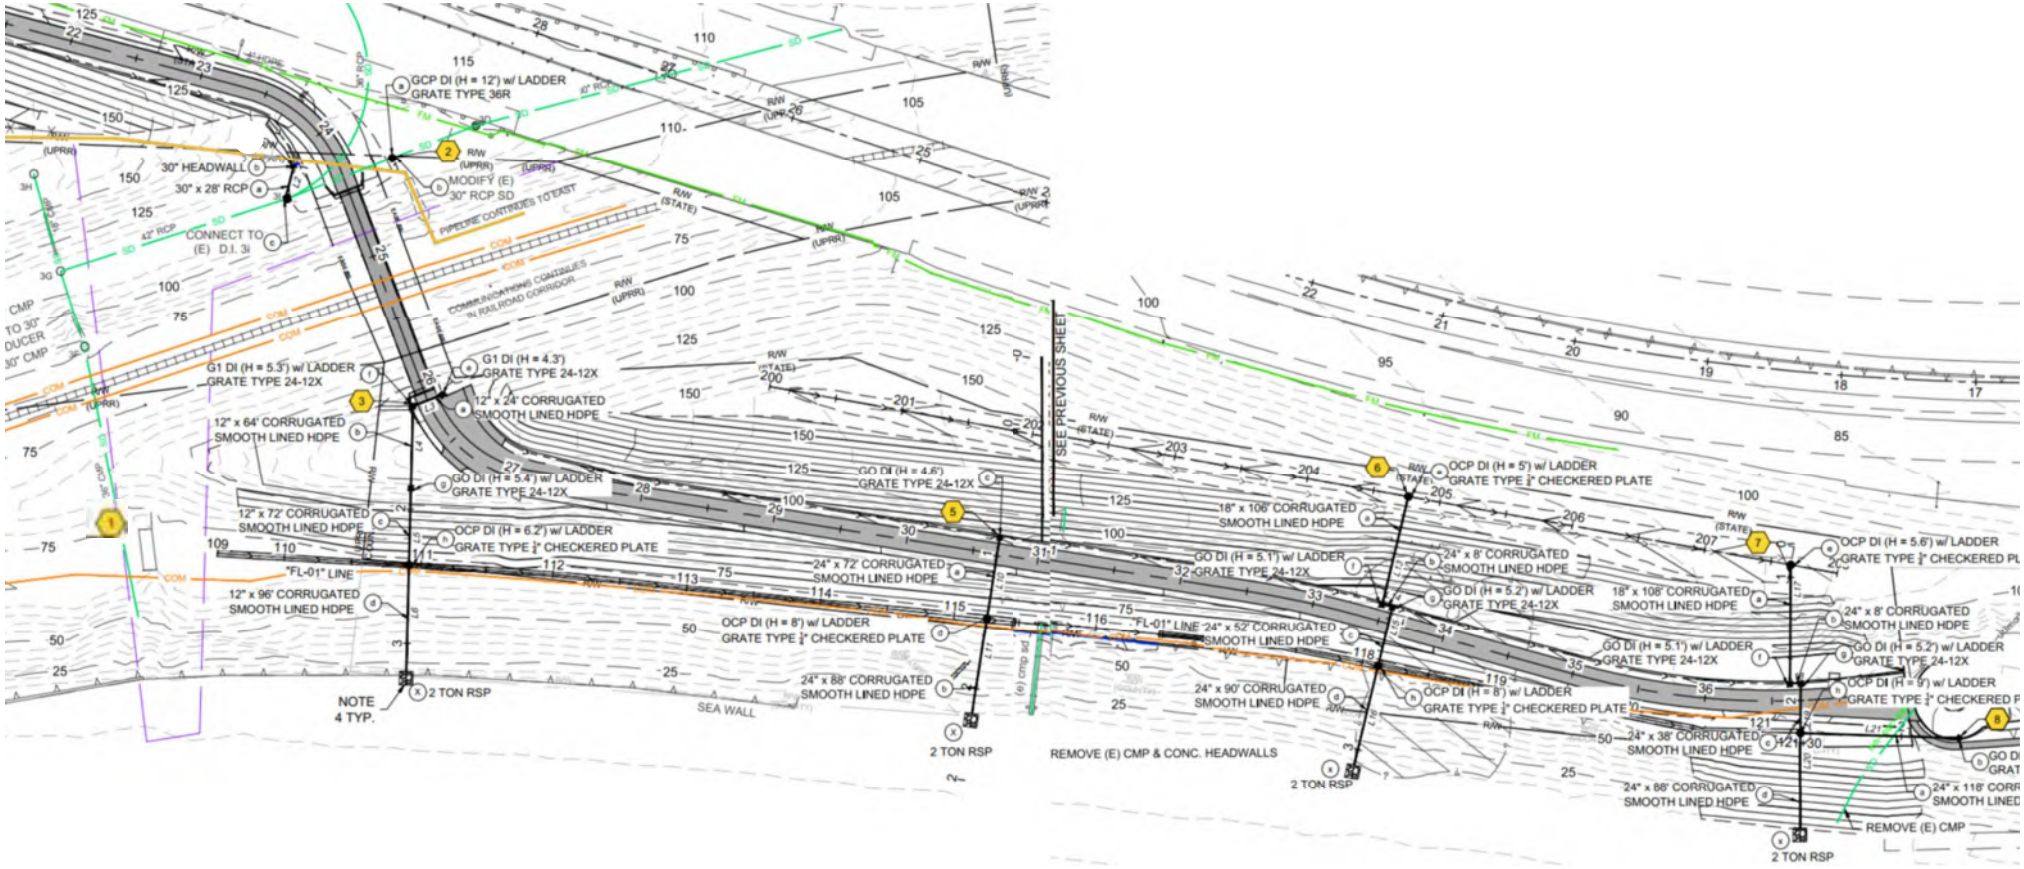


Illustration 2-6 Major Storm Drainage Components of the Project

(3) (5) (6) (7) – New Storm Drain With Beach Outlet

Existing Drain / Outlet to be Removed

On the south side of the UPRR alignment, a concrete drainage swale would also carry surface runoff from the recontoured bluff face and trail, conveying such drainage along the side of the trail until it reaches one of the storm drain inlets lower in elevation. A total of ~~5~~ 4 vertical storm drains would convey this stormwater from the trail to the beach elevation, for the trail segment south of the UPRR alignment (refer to Illustration 2-6). Drains ~~No. 3 and No. 6 (~~ shown in light blue in Illustration 2-6~~)~~ are existing, but are in seriously degraded condition and would be removed. ~~re-used, including rehabilitation of existing piping~~; Drains No. ~~2~~ 3, No. ~~4~~ 5, No. 6, and No. ~~5~~ 7 (~~shown~~ labelled in in Illustration 2-6) would be newly developed for the project.

Section 3.1, Aesthetics

c) In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

The eastern portion of the proposed trail would involve regrading of the slope above the former UPRR track alignment, to include a fill slope below the new trail bench, and a cut slope with ~~mid-elevation bench~~ a less steep angle above the trail bench (Refer to ~~Appendix G~~ Illustration 2-6 for earthwork cross-sections/profiles illustrating the slope re-working). Again, the top elevation of the ridge within this segment of the trail alignment would not be modified and the overall area would continue to have the same general appearance as the existing condition (i.e., a manufactured slope along the original cut made for the railroad alignment).

The project also involves the construction of new vertical storm drains. As discussed in Section 2.7.3, the proposed storm drains would be installed during earth work for the trail and adjacent slopes, and would be buried to cross beneath the trail and then descend on the slope face to outlet at the beach elevation. Buried portions of the storm drain would be constructed of high-density plastic, transitioning to galvanized steel for the aboveground portions.

Due to the size of the proposed above ground components, the visibility of the above ground storm drain system would be minimal and would not substantially degrade the existing visual character or quality of public views of the site and its surroundings.

Temporary adverse effects during construction due to the loss of mature vegetation would occur over a limited time period, given new landscaping and restoration of native plants are proposed as part of the project. The project would enhance area aesthetics via native landscape installations along the perimeter of the trail and ongoing landscape maintenance. Where feasible, the project would remove the invasive weeds along the proposed trail alignment that could suppress native plants. Native plants, once established, would live without need for supplemental water, helping to ensure their ongoing success. The reduction of slope angle (making the slope gentler) would slow water runoff, improve soil water retention, and support more extensive vegetation cover on the sloped areas, compared to existing conditions. Nonetheless, the project would have a potentially significant adverse impact on visual character or quality of the site and its surroundings because of the removal of mature vegetation and addition of new human-scale development. Therefore, impacts would be potentially significant. **MM-AES-1**, which requires County Board of Architectural Review, and **MM-BIO-5**, which requires restoration or enhancement of coastal sage scrub and coastal bluff scrub communities in areas temporarily impacted by construction of the trail or adjacent area, would be required. Impacts would be **less than significant with mitigation incorporated.**

Section 3.2, Air Quality

b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

For the analysis, it was assumed that heavy construction equipment would be operating five days per week (22 days per month) during proposed project construction. Construction worker and vendor trips were based on CalEEMod default assumptions and rounded up to the nearest whole number to account for whole round trips.

Proposed project construction would include ~~107,386~~ 96,040 cubic yards of cut, a total of ~~14,860~~ 10,519 cubic yards of fill, and the export of a total of ~~92,526~~ 85,519 cubic yards of earth material during the grading phase. It is anticipated that earth movement would be primarily, if not completely, accomplished using off-road equipment (e.g., scrapers and excavators). Off-road travel was assumed to be 1,000 feet per trip for vendor and haul trucks.

A detailed depiction of the construction schedule—including information regarding phases and equipment used during each phase—is included in Appendix B of this Environmental Impact Report. The information contained in Appendix B was used as CalEEMod model inputs.

Construction Emissions

Construction of the proposed project would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment) and off-site sources (i.e., on-road haul trucks, vendor trucks, and worker vehicle trips). Construction emission can vary substantially from day to day, depending on the level of activity, the specific type of operation, and for dust, the prevailing weather conditions. Therefore, such emission levels can only be estimated, with a corresponding uncertainty in precise ambient air quality impacts. Based upon the initial earthwork volumes calculated for the project (i.e., 107,386 cubic yards cut, 14,860 cubic yards fill, with 92,526 cubic yards of export), construction-related emissions were calculated using CalEEMod; Table 3.2-5 presents the ~~estimated~~ results of the calculated annual construction emissions generated during construction of the project on the basis of the initial earthwork estimates. Details of the emission calculations are provided in Appendix B. Given the reduction in the estimated earthwork volumes for the proposed project, construction emissions are expected to be lower than the levels reported in Table 3.2-5.

Table 3.2-5. Estimated Annual Construction Emissions

Year	ROC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Tons per Year					
2022	0.14	2.50	1.03	0.01	0.24	0.10
2023	0.07	0.85	0.53	0.00	0.17	0.05
Maximum Annual Emissions	**0.14**	**2.50**	**1.03**	**0.01**	**0.24**	**0.10**
SBCAPCD Threshold	*25*	*25*	*25*	*25*	*25*	*25*
Threshold Exceeded?	*No*	*No*	*No*	*No*	*No*	*No*

Source: Appendix B.
Notes: ROC = reactive organic compound; CO = carbon monoxide; NO_x = oxides of nitrogen; SO_x = sulfur oxides; PM_{10} = course particulate matter; $PM_{2.5}$ = fine particulate matter

As shown in Table 3.2-5, based on the initial earthwork estimates, annual construction emissions would not exceed the SBCAPCD significance thresholds for ROC, NO_x, CO, SO_x, PM_{10}, or $PM_{2.5}$ emissions during construction. Given the updated earthwork estimates for the proposed project are reduced as compared to the initial estimates, the construction emissions from the proposed project would also remain well below applicable significance thresholds of the SBCAPCD. Therefore, construction of the proposed project would result in a **less than significant** impact.

Section 3.3, Biological Resources

NOTE: The Biological Resources section below replaces the entire Section 3.3 of the Draft EIR, as minor revisions are distributed throughout the section and presentation of isolated paragraphs would hamper overall readability.

This section describes the existing biological resources conditions of the proposed Carpinteria Rincon Trail Project (project) site and vicinity, identifies associated regulatory requirements, evaluates potential impacts, and proposes mitigation measures to reduce potential impacts to a less than significant level. The following discussion is based on review of existing databases; field surveys performed in 2011, 2018, 2019, ~~and~~ 2020, and 2021; knowledge of the project vicinity from previous biological surveys, consultations with local experts; and information from the Carpinteria Rincon Trail Proposed Final Mitigated Negative Declaration (MND) (City of Carpinteria 2015) and the Carpinteria Rincon Trail Final Subsequent MND (City of Carpinteria 2019) certified January 6, 2020.

3.3.1 Existing Conditions

The project is located on lands within the jurisdiction of the City of Carpinteria and the County of Santa Barbara (County) (Figure 2-1, Project Location). Carpinteria is a quaint seaside town located about 12 miles east of Santa Barbara near the intersection of Highway 150 and U.S. Highway 101, near the Ventura County line. The proposed trail alignment is located largely along an area of coastal bluff known as the Carpinteria Bluffs. As described in the City of Carpinteria General Plan/Local Coastal Land Use Plan & Environmental Impact Report (City of Carpinteria 2003), the Carpinteria Bluffs are among the last remaining coastal open space areas within the County and are a prime example of undisturbed California coastline. The Carpinteria Bluffs provide important public access to the coast for residents and visitors. The Carpinteria Bluffs are partially developed and further development or redevelopment of portions of the Carpinteria Bluffs are anticipated over time making the establishment of policies to protect the environment and character of the place of utmost importance.

The project site crosses several parcels of land owned by public agencies. The trail parking lot location on Carpinteria Avenue is owned by the City of Carpinteria. Heading east, the next portion of the proposed trail route is owned by the State of California as part of the U.S. Highway 101 right-of-way and from there the proposed trail route crosses two parcels of landed owned by Union Pacific Railroad (UPRR) (APN 001-010-032 and APN 001-220-092). The proposed trail route then connects to a parcel of land owned by the County as part of Rincon Beach County Park. A series of terraces interspersed with steep slopes along the proposed alignment route are evidence of extensive past grading for a former railroad bed and road cuts. Further evidence of extensive past grading is evident in the soils within the project site, as the vast majority of the site is composed of xerorthents, cut and fill areas, which are soils that are well drained, and are formed in material with a high content of gravel and cobbles derived from mixed rock sources (USDA 2020a). The remaining portion of the biological survey area contains a mapped section of beaches soils composed of sandy or stony alluvium along the coast, located along the bottom of the hill at the edge of the beach within Rincon Beach County Park (USDA 2020a).

The Union Pacific Railroad (UPRR) right-of-way provides an unvegetated corridor approximately 50 feet wide containing a single track that divides the project alignment near its center. The eastern terminus of the proposed trail alignment is within Rincon Beach County Park parking lot, consisting of both undeveloped terraces as well as a largely developed area where a paved parking lot and landscaping dominate. An existing unsanctioned trail extends between Rincon Beach County Park and the UPRR tracks extending west on the bluffs to the north of the UPRR tracks with spur trails providing beach access. The western portion of the alignment is situated west and south of U.S. Highway 101 and partly includes an unvegetated pull-out at the eastern terminus of Carpinteria Avenue as well as an area of disturbed ground adjacent to the pull-out and undeveloped open space south of U.S. Highway 101.

Despite past disturbances, long stretches of the proposed trail alignment are dominated by native scrub vegetation. In the eastern portion of the proposed trail alignment between the UPRR crossing and Rincon Beach County Park, the native shrub, quailbush (*Atriplex lentiformis*), is the dominant shrub throughout much of the area. Additional native vegetation borders the parking lot in Rincon Beach County Park and occupies portions of the proposed trail alignment. In the western portion of the proposed trail alignment between the eastern terminus of Carpinteria Avenue and the UPRR crossing, California sagebrush (*Artemisia californica*), coyote brush (*Baccharis pilularis*), and quailbush are the dominant plant species.

The project site region is identified by USGS White Ledge Peak 7.5 quadrangle as well as the four coastally influenced adjacent USGS 7.5-minute quadrangles (Ventura, Matilija, Pitas Point, Carpinteria).

3.3.1.1 Literature Review

Prior to the 2011 field visit conducted by Dudek, the California Natural Diversity Database (CNDDB) was queried for records of special-status plants and wildlife in the vicinity of the site. In addition, Carpinteria local botanist Larry Ballard was consulted for information on rare plants potentially occurring in the project vicinity, including those on the Rare Plants of Santa Barbara County list, issued by the Central Coast Center for Plant Conservation (CCCPC) (Wilken 2007) and those included on the Checklist of Ventura County Rare Plants (Magney 2020). Additional field surveys were performed in 2018, 2019, ~~and~~ 2020, and 2021. Prior to 2018, 2019, 2020, and 2021 field surveys, the location of documented special-status plant species near the project site and that have potential to occur on site were identified through a query of the CNDDB (CDFW 2018; CDFW 2020a) and the updated Rare Plants of Santa Barbara County (Wilken 2018). In summary the following were reviewed for this project:

- 2008-2009 Second Wet Season 90-Day Vernal Pool Branchiopod Survey Report, King Ventures Rincon Bluffs Carpinteria, California (Sage Institute Inc. 2009)
- Administrative Draft Environmental Impact Report Carpinteria Bluffs, Areas III Development Plan (INTERFACE Planning and Counseling Corporation 1981)
- Carpinteria Bluffs Areas 2 and 3 Biological Resource Analysis & Mapping (Firma 2008)
- Carpinteria Bluffs Biological Resources and Environmentally Sensitive Habitat (Condor Environmental Planning Services 1996)
- CDFW CNDDB (CDFW 2018; CDFW 2020a)
- Checklist of Ventura County Rare Plants (Magney 2020)
- CNPS Inventory of Rare and Endangered Plants (CNPS 2020)
- Draft Carpinteria Bluffs Area III Project Biological Resources Due Diligence Report (Dudek 2012a)

- Evaluation Report Carpinteria Bluffs Biological Resources and Environmentally Sensitive Habitat Areas (LSA Associates Inc. 1997)
- Initial Biological Assessment: Rincon Trail (VJS Biological Consulting 2008)
- List of potentially occurring listed species generated from a review of the USFWS's IPaC Trust Resources Report list of federal and threatened species (USFWS 2020a)
- Proposed Final Mitigated Negative Declaration Carpinteria Rincon Trail (City of Carpinteria 2015)
- Proposed Final Subsequent Mitigated Negative Declaration. Carpinteria Rincon Trail (City of Carpinteria 2019)
- Rare Plants of Santa Barbara County list (Wilken 2007, 2018)
- USGS National Hydrography Dataset (USGS 2020)
- USFWS Critical Habitat Mapper (USFWS 2020b)
- USFWS National Wetlands Inventory (USFWS 2020c)
- Wetland Delineation of Pool Features at Carpinteria Bluffs Areas III per the California Coastal Act, City of Carpinteria, California (Dudek 2012b)

The biological survey area includes the proposed trail alignment as well as the extent of ~~proposed temporary~~ potential impacts encompassing vegetated terraces and slopes above and below the proposed trail alignment as well as portions of the developed Rincon Beach County Park (see Figure 3.3-1).

3.3.1.2 Vegetation Communities and Wildlife Habitats

During 2018, Dudek biologists conducted vegetation community mapping within the biological survey area in the field using the List of Vegetation Alliances and Associations (Natural Communities List) (CDFW 2010), which is based on the *Manual of California Vegetation, Second Edition* (MCV2) (Sawyer et al. 2009), as shown in Table 3.3-1. The vegetation communities were updated to align with the California Natural Community List (CNCL) (CDFW 2020b), which incorporated changes based on taxonomic revisions related to dominant plants, reassignment of associations to new or different alliances, and revisions to the rarities rankings of some communities. If vegetation observed did not meet the membership rules of the vegetation communities in these sources, modifications were made to accommodate the lack of conformity of the observed communities (e.g., developed/disturbed land uses) using Oberbauer et al. (2008). Vegetation community mapping conducted in 2018 was confirmed and/or updated during the 2020 site visit. An additional site visit was conducted in May 2021 to perform vegetation mapping, special-status plant species survey, and a tree assessment within the expanded biological survey area to include the limits of Alternative 4.

The following minimum vegetation mapping units applied during vegetation mapping:

- 0.5–1.0 acre for inaccessible areas of the site due to steep terrain.
- acres for wetland (i.e., hydrophytic) vegetation in traditional wetland environments (i.e., OBL [obligate – plant species almost always in wetlands], FACW [facultative wetland – plant species usually occurring in wetlands but occasionally found in non-wetlands], but not all FAC [facultative – plant species equally likely to occur in wetlands and non-wetlands] species comprising a vegetation alliance will be mapped unless associated with a hydrologic unit – stream, depression, swale, etc.).
- all areas with sensitive vegetation communities were mapped (no minimum mapping unit identified for sensitive vegetation communities)

Table 3.3-1. Survey Dates, Times, Personnel, and Conditions for Biological Surveys

Survey Date	Time	Personnel	Survey Conditions	Survey Type
8/31/2011	0940-1253	Dave Compton	61°F–63°F, 70%–100% cloud cover, 1-8 mph winds	General Biological Survey
5/5/2018	0655-1040	Heather Moine	55°F–68°F, 50%–70% cloud cover, 1-2 mph winds	Special-Status Plant Species Survey
5/15/2018	0630-0755	Heather Moine	51°F–60°F, 0% cloud cover, 1-3 mph winds	Vegetation Mapping
7/21/2018	0700-0900	Heather Moine	63°F–64°F, 100% cloud cover, 1-2 mph winds	Special-Status Plant Species Survey
9/26/2018	1300-1510	Heather Moine	67°F–69°F, 50%–75% cloud cover, 2-3 mph winds	Special-Status Plant Species Survey, Vegetation Mapping
4/8/2019	1505-1825	Heather Moine	80°F–85°F, 10%–80% cloud cover, 2-3 mph winds	Special-Status Plant Species Survey
7/23/2019	1300-1605	Heather Moine	75°F–79°F, 0%–20% cloud cover, 4-5 mph winds	Special-Status Plant Species Survey
12/24/2020	1320-1505	Mackenzie Forgey	69°F–68°F, 90% cloud cover, 2-9 mph winds	General Biological Survey; Tree Assessment
5/17/2021	1330-1706	Heather Moine	60°F–61°F, 10%–100% cloud cover, 0-6 mph winds	Special-Status Plant Species Survey; Vegetation Mapping; Tree Assessment

Notes: °F = degrees Fahrenheit; mph = miles per hour.

The CNCL (CDFW 2020b) is a hierarchical classification system which classifies natural vegetation communities based on alliances, which contain associations, the most granular level of classification (CDFW 2020c). The CNCL includes a state rarity rank based on the NatureServe Standard Heritage Methodology (NatureServe 2020). The conservation status of a vegetation community is designated by a number from 1 to 5, preceded by a letter reflecting the appropriate geographic scale of the assessment (G = global, N = national, and S = subnational). For the purpose of this report the focus is the S rarity rank. The numbers have the following meaning (NatureServe 2020):

1 = critically imperiled
2 = imperiled
3 = vulnerable to extirpation or extinction
4 = apparently secure
5 = demonstrably widespread, abundant, and secure

For example, S1 would indicate that a vegetation community is critically imperiled within a particular state or province. A rank of S3 would indicate the vegetation community is vulnerable and at moderate risk within a particular state or province, although it may be more secure elsewhere (NatureServe 2020). The CNCL (CDFW 2020b) includes state-level rarity rankings (i.e., the subnational [S] rank) for vegetation communities. The CNCL is considered the authority for ranking the conservation status of vegetation communities in California. As described by CDFW 2020c, ranking is an ongoing process and some associations are considered sensitive, denoted by a "Y" in the "Sensitive" column of the list, while others lack association-specific global and state ranks. This "Y" in the sensitive column indicates rarity, although that alliance may not be rated S3 or below as well (CDFW 2020c). CDFW

expects to provide association level ranks for all S3 or rarer entities in the future, including those associations that are considered sensitive despite lacking an S3 or rarer alliance ranking.

The overall condition and quality of habitat provided by each vegetation community including supporting wildlife species was assessed. Discussions include degrees of disturbance, biological productivity of supporting plant and/or wildlife populations, and the relative viability of the habitat resource are included for each vegetation community and land cover type.

County environmentally sensitive habitat (ESH) and City environmentally sensitive habitat areas (ESHA) were evaluated based on definitions in the County *Coastal Land Use Plan* (CLUP) (County of Santa Barbara 2019) and the *City of Carpinteria General Plan and Local Coastal Plan* (City of Carpinteria 2003). Although most undeveloped areas of the coastal zone, as well as many isolated pockets of open space within urban areas, provide a "habitat" for many species of animals and plants, the intent of the Coastal Act is preservation of significant habitat resources. Coastal Act environmentally sensitive habitat areas are defined as "any area in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which could be easily disturbed or degraded by human activities and developments" (Coastal Act, Section 30107.5). The County CLUP (County of Santa Barbara 2019) identifies ESH based on such factors as intrinsic, scientific, and educational value and includes the following biological resource categories:

- Dunes
- Wetlands
- Native Grasslands
- Vernal Pools
- Butterfly Trees
- Marine Mammal Rookeries and Hauling Grounds
- White-tailed Kite Habitat
- Rocky Points and Intertidal Areas
- Subtidal Reefs
- Kelp Beds
- Seabird Nesting and Roosting Areas
- Native Plant Communities – examples: coastal sage scrub, chaparral, coastal bluff, closed cone pine forest, California native oak woodland (also individual oak trees), endangered and rare plant species as designated by CNPS, and other plants of special interest such as endemics
- Streams

The City of Carpinteria General Plan and Local Coastal Plan (City of Carpinteria 2003) ESHA includes a diversity and number of habitats and species not commonly found in urban areas and that warrant unique measures to ensure adequate protection. As such, the Carpinteria Bluffs have specifically been identified as an ESHA. The following list includes ESHA that have been identified as existing in Carpinteria:

- Wetlands
- Butterfly Habitat
- Marine Mammal Rookeries and Hauling Grounds
- Rocky Points and Intertidal Areas

- Subtidal Reef
- Kelp Beds
- Creeks and Riparian Habitat
- Significant Native Plant Communities such as coastal sage scrub, riparian scrub, coastal bluff scrub, and native oak woodlands
- Sensitive, rare, threatened or endangered species habitat

A total of ~~12~~ 14 vegetation communities and land cover types were recorded within the biological survey area, including ~~five~~ six native scrub communities and ~~seven~~ eight non-native communities and land cover types (Figure 3.3-1 and Table 3.3-2). All ~~five~~ six of the native vegetation communities found are protected under the County CLUP (County of Santa Barbara 2019) and the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), identified as coastal sage scrub, coastal bluff scrub, and/or habitat for sensitive species, and are thus considered County ESH and City ESHA. ~~Two~~ Three of these ~~five~~ six communities, California brittle bush scrub – ashy buckwheat scrub alliance, *Encelia californica* association, California brittle bush scrub – ashy buckwheat scrub alliance, *Encelia californica – Artemisia californica* association, and lemonade berry scrub alliance, are also sensitive by virtue of their state rank. These communities are described in CNCL and MCV2. Eucalyptus, ice plant mats, and myoporum are non-native and do not have a state rank (state not applicable [SNA]). The other ~~four~~ five communities and land cover types are not listed in CNCL or MCV2.

While two individual Monterey cypress (*Hesperocyparis macrocarpa*) trees were identified in separate locations within the project site, one within the potential ~~temporary grading~~ impact area along the western portion of the site and the other within the proposed alignment footprint in the eastern portion of the site (Figure 3.3-1), they were not mapped as separate vegetation communities because one tree is not considered a stand or woodland. The first Monterey cypress tree is located near the western terminus of the proposed trail alignment, between the alignment and the pull-out off Carpinteria Avenue, and has a diameter of approximately 10 inches measured 4 feet above the ground. The second Monterey cypress is located within the proposed trail alignment within an unsanctioned trail within Rincon Beach County Park and has a diameter of approximately 12 inches measured 4 feet from the ground. One additional Monterey cypress tree was identified in the northern portion of the project above the railroad right-of-way, which is located along the edge of the ~~temporary~~ grading impact area adjacent to disturbed habitat and was measured with an approximate 8-inch diameter measured from 4 feet above the ground. Two Monterey cypress trees are located within the developed portion of the Rincon Beach County Park, one of which is a very young sapling with a diameter under an inch and the other is a mature tree with a combined diameter measured 4 feet from the ground of 49 inches due to multiple stems. There are also trees associated with the Rincon Point housing development that abut Rincon Beach County Park and are located south and east of the ~~temporary~~ project impact area and include Monterey cypress trees.

Monterey cypress trees are not naturally occurring within the Carpinteria area and instead are documented as native in populations located in Monterey and Carmel, California (CNPS 2021); therefore, Monterey cypress trees are not considered sensitive vegetation communities or individual trees. However, Monterey cypress trees could be considered County ESH and/or City ESHA if used by sensitive wildlife species as further discussed in Section 3.3.1.4.

Two pine saplings that appeared to be newly planted with mulch placed around the trunks and stakes installed for tree stabilization, are located along the edge of the ~~temporary~~ grading impact area in the portion of the project above the railroad right-of-way, each under 4 inches diameter measured 4 feet from the ground. One of these newly

installed pine saplings is a Norfolk Island pine (*Araucaria heterophylla*), and the other could not be identified to species due to the lack of cones present at the time of the survey but appears to be a native pine tree (*Pinus* sp.).

There are also trees associated with the Rincon Point housing development that abut Rincon Beach County Park and are located south and east of the biological survey area, and include a few non-riparian California sycamore (*Platanus racemosa*) trees and other ornamental tree species located approximately 50-feet from Rincon Creek.

The County CLUP (County of Santa Barbara 2019) does not include mapped ESH within the project site. The City of Carpinteria General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) includes mapped ESHA within the limits of the City north to but not including Carpinteria Avenue.

Table 3.3-2. Summary of Existing Vegetation Communities and Land Cover Types

Habitat Group	General Habitat	Vegetation Community (Alliance, Association)	Alliance-Association (State Sensitive)/County ESH/City ESHA	Acreage
Native Scrub Communities	Coastal Bluff Scrub	California Brittle Bush – Ashy Buckwheat Scrub Alliance, *Encelia californica* Association	S3-Yes (Yes)/Yes/Yes	0.96
		California Brittle Bush – Ashy Buckwheat Scrub Alliance, *Encelia californica – Artemisia californica* Association	S3-Yes (Yes)/Yes/Yes	0.48
		Quailbush Scrub Alliance, *Atriplex lentiformis* Association	S4-No (No)/Yes/Yes	~~6.18~~ 6.93
			Coastal Bluff Scrub Subtotal	~~7.13~~ 8.38
	Coastal Scrub	California Sagebrush – (Purple Sage) Scrub Alliance, *Artemisia californica* Association	S5-S4 (No)/Yes/Yes	~~2.08~~ 2.13
		Coyote Brush Scrub Alliance, *Baccharis pilularis* Association	S5-No (No)/Yes/Yes	1.18
		Lemonade Berry Scrub Alliance, *Rhus integrifolia* Association	S3-S3 (Yes)/Yes/Yes	~~0.31~~ 0.64
			Coastal Scrub Subtotal	~~3.57~~ 3.94
Non-native Communities and Land Cover Types	Non-native Communities	Eucalyptus – Tree of Heaven – Black Locust Groves Alliance, *Eucalyptus (globulus, camaldulensis)* Association	SNA-SNA (No)/No/No	~~0.21~~ 0.23
		Ice Plant Mats Alliance, *Carpobrotus (edulis*) Association	SNA-SNA (No)/No/No	0.14
		Pepper Tree or Myoporum Groves Alliance, *Myoporum laetum/ Arundo donax* Association	SNR-SNA (No)/No/No	~~0.07~~ 0.13
		Parks and Ornamental Plantings	NA (No)/No/No	0.10
		Ruderal	NA (No)/No/No	0.17
	Land Cover Types	Developed	NA (No)/No/No	~~1.08~~ 1.10
		Disturbed Habitat	NA (No)/No/No	1.45

Table 3.3-2. Summary of Existing Vegetation Communities and Land Cover Types

		Unvegetated Siltstone/Shale Bedrock	NA (No)/No/No	0.18
Non-native Communities and Land Cover Types Subtotal				~~3.22~~ 3.50
Combined Total				~~13.92~~ ***15.82***

Notes:
SNA – state not applicable. State status rank not applicable because the species or ecosystem is not a suitable target for conservation activities (NatureServe 2020).
SNR – state no rank (NatureServe 2020).
NA – not applicable. Not included in California Natural Communities List (CDFW 2020b).

Native Scrub Communities

California Brittle Bush – Ashy Buckwheat Scrub Alliance, *Encelia californica* Association (S3-Sensitive [Sensitive], County ESH, City ESHA). This community includes California brittle bush and/or ashy buckwheat (*Eriogonum cinereum*) as the dominant or co-dominant shrub in the canopy. California brittle bush – ashy buckwheat scrub has an intermittent to continuous shrub canopy less than two meters (seven feet) in height with a variable herbaceous ground layer. The California brittle bush – ashy buckwheat scrub alliance occurs on sunny, steep south-facing slopes often rocky or eroded, with soils derived from sandstone, volcanic or shale substrates (Sawyer et al. 2009). Species associated with California brittle bush scrub on site include quailbush *(Atriplex lentiformis)*, California sagebrush, coyote brush, western prickly pear (*Opuntia littoralis*), and black mustard.

California brittle brush scrub occurs in limited patches within the project site, wildlife using this community is partly dictated by adjacent communities, which are generally other scrub communities. Brush rabbits (*Sylvilagus bachmani*) may occur within these areas, and some species of small mammals may occur here as well. The Coast Range western fence lizard (*Sceloporus occidentalis bocourti*) likely occur within this community and within adjacent communities. Songbirds with the potential to nest within this community include the mourning dove (*Zenaida macroura*), bushtit (*Psaltriparus minimus*), northern mockingbird (*Mimus polyglottos*), and song sparrow (*Melospiza melodia*).

California brittle brush scrub has a S3-Sensitive designation and is thus considered a sensitive vegetation community per CDFW (2020b). California brittle bush scrub is a state sensitive vegetation community, considered coastal bluff scrub per the County CLUP (County of Santa Barbara 2019), and supports sensitive plant species. Additionally, California brittle bush scrub is mapped as ESHA, considered coastal bluff scrub in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and supports sensitive plant species. Therefore, California brittle bush scrub is considered County ESH and City ESHA.

The *Encelia californica* association within the California brittle bush – ashy buckwheat scrub alliance was mapped in the project site. This association occurs in the proposed trail alignment in and near the County's Rincon Beach County Park (see Figure 3.3-1). Approximately 0.96 acres of this community, or ~~6.9~~ 6.1% of the total biological survey area was identified.

California Brittle Bush – Ashy Buckwheat Scrub Alliance, *Encelia californica – Artemisia californica* Association (S3-Sensitive [Sensitive], County ESH, City ESHA). This community includes California brittle bush and/or ashy

buckwheat (*Eriogonum cinereum*) as the dominant or co-dominant shrub in the canopy. California brittle bush – ashy buckwheat scrub has an intermittent to continuous shrub canopy less than two meters (seven feet) in height with a variable herbaceous ground layer. The California brittle bush – ashy buckwheat scrub alliance occurs on sunny, steep south-facing slopes often rocky or eroded, with soils derived from sandstone, volcanic or shale substrates (Sawyer et al. 2009). Species associated with *Encelia californica – Artemisia californica* association on site include coyote brush, lemonade berry (*Rhus integrifolia*), seacliff buckwheat (*Eriogonum parvifolium*), and ladies' tobacco (*Pseudognaphalium californicum*).

Encelia californica – Artemisia californica association occurs in limited patches within the project site, and wildlife using this community is partly dictated by adjacent communities, which are generally other scrub communities. Similar to the *Encelia californica* association within the California brittle bush – ashy buckwheat scrub alliance, this community supports the following wildlife species, brush rabbits, Coast Range western fence lizard, mourning dove, bushtit, northern mockingbird, and song sparrow.

California brittle brush scrub has a S3-Sensitive designation and is thus considered a sensitive vegetation community per CDFW (2020b). California brittle bush scrub is a state sensitive vegetation community, considered coastal bluff scrub per the County CLUP (County of Santa Barbara 2019), and supports sensitive plant species. Additionally, California brittle bush scrub is mapped as ESHA, considered coastal bluff scrub in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and supports sensitive plant species. Therefore, California brittle bush scrub is considered County ESH and City ESHA.

The *Encelia californica – Artemisia californica* association within the California brittle bush – ashy buckwheat scrub alliance was mapped in the project site. This association occurs within the southern portion of the project site along U.S. Highway 101 (see Figure 3.3-1). Approximately 0.48 acres of this community, or 3.0% of the total biological survey area was identified.

Quailbush Scrub Alliance*, Atriplex lentiformis* Association (S4-Not Sensitive [Not Sensitive], County ESH, City ESHA). This vegetation community includes quailbush as a dominant species. Quailbush scrub has an open to intermittent scrub canopy less than five meters (16 feet) in height with a variable herbaceous layer (Sawyer et al. 2009). In the proposed trail alignment, species associated with this community include California brittle bush, lemonade berry and Australian saltbush (*Atriplex semibaccata*).

Quailbush scrub provides shelter for brush rabbits and probably for other medium-sized mammal species such as the raccoon (*Procyon lotor*) and striped skunk (*Mephitis mephitis*). California voles (*Microtus californicus*) may occur in this vegetation community. Common reptile species that occur here include the Coast Range western fence lizard and San Diego gophersnake (*Pituophis catenifer annectens*). Nesting songbirds occurring here include the mourning dove, bushtit, northern mockingbird, and song sparrow. Songbirds that may perch on shrubs within this community include the black phoebe (*Sayornis nigricans*).

Quailbush scrub has a S4-Not Sensitive designation and thus is not considered a sensitive vegetation community per CDFW (2020b). Quailbush scrub, however, is considered coastal bluff scrub per the County CLUP (County of Santa Barbara 2019) and mapped as ESHA and considered coastal bluff scrub in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and therefore considered County ESH and City ESHA. Additionally, this vegetation community supports sensitive plant species and has the potential to support the state species of special concern (SSC) California legless lizard and further warrants County ESH and City ESHA designations.

The *Atriplex lentiformis* association within the quailbush scrub alliance was mapped in the project site. It occurs extensively in the proposed trail alignment east of the UPRR and in patches west of the UPRR (see Figure 3.3-1). Approximately ~~6.18~~ 6.93 acres of this community, or ~~44.3~~ 43.8% of the total biological survey area was identified.

California Sagebrush – (Purple Sage) Scrub Alliance*, Artemisia californica* Association (S5-S4 [Not Sensitive], County ESH, City ESHA). This community includes California sagebrush (*Artemisia californica*) and/or purple sage (*Salvia leucophylla*) as the dominant or co-dominant shrub in the canopy. California sagebrush scrub has an intermittent to continuous shrub canopy less than two meters (seven feet) in height with a variable herbaceous ground layer (Sawyer et al. 2009). Species associated with this community include California brittle bush (*Encelia californica*), coast goldenbush (*Isocoma menziesii*) and coyote brush (*Baccharis pilularis*). Black mustard (*Brassica nigra*) and other non-native species are found in this community on site.

Wildlife occupying California sagebrush scrub includes many species common to other scrub communities within the project site. Brush rabbits seek cover in these areas, and small mammals such as California voles likely occur here. Coast Range western fence lizards and San Diego gophersnakes are reptiles that occur in scrub habitats. Songbirds nesting here include the mourning dove, northern mockingbird, California towhee (*Melozone crissalis*), and song sparrow. White-crowned sparrows (*Zonotrichia leucophrys*) occur here in winter.

California sagebrush scrub has a S5-S4 designation thus is not considered a sensitive vegetation community per CDFW (2020b). California sagebrush scrub is considered coastal sage scrub per the County CLUP (County of Santa Barbara 2019) and mapped as ESHA and considered coastal sage scrub in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and therefore considered County ESH and City ESHA. Additionally, this vegetation community supports sensitive plant species and further warrants County ESH and City ESHA designations.

The *Artemisia californica* association within the California sagebrush – (purple sage) scrub alliance was mapped in the project site. This association occurs in the western portion of the project site, near Carpinteria Avenue and U.S. Highway 101, in a heavily engineered portion of the proposed trail alignment graded during highway construction (see Figure 3.3-1). Smaller patches occur adjacent to the parking lot for Rincon Beach County Park and east of UPRR. Approximately ~~2.08~~ 2.13 acres of this community, or ~~14.9~~ 13.4% of the total biological survey area was identified.

Coyote Brush Scrub Alliance*, Baccharis pilularis* Association (S5-Not Sensitive [Not Sensitive], County ESH, City ESHA). Coyote brush scrub communities include greater than 50% relative cover of coyote brush and coyote brush as the dominant or co-dominant shrub in the canopy. Coyote brush scrub has a variable shrub canopy less than three meters (10 feet) in height with a variable herbaceous ground layer (Sawyer et al. 2009). Species associated with this community in the proposed trail alignment include scattered California sagebrush, California brittle bush, myoporum (*Myoporum laetum*) and black mustard.

Wildlife occurring in coyote brush scrub is very similar to that occurring in quailbush scrub and includes brush rabbits, raccoon, striped skunk, California voles, Coast Range western fence lizard, San Diego gophersnake, mourning dove, bushtit, northern mockingbird, song sparrow and black phoebe.

Coyote brush scrub has a S5-Not Sensitive designation thus is not considered a sensitive vegetation community per CDFW (2020b). Coyote brush scrub is not considered coastal sage scrub or associated with other ESH habitats by definition per the County CLUP (County of Santa Barbara 2019); however, coyote brush scrub does support sensitive plant species and as such is designated County ESH. Additionally, coyote brush scrub is mapped as ESHA

in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and also supports sensitive plant species and therefore considered City ESHA.

The *Baccharis pilularis* association within the coyote brush scrub alliance was mapped in the project site. It occurs in the proposed trail alignment mostly near the western terminus, but also in small patches in the vicinity of Rincon Beach County Park. The coyote brush scrub between UPRR and U.S. Highway 101 occurs in old road cuts (see Figure 3.3-1). Approximately 1.18 acres of this community, or ~~8.5~~ 7.4% of the total biological survey area was identified.

Lemonade Berry Scrub Alliance*, Rhus integrifolia* Association (S3-S3 [Sensitive], County Not Sensitive, City Not Sensitive). This vegetation community includes lemonade berry (*Rhus integrifolia*) as either a dominant or co-dominant species. Lemonade berry scrub has a two-tiered, open to continuous shrub canopy less than five meters (16 feet) in height with an open herbaceous ground layer and sparse cover of emergent trees (Sawyer et al. 2009). Species associated with this community on site include coyote brush and myoporum.

Wildlife occurring in lemonade berry scrub is similar to that occurring in Coyote brush scrub and includes brush rabbits, raccoon, striped skunk, California voles, Coast Range western fence lizard, San Diego gophersnake, mourning dove, bushtit, northern mockingbird, song sparrow and black phoebe.

Lemonade berry scrub has a S3-S3 designation and thus is considered a sensitive vegetation community per CDFW (2020b). Lemonade berry scrub is not considered coastal sage scrub or associated with other ESH habitats by definition per the County CLUP (County of Santa Barbara 2019); however, it does support sensitive plant species and is a state sensitive vegetation community and thus is considered County ESH. Additionally, lemonade berry scrub is not considered coastal sage scrub or associated with other ESHA habitats by definition per the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003); however, it does support sensitive plant species and is a state sensitive vegetation community and thus is considered City ESHA.

The *Rhus integrifolia* association within the lemonade berry scrub alliance was mapped in the project site. This association occurs in two small patches west of the Rincon Beach County Park and along U.S. Highway 101 east of UPRR (see Figure 3.3-1). Approximately ~~0.31~~ 0.64 acres of this community, or ~~2.2~~ 4.0% of the total biological survey area was identified.

Non-Native Communities

Eucalyptus – Tree of Heaven – Black Locust Groves Semi-Natural Alliance, *Eucalyptus (globulus, camaldulensis)* Provisional Association (SNA-SNA [Not Sensitive], County Not Sensitive, City Not Sensitive). This alliance contains eucalyptus trees (*Eucalyptus* sp.), tree of heaven (*Ailanthus altissima),* or black locust (*Robinia pseudoacacia*) as the dominant species in the tree canopy. These groves have an open to continuous tree canopy less than 60 meters (197 feet) in height. Understory shrubs and herbaceous layers are sparse to intermittent, and the herbaceous layer is sparse to intermittent. Throughout California, this semi-natural groves alliance occurs as planted trees, groves, and windbreaks, naturalized on uplands or bottomlands and adjacent to stream courses, lakes, or levees (Sawyer et al. 2009).

The Eucalyptus – tree of heaven – black locust groves semi-natural alliance and specific *Eucalyptus* (*globulus, camaldulensis*) association is listed in MCV2 (Sawyer et al. 2009) and CNCL (CDFW 2020b), but is ranked SNA-SNA as it is composed of non-native species; it is not considered sensitive. Additionally, per the County CLUP (County of Santa Barbara 2019) eucalyptus trees are considered ESH if they are butterfly trees or provide habitat to sensitive

species. Per the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) eucalyptus trees are considered ESHA if they provide habitat for butterfly habitat or sensitive, rare, threatened or endangered species habitat. Included below is a discussion of potential wildlife use of the eucalyptus trees.

Because of shade and possibly the allelopathic (toxic) properties of eucalyptus leaf litter, little other vegetation is present in this community, and relatively little wildlife is found here. But the relatively open ground under the canopy permits medium-sized mammals such as common raccoons and striped skunks to move easily through this community to access adjacent areas. Some bird species are adapted to this community. Yellow-rumped warblers (*Setophaga coronata*) feed on insects attracted to eucalyptus blossoms in the winter. Some birds of prey favor eucalyptus trees for nesting. Red-tailed hawks (*Buteo jamaicensis*), Cooper's hawks (*Accipiter cooperii*), and great horned owls (*Bubo virginianus*) also have the potential to nest in this community.

Monarch butterflies (*Danaus plexippus*) use eucalyptus trees for roosting in the region, but they are not known to use eucalyptus within the project site. The majority of eucalyptus trees within the project site are either singular and isolated, or do not form a large enough grove to provide adequate microclimate conditions and wind protection monarch butterflies require for overwintering sites. Several eucalyptus trees are located within the proposed trail alignment near its western terminus and U.S. Highway 101, and range in diameter from approximately 18 to 28 inches measured 4 feet from the ground. Additionally, a small stand of eucalyptus trees is present at the eastern terminus of the biological survey area, which are rooted next to the Rincon Beach County Park parking lot; however, there is low potential for monarchs to overwinter here as well due to the small relative size of this eucalyptus stand and vulnerability to strong winds and weather. There are also three eucalyptus trees present near the western terminus of the biological survey area, however they each grow individually and do not form a grove capable of supporting overwintering monarchs. There are also trees associated with the Rincon Point housing development that abut Rincon Beach County Park and are located south and east of the eastern portion of the biological survey area and include some eucalyptus trees. Monarch butterflies and monarch butterfly habitat are further discussed in Section 3.3.1.4.

The white-tailed kite is known to occur in the area (City of Carpinteria 2003). The City specifically cites the Carpinteria Bluffs as a location where this species occurs and is protected. However, no white-tailed kites were detected in the biological survey area, and the eucalyptus trees in and around the western portion of biological survey area are relatively small, and located in areas with high levels of human disturbance where kites are unlikely to nest. Marginally suitable woodland nesting habitat is present in the trees adjacent to the project site near Rincon Beach County Park, within the Rincon Point housing development. This species prefers open grassland or marshland habitats which are not present on site, and is found less commonly in agricultural areas or rights-of-way. This species is known to occur along the south coast, however most foraging and nesting activity in the County is restricted to more rural areas and in particular, the Goleta and Santa Maria Valleys (Lehman 2020).

The *Eucalyptus (globulus, camaldulensis)* provisional association within the eucalyptus - tree of heaven - black locust semi-natural alliance was mapped in the project site. Within the biological survey area this community is dominated by eucalyptus trees, which are sparse and do not create a windrow and do not provide habitat for sensitive species; and thus are not included as ESH per County of Santa Barbara (2009) or ESHA per City of Carpinteria (2003). Approximately ~~0.21~~ 0.23 acres of this community, or 1.5% of the biological survey area was identified.

Ice Plant Mats Semi-Natural Alliance, *Carpobrotus (edulis)* Association (SNA-SNA [Not Sensitive], County Not Sensitive, City Not Sensitive). Ice plant mats contains hottentot fig (*Carpobrotus edulis*), sea fig (*Carpobrotus chilensis*), or other ice plant taxa as the dominant or co-dominant species in the herbaceous layer. These species

invade coastal bluff scrub, dune mat, dune scrub, and coastal prairies and compete with native plants (Sawyer et al. 2009). Ice plant semi-natural alliance areas have an intermittent to continuous canopy within the herbaceous layer less than 0.5 meters (1.6 feet) in height.

Very few wildlife species occur in ice plant mats. California ground squirrels (*Spermophilus* [*Otospermophilus*] *beecheyi*) often inhabit this community. This community provides poor nesting habitat for birds. Common reptiles such as the western fence lizard likely occur here. This community is not generally valuable to special-status wildlife species.

The ice plant mats semi-natural alliance and specific *Carpobrotus (edulis)* association is listed in MCV2 (Sawyer et al. 2009) and CNCL (CDFW 2020b), but is ranked SNA-SNA as it is composed of non-native species; therefore, it is not considered sensitive. Additionally, ice plant mats vegetation community is not included on the list of ESH per the County CLUP (County of Santa Barbara 2019) or provide habitat for sensitive species. Ice plant mats are not mapped as ESHA, included as other ESHA habitats in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and do not provide habitat for sensitive species, and therefore not considered locally sensitive.

The *Carpobrotus (edulis)* association within the ice plant mats semi-natural alliance was mapped in the project site. Approximately 0.14 acres of this community, or ~~1.0~~ 0.9% of the biological survey area was identified.

Pepper Tree or Myoporum Groves Semi-Natural Alliance*, Myoporum laetum/Arundo donax* Association (SNR-SNA [Not Sensitive], County Not Sensitive, City Not Sensitive). Pepper tree or myoporum groves consist of myoporum or pepper trees (*Schinus* spp.) as the dominant species in the tree canopy. Within the biological survey area, this community is dominated by myoporum. These groves have an open to continuous tree canopy less than 18 meters (59 feet) in height. Understory shrubs are infrequent or common and the herbaceous layer is simple to diverse lacking trees and shrubs. Throughout Central and Southern California, the pepper trees or myoporum groves semi-natural alliance occurs in coastal canyons, washes, slopes, riparian areas, and roadsides (Sawyer et al. 2009).

Several myoporum trees are located within the proposed trail alignment west of Rincon Beach County Park, and are largely multistemmed. Myoporum groves provide shelter for medium-sized mammal species such as the brush rabbit, common raccoon, and striped skunk. California voles may occur in this vegetation community. Common reptile species such as the western fence lizard likely occur. Nesting songbirds occurring here likely include the mourning dove, bushtit, and northern mockingbird. Wintering black phoebes are among birds that likely perch on myoporum. Some birds of prey, such the white-tailed kite and other raptors, may also perch in this community where it is adjacent to foraging habitat.

This semi-natural alliance and specific *Myoporum laetum/Arundo donax* association mapped on site are listed in MCV2 (Sawyer et al. 2009) and CNCL (CDFW 2020b), but is ranked SNA as it is composed of non-native species; thus, it is not considered sensitive. Additionally, myoporum is not included on the list of ESH per the County CLUP (County of Santa Barbara 2019) or provide habitat for sensitive species. Myoporum are not mapped as ESHA, included as other ESHA habitats in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and do not provide habitat for sensitive species, and therefore not considered locally sensitive.

The *Myoporum laetum/Arundo donax* association within the pepper tree or myoporum groves semi-natural alliance was mapped in the project site. Approximately ~~0.7~~ 0.13 acres of this community, or ~~0.5~~ 0.8% of the biological survey area was identified.

Parks and Ornamental Plantings (NA [Not sensitive], County Not Sensitive, City Not Sensitive). This community is not described in CNCL or MCV2 because it is not a naturally occurring community in California; thus, it is not considered sensitive. It includes landscaping plants as dominants. Additionally, parks and ornamental plantings is not included on the list of ESH per the County CLUP (County of Santa Barbara 2019) or provide habitat for sensitive species. Parks and ornamental plantings are not mapped as ESHA, included as other ESHA habitats in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and do not provide habitat for sensitive species, and therefore not considered locally sensitive.

The ornamental vegetation community in the proposed trail alignment is characterized by the dominance of landscaped plant species. Botta's pocket gopher (*Thomomys bottae*) and California ground squirrel are among common mammals found in this community. Western fence lizards are a common reptile found in parks and ornamental plantings. Common nesting birds such as Eurasian collared-dove (*Streptopelia decaocto*), California scrub-jay (*Aphelocoma californica*), American crow (*Corvus brachyrhynchos*), bushtit, and house finch (*Haemorhous mexicanus*) may be found here.

Parks and ornamental plantings occur within the eastern part of Rincon Beach County Park (see Figure 3.3-1). Approximately 0.10 acres of this community, or ~~0.7~~ 0.6% of the biological survey area was identified.

Ruderal (NA [Not Sensitive], County Not Sensitive, City Not Sensitive). Ruderal is not described in CNCL or MCV2 because it is not a naturally occurring community in California; thus, it is not considered sensitive. Additionally, ruderal habitats are not included on the list of ESH per the County CLUP (County of Santa Barbara 2019) or provide habitat for sensitive species. Ruderal habitats are not mapped as ESHA, included as other ESHA habitats in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and do not provide habitat for sensitive species, and therefore not considered locally sensitive.

Ruderal areas are characterized by limited native vegetation resulting in low function ecological processes. Plants in these areas are dominated by non-native species and there is not a dominant plant species or overall structure to the habitat. Ruderal areas provide little habitat or foraging potential for wildlife, due to the lack of significant cover by vegetation; however, there are often patchy areas of non-native plant species. Mammals may include common species, such as the California ground squirrel, but medium-sized mammals such as raccoons may use ruderal habitats as movement corridors. Among common reptiles that may use these areas is the western fence lizard. Seed-eating birds found here include the California towhee and white-crowned sparrow. Ruderal does not provide habitat for special-status wildlife species.

Mapped ruderal includes roadside areas and areas with disturbed non-native vegetation (see Figure 3.3-1). Approximately 0.17 acres of this community, or ~~1.3~~ 1.1% of the biological survey area was identified.

Land Cover Types

Developed (NA [Not Sensitive], County Not Sensitive, City Not Sensitive). Within the biological survey area, developed areas are unvegetated areas such as pavement and development with impervious materials, it is not described in CNCL or MCV2, and does not provide habitat for sensitive species. Developed areas include the parking lot at Rincon Beach County Park and the wide turnout at the eastern terminus of Carpinteria Avenue (see Figure 3.3-1). Approximately ~~1.08~~ 1.10 acres of developed area, or ~~7.7~~ 7.0% of the biological survey area was identified.

Disturbed Habitat (NA [Not Sensitive], County Not Sensitive, City Not Sensitive). This land cover type, which is not described in CNCL or MCV2, includes invasive non-native and other disturbance-tolerant species as dominants, and does not support sensitive species. Species occurring within this community, including some natives, are those that are tolerant to disturbances such as grading or vegetation clearing. On-site, species appearing in disturbed areas include poison hemlock (*Conium maculatum*), black mustard, Hottentot fig, and horseweed (*Erigeron canadensis*). Approximately 1.45 acres of this land cover type, or ~~10.45~~ 9.1% of the biological survey area was identified.

Unvegetated Siltstone/Shale Bedrock (NA [Not Sensitive], County Not Sensitive, City Not Sensitive). Within the biological survey area, unvegetated siltstone/shale bedrock areas are unvegetated areas with exposed siltstone/shale bedrock, it is not described in CNCL or MCV2, and does not provide habitat for sensitive species. Unvegetated siltstone/shale bedrock areas include the southern slope along UPRR and southern portion of the biological survey area along U.S. Highway 101 (see Figure 3.3-1). Approximately 0.18 acre of unvegetated siltstone/shale bedrock, or 1.1% of the biological survey area was identified.

3.3.1.3 Special-Status Plant Species

During 2018, ~~and~~ 2019, and 2021, Dudek biologists performed floristic surveys for special-status plant species, as shown in Table 3.3-1. All plant species encountered during the field surveys were identified to subspecies or variety, if possible. Species that could not be identified in the field were brought into the laboratory for further investigation. Scientific and common names for plant species with a California Rare Plant Rank (CRPR) follow the California Native Plant Society On-Line Inventory of Rare, Threatened, and Endangered Plants of California (CNPS 2020). For plant species without a California Rare Plant Rank, scientific names follow the Jepson Interchange for California Floristics; Index to California Plant Names (Jepson Flora Project 2020) and common names follow the California Natural Community List (CDFW 2020b) or the U.S. Department of Agriculture (USDA) Natural Resources Conservation Service Plants Database (USDA 2020b).

For the purpose of CEQA analysis, federal, state, CNPS CRPR 1A, 1B, 2A, and 2B plants, and locally rare plants (Wilken 2018) are considered special-status. CRPR 3 and 4 plants are CNPS designated rare, but not considered special-status as plant species but do add to the vegetation community value designated as County ESH and or City ESHA as CNPS CRPR 3 and 4 species.

In considering rarity beyond federal or state designations, the CNPS Inventory of Rare and Endangered Vascular Plants of California was the primary reference (CNPS 2020). Use of the CNPS inventory is helpful because it clearly defines levels of endangerment and rarity for all of the species addressed. The CNPS inventory divides its subject taxa into four ranks: CRPR 1 (which is further divided into 1A and 1B), CRPR 2 (which is further divided into 2A and 2B), CRPR 3, and CRPR 4. Plants with a CRPR of 1A are presumed extirpated or extinct because they have not been seen or collected in the wild in California for many years. Plants with a CRPR of 1B are rare throughout their range, with the majority of them endemic to California. Most of the plants that are ranked 1B have declined significantly over the last century. Plants with a CRPR of 2A are presumed extirpated because they have not been observed or documented in California for many years. Except for being common beyond the boundaries of California, plants with a CRPR of 2B would have been ranked 1B. Plants with a CRPR of 3 have not had sufficient information collected to assign them to one of the other ranks or to reject them. Nearly all of the plants constituting CRPR 3 are taxonomically problematic. Plants with a CRPR of 3 are plants about which more information is needed and 4 are of limited distribution or infrequent throughout a broader area in California, and their status should be monitored regularly. CRPR 3 plants lack necessary information to assign them to one of the other ranks or to reject them. Should the degree of endangerment or rarity of a CRPR 4 plant change, it would be transferred to a more appropriate rank.

CRPR plants are further defined as follows:

- .1 = seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat)
- .2 = moderately threatened in California (20%–80% occurrences threatened/moderate degree and immediacy of threat)
- .3 = not very threatened in California (<20% of occurrences threatened/low degree and immediacy of threat or no current threats known)

A total of ~~133~~ 138 plant species were observed and identified during surveys. Of these, ~~57~~ 61 (~~43~~ 44%) are considered native and ~~76~~ 77 (~~57~~56%) are considered non-native to California, included as Appendix C1, Plant and Wildlife Species Compendium. The CNDDB (CDFW 2018; CDFW 2020a) and CNPS (CNPS 2020) queries returned 34 special-status plant species that have been documented within the USGS White Ledge Peak 7.5 quadrangle as well as the four coastally influenced adjacent USGS 7.5 minute quadrangles (Ventura, Matilija, Pitas Point, Carpinteria), hereafter referred to as the region. Only the four coastally influenced adjacent USGS 7.5-minute quadrangles were queried for sensitive biological resources instead of all adjacent quadrangle maps, since the habitats north of the foothills vary greatly from the project site and would not be representative of what species are likely to occur in coastal habitats. Dudek analyzed the resulting special-status plant species potential to occur based on known elevation or geographic range, suitable habitat, or the species has been extirpated from the region. Appendix C2, Plant and Wildlife Species Not Expected to Occur within the Biological Survey Area provides a list of the 20 special-status plant species that are not expected to occur based on site surveys, lack of suitable habitat, and the site being out of the species range. The special-status plant species in Appendix C2 are not analyzed in this report as no direct, indirect, or cumulative impacts are expected.

Based on Dudek's habitat suitability analysis including elevation and habitats, 11 of the special-status plant species had the potential to occur within the project site, and 3 special-status plant species were observed during 2018, ~~and~~ 2019, and 2021 rare plant surveys. These 14 special-status plant species include aphanisma (*Aphanisma blitoides*), Miles' milk-vetch (*Astragalus didymocarpus* var. *milesianus*), Ventura marsh milk-vetch (*Astragalus pycnostachyus* var. *lanosissimus*), Coulter's saltbush (*Atriplex coulteri*), South Coast saltscale (*Atriplex pacifica*), southern tarplant (*Centromadia parryi* ssp. *australis*), Orcutt's pincushion (*Chaenactis glabriuscula* var. *orcuttiana*), mesa horkelia (*Horkelia cuneata* var. *puberula*), California satintail (*Imperata brevifolia*), Santa Barbara honeysuckle (*Lonicera subspicata* var. *subspicata*), cliff malacothrix (*Malacothrix saxatilis* var. *saxatilis*), aparejo grass (*Muhlenbergia utilis*), south coast branching phacelia (*Phacelia ramosissima* var. *austrolitoralis*), Nuttall's scrub oak (*Quercus dumosa*), salt spring checkerbloom (*Sidalcea neomexicana*), and woolly seablite (*Suaeda taxifolia*) (Table 3.3-3).

Table 3.3-3. Special-Status Plant Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[a]	Habitat Requirements	Potential to Occur within the BSA
Aphanisma blitoides	aphanisma	None/None/1 B.2	Coastal bluff scrub, Coastal dunes, Coastal scrub; sandy or gravelly/annual herb/Feb–June/3–1,000 feet amsl	Low potential to occur. Suitable coastal scrub and coastal bluff scrub habitat is present, however the only CNDDB occurrence in the region was last confirmed in 1963 and located 1.5 miles west of the Ventura River (CDFW 2020a). This species was not

Table 3.3-3. Special-Status Plant Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[a]	Habitat Requirements	Potential to Occur within the BSA
				detected during 2018, 2019, or 2021 special-status plant species surveys.
Astragalus didymocarpus var. *milesianus*	Miles' milk-vetch	None/None/1 B.2	Coastal scrub (clay)/annual herb/Mar–June/66–295 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present, although clay soils are absent (USDA 2020a). There are only two CNDDB occurrences in the region the most recent of which was recorded in the 1970s in the Ojai area (CDFW 2020a). This species was not detected during 2018, 2019, or 2021 special-status plant species surveys.
Atriplex coulteri	Coulter's saltbush	None/None/1 B.2	Coastal bluff scrub, Coastal dunes, Coastal scrub, Valley and foothill grassland; alkaline or clay/perennial herb/Mar–Oct/10–1,505 feet amsl	Low potential to occur. Suitable coastal bluff scrub and coastal scrub habitat is present, and the large quantities of quailbush on site indicate that suitable alkaline soils may be present. This species is known to occur along Carpinteria coastal bluffs, however this is from an occurrence last confirmed in 1927 (CDFW 2020a). This species was not detected during 2018, 2019, or 2021 special-status plant species surveys.
Atriplex pacifica	South Coast saltscale	None/None/1 B.2	Coastal bluff scrub, Coastal dunes, Coastal scrub, Playas/annual herb/Mar–Oct/0–460 feet amsl	Low potential to occur. Suitable coastal bluff scrub and coastal scrub habitat is present and the large quantities of quailbush on site indicate that suitable alkaline soils may be present. However, there is only one occurrence in the region which was last confirmed in 1972 about 1.5 miles west of the Ventura River (CDFW 2020a). This species was not detected during 2018, 2019, or 2021 special-status plant species surveys.

Table 3.3-3. Special-Status Plant Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[a]	Habitat Requirements	Potential to Occur within the BSA
Centromadia parryi ssp. *australis*	southern tarplant	None/None/1 B.1	Marshes and swamps (margins), Valley and foothill grassland (vernally mesic), Vernal pools/annual herb/May–Nov/0–1,570 feet amsl	Low potential to occur. Suitable habitat is present in the disturbed habitat and ruderal areas on site, as this species can occur in disturbed sites (CDFW 2020a). However, the only occurrence in the region was last confirmed in 1997 and is considered possibly extirpated (CDFW 2020a). This species was not detected during 2018, 2019, or 2021 special-status plant species surveys.
Chaenactis glabriuscula var. *orcuttiana*	Orcutt's pincushion	None/None/1 B.1	Coastal bluff scrub (sandy), Coastal dunes/annual herb/Jan–Aug/0–330 feet amsl	Low potential to occur. Suitable coastal bluff scrub habitat is present. However, the only occurrence in the region was last confirmed in 1961 and is considered possibly extirpated (CDFW 2020a). This species was not detected during 2018, 2019, or 2021 special-status plant species surveys.
Horkelia cuneata var. *puberula*	mesa horkelia	None/None/1 B.1	Chaparral (maritime), Cismontane woodland, Coastal scrub; sandy or gravelly/perennial herb/Feb–July(Sep)/230–2,655 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present, although the most recently confirmed occurrence in the region is from 1935 (CDFW 2020a). This species was not detected during 2018, 2019, or 2021 special-status plant species surveys.
Imperata brevifolia	California satintail	None/None/2 B.1	Chaparral, Coastal scrub, Mojavean desert scrub, Meadows and seeps (often alkali), Riparian scrub; mesic/perennial rhizomatous herb/Sep–May/0–3,985 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present, and the large quantities of quailbush on site indicate that suitable alkaline soils may be present. However, there are only two occurrences in the region, both of which are located behind the transverse ranges north the site, approximately 11 miles northeast of the project site (CDFW 2020a). This species was not detected during 2018, 2019, or 2021 special-status plant species surveys.
Lonicera subspicata var. *subspicata*	Santa Barbara honeysuckle	None/None/1 B.2	Chaparral, Cismontane woodland, Coastal scrub/perennial evergreen shrub/May–	Low potential to occur. Suitable coastal scrub habitat is present. However, all the occurrences in the region are located within the

Table 3.3-3. Special-Status Plant Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[a]	Habitat Requirements	Potential to Occur within the BSA
			Aug(Dec–Feb)/33–3,280 feet amsl	foothills and not directly along the coast (CDFW 2020a). This species was not detected during 2018, 2019, or 2021 special-status plant species surveys.
Malacothrix saxatilis var. *saxatilis*	cliff malacothrix	None/None/4.2[b]	Coastal bluff scrub, Coastal scrub/perennial rhizomatous herb/Mar–Sep/10–655 feet amsl	Present. Detected during 2018, 2019, and 2021 special-status plant species surveys.
Muhlenbergia utilis	aparejo grass	None/None/2B.2	Meadows and seeps, marshes and swamps, chaparral, coastal scrub, cismontane woodland; sometimes alkaline, sometimes serpentinite/perennial rhizomatous herb/Mar–Oct/82–7,625 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present, and the large quantities of quailbush on site indicate that suitable alkaline soils may be present. However, the only occurrence in the region was last confirmed in 1964 and was located west of Matilija Lake (CDFW 2020a).
Phacelia ramosissima var. *austrolitoralis*	south coast branching phacelia	None/None/3.2[b]	Chaparral, Coastal dunes, Coastal scrub, Marshes and swamps (coastal salt); sandy, sometimes rocky/perennial herb/Mar–Aug/16–985 feet amsl	Present. Detected during 2018 or 2019 special-status plant species surveys.
Quercus dumosa	Nuttall's scrub oak	None/None/1B.1	Closed-cone coniferous forest, Chaparral, Coastal scrub; sandy, clay loam/perennial evergreen shrub/Feb–Apr (May–Aug)/49–1,310 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present, although clay soils are absent (USDA 2020a). The closest occurrence in the region was last confirmed in 1929 and was described as occurring in Carpinteria, and the remaining occurrences in the region are located within the foothills and not directly along the coast (CDFW 2020a). This species was not detected during 2018, 2019, or 2021 special-status plant species surveys.

Table 3.3-3. Special-Status Plant Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[a]	Habitat Requirements	Potential to Occur within the BSA
Suaeda taxifolia	woolly seablite	None/None/4.2[b]	Coastal bluff scrub, Coastal dunes, Marshes and swamps (margins of coastal salt)/perennial evergreen shrub/Jan–Dec/0–165 feet amsl	Present. Detected during 2018 and 2019 special-status plant species surveys.

Notes: amsl = above mean sea level.

[a] **Status Legend:**
FE: Federally listed as endangered
SE: State listed as endangered
CRPR 1A: Plants presumed extinct in California
CRPR 1B: Plants rare, threatened, or endangered in California and elsewhere
CRPR 2A: Plants rare, threatened, or endangered in California but common elsewhere
CRPR 2B: Plants rare, threatened, or endangered in California but more common elsewhere
CRPR 3: Plants about which more information is needed – a review list
CRPR 4: Plants of limited distribution – a watch list
.1 Seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat)
.2 Fairly endangered in California (20% to 80% of occurrences threatened)
.3 Not very endangered in California (less than 20% of occurrences threatened or no current threats known).

[b] For the purpose of CEQA analysis, federal, state, and CNPS CRPR 1A, 1B, 2A, and 2B plants are considered special-status. CRPR 3 and 4 plants are not considered special-status as plant species but do add to the vegetation community value designated as County environmentally sensitive habitat and or City environmentally sensitive habitat areas as CNPS CRPR 3 and 4 species.

No federal, state, or CNPS CRPR 1 or 2 plant species were observed. Two CNPS CRPR 4.2 plant species, cliff malacothrix (*Malacothrix saxatilis* var. *saxatilis*) and woolly seablite (*Suaeda taxifolia*), and one CNPS CRPR 3.2 plant species, south coast branching phacelia (*Phacelia ramosissima* var. *austrolitoralis*) were detected within the biological survey area (see Figure 3.3-1). Cliff malacothrix, south coast branching phacelia, and woolly seablite are not included on the Rare Plants of Santa Barbara County list (Wilken 2018); therefore, these are not considered special-status plant species.

Cliff malacothrix (*Malacothrix saxatilis* var. *saxatilis*). This CNPS CRPR 4.2 species is a perennial herb that occurs in coastal bluff scrub and coastal scrub at 10 to 220 feet in elevation. It occurs along the coast from Orange County north to Santa Barbara County, and inland in Kern and San Bernardino Counties and blooms March through September. A total of ~~68,385~~ 70,252 square feet and ~~834~~ 902 individuals were documented (Figure 3.3-1) in the biological survey area.

South coast branching phacelia (*Phacelia ramosissima* var. *austrolitoralis*). This species is a perennial herb that is native to California and included as CNPS CRPR 3.2. It occurs in chaparral, coastal dunes, coastal scrub, marshes and swamps (coastal salt) in sandy sometimes rocky soils and blooms March through August. A total of 14 square feet and 2 individuals were documented (Figure 3.3-1) in the biological survey area.

Woolly seablite (*Suaeda taxifolia*). This CNPS CRPR 4.2 species is found in coastal bluff scrub, coastal dunes, and marshes and swamps at 0 to 165 feet elevation. It occurs along the coast from Orange County north to San Luis Obispo County, as well as on the Channel Islands and blooms January through December, year-round. In the project vicinity, this species is distributed in monotypic patches along the bluffs just west of Rincon Beach County Park, adjacent to the trail alignment (Figure 3.3-1). A total of 75,161 square feet and 617 individuals were documented in the biological survey area.

3.3.1.4 Special-Status Wildlife Species

Wildlife species were documented during the 2011 general biological survey and subsequent vegetation mapping, and special-status plant species surveys during 2018, 2019, and 2021. Additionally, a Dudek biologist documented wildlife observed during the general biological survey conducted in December 2020.

A total of 32 special-status wildlife species (25 birds, two invertebrates, three mammals, and two reptiles) were either directly observed or detected based on vocal cues or observation of sign, included as Appendix C1. The CNDDB (CDFW 2018, 2020a) and USFWS (USFWS 2020a) queries returned 41 special-status wildlife species that have been documented within the USGS White Ledge Peak 7.5 quadrangle as well as the four coastally influenced adjacent USGS 7.5 minute quadrangles (Ventura, Matilija, Pitas Point, Carpinteria), herein after referred to as the region. Only the four coastally influenced adjacent USGS 7.5-minute quadrangles were queried for sensitive biological resources instead all adjacent quadrangle maps, since the habitats north of the foothills vary greatly from the project site and would not be representative of what species are likely to occur in coastal habitats.

A variety of special-status wildlife have recorded occurrences in the region (i.e., the five 7.5-minute quadrangles queried) and were evaluated for their potential to occur on the project site, including but not limited to the Monarch butterfly (*Danaus plexippus*; Special Animal), tidewater goby (*Eucyclogobius newberryi*; federally endangered [FE]), southern steelhead (*Oncorhynchus mykiss irideus*; FE), California red-legged frog (*Rana draytonii*); federally threatened [FT]), California legless lizard (*Anniella sp.*; California Species of Special Concern [SSC]), two-striped garter snake (*Thamnophis hammondii*; SSC), white-tailed kite (*Elanus leucurus*; state fully protected [FP]); light-footed clapper rail (*Rallus longirostris levipes*; FE, state endangered [SE], FP), snowy plover (*Charadrius nivosus*; FT) and Belding's savannah sparrow (*Passerculus sandwichensis beldingi*; SE). Appendix C2 provides a list of the 31 special-status wildlife species that are not expected to occur based on site surveys, lack of suitable habitat, and the site being out of the species range. The special-status wildlife species in Appendix C2 are not analyzed in this report as no direct, indirect, or cumulative impacts are expected.

Based on Dudek's knowledge of regional biological resources, distribution of local species, and species-specific habitat preferences, 8 of the special-status wildlife species queried had the potential to occur within the project site. These 8 special-status wildlife species include California legless lizard, Blainville's horned lizard (*Phrynosoma blainvillii*), coast patch-nosed snake (*Salvadora hexalepis virgultea*), white-tailed kite, western mastiff bat (*Eumops perotis californicus*), Townsend's big-eared bat (*Corynorhinus townsendii*), San Diego desert woodrat (*Neotoma lepida intermedia*), and the monarch butterfly and their overwintering population (Table 3.3-4).

Table 3.3-4. Special-Status Wildlife Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1] Fed/State/ County/City	Habitat Requirements	Potential to Occur within the BSA
Reptiles				
Anniella sp.	California legless lizard	None/SSC/None/None	Coastal dunes, stabilized dunes, beaches, dry washes, valley–foothill, chaparral, and scrubs; pine, oak, and riparian	Moderate potential to occur. Note that the species of legless lizard occurring in the region is not known (Papenfuss and Parham 2013). Suitable scrub habitat is present,

Table 3.3-4. Special-Status Wildlife Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1] Fed/State/ County/City	Habitat Requirements	Potential to Occur within the BSA
			woodlands; associated with sparse vegetation and sandy or loose, loamy soils	although loose, loamy soils are less abundant within the site due to extensive past grading to form the slopes adjacent to U.S. Highway 101. A 1952 CNDDB occurrence was within the western portion of the project site (CDFW 2020a). The next closest occurrence is located approximately 2 miles northwest of the site at Carpinteria State Beach (CDFW 2020a).
Phrynosoma blainvillii	Blainville's horned lizard	None/SSC/None/None	Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley–foothill hardwood, conifer, riparian, pine–cypress, juniper, and annual grassland habitats	Low potential to occur. Suitable coastal scrub habitat is present, although there is only one CNDDB occurrence in the region, located approximately 10.5 miles northeast of the site near the Los Robles Diversion Canal (CDFW 2020a).
Salvadora hexalepis virgultea	coast patch-nosed snake	None/SSC/None/None	Brushy or shrubby vegetation; requires small mammal burrows for refuge and overwintering sites	Low potential to occur. Suitable coastal scrub shrubby habitat is present, although all three CNDDB occurrences in the region are located in the montane areas behind the site and not in coastal areas, the closest of which is located approximately 10.5. miles north of the site along E Camino Cielo (CDFW 2020a).
Birds				
Elanus leucurus (nesting)	white-tailed kite	None/FP/ESH/ESHA	Nests in woodland, riparian, and individual trees near open lands; forages opportunistically in grassland, meadows, scrubs, agriculture, emergent wetland, savanna, and disturbed lands	Low potential to nest. Marginally suitable woodland nesting habitat is present in the trees adjacent to the project site near Rincon Beach County Park, within the Rincon Point housing development. This species prefers open grassland or marshland habitats which are not present on site, and is found less commonly in agricultural areas or rights-of-way. This species is known to occur along the south coast, however most foraging and nesting activity in the County is restricted to more rural areas and in particular, the Goleta and Santa Maria Valleys (Lehman 2020).

Table 3.3-4. Special-Status Wildlife Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1] Fed/State/ County/City	Habitat Requirements	Potential to Occur within the BSA
Mammals				
Corynorhinus townsendii	Townsend's big-eared bat	None/SSC/None/None	Mesic habitats characterized by coniferous and deciduous forests and riparian habitat, but also xeric areas; roosts in limestone caves and lava tubes, human-made structures, and tunnels	Low potential to occur, not expected to roost. Marginally suitable coastal scrub foraging habitat is present, while suitable roosting habitat is absent on site. There is only one CNDDB occurrence in the region, last confirmed in 1941 at the Carpinteria Salt Marsh (CDFW 2020a).
Eumops perotis californicus	western mastiff bat	None/SSC/None/None	Chaparral, coastal and desert scrub, coniferous and deciduous forest and woodland; roosts in crevices in rocky canyons and cliffs where the canyon or cliff is vertical or nearly vertical, trees, and tunnels	Low potential to occur, not expected to roost. Suitable coastal scrub foraging habitat is present, while the slopes present on site are not large and far enough away from human disturbance to be suitable roosting habitat. There is only one CNDDB occurrence in the region, which is located approximately 10 miles east of the site near Weldon (CDFW 2020a).
Neotoma lepida intermedia	San Diego desert woodrat	None/SSC/None/None	Coastal scrub, desert scrub, chaparral, cacti, rocky areas	Moderate potential to occur. Suitable coastal scrub habitat is present, and this species is known to occur along the coast in the region, the closet occurrence of which was last confirmed in 1992 located approximately 2.75 miles southeast of the site just east of Punta Gorda (CDFW 2020a). Additionally, woodrat middens have been observed within the project site during various surveys.
Puma concolor (southern and central coast California evolutionary significant units)	mountain lion	None/SC/None/None	Dense undergrowth and cover in deserts, humid coast forests, arid hillsides, and scrub and oak woodlands.	Low potential to occur. Suitable habitat north and east of the project site across U.S. Highway 101 in the vicinity of State Route 150. This species is known to occur in more rural areas and may access areas east of the project site via Rincon Creek; however, project site access is constricted by U.S. Highway 101 and adjacent chain link fencing along the southbound lanes of the highway, the narrow and frequently used State Route 150, and the beach.

Table 3.3-4. Special-Status Wildlife Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1] Fed/State/ County/City	Habitat Requirements	Potential to Occur within the BSA
Invertebrates				
Danaus plexippus	monarch	FC/None/ESH [2]/ESHA[2]	Follows a pattern of seasonal migration and the Rocky Mountain population migrates southwest to wintering grounds along the California coast from Mendocino to the Mexico border extending into Baja, California, Mexico. Overwintering populations utilize wind-protected tree groves (typically eucalyptus [*Eucalyptus* sp.], Monterey cypress [*Hesperocyparis macrocarpa*], sycamore [*Platanus racemosa*], and coast live oak [*Quercus agrifolia*]) with nectar sources and nearby water sources.	Low potential to roost. While there are a few trees located on the project site including Monterey cypress and eucalyptus trees, most are isolated individuals, and none assemble into a woodland large enough to provide protection and other elements required by overwintering monarch butterflies. There is low potential for monarch butterflies to overwinter adjacent to the project site, including the stand of eucalyptus and trees associated with residential development at Rincon Point near Rincon Creek; however, monarch individuals were not observed during surveys and winter roost sites have not been documented in these areas (Xerces Society 2020). There are numerous occurrences in the region, including a stand of eucalyptus trees north of the project site along Rincon Creek and Bates Road north of Highway 101, last confirmed in 2002 (CDFW 2020a).

[1] **Federal Designations:**

WL Watch List

[2] Monarch overwintering sites are protected under County CLUP (County of Santa Barbara 2019) and the City General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) as County environmentally sensitive habitat and City environmentally sensitive habitat areas.

Two special-status wildlife species were determined to have a moderate potential to occur within the project site, including Northern California legless lizard (SSC) and San Diego desert woodrat (SSC).

California legless lizard. The California legless lizard is a state SSC and is a fossorial lizard that occupies suitable habitats such as coastal dune, valley and foothill grassland, chaparral, and coastal scrub from Contra Costa County south to the Mexico border. This species requires loose, friable soils for burrowing, and often requires moist substrates and environments (CDFW 2020a). This species has been recorded within the project site from a 1952 occurrence along the coastal bluffs near Rincon Road and Rincon Beach County Park (CDFW 2020a). Suitable habitat for this species occurs on site in the coastal scrub and coastal bluff scrub vegetation communities mapped over a large portion of the site

San Diego desert woodrat. The San Diego desert woodrat is a state SSC known to inhabit scrub habitats, such as coastal sage scrub. Its distribution tends to be on the west side of Coast Ranges from San Diego County north to at least San Luis Obispo County. The San Diego desert woodrat prefers moderate to dense canopies, and are particularly abundant in rock outcrops, rocky cliffs, and slopes (CDFW 2020a). Unlike dusky-footed woodrats, San Diego desert woodrats do not construct large stick nests. This species normally occupies openings in rocks, vegetation (such as openings among patches of cactus), and even debris, and sometimes small stick nests are built within an opening or crevice. Suitable habitat for this species occurs on site in the coastal scrub and coastal bluff scrub vegetation communities mapped over a large portion of the site. Woodrat middens have been observed during surveys on site.

White-tailed kite. The white-tailed kite, a state fully protected species, is known to occur in the area (City of Carpinteria 2003), and in addition to protections by the state, the white-tailed kite receives protection under the Santa Barbara County Coastal Land Use Plan (County of Santa Barbara 2019) and the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003). The City specifically cites the Carpinteria Bluffs as a location where this species occurs and is protected. However, no white-tailed kites were detected in the biological survey area, and the scrub vegetation that predominates there is unsuitable for foraging by this species, which hunts in habitats dominated by grasses and forbs. Trees in and around the site are relatively small, and located in areas with high levels of human disturbance where kites are unlikely to nest. Marginally suitable woodland nesting habitat is present in the trees adjacent to the project site near Rincon Beach County Park, within the Rincon Point housing development. This species prefers open grassland or marshland habitats which are not present on site, and is found less commonly in agricultural areas or rights-of-way. This species is known to occur along the south coast, however most foraging and nesting activity in the County is restricted to more rural areas and in particular, the Goleta and Santa Maria Valleys (Lehman 2020).

Monarch butterflies and overwintering sites. Monarch butterflies are currently a federal candidate species, while their overwintering sites are also protected under Santa Barbara County Coastal Land Use Plan (County of Santa Barbara 2019) and the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) policies. The monarch butterfly follows a pattern of seasonal migration. The summer grounds of the species are found in New England, the Great Lakes region, the northern Rocky Mountains, and some portions of the Arid West (Pelton et al. 2016). The New England and Great Lakes populations generally migrate southwest to wintering grounds in the Sierra Madre mountain range of Mexico, while the Rocky Mountains population generally migrates southwest to wintering grounds along the California coast.

Monarchs require specific conditions for suitable wintering sites, and wintering sites in California are associated with wind-protected groves of large trees (primarily eucalyptus or pine) with nectar and water sources nearby, dappled sunlight, high humidity, and an absence of freezing temperatures or high wind, generally near the coast (Pelton et al. 2016). The majority of trees within the biological survey area are either singular and isolated, or do not form a large enough grove to provide adequate microclimate conditions and wind protection monarch butterflies

require for overwintering sites. There is a small portion of eucalyptus trees within the eastern portion of the biological survey area, however there is low potential for monarchs for overwinter here as well due to the small relative size of this eucalyptus stand and vulnerability to strong winds and weather. There are also three eucalyptus trees present at near the western terminus of the biological survey area, however they each grow individually and do not form a grove capable of supporting overwintering monarchs. Additionally, the eucalyptus trees present along the hills behind the biological survey on private property, specifically the eucalyptus trees around the residential development off Bates Ranch Road as well as the eucalyptus trees that extend beyond the terminus of Camino Carreta, appear to be planted windrows and do not form large protected groves that have the microclimate characteristics monarchs require for overwintering.

Monarch butterflies are known to occur near the biological survey area along Bates Road just north of U.S. Highway 101 in a eucalyptus stand associated with Rincon Creek (CNDDB Occurrence No. 268; Xerces Site No. 2803) (CDFW 2020a). Additionally, this site was known to have been surveyed for overwintering monarch populations in 2017 during the Xerces Society New Year's Count, of which none were detected (Xerces Society 2020).

3.3.1.5 Critical Habitat

There is no USFWS designated critical habitat for any plant species or wildlife species within or adjacent to the project site (USFWS 2020b).

3.3.1.6 Wildlife Movement Corridors

The project site is located adjacent to the Pacific Ocean and does not connect important habitat areas used by large or small wildlife species. In addition, U.S. Highway 101 and adjacent chain link fencing along the southbound lanes of the highway provide impediments to wildlife movement between the bluffs and more inland areas. Additionally, development and restricted access from more open space areas to the north impede wildlife movement in accessing the project site. Large-sized mammal species such as mountain lion and California black bears (*Ursus americanus californiensis*) may utilize areas to the east of the biological survey area including Rincon Creek and the channelized portion under U.S. Highway 101 to access beach areas; however, the surrounding areas where Rincon Creek daylights is developed with residential homes and parking lot improvements, resulting in a high urban wildlife interface. Medium-sized mammal species such as the striped skunk (*Mephitis mephitis*) or northern raccoon (*Procyon lotor*) may move locally along the coast. The UPRR and associated right-of-way provides an unvegetated corridor approximately 50 feet wide containing a single track that divides the project alignment near its center. The UPRR tracks are at a much lower elevation than the adjacent bluffs creating an anthropogenic valley and break in continuous topography along the bluffs. The project includes a span bridge which connects the two bluffs and ultimately will not change the overall topography for wildlife to approach or cross the tracks. Additionally, minor changes to wind and weather patterns in a very local setting are not an impediment to birds moving long distance, particularly since the overall height of the slope should remain at the same elevation.

To evaluate the change in wind uplift patterns above the bluff face from the proposed regrading for the project, Dudek commissioned an Airflow Analysis for the Proposed Regrading of the Rincon Bluffs study (Airflow Analysis Report ~~Study~~) by an expert in fluid dynamics; the Airflow Analysis Report ~~Study~~ is included as Appendix I of this Environmental Impact Report. Several different approaches were used, based upon published literature including wind tunnel experiments and direct field measurements of the amplification effects of a slope or vertical face on horizontal wind vectors perpendicular to the slope face. In the published literature reviewed for this Airflow Analysis Report ~~Study~~, certain investigators compared the average slope angle of the entire slope or bluff face to determine

the wind amplification effect, while others compared the angle of just the upper portion of the slope. The analysis of the effects of the proposed regrading of the bluff face for the project concluded that the proposed regrading could reduce the vertical airflow velocity by 10% to 30% relative to current conditions; for altitudes relevant to paragliding and soaring activities, the reduction may be closer to the maximum reduction of 30% (Appendix I). ~~Based on available experimental results, the introduction of an upper bench above the trail is expected to provide a small increase in turbulence (of the order of 5%) at an altitude of 30 feet above the front of the bluffs, becoming negligible by an altitude of approximately 75 feet (Appendix I).~~ Migratory avian species travel hundreds to thousands of miles at various elevations during which they can be exposed to a variety of weather systems within days or weeks of each other and have behavioral plasticity in response to microscale through mesoscale conditions including extremely adverse weather (Sahmoun-Baranes 2017). The anticipated changes in ~~wind~~ velocity ~~and turbulence~~ would occur within a short linear distance relative to the distance traveled for a migrating avian species, and avian species regularly adjust to changing weather conditions. Additionally, the velocity ~~and turbulence~~ changes would be focused at altitudes near the bluff top and would not extend the whole altitude range for migrating birds.

3.3.1.7 Aquatic Resources

While a delineation of jurisdictional aquatic resources was not performed; no evidence of aquatic features was observed within the biological survey area during field surveys. Additionally, there are no USGS National Hydrography Dataset (USGS 2020) or USFWS National Wetlands Inventory (USFWS 2020b) mapped aquatic resources within the project site. On the adjacent Carpinteria Bluffs III site, to the south and west of the western most portion of the project site, multiple seasonal pools and ephemeral pools have been documented (Sage Institute Inc. 2009; Dudek 2012a, 2012b). As part of the Wetland Determination of Pool Features at Carpinteria Bluffs Area II per the California Coastal Act (Dudek 2012b), jurisdictional determinations for coastal wetlands were made for documented seasonal pools and ephemeral features. No documented coastal wetlands occur within the project site; however, coastal wetlands (Dudek 2012b) are approximately 123 feet from project ~~temporary~~ impacts ~~and 125 feet from project permanent impacts~~. The closest mapped riverine or stream/river feature is associated with the Rincon Creek outlet located approximately 50 feet from the eastern portion of the biological survey area.

3.3.2 Relevant Plans, Policies, and Ordinances

3.3.2.1 Federal

Clean Water Act, Section 404

The Clean Water Act (CWA) establishes the basic structure for regulating discharges of pollutants into waters of the United States, and regulating quality standards for surface waters. Under the CWA, the U.S. Environmental Protection Agency (USEPA) has implemented pollution control programs such as setting wastewater standards for industry and developing national water quality criteria recommendations for pollutants in surface waters.

The CWA made it unlawful to discharge any pollutant from a point source into navigable waters, unless a permit was obtained. USEPA's National Pollutant Discharge Elimination System (NPDES) permit program controls discharges. Point sources are discrete conveyances such as pipes or human-made ditches. Individual homes that are connected to a municipal system, use a septic system, or do not have a surface discharge do not need an NPDES permit; however, industrial, municipal, and other facilities must obtain permits if their discharges go directly to surface waters.

Under Section 404 of the Clean Water Act, the U.S. Army Corps of Engineers (USACE) has authority to regulate activities that could discharge fill of material into wetlands or other "waters of the United States." Perennial and intermittent creeks are considered waters of the United States if they are hydrologically connected to other jurisdictional waters (typically a navigable water). USACE also implements the federal policy embodied in Executive Order 11990, which is intended to result in no net loss of wetland value or acres. In achieving the goals of the Clean Water Act, USACE seeks to avoid adverse impacts and offset unavoidable adverse impacts on existing aquatic resources. Any fill of wetlands that are hydrologically connected to jurisdictional waters would require a permit from USACE prior to the start of work. Typically, when a project involves impacts to waters of the United States, the goal of no net loss of wetland acres or values is met through avoidance and minimization to the extent practicable, followed by compensatory mitigation involving creation or enhancement of similar habitats.

Federal Endangered Species Act

Under the federal Endangered Species Act of 1973 (ESA), the Secretary of the Interior and the Secretary of Commerce jointly have the authority to list a species as threatened or endangered (16 USC 1533[c]). Pursuant to the requirements of the ESA, an agency reviewing a project within its jurisdiction must determine whether any federally listed threatened or endangered species may be present in the planning area, and determine whether the project would have a potentially significant impact on such species. In addition, the agency is required to determine whether the project is likely to jeopardize the continued existence of any species proposed to be listed under the ESA or result in the destruction or adverse modification of critical habitat proposed to be designated for such species (16 USC 1536[3][4]). The U.S. Fish and Wildlife Service (USFWS) and the National Oceanic and Atmospheric Administration National Marine Fisheries Service are responsible for implementation of the ESA.

USFWS also publishes a list of candidate species. Species on this list receive special attention from federal agencies during environmental review, although they are not protected otherwise under the ESA. The candidate species are those for which USFWS has sufficient biological information to support a proposal to list them as endangered or threatened.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act prohibits the take of any migratory bird or any part, nest, or eggs of any such bird. Under the Migratory Bird Treaty Act, "take" is defined as "pursue, hunt, shoot, wound, kill trap, capture, or collect, or any attempt to carry out these activities" (16 USC 703 et seq.). Additionally, Executive Order 13186, Responsibilities of Federal Agencies to Protect Migratory Birds, requires that any project with federal involvement address impacts of federal actions on migratory birds with the purpose of promoting conservation of migratory bird populations (66 FR 3853–3856). Executive Order 13186 requires federal agencies to work with USFWS to develop a memorandum of understanding. USFWS reviews actions that might affect these species. Currently, birds are considered to be nesting under the Migratory Bird Treaty Act only when there are eggs or chicks that are dependent on the nest.

3.3.2.2 State

California Endangered Species Act

The California ESA establishes state policy to conserve, protect, restore, and enhance threatened or endangered species and their habitats. Under the California ESA, CDFW is responsible for maintaining a list of threatened species and endangered species (California Fish and Game Code, Section 2070). CDFW also maintains a list of

candidate species, which are species that CDFW has formally noticed as under review for addition to the threatened or endangered species list. CDFW also maintains lists of California species of special concern, which serve as watch lists. Pursuant to the requirements of the California ESA, an agency reviewing a proposed project within its jurisdiction must determine whether any state-listed endangered or threatened species may be present in the area, and determine whether the proposed project would have a potentially significant impact on such species. CDFW encourages informal consultation on any proposed project that may impact a candidate species.

California Fish and Game Code

Under the California Fish and Game Code, CDFW provides protection from take for a variety of species, including fully protected species. "Fully protected" is a legal protective designation administered by CDFW and intended to conserve wildlife species that risk extinction within California. Lists have been created for birds, mammals, fish, amphibians, and reptiles.

Birds of prey are protected in California under California Fish and Game Code Section 3503.5. Section 3503.5 states that it is "unlawful to take, possess, or destroy any birds in the orders Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto." Construction disturbance during the breeding season could result in the incidental loss of fertile eggs or nestlings, or otherwise lead to nest abandonment. Disturbance that causes nest abandonment and/or loss of reproductive effort is considered "taking" by CDFW. Section 3511 prohibits take or possession of a fully protected species. In addition, Section 3513 states "It is unlawful to take or possess any migratory nongame bird as designated in the Migratory Bird Treaty Act or any part of such migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the Migratory [Bird] Treaty Act." Any loss of fertile eggs or nesting raptors, or any activities resulting in nest abandonment would constitute a significant impact. Non-raptor native birds receive similar protection under California Fish and Game Code Section 3503. Project impacts to these species would not be considered significant unless the species are known to, or have a high potential to, nest in the area or rely on it for primary foraging.

The Native Plant Protection Act of 1977 (California Fish and Game Code, Section 1900 et seq.) gives CDFW authority to designate state endangered, threatened, and rare plants, and provides specific protection measures for identified populations.

CDFW also protects streams, water bodies, and riparian corridors through the Streambed Alteration Agreement process under Sections 1601–1606 of the California Fish and Game Code. The California Fish and Game Code stipulates that it is "unlawful to substantially divert or obstruct the natural flow or substantially change the bed, channel or bank of any river, stream or lake" without notifying CDFW, incorporating necessary mitigation, and obtaining a Streambed Alteration Agreement. Through policy, CDFW asserts jurisdiction to the top of banks of all streams, including intermittent and ephemeral streams, extending laterally to the upland edge of adjacent riparian vegetation. CDFW uses the Cowardin system for wetland identification and classification, which typically results in a larger jurisdictional area than federal jurisdiction under the Clean Water Act. Under this system, wetlands must have one or more of the following three attributes: (1) at least periodically, the land supports predominantly hydrophytes; (2) the substrate is predominantly undrained hydric soil; and (3) the substrate is nonsoil and is saturated with water or covered by shallow water at some time during the growing season of each year.

3.3.2.3 Local

City of Carpinteria General Plan/Local Coastal Land Use Plan

The City's General Plan/Local Coastal Land Use Plan includes the following objectives and policies relevant to the proposed project and biological resources:

- OSC-1 Protect, Preserve and Enhance Local Natural Resources and Habitats
  - Policy OSC-1a. Protect ESHAs from development and maintain them as natural open space or passive recreational areas.
  - Policy OSC-1b. Prohibit activities, including development, that could damage or destroy ESHA.
  - Policy OSC-1c. Establish and support preservation and restoration programs for ESHA, including but not limited to Carpinteria Creek, Carpinteria Bluffs, Carpinteria Salt Marsh, seal rookery, Carpinteria reef, Pismo clam beds and the intertidal zones along the shoreline.
  - Policy OSC-1d. Property including ESHA should be designated with a zoning category that allows for the protection of, and access to, the resource area, such as Open Space/Recreation or Public Facility zoning. Any development on property including ESHA should be designed and conducted to protect the resources. Within environmentally sensitive habitat only uses dependent upon those resources shall be allowed and the resources shall be protected against any disruption.
  - Policy OSC-1f. Protect and restore degraded wetlands, butterfly habitat, native plant communities, and sensitive, rare, threatened or endangered species habitat on City-owned land to the maximum extent feasible.
- OSC-3 Preserve and Restore Wetlands Such as the Carpinteria Salt Marsh
  - Policy OSC-3a. Wetland delineations shall be based on the definitions contained in Section 13577 (b) of Title 14 of the California Code of Regulations
  - Policy OSC-3b. The upland limit of a wetland is defined as
    - the boundary between land with predominantly hydrophytic cover and land with predominantly mesophytic or xerophytic cover;
    - the boundary between soil that is predominantly hydric and soil that is predominantly non-hydric;
    - in the case of wetlands without vegetation or soils, the boundary between land that is flooded or saturated at some time during years of normal precipitation, and land that is not.
    - If questions exist, the limit shall be determined by a habitat survey made by a qualified biologist in consultation with the California Department of Fish and Game.
  - Policy OSC-3c. Development adjacent to the required buffer around wetlands should not result in adverse impacts including but not limited to sediment runoff, chemical and fertilizer contamination, noise, light pollution and other disturbances.
- OSC-7 Conserve Native Plant Communities.
  - Policy OSC-7b. When sites are graded or developed, areas with significant amounts of native vegetation shall be preserved. Structures shall be sited and designed to minimize the impact of grading, paving construction of roads, runoff and erosion on native vegetation. Sensitive resources that exhibit any level of disturbance shall be maintained, and if feasible, restored. New development shall include measures to restore any disturbed or degraded habitat on the project site. Cut and fill slopes and all areas disturbed by construction activities shall be landscaped or revegetated at the completion of

grading. Plantings shall be of native, drought-tolerant plant species consistent with the existing native vegetation on the site. Invasive plant species that tend to supplant native species shall be prohibited.

Santa Barbara County Article II Coastal Zoning Ordinance

Pursuant to PRC Section 30500 of the California Coastal Act of 1976, Santa Barbara County was required to prepare an LCP for portions of the unincorporated areas of Santa Barbara County within the coastal zone. Sections of the Santa Barbara County Article II Zoning Ordinance that may be relevant to the proposed project include Section 35-140, Tree Removal. Section 35-140 regulates the removal of qualifying trees within the coastal zone, and requires Coastal Development Permit (CDP) approval prior to removal of any qualifying tree. A qualifying tree is defined as a tree which is six inches or more in diameter measured four feet above the ground and six feet or more in height and which is 1) located in a County street right-of-way; or 2) located within 50 feet of any major or minor stream except when such trees are removed for agricultural purposes; or 3) oak trees; or 4) used as a habitat by the monarch butterflies. However, a CDP to remove trees in the coastal zone shall only be issued for reasons such as: the trees are dead; the trees prevent the construction of a project for which a CDP has been issued and project redesign is not feasible; the trees are diseased and pose a danger to healthy trees in the immediate vicinity; or the trees are so weakened by age, disease, storm, fire, excavation, removal of adjacent trees, or any injury so as to cause imminent danger to persons or property.

Santa Barbara County Coastal Land Use Plan

The Santa Barbara County Coastal Land Use Plan was partially certified by the Coastal Commission on March 17, 1981, adopted in 1982, and republished June 2019, as the Local Coastal Program for unincorporated Santa Barbara County. It details the rules and regulations of land use within Santa Barbara County's coastal areas. The following policies would apply to the proposed project. Policy 9-37 consists of the same guidelines discussed above in the Santa Barbara County Article II Zoning Ordinance Section 35-97.19, Development Standards for Stream Habitats. Policy 9-38 consists of the same guidelines discussed above in the Santa Barbara County Article II Zoning Ordinance Section 35-97.19.

- Policy 9-36: When sites are graded or developed, areas with significant amounts of native vegetation shall be preserved. All development shall be sited, designed, and constructed to minimize impacts of grading, paving, construction of roads or structures, runoff, and erosion on native vegetation. In particular, grading and paving shall not adversely affect root zone aeration and stability of native trees.
- Policy 9-37: The minimum buffer strip for major streams in rural areas, as defined by the land use plan, shall be presumptively 100 feet, and for streams in urban areas, 50 feet. These minimum buffers may be adjusted upward or downward on a case-by-case basis. The buffer shall be established based on an investigation of the following factors and after consultation with the Department of Fish and Game and Regional Water Quality Control Board in order to protect the biological productivity and water quality of streams:

  1) Soil type and stability of stream corridors;
  2) How surface water filters into the ground;
  3) Slope of the land on either side of the stream; and
  4) Location of the 100-year flood plain boundary.

  Riparian vegetation shall be protected and shall be included in the buffer. Where riparian vegetation has previously been removed, except for channelization, the buffer shall allow for the reestablishment of riparian vegetation to its prior extent to the greatest degree possible. Riparian vegetation shall be protected

and shall be included in the buffer. Where riparian vegetation has previously been removed, except for channelization, the buffer shall allow for the reestablishment of riparian vegetation to its prior extent to the greatest degree possible.

- Policy 9-38: No structures shall be located within the stream corridor except: public trails, dams for necessary water supply projects, flood control projects where no other method for protecting existing structures in the flood plain is feasible and where such protection is necessary for public safety or to protect existing development; and other development where the primary function is for the improvement of fish and wildlife habitat. Culverts, fences, pipelines, and bridges (when support structures are located outside the critical habitat) may be permitted when no alternative route/location is feasible. All development shall incorporate the best mitigation measures feasible.

3.3.3 Thresholds of Significance

The County provides types of impacts to biological resources that may be considered significant if the project substantially alters biological resources in the following ways (County of Santa Barbara 2008):

1. Substantially reduce or eliminate species diversity or abundance
2. Substantially reduce or eliminate quantity or quality of nesting areas
3. Substantially limit reproductive capacity through losses of individuals or habitat
4. Substantially fragment, eliminate, or otherwise disrupt foraging areas and/or access to food sources
5. Substantially limit or fragment range and movement (geographic distribution or animals and/or seed dispersal routes)
6. Substantially interfere with natural processes, such as fire or flooding, upon which the habitat depends.

Furthermore, the size, type, and timing of impacts should be considered in assessing the significance of project impacts on biological resources (County of Santa Barbara 2008).

The significance criteria used to evaluate the project impacts to biological resources are based on Appendix G of the CEQA Guidelines. According to Appendix G of the CEQA Guidelines, a significant impact related to biological resources would occur if the project would:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

g) Result in cumulatively considerable impacts to biological resources.

3.3.4 Impact Analysis

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

For the purpose of CEQA analysis, federal, state, CNPS CRPR 1A, 1B, 2A, and 2B plants, and locally rare plants (Wilken 2018) are considered special-status plant species. CRPR 3 and 4 plants, which are CNPS "rare", but not considered special-status plant species under CEQA. Yet these plant species do add to the vegetation community value designated as County ESH and or City ESHA as CNPS CRPR 3 and 4 species. No federal, state, or CNPS CRPR 1 or 2 species, or locally rare (Wilken 2018) species were observed. Two CNPS CRPR 4.2 plant species, cliff malacothrix and woolly seablite, and one CNPS CRPR 3.2 plant species, south coast branching phacelia, were detected within the biological survey area. ~~Cliff malacothrix, south coast branching phacelia, and woolly seablite are not included on the Rare Plants of Santa Barbara County list (Wilken 2018) and therefore, are not considered special status plant species.~~

~~No special status plant species were observed; thus, impacts to special status plant species would be less than significant.~~CNPS' CRPR 4 plant species are of limited distribution or are infrequent throughout a broader area in California, so that their vulnerability or susceptibility to threat appears low at this time, from a statewide perspective as described by the CNPS. Per CNPS, these species warrant regular monitoring for evidence of decline and subsequent transfer to a more sensitive rank.

Cliff malacothrix, CRPR 4.2, is known to occur in coastal bluff scrub and coastal scrub habitats from northern Santa Barbara County south through southern Orange County. It is not considered locally rare in Santa Barbara County (Wilken 2018), but is considered locally rare in Ventura County (Magney 2020). From 1980 to present, there have been 27 recorded observations of this species in Santa Barbara County and Ventura County (Calflora 2021). The recorded observations were along coastal bluffs that have likely not been developed or disturbed since recorded. Although there are an abundance of recorded cliff malacothrix observations in Santa Barbara County, this species is likely under documented and is known to occur in large areas adjacent to the project site and multiple locations along the Santa Barbara County and nearby Ventura County coast. Cliff malacothrix documented within the biological survey area is in habitats similar throughout the range of the species, coastal bluff scrub and coastal scrub habitats on siltstone/shale bedrock. The proposed project lies generally within an elevated marine terrace, which has been subject to extensive grading associated with current and former transportation facilities. The project site is located within Santa Barbara County immediately adjacent to Ventura County, which is well within the known geographic range of this species, northern Santa Barbara County south through southern Orange County. Cliff malacothrix is not included on the BLM Special Status Plants under the jurisdiction of the California State Office as of May 28, 2015 list (USDOI, BLM 2015), USFWS listed plants (USFWS 2021), are not listed or proposed under the ESA (USFS 2005). A total of approximately 418 cliff malacothrix individuals would be impacted by the project, approximately 46% of the individuals within the biological survey area. The project is within the geographic range of the species, cliff malacothrix is not considered locally rare in Santa Barbara County (Wilken 2018), the cliff malacothrix individuals were observed

on areas that were subjected to extensive grading associated with current and former transportation facilities, and the species occurs in coastal bluff scrub and coastal scrub on siltstone/shale bedrock which are common habitats and substrates for this species. Project impacts would not result in declines in cliff malacothrix to transfer to a more sensitive rank; therefore, impacts to cliff malacothrix would be **less than significant**.

Woolly seablite, CRPR 4.2, is known to occur in coastal bluff scrub, coastal dunes, and marshes and swamps (coastal margins) habitats from San Luis Obispo County south through southern San Diego County including the Channel Islands. It is not considered locally rare in Santa Barbara County (Wilken 2018), but is considered locally rare in Ventura County (Magney 2020). From 1980 to present, there have been 47 recorded observations of this species in Santa Barbara County and Ventura County (Calflora 2021). The recorded observations were along coastal bluffs and beach terraces that have likely not been developed or disturbed since recorded. Although there are an abundance of recorded woolly seablite observations in Santa Barbara County and Ventura County, this species is likely under documented and is known to occur in large areas adjacent to the project site and multiple locations along the Santa Barbara County and nearby Ventura County coast. Woolly seablite documented within the biological survey area is in habitats similar throughout the range of the species, coastal bluff scrub and coastal scrub habitats on siltstone/shale bedrock. The proposed project lies generally within an elevated marine terrace, which has been subject to extensive grading associated with current and former transportation facilities. The project site is located within Santa Barbara County immediately adjacent to Ventura County which is well within the known geographic range of this species, San Luis Obispo County south through southern San Diego County. Woolly seablite is not included on the BLM Special Status Plants under the jurisdiction of the California State Office as of May 28, 2015 list (USDOI, BLM 2015), USFWS listed plants (USFWS 2021) that are not listed or proposed under the ESA (USFS 2005). A total of approximately 256 woolly seablite individuals would be impacted by the project, approximately 41% of the individuals within the biological survey area. The project is within the geographic range of the species, woolly seablite is not considered locally rare in Santa Barbara County (Wilken 2018), the woolly seablite individuals were observed on areas that were subjected to extensive grading associated with current and former transportation facilities, and the species occurs in coastal bluff scrub and coastal scrub on siltstone/shale bedrock which are common habitats and substrates for this species. Project impacts would not result in declines in woolly seablite to transfer to a more sensitive rank; therefore, impacts to woolly seablite would be **less than significant**.

CRPR 3 plant species are those species about which more information is needed. Necessary information is lacking to assign these species to one of the other ranks or to reject them.

South coast branching phacelia, CRPR 3.2, is known to occur in chaparral, coastal dunes, coastal scrub, and marshes and swamps (coastal salt) habitats within sandy, sometimes rocky habitats from southern San Luis Obispo County south through central coastal San Diego County. It is not considered locally rare in Santa Barbara County (Wilken 2018), but is considered locally rare in Ventura County (Magney 2020). From 1980 to present, there have been 44 recorded observations of this species in Santa Barbara County and Ventura County (Calflora 2021). The recorded observations were along rivers, within La Purisima Mission State Historic Park, within Burton Mesa Ecological Reserve, and abandoned roads and trails that have likely not been developed or disturbed since recorded. Although there are an abundance of recorded south coast branching phacelia observations in Santa Barbara County and Ventura County, this species is likely under documented and is known to occur in multiple locations along the Santa Barbara County and nearby Ventura County coast. South coast branching phacelia documented within the biological survey area is in habitats similar throughout the range of the species, coastal scrub. The proposed project lies generally within an elevated marine terrace, which has been subject to extensive grading associated with current and former transportation facilities. The project

site is located within Santa Barbara County immediately adjacent to Ventura County which is well within the known geographic range of this species, southern San Luis Obispo County south through central coastal San Diego County. South coast branching phacelia is not included on the BLM Special Status Plants under the jurisdiction of the California State Office as of May 28, 2015 list (USDOI, BLM 2015), USFWS listed plants (USFWS 2021 that are not listed or proposed under the ESA (USFS 2005). The one individual of south coast branching phacelia documented within the biological survey area would be impacted by the project. The project is within the geographic range of the species, south coast branching phacelia is not considered locally rare in Santa Barbara County (Wilken 2018), the south coast branching phacelia individual was observed in an area that was subjected to extensive grading associated with current and former transportation facilities, and the species occurs in coastal scrub on siltstone/shale bedrock which are common habitats and substrates for this species. Project impacts would not result in declines in south coast branching phacelia to transfer to a more sensitive rank; therefore, impacts to south coast branching phacelia would be **less than significant**.

Habitat was documented for two special-status wildlife species, either within or adjacent to the trail alignment: California legless lizard and San Diego desert woodrat. Habitat for the California legless lizard was found in the proposed trail alignment immediately south of the UPRR crossing. California legless lizard individuals could suffer injury or mortality because of grading and other construction activities associated with the project. Therefore, impacts to California legless lizard would be potentially significant absent mitigation. Habitat for the woodrat is located throughout the scrub dominated portions of the site. Woodrat individuals could suffer injury or mortality because of grading and other construction activities. Therefore, impacts to woodrat would be potentially significant absent mitigation. Impacts to these species' habitats would be reduced to **less than significant with implementation of Mitigation Measure (MM) BIO-1 through MM-BIO-4**.

White-tailed kite is known to occur along the south coast, however most foraging and nesting activity in the County is restricted to more rural areas and in particular, the Goleta and Santa Maria Valleys (Lehman 2020). The City specifically cites the Carpinteria Bluffs as a location where white-tailed kites occur and their habitat is protected. However, no white-tailed kites were detected in the biological survey area, and the scrub vegetation that predominates there is unsuitable for foraging by this species, which hunts in habitats dominated by grasses and forbs. This species prefers open grassland or marshland habitats which are not present on site, and is found less commonly in agricultural areas or rights-of-way. Trees in and around the project site are relatively small, and located in areas with high levels of human disturbance where white-tailed kites are unlikely to nest. Marginally suitable woodland nesting habitat is present in the trees adjacent to the project site near Rincon Beach County Park and within the Rincon Point housing development; however, proposed project impacts are greater than 500 feet from these habitats. The trees within the vicinity of Rincon Beach County Park are not planned to be directly impacted. Therefore, impacts to white-tailed kites would be **less than significant.**

Monarchs require specific conditions for suitable wintering sites, and wintering sites in California are associated with wind-protected groves of large trees (primarily eucalyptus or pine) with nectar and water sources nearby, dappled sunlight, high humidity, and an absence of freezing temperatures or high wind, generally near the coast (Pelton et al. 2016). The majority of trees within the project site are either singular and isolated, or do not form a large enough grove to provide adequate microclimate conditions and wind protection monarch butterflies require for overwintering sites. There are three eucalyptus trees present near the western terminus of the project site, however they each grow individually and do not form a grove capable of supporting overwintering monarchs. There is a small portion of eucalyptus trees within the eastern portion of the biological survey area, however there is low potential for monarchs to overwinter here as well due to the small relative size of this eucalyptus stand and vulnerability to strong winds and weather. The easternmost proposed project impacts are over 1,000 feet from

these eucalyptus trees. Additionally, the eucalyptus trees present along the hills behind the project site on private property, specifically the eucalyptus trees around the residential development off Bates Ranch Road as well as the eucalyptus trees that extend beyond the terminus of Camino Carreta, appear to be planted windrows and do not form large protected groves that have the microclimate characteristics monarchs require for overwintering.

Monarch butterflies are known to occur near the project site along Bates Road just north of U.S. Highway 101 in a eucalyptus stand associated with Rincon Creek (CNDDB Occurrence No. 268; Xerces Site No. 2803) (CDFW 2020a). Additionally, this site was known to have been surveyed for overwintering monarch populations in 2017 during the Xerces Society New Year's Count, of which none were detected (Xerces Society 2020). While this population is not within 100 feet of the project site, it conceivably could be affected by project implementation due to changed weather patterns. However, no impacts to this monarch overwintering site are anticipated since the overall height of the slope within Rincon Beach County Park south of Highway 101 will not be reduced, as work includes proposed terraces to stabilize the hill but will not decrease its overall height, and therefore no changes to the wind conditions at the overwintering site are expected. Additionally, this overwintering site is largely protected by the hill below the single residential development at 637 Bates Road, and any possible changes to weather and wind patterns due to project implementation would not affect the protective contour this hill independently provides. Therefore, monarch butterflies are not anticipated to be affected since there is low potential for the project site to support overwintering populations, and because known overwintering populations in the vicinity would not be adversely affected due to project implementation. Therefore, impacts to monarch butterfly individuals and monarch butterfly overwintering sites would be **less than significant.**

Several trees, including eucalyptus, Monterey cypress, pine, are located within the proposed trail alignment near its western terminus and U.S. Highway 101. These trees are relatively small and located in areas with high levels of human disturbance including U.S. Highway 101 vehicular traffic and pedestrian use of Carpinteria Avenue and adjacent areas. These isolated and singular trees lack dense foliage and are located in areas vulnerable to strong winds and weather. Several myoporum trees are located within the proposed trail alignment and are largely multistemmed. The myoporum located directly adjacent to the unsanctioned trail experiences high levels of human disturbance. Due to the locations of these trees in areas with high levels of human disturbance, relatively small size of these trees, isolated nature of the trees, and vulnerability to strong winds and weather, raptors are unlikely to nest in these trees. Therefore, removal of these trees would not substantially reduce or eliminate the quantity or quality of raptor nesting areas and impacts would be **less than significant.**

Additionally, a stand of trees is present at the eastern terminus of the biological survey area, which are rooted next to the Rincon Beach County Park parking lot. The eastern most proposed project impacts are over 1,000 feet from this stand of trees. The trees within the vicinity of Rincon Beach County Park are not planned to be directly impacted. Therefore, project impacts to raptor nesting trees would not substantially reduce or eliminate the quantity or quality of nesting areas and impacts to nesting trees would be **less than significant.**

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

As discussed in Section 3.1.1.2, five native scrub communities ([California brittle bush – ashy buckwheat scrub alliance, *Encelia californica* association], [quailbush scrub alliance, *Atriplex lentiformis* association], [coastal sage scrub: California sagebrush – (purple sage) scrub alliance, *Artemisia californica* association], [coyote brush scrub alliance, *Baccharis pilularis* association], and [lemonade berry scrub alliance, *Rhus integrifolia* association]) are

found in the proposed trail alignment and adjacent areas. These five native scrub communities are designated sensitive by CDFW, County ESH by definition (coastal bluff scrub or coastal sage scrub habitat) or supporting sensitive species, and/or City ESHA by definition (coastal bluff scrub or coastal sage scrub habitat), mapped as ESHA by the City, or supporting sensitive species, as described in Table 3.3-5.

Communities impacted by the proposed project are shown in Table 3.3-5, below, and include California brittle bush – ashy buckwheat scrub alliance, *Encelia californica* association (0.42 acres permanent impacts) and quailbush scrub alliance, *Atriplex lentiformis* association (1.73 acres permanent impacts) as well as coastal sage scrub: California sagebrush – (purple sage) scrub alliance, *Artemisia californica* association (1.29 acres permanent impacts), coyote brush scrub alliance, *Baccharis pilularis* association (0.71 acres permanent impacts), and lemonade berry scrub alliance, *Rhus integrifolia* association (0.17 acres permanent impacts).

Table 3.3-5. Permanent Impacts to Sensitive Native Vegetation Communities

Vegetation Community Alliance, Association	Alliance-Association (State Sensitive)/ County ESH/ City ESHA	Permanent Impacts (acres)
Coastal Bluff Scrub		
California Brittle Bush – Ashy Buckwheat Scrub Alliance, *Encelia californica* Association	S3-Yes (Yes)/Yes/Yes	0.42
Quailbush Scrub Alliance, *Atriplex lentiformis* Association	S4-No (No)/Yes/Yes	1.73
	Coastal Bluff Scrub Subtotal	*2.15*
Coastal Scrub		
California Sagebrush – (Purple Sage) Scrub Alliance, *Artemisia californica* Association	S5-S4 (No)/Yes/Yes	1.29
Coyote Brush Scrub Alliance, *Baccharis pilularis* Association	S5-No (No)/Yes/Yes	0.71
Lemonade Berry Scrub Alliance, *Rhus integrifolia* Association	S3-S3 (Yes)/Yes/Yes	0.17
	Coastal Scrub Subtotal	*2.17*
	Total	**4.32**

As shown in Table 3.3-5, approximately ~~3.55 acres of CDFW sensitive, County ESH, and/or City ESHA habitats would be temporarily impacted due to construction. An additional 0.76~~ 4.32 acres of CDFW sensitive, County ESH, and/or City ESHA habitats would be permanently impacted due to construction. These native plant communities are considered CDFW sensitive, County ESH, and/or City ESHA and protected under County CLUP (County of Santa Barbara 2019) and the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) policies. Therefore, the proposed project would result in a substantial adverse effect on a sensitive natural community, and impacts would be potentially significant.

County CLUP (County of Santa Barbara 2019) and the City of Carpinteria General Plan and Local Coastal Plan (City of Carpinteria 2003) policies require County ESH and City ESHA avoidance. With implementation of **MM-BIO-1**, **MM-BIO-2**, **MM-BIO-5**, and **MM-BIO-6** impacts would be reduced to **less than significant with mitigation.**

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

As discussed in Section 3.1.1.8, above, no jurisdictional aquatic resources were detected at the biological survey area during the field survey. Therefore, no direct impacts to jurisdictional aquatic resources would occur. On the adjacent Carpinteria Bluffs III site, to the south and west of the westernmost portion of the project site, multiple seasonal pools and ephemeral pools have been documented (Sage Institute Inc. 2009; Dudek 2012a, 2012b). As part of the Wetland Determination of Pool Features at Carpinteria Bluffs Area II per the California Coastal Act (Dudek 2012b), jurisdictional determinations for coastal wetlands were made for documented seasonal pools and ephemeral features. These coastal wetlands (Dudek 2012b) are approximately 123 feet from project ~~temporary~~ impacts~~ and 125 feet from project permanent impacts~~. The closest mapped riverine or stream/river feature is associated with the Rincon Creek outlet located approximately 50 feet from the eastern portion of the biological survey area and over 1,000 feet from the eastern terminus of proposed impacts. The existing developed areas near this portion of Rincon Creek included the Rincon Beach County Park asphalt parking lot and associated developments of a standard curb, vegetation, paved Rincon Point Lane, and additional vegetation.

The City of Carpinteria General Plan and Local Coastal Plan (City of Carpinteria 2003) includes implementation policies associated with wetlands which state, "*Maintain a minimum 100-foot setback/buffer strip in a natural condition along the upland limits of all wetlands. No structures other than those required to support light recreational, scientific and educational uses shall be permitted within the setback, where such structures are consistent with all other wetland development policies and where all feasible measures have been taken to prevent adverse impacts. The minimum setback may be adjusted upward to account for site-specific conditions affecting avoidance of adverse impacts.*"

Project impacts~~, both temporary and permanent,~~ are greater than 100 feet from known coastal wetlands near the western terminus of the project and greater than 1,000 feet from Rincon Creek near the eastern terminus of the project. Therefore, the project would not have a substantial adverse effect on coastal wetlands including creeks and **no impact** would occur.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

As discussed in Section 3.1.1.7, the proposed trail alignment is located adjacent to the Pacific Ocean and does not connect important habitat areas used by large or small terrestrial wildlife species. In addition, U.S. Highway 101 and the chain link fence adjacent to the southbound lanes of the highway provide impediments to movement of larger and medium-sized wildlife. Additionally, development and restricted access from more open space areas to the north impede wildlife movement in accessing the project site. Large-sized mammal species such as mountain lion and California black bears (*Ursus americanus californiensis*) may utilize areas to the east of the biological survey area including Rincon Creek and the channelized portion under U.S. Highway 101 to access beach areas; however, the surrounding areas where Rincon Creek daylights is developed with residential homes and parking lot improvements, resulting in a high urban wildlife interface. Medium-sized mammal species such as the striped skunk (*Mephitis mephitis*) or northern raccoon *(Procyon lotor)* may occasionally use the opening provided by the trail to move locally along the coast. The trail may provide some hazard to common, smaller terrestrial species such as the western fence lizard *(Sceloporus occidentalis)*, common side-blotched lizard *(Uta*

stansburiana) and California pocket mouse *(Chaetodipus californicus),* but the trail and associated fencing will not present a physical barrier to their movement.

Concerning avian species, minor changes to wind and weather patterns in a very local setting are not an impediment to birds moving long distance, particularly since the overall height of the slope should remain at the same elevation. As identified in the Airflow Study (Appendix I), the analysis of the effects of the proposed regrading of the bluff face for the project concluded that the proposed regrading could reduce the vertical airflow velocity by 10% to 30% relative to current conditions; for altitudes relevant to paragliding and soaring activities, the reduction is expected to be closer to 30%. ~~Based on available experimental results, the introduction of an upper bench above the trail is expected to provide a small increase in turbulence (of the order of 5%) at an altitude of 30 feet above the front of the bluffs, becoming negligible by an altitude of approximately 75 feet.~~ Migrating avian species may experience reduced airflow velocity by approximately 30% ~~and an increase in turbulence (of the order of 5%)~~ at an altitude of 30 feet above the front of the bluffs. Migratory avian species travel hundreds to thousands of miles at various elevations during which they can be exposed to a variety of weather systems within days or weeks of each other and have behavioral plasticity in response to microscale through mesoscale conditions including extremely adverse weather (Sahmoun-Baranes 2017). The anticipated changes in velocity and turbulence would occur within a short linear distance relative to the distance traveled for a migrating avian species, and avian species regularly adjust to changing weather conditions. Additionally, the velocity and turbulence changes would be focused at altitudes near the bluff top and would not extend the whole altitude range for migrating birds. Therefore, changes in topography associated with regrading would not substantially impact migratory avian species and impacts would be **less than significant.**

In addition, as discussed under Threshold a, above, 22 species of native birds were detected on site, including several with the potential to nest there. Nests, eggs and nestlings of all native bird species are protected by the Migratory Bird Treaty Act and the California Fish and Game Code. Vegetation clearing and grading, if occurring during the nesting season (typically mid-February to August), have the potential to destroy nests, eggs and nestlings, which could violate these regulations. Therefore, the project impacts to nesting birds from project disturbances would be potentially significant. With implementation of **MM-BIO-1**, **MM-BIO-2**, and **MM-BIO-7**, project impacts would be reduced to **less than significant with mitigation**.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

As discussed in Section 3.1.1.4, three Monterey cypress trees (*Hesperocyparis macrocarpa*), a species native to California but not to the project region, exist on or near the proposed alignment, or within the ~~temporary~~ grading impact area. This includes a single tree near the western terminus of the project site near the pull-out off Carpinteria Ave., a single tree at the edge of the ~~temporary disturbance~~ grading impact area near disturbed habitat in the western half of the project, and a single tree adjacent to the myoporum grove along an unsanctioned trail within Rincon Beach County Park. Additionally, two newly planted pine saplings (*Pinus* sp.) exist near the edge of the ~~temporary disturbance~~ grading impact area in the western portion of the project, both of which were under 3 inches diameter measured 4 feet from the ground and were installed with supportive stakes and mulch. Several eucalyptus (*Eucalyptus* sp.) are adjacent to the western portions of the proposed trail, located within the City, as well as exist near the eastern terminus of the biological survey area overhanging the Rincon Beach County Park parking lot. All of the trees described above are not native or naturally occurring in the region, therefore they should not be considered native trees under Policy 9.36 of the Santa Barbara County Coastal Land Use Plan (County of Santa Barbara 2019).

Furthermore, the only trees on site that meet the definition for qualifying trees under the Santa Barbara County Article II Coastal Zoning Ordinance, are the few eucalyptus trees located at the eastern terminus of the biological survey area, the canopies of which spread across the Rincon Beach County Park parking lot. These few trees are large enough and are located within 50 feet of Rincon Creek satisfying the definition for a qualifying tree. Note that Rincon Creek is outside the biological survey area and greater than 1,000 feet from proposed project impacts. The trees associated with Rincon Creek and trees south of the Rincon Beach County Park parking lot are not proposed to be impacted or altered in any way, and thus the project would not conflict with the Coastal Zoning Ordinance. None of the other trees on site meet the definition of a qualifying trees under the Santa Barbara County Article II Coastal Zoning Ordinance as they are not located in a County street right-of-way, located within 50 feet of any major or minor stream, oak trees or used as a habitat by the monarch butterflies. In addition, none of the trees identified on site are not a part of any windbreak on the Carpinteria Bluffs, which are protected under the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003). Therefore, the project does not conflict with any local tree preservation policy and impacts to trees would be **less than significant.**

White-tailed kite is known to occur along the south coast, however, most foraging and nesting activity in the County is restricted to more rural areas and in particular, the Goleta and Santa Maria Valleys (Lehman 2020). The City specifically cites the Carpinteria Bluffs as a location where white-tailed kites occur and their habitat is protected. However, no white-tailed kites were detected in the biological survey area, and the scrub vegetation that predominates there is unsuitable for foraging by this species, which hunts in habitats dominated by grasses and forbs. This species prefers open grassland or marshland habitats which are not present on site, and is found less commonly in agricultural areas or rights-of-way. Trees in and around the project site are relatively small, and located in areas with high levels of human disturbance where white-tailed kites are unlikely to nest. Marginally suitable woodland nesting habitat is present in the trees adjacent to the project site near Rincon Beach County Park and within the Rincon Point housing development; however, proposed project impacts are greater than 500 feet from these habitats. The trees within the vicinity of Rincon Beach County Park are not planned to be directly impacted. Therefore, impacts to white-tailed kites would be **less than significant.**

Monarchs require specific conditions for suitable wintering sites, and wintering sites in California are associated with wind-protected groves of large trees (primarily eucalyptus or pine) with nectar and water sources nearby, dappled sunlight, high humidity, and an absence of freezing temperatures or high wind, generally near the coast (Pelton et al. 2016). The majority of trees within the project site are either singular and isolated, or do not form a large enough grove to provide adequate microclimate conditions and wind protection monarch butterflies require for overwintering sites. There are three eucalyptus trees present near the western terminus of the project site, however they each grow individually and do not form a grove capable of supporting overwintering monarchs. There is a small portion of eucalyptus trees within the eastern portion of the biological survey area, however, there is low potential for monarchs to overwinter here as well due to the small relative size of this eucalyptus stand and vulnerability to strong winds and weather. The easternmost proposed project impacts are over 1,000 feet from these eucalyptus trees. Additionally, the eucalyptus trees present along the hills behind the project sit on private property, specifically the eucalyptus trees around the residential development off Bates Ranch Road as well as the eucalyptus trees that extend beyond the terminus of Camino Carreta, appear to be planted windrows and do not form large protected groves that have the microclimate characteristics monarchs require for overwintering.

Monarch butterflies are known to occur near the project site along Bates Road just north of U.S. Highway 101 in a eucalyptus stand associated with Rincon Creek (CNDDB Occurrence No. 268; Xerces Site No. 2803) (CDFW 2020a). Additionally, this site was known to have been surveyed for overwintering monarch populations in 2017 during the Xerces Society New Year's Count, of which none were detected (Xerces Society 2020). While this

population is not within 100 feet of the project site, it could be affected by project implementation due to changed weather patterns. However, no impacts to this monarch overwintering site is anticipated since the overall height of the slope within Rincon Beach County Park south of U.S. Highway 101 will not be reduced, as work includes proposed terraces to stabilize the hill but will not decrease its overall height, and therefore no changes to the wind conditions at the overwintering site are expected. Additionally, this overwintering site is largely protected by the hill below the single residential development at 637 Bates Road, and any possible changes to weather and wind patterns due to project implementation would not affect the protective contour this hill independently provides. Therefore, monarch butterflies are not anticipated to be affected since there is low potential for the project site to support overwintering populations, and because known overwintering populations in the vicinity would not be adversely affected due to project implementation. Therefore, impacts to monarch butterfly individuals and monarch butterfly overwintering sites would be **less than significant.**

Several trees, including eucalyptus, Monterey cypress, and pine, are located within the proposed trail alignment near its western terminus and U.S. Highway 101. These trees are relatively small and located in areas with high levels of human disturbance including U.S. Highway 101 vehicular traffic and pedestrian use of Carpinteria Avenue and adjacent areas. These isolated and singular trees lack dense foliage and are located in areas vulnerable to strong winds and weather. Several myoporum trees are located within the proposed trail alignment and are largely multistemmed. The myoporum located directly adjacent to the unsanctioned trail experiences high levels of human disturbance. Due to the locations of these trees in areas with high levels of human disturbance, relatively small size of these trees, isolated nature of the trees, and vulnerability to strong winds and weather, raptors are unlikely to nest in these trees. Therefore, removal of these trees would not substantially reduce or eliminate quantity or quality of raptor nesting areas and impacts would be **less than significant.**

Additionally, a stand of trees is present at the eastern terminus of the biological survey area, which are rooted next to the Rincon Beach County Park parking lot. The easternmost proposed project impacts are over 1,000 feet from this stand of trees. The trees within the vicinity of Rincon Beach County Park are not planned to be directly impacted. Therefore, project impacts to raptor nesting trees would not substantially reduce or eliminate quantity or quality of nesting areas and impacts to nesting trees would be **less than significant.**

County environmentally sensitive habitat (ESH) and City environmentally sensitive habitat areas (ESHA) were evaluated based on definitions in the County *Coastal Land Use Plan* (CLUP) (County of Santa Barbara 2019) and the *City of Carpinteria General Plan and Local Coastal Plan* (City of Carpinteria 2003). As shown in Table 3.3-5, approximately ~~3.55 acres of CDFW sensitive, County ESH, and/or City ESHA habitats would be temporarily impacted due to construction. An additional 0.76~~ 4.32 acres of CDFW sensitive, County ESH, and/or City ESHA habitats would be permanently impacted due to construction. These native plant communities are considered CDFW sensitive, County ESH, and/or City ESHA and protected under County CLUP (County of Santa Barbara 2019) and the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) policies. Therefore, the proposed project would result in a substantial adverse effect on a sensitive natural community, and impacts would be potentially significant. County CLUP (County of Santa Barbara 2019) and the City of Carpinteria General Plan and Local Coastal Plan (City of Carpinteria 2003) policies require County ESH and City ESHA avoidance. With implementation of **MM-BIO-1**, **MM-BIO-2**, **MM-BIO-5**, and **MM-BIO-6** impacts would be reduced to **less than significant with mitigation.**

As discussed in Section 3.1.1.8, above, no jurisdictional aquatic resources were detected in the biological survey area during the field survey. Therefore, no direct impacts to jurisdictional aquatic resources would occur. On the adjacent Carpinteria Bluffs III site, to the south and west of the western most portion of the project site, multiple

seasonal pools and ephemeral pools have been documented (Sage Institute Inc. 2009; Dudek 2012a, 2012b). As part of the Wetland Determination of Pool Features at Carpinteria Bluffs Area II per the California Coastal Act (Dudek 2012b), jurisdictional determinations for coastal wetlands were made for documented seasonal pools and ephemeral features. These coastal wetlands (Dudek 2012b) are approximately 123 feet from project ~~temporary~~ impacts ~~and 125 feet from project permanent impacts~~. The closest mapped riverine or stream/river feature is associated with the Rincon Creek outlet located approximately 50 feet from the eastern portion of the biological survey area and over 1,000 feet from the eastern terminus of proposed impacts. The existing developed areas near this portion of Rincon Creek included the Rincon Beach County Park asphalt parking lot and associated developments of a standard curb, vegetation, paved Rincon Point Lane, and additional vegetation.

The City of Carpinteria General Plan and Local Coastal Plan (City of Carpinteria 2003) includes implementation policies associated with wetlands which state, *Maintain a minimum 100-foot setback/buffer strip in a natural condition along the upland limits of all wetlands. No structures other than those required to support light recreational, scientific and educational uses shall be permitted within the setback, where such structures are consistent with all other wetland development policies and where all feasible measures have been taken to prevent adverse impacts. The minimum setback may be adjusted upward to account for site-specific conditions affecting avoidance of adverse impacts.*

Project impacts~~, both temporary and permanent,~~ are greater than 100 feet from known coastal wetlands near the western terminus of the project and greater than 1,000 feet from Rincon Creek near the eastern terminus of the project. Therefore, the project would not have a substantial adverse effect on coastal wetlands including creeks and **no impact** would occur.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No habitat conservation plans apply to the project area (CDFW 2019). **No impact** would occur.

g) Would the project result in cumulatively considerable impacts to biological resources?

The surrounding land uses of the project site include transportation, open space, residential development, and recreational facilities. While the project site is primarily composed of undeveloped lands, they have been previously subject to extensive grading to form the terraces and slopes that abut U.S. Highway 101 to the north and UPRR which bisects the site. The coastal bluffs west of the project site are moderately trafficked areas used for recreation, walking, and biking. In 2017, The Land Trust for Santa Barbara County partnered with the Citizens for the Carpinteria Bluffs, the City of Carpinteria, the County of Santa Barbara, and over a thousand community members to purchase, initiate restoration, and ensure long-term maintenance of the Carpinteria Bluffs III property (also referred to as Rincon Bluffs Preserve), the 21-acre property directly to the west of the project site. A conservation easement of the Carpinteria Bluffs III property/Rincon Bluffs Preserve has been recorded which provides permanent preservation and provides long-term conservation of the open space, scenery, habitat for native plants and animals, and coastal access and recreational opportunities. And within the eastern portion of the project site, the currently developed Rincon Beach County Park provides infrastructure for recreation and is highly utilized. Areas to the south are associated with undeveloped beach areas and the Pacific Ocean. As discussed in Section 3.1.1.7, the proposed trail alignment is located adjacent to the Pacific Ocean and does not connect important habitat areas used by large or small terrestrial wildlife species, and minor changes to wind and weather patterns in a very local setting are not an impediment to birds moving long distance, particularly since

the overall height of the slope would remain at the same elevation. Mitigation measures have been identified to reduce potential impacts to special-status wildlife species and sensitive vegetation communities to less-than-significant levels. Therefore, cumulative impacts resulting from the proposed project, in combination with the reasonably foreseeable future projects in the area, would be less-than-significant.

3.3.5 Mitigation

MM-BIO-1 **Workers Environmental Awareness Program (WEAP).** The City shall fund an approved biologist to prepare and implement a worker education and awareness program (WEAP) specific to the project. The program shall be presented to all individuals involved in the construction of the project. The program shall include information focused on sensitive vegetation communities, sensitive wildlife and plant species, and common wildlife species and their habitats and shall include, but not be limited to, the following:

- Description of sensitive vegetation communities.
- Workers shall be provided with photographs of sensitive biological resources including sensitive wildlife and plant species.
- Workers shall be informed verbally and in writing of the various project tasks that require biological surveys and monitoring for resource protection.
- Workers shall be provided with a photograph or description of the markers for active bird nests, trees, or other mitigation areas, so that they shall know these are not to be disturbed without a biological monitor present.
- Workers shall be informed not to litter. All trash and litter shall be picked up and removed from the construction sites at the end of each day.
- Workers shall be informed to obey a speed limit of 15 miles per hour while traveling on the project site to avoid collisions with wildlife.
- Workers shall avoid driving over or otherwise disturbing areas outside the designated construction areas.

Plan Requirements and Timing: The applicant shall submit the WEAP to the City of Carpinteria (City) and County of Santa Barbara (County) for review and approval prior to ~~implementation~~ issuance of zoning clearance. All workers, contractors, and visitors shall attend the WEAP prior to entering the project site and performing any work. The applicant shall provide copies of the training attendance sheets to City of Carpinteria and County staff as a record of compliance with this measure on a monthly basis. The WEAP shall be reviewed and approved by the City of Carpinteria and County prior to Zoning Clearance approval. Implementation of the WEAP training shall occur prior to the start of construction and as new crew members are added to the project.

Monitoring: The City of Carpinteria and County permit compliance staff will ensure compliance with the WEAP throughout construction by review of attendance sheets and hardhats, inspection of the site, and interviewing workers, as appropriate.

MM-BIO-2 **Fencing.** To prevent inadvertent impacts on adjacent sensitive vegetation communities including County ESH and City ESHA, native vegetation, special-status species, and common wildlife species and their habitats, construction limits will be fenced with highly visible fencing and staked. Wildlife-safe highly visible construction fencing shall be installed to identify the limits of grading/disturbance,

which would reduce potential human trampling outside of the construction limits and minimize the potential spread of non-native weeds or invasive plant species. Wildlife-safe construction fencing and flagging shall remain in place during construction and replaced as needed.

Plan Requirements and Timing: The detailed fencing plan, showing the location of required fencing shall be reviewed and approved by City of Carpinteria and County staff prior to Zoning Clearance approval. This condition shall be printed on all project plans. The detailed fencing plan, showing the location of fencing shall be submitted to City of Carpinteria and County staff for review and approval prior to Zoning Clearance approval. The fence shall be installed prior to the start of ground disturbing activities.

Monitoring: The City of Carpinteria and County staff will inspect the project plans and site, to ensure compliance with this measure as appropriate.

MM-BIO-3 **Pre-construction California Legless Lizard Survey and Relocation**. Prior to initiation of construction, capture and relocation efforts for California legless lizards shall be conducted. Trapping shall be conducted by a qualified biologist and shall include the following steps:

1. Prior to initiation of capture and relocation, a suitable receptor site shall be located. This site shall include areas with loose, moist soils occurring in scrub habitat with high coverage of deerweed (*Lotus scoparius*) or California goldenbush, in arroyo willow (*Salix lasiolepis*) thickets or in other suitable scrub or woodland habitat.
2. Capture and relocation shall take place no more than five days prior to the initiation of construction.
3. These surveys shall be performed by lightly raking loose soil, sand and leaf litter with a wooden rake for a sufficient period to determine that no legless lizards are present, or all legless lizards have been captured.
4. Any lizards found shall be placed in a receptacle with sand and a wet towel and relocated to the previously designated receptor site.

Plan Requirements and Timing: Prior to initiation of construction, capture and relocation efforts for California legless lizards shall be conducted where appropriate. Trapping shall be conducted by a qualified biologist.

Monitoring: The City of Carpinteria and County staff shall ensure the pre-construction survey and relocation efforts, if required, are completed prior to commencement of any earth-moving activities.

MM-BIO-4 **Pre-construction Woodrat Survey and Relocation**. Prior to initiation of construction, capture and relocation efforts for woodrat shall be conducted. Trapping shall be conducted by a qualified biologist and shall include the following steps:

1. Prior to initiation of capture and relocation, a suitable receptor site shall be located. This site shall be within similar habitat and an adequate distance away from any locations that might be subject to increased human disturbance, such as adjacent to a walking path.
2. These pre-construction surveys shall be performed searching all coastal sage scrub or coastal bluff scrub within the disturbance area for middens or other sign of the species.
3. Any middens and woodrats found shall be live-trapped and relocated to the pre-determined receptor site. The midden shall be dismantled and the materials placed at the relocation site.

Plan Requirements and Timing: Prior to initiation of construction, capture and relocation efforts for woodrat shall be conducted where appropriate. Trapping shall be conducted by a qualified biologist.

Monitoring: The City of Carpinteria and County staff shall ensure the pre-construction survey and relocation efforts, if required, are completed prior to commencement of any earth-moving activities.

MM-BIO-5 **Habitat Mitigation and Monitoring Plan.** Prior to issuance of zoning clearance ~~approval of a coastal development permit~~, the City shall contract with a qualified biologist to develop a Habitat Mitigation and Monitoring ~~Reporting~~ Plan (Plan) to mitigate for impacts to County ESH/City ESHA vegetation communities. The Plan shall outline efforts to restore or enhance coastal sage scrub and coastal bluff scrub communities, and, therefore, preserve or provide wildlife habitat, in areas impacted by construction of the trail but outside the trail-related impervious surfaces and within similar habitats adjacent to the impacted biological resources. The Plan may focus on the following:

- In-kind, on-site restoration of areas where coastal sage scrub or coastal bluff scrub has been removed;
- Enhancement of ~~temporarily~~ impacted areas on site currently occupied by ornamental, disturbed or developed areas;
- Restoration of areas occupied by non-native habitats or native habitats with large components of non-native vegetation, within similar habitats adjacent to the impacted biological resources.

A total of 4.32 acres of impacts are proposed to County ESH/City ESHA native vegetation communities. Under the Plan, impacts to S3/County ESH/City ESHA native vegetation communities (California brittle bush – ashy buckwheat scrub alliance, *Encelia californica* association and lemonade berry scrub alliance, *Rhus integrifolia* association) that total 0.59 acres shall be restored in-kind at 4:1. Impacts to S4 and S5/County ESH/City ESHA native vegetation communities (quailbush scrub alliance, *Atriplex lentiformis* association, California sagebrush – (purple sage) scrub alliance, *Artemisia californica* association, and coyote brush scrub alliance, *Baccharis pilularis* association) that total 3.73 acres shall be restored in-kind at 2:1. To the extent feasible, restoration should occur on site and, any additional mitigation required shall be carried out on areas within adjacent land controlled by the County or City, such as the Rincon Bluffs Preserve or Rincon Beach County Park.

A qualified biologist/botanist shall develop the Plan, which shall provide specific measures to restore or enhance habitat to replace the loss of coastal sage scrub and coastal bluff scrub communities. This Plan shall be focused on adaptive management principles, and shall identify detailed enhancement areas and strategies based on the parameters outlined below, with long-term timing and monitoring requirements. The Plan shall:

1. Provide an up-to-date inventory of on-site native vegetation resources.
2. Define attainable and measurable goals and objectives to achieve through implementation of the Plan. Goals and objectives shall focus on replacement of coastal sage scrub, coastal bluff scrub and rare plants removed during construction.
3. Provide site selection and justification. Prior to identifying habitat restoration mitigation areas, both within the project area and adjacent lands, the habitat shall be surveyed for sensitive vegetation communities and special-status plant species, to ensure avoidance of impacts during habitat restoration implementation. Additionally, potential adjacent mitigation

lands shall be assessed to ensure sites are suitable and appropriate for implementation of habitat restoration for the impacted native vegetation communities.

4. Detail a restoration work plan including methodologies, restoration schedule, plant materials (seed and container plant) sourcing – locally genetic stock, and implementation strategies.
5. Provide a detailed maintenance plan to include removal of invasive non-native species.
6. Define annual and final performance standards. Prior to grading, the project-related native coastal bluff scrub and coastal scrub vegetation communities shall be assessed by vegetation community type for percent cover (both basal and vegetative), species diversity, density, and abundance. This project site native vegetation community data shall be used to define performance standards for native habitat restoration by vegetation layers (tree, shrub, grass, and forb) for each vegetation community type and for non-native plant species.
7. Identify that the restoration areas shall be irrigation-free for at least 3 years and the performance standards have remained stable (no negative trend for richness/ diversity/ abundance/ cover of native species and no positive trend for invasive/non-native cover for each vegetation layer) for at least 3 years.
8. Provide a monitoring plan to include methods and analysis of results. Also, include goals, success or failure criteria, and an adaptive management plan, contingency actions, and suggestions for failed restoration efforts.

Plan Requirements and Timing: Prior to issuance of ~~a grading permit~~ zoning clearance, the City of Carpinteria shall contract with a qualified biologist to develop a Plan. The Plan shall outline efforts to restore or enhance coastal sage scrub and coastal bluff scrub communities in areas impacted by construction of the project.

***Monitoring*:** The City of Carpinteria and County staff shall ensure development of the Plan and adherence to Plan measures are completed prior to commencement of any earth-moving activities. Additionally, California Department of Fish and Wildlife shall approve the Plan prior to issuance of zoning clearance ~~ground disturbance~~. City and County staff shall periodically conduct site inspections to ensure compliance on site. Restored areas shall be monitored for five years following planting. Annual reports and the final report shall be submitted to the City and County.

MM-BIO-6 **Weed Management Plan.** Prior to issuance of zoning clearance ~~approval of a coastal development permit~~, the City shall contract with a qualified biologist to develop a Weed Management Plan to be implemented during construction and implementation of the Habitat Mitigation and Monitoring Plan. The Weed Management Plan shall include, but is not limited to, the following:

- Prior to ground disturbance, a City approved qualified biologist shall map invasive weeds within the limits of impacts plus a 100-foot buffer. Invasive weeds shall be defined as California Invasive Plant Inventory Database (Cal-IPC) moderate and high ratings. Invasive species subject to control measures shall be identified. Note that non-native grasses such as bromes and wild oats shall be mapped but are not subject to control measures. Prior to ground disturbance, areas with invasive weeds shall be treated according to control methods below and BMPs for invasive weeds.

- To prevent the spread of invasive weeds and inhibit germination, the following shall be implemented.
    - Maintain vehicle wash and conduct inspections to monitor the types of materials brought on site to minimize the potential for invasive weed introduction
    - Limit disturbance areas to the permitted disturbance area
    - Limit ingress and egress to defined routes
    - Use certified weed-free products
- Invasive weed control methods shall include legally permitted herbicide, manual, and mechanical methods approved for application. The application of herbicides shall be in compliance with state and federal laws and regulations under the prescription of a pest control advisor, with the City's concurrence, and shall be implemented by a licensed qualified applicator. All product labels shall be followed. Spot treatments shall be the method of application and broadcast applications shall be avoided. Herbicides shall not be applied during or within 72 hours of a forecasted measurable rain event or during high wind conditions. Invasive weed debris accumulated during manual and mechanical methods shall be disposed of at an appropriate location off-site. Maintenance shall be timed to remove invasive weeds prior to seed production. The maintenance crew shall coordinate with the City approved biologist to avoid and minimize impacts to plant species and wildlife species.
- A City approved qualified biologist shall perform annual monitoring within the limits of disturbance and a 100-foot buffer to map and document invasive weed species. At any time during implementation of the Weed Management Plan, monitoring frequency may increase as needed to provide guidance to maintenance crews.

Plan Requirements and Timing: Prior to issuance of zoning clearance ~~a grading permit~~, the City of Carpinteria shall contract with a qualified biologist to develop a Plan. The Plan shall outline efforts to implement a weed management plan to control invasive weeds. Pre-construction survey results shall be reported and ongoing invasive weed control efforts and annual survey results shall be submitted annually and for the five year duration of the Habitat Mitigation and Monitoring Plan.

Monitoring: The City of Carpinteria and County staff shall ensure development of the Plan and adherence to Plan measures are completed prior to commencement of any earth-moving activities. City and County staff shall periodically conduct site inspections to ensure compliance on site and to ensure the plan is fully implemented.

MM-BIO-7 **Pre-construction Nesting Bird Surveys**. Within 30 days prior to any vegetation clearing, ground disturbance, or use of noise-generating equipment associated with construction or grading that would occur during the nesting/breeding season of native bird species potentially nesting on the site (typically mid-February through August in the project region, or as determined by a qualified biologist), the City shall have weekly surveys conducted by a qualified biologist to determine if active nests of special-status bird species, or of any bird species protected by the Migratory Bird Treaty Act or the

California Fish and Game Code, are present in the disturbance zone or within 300 feet (500 feet for raptors) of the area to be disturbed. The surveys shall occur on a weekly basis, with the last survey being conducted no more than seven days prior to initiation of disturbance work. If ground disturbance is delayed, then additional pre-disturbance surveys shall be conducted such that no more than seven days will have elapsed between the survey and ground disturbance activities. The City or contractor shall provide the biologist with plans detailing the extent of proposed ground disturbance prior to the survey effort.

If active nests are found, including any nests for Cooper's hawk, clearing and use of noise-generating construction equipment within 300 feet of the nest (500 feet for raptors) shall be postponed or halted, at the discretion of the biologist, until the nest is vacated and juveniles have fledged, as determined by the biologist, and there is no evidence of a second attempt at nesting. Limits of construction to avoid an active nest shall be established in the field with highly visible construction fencing, and construction personnel shall be instructed on the sensitivity of nest areas. The results of the surveys, including graphics showing the locations of any nests detected, and any avoidance measures recommended, shall be submitted to the City and County within 14 days of completion of the pre-construction surveys to document compliance with applicable state and federal laws pertaining to the protection of native birds.

Plan Requirements and Timing: Pre-construction nesting bird surveys shall be completed within 30 days prior to any vegetation clearing or ground disturbance associated with construction or grading during the bird nesting season (typically mid-February to August). The surveys shall occur on a weekly basis, with the last survey being conducted no more than seven days prior to initiation of disturbance work.

Monitoring: The City of Carpinteria and County staff shall ensure the pre-construction nesting bird surveys and any avoidance requirements are completed prior to commencement of any earth-moving activities.

3.3.6 Level of Significance After Mitigation

Implementation of **MM-BIO-1, MM-BIO-2,** and **MM-BIO-3** would reduce impacts to California legless lizard to less than significant. Implementation of **MM-BIO-1, MM-BIO-2,** and **MM-BIO-4** would reduce impacts to San Diego desert woodrat to less than significant. After implementation of **MM-BIO-1**, **MM-BIO-2**, **MM-BIO-5**, and **MM-BIO-6** impacts to sensitive vegetation communities, including County ESH and City ESHA, would be less than significant**.** After implementation of **MM-BIO-1, MM-BIO-2,** and **MM-BIO-7**, impacts to nesting birds during the bird nesting season would be less than significant.

Section 3.5, Geology & Soils

3.5.4 Impact Analysis

a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

- ***i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42?***
- ***ii. Strong seismic ground shaking?***
- ***iii. Seismic-related ground failure, including liquefaction?***
- ***iv. Landslides?***

The California Department of Conservation provides an index map that identifies all Official Maps of Earthquake Fault Zones delineated by the California Geological Survey through December 2010 under the Alquist-Priolo Earthquake Fault Zoning Act. According to the most recent data, the proposed project is not located within an Alquist-Priolo earthquake fault zone; however, the project site is to the north of the Pitas Point quadrangle (CGS 2018c). The northwestern corner of the Pitas Point quadrangle encompasses a very small portion of Santa Barbara County, consisting of the Rincon Point neighborhood south of Rincon Point Lane. The fault line within the Pitas Point Quadrangle that is closest to the proposed project runs northwest-southeast, north of La Conchita Beach in Ventura County, approximately two miles southeast from Rincon Beach County Park (Dibblee and Ehrenspeck 1986).

According to the City of Carpinteria's General Plan Fault Map, the Rincon Creek fault is located to the north of the proposed project and the Carpinteria Fault is located to the south (City of Carpinteria 2003). In the immediate vicinity of the proposed trail and parking lot, the project is located on the up-thrown side on an inferred fault located to the north of US Highway 101 near the connection to Highway 150 (City of Carpinteria 2003). According to the Santa Barbara County's South Coast Seismic Tectonic Map, the entire south coast portion of the county, including the project site, is rated as having a high seismic potential with a moderate possible variation from the assigned rating (County of Santa Barbara 2011). The Santa Barbara County South Coast Seismic Tectonic Map indicates that the Red Mountain fault is the closest known potentially active fault and traverses the proposed trail near the intersection of the UPRR and the trail alignment. The Red Mountain fault is approximately 39 km (24 miles) long and trends in a generally east-west direction, running parallel to the coastline, near the project area. A maximum credible earthquake of moment magnitude 6.8 has been assigned to this reverse displacement fault (CGS 1996).

The proposed project consists of a shared-use path with pedestrian bridge and other trail improvements. The project would not introduce new buildings that would be subject to structural damage in the unlikely event of strong seismic ground shaking. Moreover, there are no existing buildings within the project area that would pose a risk of loss, injury, or death as a result of potential structural damage caused by earth movement. However, the pedestrian bridge structure could be damaged by seismic activity if not designed to withstand the potential peak ground acceleration of 0.8 g, as identified in the Bengal geotechnical report (Appendix E).

Previously manipulated and engineered slopes along the trail alignment are proposed to be re-graded to achieve a finished slope face that is more gradual (less steep) than the existing slope faces. Slopes adjacent to US Highway 101 would be reshaped with those above the trail having a slope ratio of 1.25:1, fill slopes (which would be present only adjacent to the bridge over the UPRR) are proposed to have slope ratios between 2:1

and 4:1. For the portion of the path on the ocean side of the UPRR alignment, the regraded slopes for the trail "bench" would employ cut slopes with a ratio of 1:1 above the trail, while a ratio of 1.25:1 would be employed for the "reinforced" fill slopes below the trail. These slope angles are each shallower than existing conditions, ~~and mid-elevation benches in the slopes~~ and would ~~further~~ decrease the potential for mass soil movement (shallow landslides). It is important to note that all of the earthwork proposed for the project involves manipulation of manufactured slopes (previously modified landforms) and not natural topography. In addition, the project proposes to vegetate all new slope areas to minimize the potential for shallow erosion to occur.

The Carpinteria Valley is subject to geologic hazards related primarily to earthquakes and secondary hazards, such as landslides and liquefaction; the project includes manufactured slopes and a bridge structure that could be damaged by seismic ground shaking. As such, potential impacts relating to adverse effects caused by strong seismic ground shaking, or seismic related ground failure would be potentially significant. **Mitigation Measure (MM) GEO-1** through **MM-GEO-3** would reduce impacts to **less than significant with mitigation**.

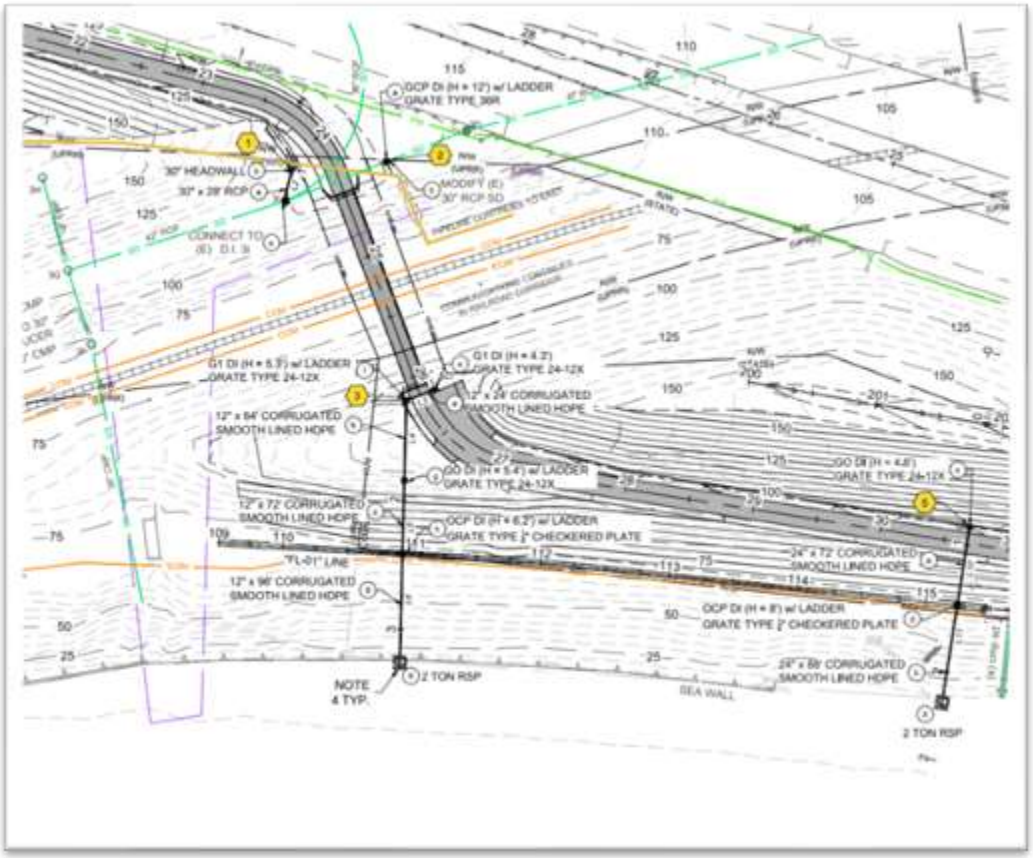
b) Would the project result in substantial soil erosion or the loss of topsoil?

Soils within the project site have been classified as Xerorthents, cut and fill areas (USDA 2020). The NRCS Web Soil Survey provides an erosion hazard rating that indicates the hazard of soil loss from off-road and off-trail areas after disturbance activities that expose the soil surface. Xerorthents in the project area have a moderate erosion hazard rating, which indicates that some erosion is likely and that erosion control measures may be needed (USDA 2020). The project does propose to vegetate all new slope area to minimize the potential for soil erosion to occur.

To prepare the site for trail construction, the trail alignment along with adjacent slopes would be graded to meet the proposed finished grade surface and to achieve stable slope profiles above and below the trail. It is anticipated that total cut would be approximately ~~107,386~~ 96,040 cubic yards and total fill would be approximately ~~14,860~~ 10,519 cubic yards during the grading phase. Cut material on site would be utilized for the necessary fill material, as feasible. The re-grading of previously manufactured slopes is intended to reduce the angle of the slope face, decreasing historic erosion rates and increasing the long-term stability of the slope faces. The lower angle slopes would not be noticeably different from the existing manufactured slopes but should eliminate or greatly reduce the amount of soil materials moving down the slope areas to be deposited on the trail or areas below the trail. Erosion potential would be lessened with the proposed engineered slope design. However, soil erosion could be increased unless proper slope construction techniques are employed. Accordingly, soil erosion impacts would be potentially significant. **MM-GEO-3** would reduce impacts to **less than significant with mitigation**.

Section 3.8 Hydrology & Water Quality

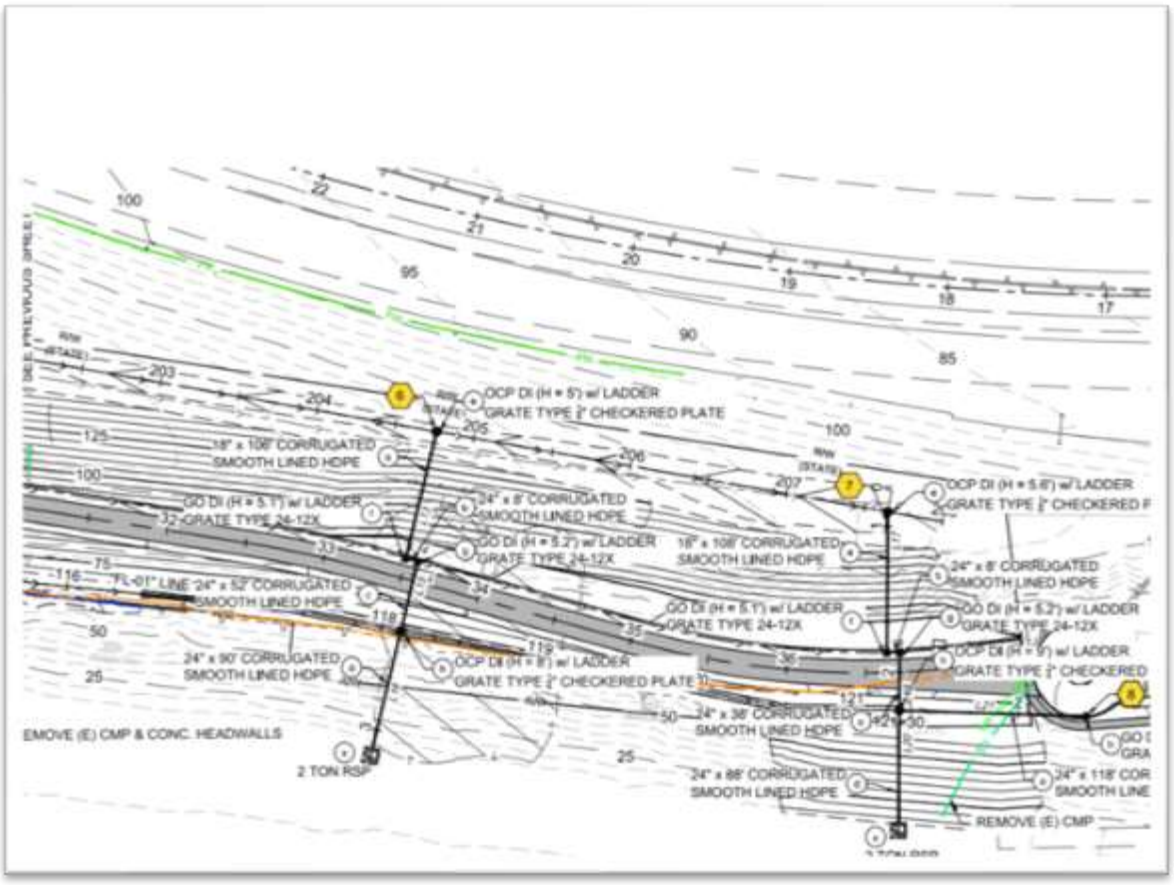
3.8.4 Impact Analysis



c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

- ***i. result in substantial erosion or siltation on or off-site?***
- ***ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site?***
- ***iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?***

iv. impede or redirect flood flows?



The project would moderately alter the existing drainage patterns of the site, via regrading of project slopes and short-term removal of vegetation, as well as through introduction of the impervious trail surface (approximately 1 acre of new impervious surface). Increased stormwater runoff and erosion potential during construction and until new vegetation is established are addressed under **MM-WAT-1, MM-WAT-2,** and **MM-WAT-3**. Long-term stormwater runoff from the trail surface would be collected by a concrete v-ditch adjacent to the trail, and released through a series of short length storm drains with discharge along the adjacent beach. The provision of project-specific storm drains would accommodate the storm runoff volumes anticipated from the project's impervious surfaces, and also avoid directing stormwater to existing public storm drain systems in the project vicinity that could lack surplus capacity to accommodate the project. Release of project storm drainage along the beach would not result in substantial erosion, as the introduction of impervious surface would be minimal compared to the overall project drainage area and the trail drainage will be divided into ~~6~~ 5 separate outlets to minimize the discharge volume from any of the outlets. Illustration ~~3.8-1~~ 2.6 (Project Description) illustrates these ~~6~~ 5 outlets.~~, three exist (blue color) and three would be new (magenta).~~ The Project would remove two heavily degraded storm drains and outlets and construct four new storm drain lines for the segment of trail south of the UPRR alignment.

Illustrations 3.8-2 and 3.8-3 provide plan sheet excerpts of the proposed drainage system outlets, with connection to other drainage conveyance elements.

SOURCE: Bengal Engineering

Illustration 3.8-2 Design Details for Storm Drain Outlets #3 and #5

SOURCE: Bengal Engineering

Illustration 3.8-3 Design Details for Storm Drain Outlets #6 and #7

The proposed storm drain system includes concrete v-ditch for collection and conveyance of runoff water, drop inlets connecting to vertical drainpipes, and outlets at the beach elevation. The concrete v-ditch components would be durable, and not prone to weathering or failure over time. The vertical drains are proposed to be composed of a 12-inch diameter corrugated metal pipe. The pipe would be buried to cross beneath the trail section and would descend partly down the bluff face. However, in order to allow visual access for inspection of the pipe integrity, the lower portion of the storm drainpipe would be mounted on the surface of the slope/bluff face. The corrugated metal material was selected for weight consideration and as a superior material to PVC for withstanding damage from fire or sun exposure. However, the metal is prone to rust or corrosion, with the potential for collapse or failure over time. Leaks from the vertical drains would contribute to erosion of the bluff face, failure of a vertical storm drain could lead to significant erosion of the bluff face. The storm drains would be installed by the project, **MM-WAT-5** requires periodic inspection and maintenance of the storm drains in perpetuity to prevent failure of such facilities. Accordingly, the project's impacts on existing drainage patterns and storm drain systems would be potentially significant. Incorporation of **MM-WAT-5** would reduce impacts to **less than significant with mitigation**.

Section 3.9, Land Use and Planning

In response to comments received on May 3, 2021 by the County of Santa Barbara Planning and Development, the following changes have been made to Section 3.9.2, Relevant Plans, Policies, and Ordinances, included in the Draft EIR.

Santa Barbara County Comprehensive Plan

As indicated above, California State Government Code Section 65300 requires all cities and counties adopt a comprehensive, long-term general plan that outlines physical development of the county or city. The County of Santa Barbara refers to theirs as a Comprehensive Plan, to avoid confusion with the City of Santa Barbara General Plan. The comprehensive plan must cover a local jurisdiction's entire planning area so that it can adequately address the broad range of issues associated with the city or county's development. Ultimately, the comprehensive plan expresses the community's development goals and embodies public policy relative to the distribution of future public and private land uses. The Santa Barbara County Comprehensive Plan contains the following Elements: Agriculture, Circulation, Coastal Land use Plan, Conservation, Energy, Environmental Resources Management, Hazardous Waste, Housing, Land Use, Noise, Open Space, Scenic Highways, Seismic Safety & Safety. The Coastal Land Use Plan is described in further detail below, including applicable objectives and policies. The remaining elements of the County Comprehensive Plan are described within the EIR sections to which they pertain. The Santa Barbara County Comprehensive Plan Open Space Element includes the following applicable policies.

Coastal Land Use Plan Policy 7-33: To encourage walking and biking as alternatives to travel by automobile, the County shall strongly encourage development of new pedestrian and/or bicycle-friendly paths along the highway corridor. Improvements to Highway 101 shall not remove existing bikeways or pedestrian paths or preclude the development of proposed bikeways or pedestrian paths that are identified in the County's Comprehensive Plan, Coastal Land Use Plan and community plans, without providing comparable or better replacement facilities.

Coastal Act Policy 30211. Development shall not interfere with the public's right of access to the sea where acquired through use, custom, or legislative authorization, including, but not limited to, the use of dry sand and rocky coastal beaches to the first line of terrestrial vegetation.

Coastal Act Policy 30252. The location and amount of new development should maintain and enhance public access to the coast by: (1) facilitating the provision or extension of transit service; (2) providing commercial facilities within or adjoining residential development or in other areas that will minimize the use of coastal access roads; (3) providing non-automobile circulation within the development; (4) providing adequate parking facilities or providing substitute means of serving the development with public transportation; (5) assuring the potential for public transit for high-intensity uses such as high-rise office buildings, and by (6) assuring that the recreational needs of new residents will not overload nearby coastal recreation areas by correlating the amount of development with local park acquisition and development plans with the provision of on-site recreational facilities to serve the new development.

Coastal Act Policy 30210. In carrying out the requirement of Section 4 of Article X of the California Constitution, maximum access, which shall be conspicuously posted, and recreational opportunities shall

be provided for all the people consistent with public safety needs and the need to protect public rights, rights of private property owners and natural resource areas from overuse.

Coastal Act Policy 30212.5 Wherever appropriate and feasible, public-facilities, including parking areas or facilities, shall be distributed throughout an area so as to mitigate against the impacts, social and otherwise, of overcrowding or overuse by the public of any single area.

Coastal Act Policy 30213. Lower cost visitor and recreational facilities shall be protected, encouraged, and, where feasible, provided. Developments providing public recreational opportunities are preferred.

Coastal Land Use Plan Policy 7-8: Increased opportunities for beach access shall be provided in the Carpinteria planning area.

Coastal Land Use Plan Policy 3-13: Plans for development shall minimize cut and fill operations. Plans requiring excessive cutting and filling may be denied if it is determined that the development could be carried out with less alteration of the natural terrain.

Coastal Land Use Plan Policy 3-14: All development shall be designed to fit the site topography, soils, geology, hydrology, and any other existing conditions and be oriented so that grading and other site preparation is kept to an absolute minimum. Natural features, landforms, and native vegetation, such as trees, shall be preserved to the maximum extent feasible. Areas of the site which are not suited for development because of known soil, geologic, flood, erosion or other hazards shall remain in open space.

Coastal Act Policy 30240 (b). Development in areas adjacent to environmentally sensitive habitat areas and parks and recreation areas shall be sited and designed to prevent impacts which would significantly degrade such areas, and shall be compatible with the continuance of such habitat areas.

Coastal Land Use Plan Policy 4-3: In areas designated as rural on the land use plan maps, the height, scale, and design of structures shall be compatible with the character of the surrounding natural environment, except where technical requirements dictate otherwise. Structures shall be subordinate in appearance to natural landforms; shall be designed to follow the natural contours of the landscape; and shall be sited so as not to intrude into the skyline as seen from public viewing places.

Circulation Element Policy 5C: The County shall continue to develop programs that encourage the use of alternative modes of transportation including, but not limited to, an updated bicycle route plan, park and ride facilities, and transportation demand management ordinances.

3.9.4 Impact Analysis

a) Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

The project site within the City of Carpinteria has a Carpinteria General Plan/Coastal Land Use Plan land use designation of Visitor-Serving Commercial (2003) and has been zoned for Resort Zone District use. The portion of the project within the County of Santa Barbara is designated as Other Open Land and Recreation and is zoned Transportation Corridor and Recreation (County of Santa Barbara 2010). The proposed trail is an apt use for the

City's and County's vision for the properties within each jurisdiction. The provision of the proposed multi-use trail within the coastal zone would also meet the objectives in Coastal Act Policies to expand low cost recreation opportunities, enhance access to coastal and beach resources, and to support alternative modes of transportation. The proposed multi-use trail would assist in achieving similar objectives in Carpinteria and Santa Barbara County coastal land use policies that strongly encourage development of a trail parallel to the US Highway 101 corridor, provision of alternative transportation facilities, and enhancement of public access to the beach While the proposed trail in some areas would traverse areas designated as environmentally sensitive habitat area (ESHA), the avoidance of which is generally prioritized in local coastal plan and Coastal Act policies, mitigation measures require the restoration of areas outside the trail to fully offset the removal of native plants to accommodate trail construction (refer to Section 3.3, Biological Resources). The proposed trail would involve substantial earthwork, which is generally discouraged by local coastal land use policies; however the earthwork is focused on the remediation of artificially steep slope areas which are remnants of previous transportation facilities within the Project corridor, and does not involve modification of natural landforms. Mitigation measures require that new slopes follow specifications in the Project geotechnical study to achieve replacement slopes that are stable. With the incorporation of mitigation measures identified in this document to reduce environmental impacts to less than significant levels, the proposed project would not conflict with any applicable land use plan, policy or regulation of an agency with jurisdiction over the project. In addition, no habitat conservation plans or natural community conservation plans apply to the project site. Overall, the proposed project would achieve the goal of enhanced coastal access. In addition, with respect to consideration of parking related to coastal access, construction is not anticipated to reduce parking availability. No parking spaces would be removed by the proposed project. However, absent mitigation, impacts due to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect would be potentially significant. **Mitigation Measures (MM) AES-1; MM-BIO-1** through **MM-BIO-6; MM-CR-1** through **MM-CR-4; MM-GEO-1 through MM-GEO-3; MM-HAZ-1; MM-WAT-1** through **MM-WAT-6; MM-NOI-1** through **MM-NOI-2; MM-TCR-1** would reduce impacts to conflicts with any land use plan, policy, or regulations to **less than significant with mitigation.**

b) Would the project result in cumulatively considerable impacts to land use and planning?

The proposed project would be consistent with the land use and zoning designations that have been assigned to the project site parcels. It would also implement a number of policies aimed at increasing public access to the beach as well as providing transportation alternatives for non-vehicle travel. While portions of the proposed trail would traverse designated ESHA, **MM-BIO-1** through **MM-BIO-4** would be required to fully offset the project's reduction in habitat area (refer to Section 3.3). The proposed trail would involve substantial earthwork; however, the earthwork is focused on the remediation of artificially steep slope areas which are remnants of previous transportation facilities within the Project corridor. **MM-GEO-1 through MM-GEO-3** would ensure that all trail elements and replacement slopes are stable. In addition, impacts due to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect would be potentially significant. Therefore, **Mitigation Measures (MM) AES-1; MM-BIO-1** through **MM-BIO-6; MM-CR-1** through **MM-CR-4; MM-GEO-1 through MM-GEO-3; MM-HAZ-1; MM-WAT-1** through **MM-WAT-6; MM-NOI-1** through **MM-NOI-2; MM-TCR-1** would reduce impacts to conflicts with any land use plan, policy, or regulations to less than significant with mitigation. Therefore, with implementation of all mitigation included in the EIR, the proposed project would not have a considerable contribution to any cumulative land use or planning impact.

Section 3.11, Recreation

3.11.4 Impact Analysis

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

The proposed project includes a shared-use path for walking and biking. The proposed trail would fill in an existing segment of the California Coastal Trail between the Carpinteria Bluffs Nature Preserve, which includes several miles of interconnected coastal bluff open space trails, and Rincon Beach County Park with 1 mile of the trail along the bluff. As the Rincon segment will expand the Carpinteria Coastal Trail System and would connect the City of Carpinteria with Rincon Beach County Park and points east and west along the Pacific Coast Bikeway and California Coastal Trail, it would provide additional recreation and access opportunities along the Santa Barbara County and Ventura County coastline. The proposed trail also would serve to fill in missing segments in the California Missions Trail and the Juan Bautista de Anza National Historic Trail. The project would provide a safe, direct and scenic coastal pedestrian and bike trail link to Ventura County paralleling U.S. Highway 101 and would formalize one railroad overcrossing along this segment, providing for safe access to the coast.

Although the air space above the proposed trail is not a public recreational facility for the purposes of the CEQA Guidelines, the proposed trail also is not expected to significantly impair the ability of paragliders and hang-gliders. Members of the paragliding and hang-gliding community have expressed concern that the proposed regrading of slopes along the trail alignment could adversely impact wind uplift conditions, such that paragliding and hang-gliding opportunities in the air space above the property could be eliminated, or substantially reduced.

The portion of the bluff face that would be regraded for the proposed trail was previously altered to create a bench for the UPRR alignment, and this steep manufactured slope is not considered to be stable in the long term with or without the project (the railroad was previously re-aligned away from this slope). Reducing the steepness of the slope face (making it less vertical) is necessary to avoid it collapsing over time and ensuring the longevity of the proposed new trail. Comments from the soaring community indicate a belief the proposed lessening of the bluff face slope angle could reduce or eliminate wind uplift patterns along the re-graded bluff slope area.

In order to evaluate the change in wind uplift patterns above the bluff face from the proposed regrading for the project, Dudek commissioned an Airflow Analysis for the Proposed Regrading of the Rincon Bluffs study (Airflow Study) by an expert in fluid dynamics; the Airflow Study is included as Appendix I of this Environmental Impact Report. Several different approaches were used, based upon published literature including wind tunnel experiments and direct field measurements of the amplification effects of a slope or vertical face on horizontal wind vectors perpendicular to the slope face. In the published literature reviewed for this Airflow Study, certain investigators compared the average slope angle of the entire slope or bluff face to determine the wind amplification effect, while others compared the angle of just the upper portion of the slope. The analysis of the effects of the originally proposed regrading of the bluff face for the project (which previously included a mid-elevation bench above the trail) concluded that the proposed regrading could reduce the vertical airflow velocity by 10% to 30% relative to current conditions; for altitudes relevant to soaring activities, the reduction is expected to be closer to 30% (Appendix I). Given the updated project design that no longer incorporates a mid-elevation bench above the trail, the Air Flow Study (Appendix I) found that the elimination of the upper bench would result

in a reduction in the vertical wind speed along the bluff edge by 10% to 20%, rather than the 30% maximum reduction resulting from the originally proposed project. In practical terms, a reduction in vertical wind speeds along the bluffs caused by regrading could maintain conditions favorable for paragliding and hang-gliding activities to occur in the air space over the trail alignment. A vertical wind speed reduction of 10% to 20% would have a lower effect upon soaring opportunities than the 30% reduction associated with the originally proposed project. As such, the updated project design could result in conditions that allow for soaring more frequently than the originally proposed project. ~~Based on available experimental results, the introduction of an upper bench above the trail is expected to provide a small increase in turbulence (on the order of 5%) at an altitude of 30 feet above the front of the bluffs, becoming negligible by an altitude of approximately 75 feet (Appendix I).~~

Published records of wind speeds favorable to paragliding and hang-gliding above the bluffs along the trail alignment do not exist. However, the Torrey Pines Gliderport is a dedicated soaring facility adjacent to the ocean bluffs in San Diego County, that exhibit similar characteristics to the bluffs along the Rincon Trail alignment. At Torrey Pines, about 7-15 mph of wind coming from the west (perpendicular to the bluffs) is generally needed for paragliding tandems; hang gliding tandems generally need 10-18 mph, also from the west (Torrey Pines Gliderport 2021). This evidences a wind regime that is successful in supporting soaring operations with an approximately 50% range of wind speeds (lowest viable wind speed representing 50% of the top speed). Consequently, the maximum predicted reduction in vertical wind velocity (~~30%~~ 20%) caused by the proposed regrading of bluffs along the trail segment south of the UPRR alignment should not eliminate favorable wind uplift patterns above the bluff face for soaring activities. The existing ~~20%~~ 30% of the upper portion of wind speeds successful for soaring should continue to provide acceptable uplift conditions; thus the proposed trail alignment would not cause paragliders and hang-gliders to use other air space, such that substantial physical deterioration of those facilities would occur or be accelerated. The upper end of the wind speed regime considered acceptable for soaring activities also may be extended somewhat by reduced updraft velocities, which may create additional opportunities for soaring activities during conditions with high wind velocities. In addition, the bluff west of where the proposed trail would cross the UPRR alignment would not be altered in any way by the proposed trail. Therefore, while the proposed regrading of the ocean bluffs will cause some modification of vertical wind velocities supporting soaring activities, it is unknown what the net effect will be on the number of days annually in which the wind conditions within the project alignment are favorable for soaring. Given the uncertainty above and the Airflow Study analysis that the maximum predicted reduction in vertical wind velocity will be ~~30%~~ 20% given the absence of a mid-elevation bench above the trail, the proposed project would have a **less than significant impact on recreational resources**.

Section 6.0, Alternatives

6.6.2 Maximize Existing Benchwork/Topography Alternative (Alternative 2)

Project Alternative 2 Impact Analysis

Biological Resources

The Maximum Existing Benchwork/Topography Alternative, would overall disturb ~~less~~ more area than the proposed project. The project impacts a total of 5.05 acres and this alternative impacts a total of 6.30 acres, resulting in an increase of 1.25 acres. ~~Project temporary impacts total 4.02 acres and this alternative has no temporary impacts identified, resulting in a net decrease of 4.02 acres of temporary impacts. It should be noted that although temporary impacts have not been identified, this alternative will likely result in temporary impacts. Project~~

~~permanent impacts total 1.02 acres and this alternative includes 0.67 acres of permanent impacts resulting in a net decrease of 0.35 acres of permanent impacts. Overall, the net impacts will decrease by 4.37 acres under this alternative since less grading and earthwork is required~~. More specifically, the project would result in 4.32 acres of impacts to County ESH and City ESHA and this alternative would result in 5.48 acres of impacts to County ESH and City ESHA, resulting in an increase of 1.16 acres of impacts to County ESH and City ESHA. ~~More specifically, the project would result in 3.55 acres of temporary impacts to County ESH and City ESHA and this alternative has no temporary impacts identified, resulting in a net decrease of 3.55 acres of temporary impacts to County ESH and City ESHA. The project will result in 0.76 acres of permanent impacts to County ESH and City ESHA and this alternative includes 0.51 acres of permanent impacts to County ESH and City ESHA, resulting in a net decrease of 0.25 acres of permanent impacts to County ESH and City ESHA. Overall, the net impacts to County ESH and City ESHA would decrease by 3.80 acres under this alternative since less grading and earthwork is required.~~

Because the vast majority of impacts under the proposed project are occurring within sensitive native vegetation communities identified as County ESH and City ESHA and require mitigation, this alternative would result in ~~fewer~~ more overall impacts. However, mitigation measures associated with County ESH and City ESHAs would still be required. While ~~less~~ more area is proposed to be impacted under this alternative, similar impacts to special-status wildlife species and nesting birds may occur and would require similar mitigation. Therefore, due to the ~~decreased~~ increased overall direct impacts to sensitive native vegetation communities identified as County ESH and City ESHA, impacts to biological resources would be ~~reduced~~ increased under the Maximum Existing Benchwork/Topography Alternative, Alternative 2 and **MM-BIO-1** through **MM-BIO-6** would continue to be required..

6.6.3 Steeper Slopes/Reduced Earthwork Alternative (Alternative 3)

Project Alternative 3 Summary

Under the proposed project, to achieve compliance with pathway surface slope limitations under the Americans with Disability Act (ADA), the existing benched slope would be regraded along the entire trail alignment. On some portions of the trail (along the segments north of the UPRR alignment), the proposed project also includes ~~creation~~ reconstruction of an existing second earthwork bench on the new slope above the trail to reduce erosion potential. Several agencies provided comments indicating that earthwork should be reduced as much as possible in order for the Project to achieve compliance with applicable resource protection policies and to minimize environmental impacts. In response, a refined ~~The~~ Steeper Slopes/Reduced Earthwork Alternative (Alternative 3) has been developed that would: 1) reduce the paved width of the trail from 16 feet to 14 feet for the segment south of the UPRR crossing; 2) re-align the trail slightly in the segment south of the UPRR crossing to re-use a longer portion of the existing historic bench; and, 3) remove one of the earthwork benches that was originally proposed on the slope above the trail alignment, for ~~a portion of~~ the trail ~~length~~ segment south of the UPRR crossing.

Figure 6-2 (Concept Design 6% Grade) illustrates the alignment of the trail for the segment south of the UPRR crossing under the refined Steeper Slopes/Reduced Earthwork Alternative (Alternative 3). In order to capitalize on the existing historic bench, the trail would need to descend slightly more steeply from the UPRR over-crossing bridge, resulting in a trail segment of approximately 690 feet in length with trail surface slope of 6% as compared to the proposed project that employs a 5% grade along this trail segment. It should be noted that 5% is the maximum trail surface slope for a path/trail to be ADA compliant, and consequently the easterly 690 foot portion of the trail southward of the UPRR crossing would not evidently achieve ADA compliance under the refined Alternative 3. The U.S. Access Board (USAB) is responsible for developing accessibility guidelines for the construction and alteration of facilities covered by the Americans with Disabilities Act (ADA) of 1990 and the Architectural Barriers Act (ABA) of

1968. The guidelines ensure that the facilities are readily accessible to and usable by people with disabilities. The Access Board issued the current guidelines in 2004. According to the USAB guidelines, segments of the trail may qualify for an exception to the maximum surface slope, where compliance is not practicable due to terrain. Not practicable may be defined as requiring extensive cuts or fills that are difficult to construct and maintain, cause drainage or erosion impacts, or create other adverse environmental impacts (https://www.access-board.gov/aba/guides/chapter-10-outdoor/#conditions-for-exceptions-1019). If this exception were to be granted for the 690 foot segment with 6% ground slope, the entire trail could potentially be considered ADA compliant.

The cross sections proposed under Alternative 3 are shown in Illustration 6-1, Steeper Slopes/Reduced Earthwork Alternative (Alternative 3) Trail Cross Section, below. ~~Alternative 3 would result in a 7.6% reduction of earthwork, or 10,015 less CY, compared to the project.~~ Regarding the export of earth materials from the site, refined Alternative 3 would reduce exported materials volume by approximately 121 CY (from 85,521 CY to 85,400 CY) compared to the proposed project. Under refined Alternative 3, the proposed alignment would be the same as the proposed project for the segment north of the UPRR corridor. Similar to the proposed project, a bridge would be provided to provide safe crossing for trail users over the UPRR. However, the exact alignment and cross section of the trail south of the UPRR crossing, on the eastern portion of the trail alignment, would be different. More specifically, ~~Alternative 3 would not provide benches above the trail (to control drainage and rockfall);~~ the trail would intersect the existing historic railroad bench at a more westerly point; and, a segment of the trail approximately 690 feet in length would descend at a slightly steeper grade (6%).

Project Alternative 3 Impact Analysis

Air Quality

Alternative 3 would result in ~~96,077 CY of cut and 10,570 CY of fill, resulting in 85,507~~ 85,400 CY of export. This is lower than the proposed project's ~~92,526~~ 85, 521 CY of export and therefore would result in fewer haul trucks during construction. Therefore, criteria air pollutant emissions during construction are expected to be less than the proposed project. Impacts would be less than significant during construction. During operation, Alternative 3 would result in emissions from maintenance activities similar to the proposed project. Maintenance activities include landscape watering, vegetation control and other trail amenity care and repair, which would involve the temporary use of a light-duty truck that would generate nominal air pollutant emissions. Operational impacts would be considered less than significant, and similar to that of the proposed project.

Biological Resources

Alternative 3 would disturb approximately the same area as the proposed project. While the volume of sediment removed and grading configuration proposed for this alternative would reduce overall earthwork, it would occur within the same overall grading and development footprint since the location of the trail alignment would be substantially the same as for the proposed project. Additionally, impacts to special-status wildlife species and nesting birds would be similar under this alternative since the impact footprint is approximately the same. The Steeper Slopes/Reduced Earthwork Alternative would result in similar impacts to biological resources as the proposed project and would require similar mitigation because development would generally occur within the same footprint as the proposed project. Therefore, the Steeper Slopes/Reduced Earthwork Alternative would result in similar impacts to biological resources and **MM-BIO-1** through **MM-BIO-7** would continue to be required to address potentially significant biological resources impacts under Alternative 3.

Cultural Resources

Alternative 3 would disturb approximately the same area as the proposed project. As discussed in Section 3.4, cultural resources are present between the UPRR crossing bridge and U.S. Highway 101. Development under Alternative ~~2~~ 3 would still result in development of the trail segment north of the UPRR crossing in the identical alignment to the proposed project, ~~same area~~, and would therefore result in equivalent impacts to these existing cultural resources. In addition, the project could still potentially impact undiscovered cultural resources along the overall trail alignment, including archaeological resources and human remains. **MM-CR-1** through **MM-CR-4** would still be required. Impacts would be similar to the proposed project.

Energy

Alternative 3 would result in ~~96,077 CY of cut and 10,570 CY of fill, resulting in 85,507~~ 85,400 CY of export. This is lower than the proposed project's ~~92,526~~ 85, 521 CY of export and therefore would result in fewer haul trucks during construction. Therefore, energy use during construction is expected to be less than the proposed project. During operation, Alternative 3 would result in energy use from maintenance activities similar to the proposed project. Maintenance activities include landscape watering, vegetation control and other trail amenity care and repair, which would involve the temporary use of a light-duty truck that would generate nominal energy usage. Operational impacts would be considered less than significant, and similar to the proposed project.

Geology and Soils

Alternative 3 would result in ~~110,019~~ 40 less CY of ~~earthwork~~ excavation, compared to the project, and 121 CY less exported earth materials. Under Alternative 3, the proposed alignment would be substantially the same as the proposed project. However, for the cross section of the trail south of the UPRR crossing, on the eastern portion of the trail alignment, Alternative 3 would re-align the trail slightly to re-use a longer portion of the existing historic bench and would employ a trail surface slope of 6% for the easterly 690 feet of the trail ~~not provide benches above the trail~~. Given the slightly lower volume of earthwork involved, temporary erosion impacts during construction would be slightly reduced with this alternative; however, **MM-GEO-3** would continue to be required. The same bridge structure over the UPRR alignment would be employed, and therefore **MM-GEO-1** and **MM-GEO-2** would continue to be required. Updated geotechnical design details would be needed to address long-term stability of the regraded slopes south of the UPRR alignment, but the project engineers have indicated that feasible methods to achieve such stability are available and could be detailed in an updated geotechnical report if Alternative 3 were to be selected for implementation. It should be noted that **MM-GEO-3** mandates preparation of an updated geotechnical investigation to address final trail design, and incorporation of all identified recommendations from the updated geotechnical investigation during implementation of the final selected trail design. Therefore, impacts would be similar to the proposed project.

Greenhouse Gas Emissions

Alternative 3 would result in ~~96,077 CY of cut and 10,570 CY of fill, resulting in 85,507~~ 85,400 CY of export. This is lower than the proposed project's ~~92,526~~ 85, 521 CY of export and therefore would result in fewer haul trucks during construction. Therefore, GHG emissions during construction are expected to be less than the proposed project. Impacts would be less than significant during construction. During operation, Alternative 3 would result in GHG emissions from maintenance activities similar to the proposed project. Maintenance activities include landscape watering, vegetation control and other trail amenity care and repair, which would involve the temporary

use of a light-duty truck that would generate nominal air pollutant emissions. Operational impacts would be considered less than significant, and similar to the proposed project.

Hazards and Hazardous Emissions

Alternative 3 would involve an identical trail length to the project, but would reduce ~~earthwork~~ the volume of exported earth materials by approximately ~~10,019~~ 121 CY. The use of heavy equipment would be slightly reduced in duration, compared to the project, due to the reduced ~~earthwork~~ volume of exported earth materials. The section of the trail north of the UPRR corridor (the western portion) would have the same potential to encounter soils with ADL. Overall, impacts would remain similar or the same as the project relative to the volumes of hazardous materials associated with construction and the risk of release, as well as handling and disposal of ADL containing soils. **MM-WAT-2** and **MM-HAZ-1** would continue to be required, and residual impacts under Alternative 3 would also be less than significant.

Hydrology and Water Quality

Alternative 3 would involve an identical trail length to the project and would have substantially similar total earthwork volumes as the project ~~but would reduce earthwork by approximately 10,019~~. With slightly reduced ~~earthwork~~ volume of excavated and exported earth materials, the potential for erosion during construction would be reduced under Alternative 3, as compared to the proposed project; however, **MM-WAT-1**, **MM-WAT-2**, and **MM-WAT-3** would continue to be required to address potential erosion and other water quality impacts during construction. The trail alignment under Alternative 3 would substantially match the project, and therefore all of the proposed storm drain components would continue to adequately serve the stormwater runoff volumes from the project. As with the proposed project, **MM-WAT-4**, **MM-WAT-5**, and **MM-WAT-6** would continue to be required to address long-term operational affects upon water quality. Overall, Alternative 3 would marginally reduce hydrology and water quality impacts when compared to the project.

Land Use and Planning

The proposed project would result in less than significant impacts to land use and planning with incorporation of **MM-BIO-1** through **MM-BIO-4**, which prescribe required mitigation measures to satisfy requirements found in City and County policies governing ESHA. As discussed under Biological Resources, above, Alternative 3 would disturb approximately the same area as the proposed project, resulting in similar impacts to ESHA. In addition, the project would result in less than significant impacts to conflicts with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect with implementation of **MM-AES-1; MM-BIO-1** through **MM-BIO-7; MM-CR-1** through **MM-CR-4; MM-GEO-1 through MM-GEO-3; MM-HAZ-1; MM-WAT-1** through **MM-WAT-6; MM-NOI-1** through **MM-NOI-2; MM-TCR-1**. It is anticipated that Alternative ~~2~~ 3 would require similar mitigation measures to reduce potential land use impacts. Thus, impacts to land use and planning would be similar under this alternative.

Noise

Alternative 3 would involve an identical trail length and substantially similar alignment to the project but would reduce the volume of exported earth material by approximately 121 CY, compared to the proposed project ~~earthwork by approximately 10,019 CY. With reduced earthwork volume, the duration for earthwork activities using heavy equipment would be lessened~~, and lessening the number of off-site haul truck trips; nonetheless **MM-NOI-1** and **MM-NOI-2** would continue to be required to reduce construction noise impacts to a less than significant level. Noise impacts from Alternative 3 would be similar to the project, but somewhat less due to the reduced earthwork volumes involved, as compared to the project.

Recreation

Under Alternative 3, a multi-use trail for cyclists and pedestrians ~~identical~~ that is substantially similar to the proposed project would be constructed and operated, and the substantial gap that currently exists in the Coastal Trail system would be filled. Enhancement of local and regional biking and hiking opportunities delivered by the project would also be achieved under Alternative 3, and recreational benefits of the project would be realized. ~~A critical difference would be incorporated, however, in the grading profile for the trail segment along the bluff face adjacent to the ocean; this segment would not be re-graded to create a second bench above the trail bench (unlike the proposed project). The Air Flow Study (Appendix I) found that the elimination of the upper bench would result in a reduction in the vertical wind speed along the bluff edge by 10% to 20%, rather than the 30% maximum reduction resulting from the proposed project. In practical terms, a reduction in vertical wind speeds along the bluffs caused by regrading could maintain conditions favorable for paragliding and hang gliding activities to occur in the air space over the trail alignment. A vertical wind speed reduction of 10% to 20% would have a lower effect upon soaring opportunities than the 30% reduction associated with the proposed project. As such, Alternative 3 could have lesser impacts on recreation resources and opportunities than the project, specifically in regard to soaring opportunities.~~ Alternative 3 would continue to meet primary recreational objectives for the project by providing a trail that offers views of the Pacific Ocean, ~~that is ADA compliant,~~ and which achieves a safe connection between Carpinteria and the Rincon Beach County Park that can function as an alternative transportation mechanism. ~~This alternative would therefore have lesser impacts on recreation resources than the proposed project.~~

In order to capitalize on the existing historic bench that exists in the trail alignment for the portion south of the UPRR alignment, the design for Alternative 3 (refined) descends slightly more steeply from the UPRR over-crossing bridge, resulting in a trail surface slope of 6% as compared to the proposed project that employs a 5% grade along this trail segment (which measures approximately 690 feet in length). It should be noted that 5% is the maximum trail surface slope for a path/trail to be ADA compliant, and consequently the 690 foot portion of the trail southward of the UPRR crossing would not achieve ADA compliance under the refined Alternative 3. A definition of slope percent is useful for understanding this proposed trail surface slope. A 5% trail surface means that the elevation of the trail changes 5 vertical feet for every 100 feet of distance traveled along the trail. By comparison, a 6% trail would have a change in elevation of 6 feet for every 100 feet of travel. From a practical perspective, an increase of 1% slope in the trail surface over the ADA limit should not substantially reduce the usability of the trail segment south of the UPRR crossing. For bicycling, a slope of 4-6% is considered a manageable gradient (The Climbing Cyclist, 2013); the proposed trail slope would remain in this range. For walking or hiking, 5% slopes are comfortable, with a maximum slope of not more than 10% recommended to maintain enjoyment for the widest variety of trail users (Ventura County Trails, 2004). Persons with mobility limitations should be able to access the portion of the proposed Alternative 3 trail from the western terminus to the overlook at the south end of the UPRR crossing bridge, as this segment would achieve compliance with the ADA 5% maximum slope limit. Consequently, the incorporation of a 6% slope for a 690 foot portion of the trail segment south of the UPRR crossing would still support use of the entire project trail alignment by cyclists and pedestrians, while preservation of the trail surface slope at no greater than 5% for the remainder segments would allow access from Rincon Bluffs Preserve to the trail overlook on the south side of the UPRR bridge for visitors that may have mobility limitations. Recreation objectives of the project would therefore be substantially met under Alternative 3.

Furthermore, the U.S. Access Board (USAB) is responsible for developing accessibility guidelines for the construction and alteration of facilities covered by the Americans with Disabilities Act (ADA) of 1990 and the Architectural Barriers Act (ABA) of 1968. The guidelines ensure that the facilities are readily accessible to and usable by people with disabilities. The Access Board issued the current guidelines in 2004. According to the USAB guidelines,

segments of the trail may qualify for an exception to the maximum surface slope, where compliance is not practicable due to terrain. Not practicable may be defined as requiring extensive cuts or fills that are difficult to construct and maintain, cause drainage or erosion impacts, or create other adverse environmental impacts (https://www.access-board.gov/aba/guides/chapter-10-outdoor/#conditions-for-exceptions-1019). If this exception were to be granted for the 690-foot segment with 6% ground slope, the entire trail could potentially be considered ADA compliant. Because of the slightly greater slope percent (690 feet of the trail at 6% instead of 5%), the refined Alternative 3 would have marginally greater impacts on recreation than the project.

Transportation

Under Alternative 3, a multi-use trail for cyclists and pedestrians ~~identical~~ substantially similar to the project would be constructed and operated. In order to capitalize on the existing historic bench that exists in the trail alignment for the portion south of the UPRR alignment, the design for Alternative 3 (refined) descends slightly more steeply from the UPRR over-crossing bridge, resulting in a trail surface slope of 6% for a 690 foot portion as compared to the proposed project that employs a 5% grade along this trail segment; this slight increase in the proposed trail surface slope would not be expected to deter use of the trail by pedestrians or cyclists (refer to Recreation discussion above). Alternative 3 would therefore also close the substantial gap that currently exists in the Coastal Trail system, equivalent to the project. The use of a vehicle by residents in visiting the Rincon Beach County Park would be expected to decline under Alternative 3 as well, due to the existence of a new safe alternative to vehicle travel from points within Carpinteria. Transportation hazards associated with pedestrians crossing the UPRR alignment to navigate to Rincon Beach County Park would be resolved. In this regard, the enhancements of local and regional biking and hiking opportunities delivered by the project would occur under Alternative 3, and a solution to existing pedestrian hazards of the project would also be realized. This alternative would have transportation benefits and impacts equivalent to the project.

Utilities and Service Systems

Alternative 3 would involve an identical trail length to the project but would reduce ~~earthwork~~ excavation volumes by approximately 40 CY and exported earth materials volume by approximately ~~10,019~~ 121 CY. Although Alternative 3 would result in these reduced earthwork volumes, impacts to existing drainage patterns of the site would still occur. Therefore, **MM-WAT-1, MM-WAT-2, MM-WAT-3, and MM-WAT-4** would continue to be required. Therefore, impacts to utilities and service systems would be similar under Alternative 3.

Relation to Project Objectives

~~Given that~~ Alternative 3 would employ substantially the same alignment as the proposed project and would incorporate a~~n identical~~ trail width the same as, or similar to, the project (the Alternative 3 trail would continue to have a paved width of 16 feet for the segments north of the UPRR corridor, but would employ a paved width of 14-feet south of the UPRR corridor). Alternative 3 would also be ADA compliant in the segments north of the UPRR corridor but would marginally exceed the 5% maximum allowable trail surface by 1% for a 690 foot segment of the trail south of the UPRR corridor. This alternative would be ~~equivalent~~ substantially comparable to the project in meeting ~~all~~ the stated project objectives, with the exception of an intent to ensure that the entire trail length would be accessible to individuals that have impaired mobility. It should be noted, according to USAB guidelines, segments of the trail may qualify for an exception to the maximum surface slope, where compliance is not practicable due to terrain. Not practicable may be defined as requiring extensive cuts or fills that are difficult to construct and maintain, cause drainage or erosion impacts, or create other adverse environmental impacts; If this exception were to be

granted for the 690-foot segment with 6% ground slope, the entire trail could potentially be considered ADA compliant.

The incorporation of a 6% slope for a 690 foot portion of the trail segment south of the UPRR crossing would still support use of the entire project trail alignment by cyclists and pedestrians, while preservation of the trail surface slope at no greater than 5% for the remainder segments would allow access from Rincon Bluffs Preserve to the trail overlook on the south side of the UPRR bridge for visitors that may have mobility limitations. With regard to the project objective of reducing regional greenhouse gas emissions, Alternative 3 would be marginally more successful in meeting this objective, as ~~earthwork~~ exported earth material volumes and therefore haul truck operations would be reduced under this alternative, leading to fewer construction equipment emission contributions to greenhouse gas levels.

6.6.4 Freeway Adjacent Trail Avoiding Bluff Face Alternative (Alternative 4)

Project Alternative 4 Impact Analysis

Biological Resources

Alternative 4 would overall disturb more area than the proposed project. The proposed project impacts a total of 5.05 acres and this alternative impacts a total of 6.10 acres, resulting in an increase of 1.05 acres. More specifically, the project would result in 4.32 acres of impacts to County ESH and City ESHA and this alternative would result in 5.21 acres of impacts to County ESH and City ESHA, resulting in an increase of 0.89 acres of impacts to County ESH and City ESHA.

Because the vast majority of impacts under the proposed project are occurring within sensitive native vegetation communities identified as County ESH and City ESHA and require mitigation, this alternative would result in more overall impacts and the mitigation measures associated with County ESH and City ESHAs would still be required. While more area is proposed to be impacted under this alternative, similar impacts to special-status wildlife species and nesting birds may occur and would require similar mitigation. Therefore, due to the increased overall direct impacts to sensitive native vegetation communities identified as County ESH and City ESHA, impacts to biological resources would be increased under the Freeway Adjacent Trail Avoiding Bluff Face Alternative, Alternative 4, and **MM-BIO-1** through **MM-BIO-7** would continue to be required to address potentially significant biological resources impacts under Alternative 4.

~~Based on impacts within the biological survey area, this alternative would result in a decrease of impacts to sensitive biological resources. However, since a portion of the trail alignment under this alternative has not been surveyed (vegetation mapping, special status plant species, wildlife species, and tree assessment) a complete comparison analysis cannot be performed to determine if impacts to sensitive biological resources would be increased or reduced under the Freeway Adjacent Trail Avoiding Bluff Face Alternative. Therefore, additional surveys to detect potential sensitive biological resources would be required, and would include vegetation mapping, special status plant species surveys, a special status wildlife species habitat assessment, and a tree assessment. While it is unlikely that additional special status plant or wildlife species may be present along the new trail alignment, since it is located within similar habitats and along previously disturbed and graded slopes within the proposed project footprint, this alternative may result in greater impacts to sensitive vegetation communities included as County ESH and City ESHA, and qualifying trees. The trail alignment under Alternative 4 is longer as compared to the proposed project resulting in more permanent impacts to undeveloped land, and may require removal of eucalyptus trees~~

~~located at the eastern terminus of the Rincon Beach County Park parking lot, which are qualifying trees and require mitigation for removal under Santa Barbara County Article II Zoning Ordinance. Therefore, Alternative 4 may require additional mitigation for impacts to sensitive vegetation communities, including County ESH and City ESHA. More specifically, Alternative 4 may result in greater areas of impacts to vegetation communities and therefore require greater mitigation acreages, outlined in a Habitat Mitigation and Monitoring Plan (see MM BIO 5). Mitigation for removal of any qualifying trees impacted would also be required under Alternative 4. Similar impacts to special-status wildlife species and nesting birds are anticipated and would require similar mitigation.~~

Cultural Resources

Alternative 4 would result in greater ground disturbance compared to the proposed project, due to the longer length of the trail. It is anticipated that impacts to existing cultural resources would still occur, and that potential impacts to undiscovered cultural resources, including archaeological resources and human remains would be greater due to ~~greater~~ the increased area of development. ~~However, the presence of cultural resources within the area expanding the project footprint southeast, past the Rincon Beach County Park, and terminating at Bates Road, are unknown at this time~~. Although the proposed additional ground disturbance for Alternative 4 extends into a previously recorded archaeological site, there is significant evidence that the proposed ground disturbance would occur within previously disturbed soils and imported fill soils. The area unique to Alternative 4 ~~area proposed~~, or expanding the project footprint southeast, past the Rincon Beach County Park, and terminating at Bates Road, has been subject to significant ground disturbances including massive cut and fill grading and construction of the following: original UPRR railroad, original and widening of Highway 2, Highway 101 road and ramp construction, and the Bates Road overcrossing. Evidence of ground disturbance is documented in as-built plans for Highway 101 and the archaeological site record for CA-SBA-1 and associated field notes. The full potential presence and extent of cultural resources within the area expanding the project footprint are not fully known at this time since evidence points to any existing native soils being buried by several feet of disturbed and fill soils. Therefore, ~~development in this area would require additional investigation to appropriately determine the presence of existing cultural resources and potential impacts to these resources~~. **MM-CUL-1** through **MM-CUL-4** would still be required. Due to the longer length of the trail under Alternative 4, impacts to cultural resources would be ~~slightly~~ greater than the proposed project ~~and additional~~ , but would be appropriately addressed through implementation of **MM-CUL-1** through **MM-CUL-4**. ~~mitigation may be required~~.

Appendix C1, Plant and Wildlife Species Compendium

ASTERACEAE—SUNFLOWER FAMILY

Artemisia douglasiana—Douglas' sagewort

BRASSICACEAE—MUSTARD FAMILY

* *Sisymbrium altissimum*—tall tumblemustard

CRASSULACEAE—STONECROP FAMILY

Dudleya edulis—fingertips

LAMIACEAE—MINT FAMILY

* *Salvia mellifera*—black sage

RUBIACEAE—MADDER FAMILY

Galium aparine— stickywilly

Appendix C2, Plant and Wildlife Species Not Expected to Occur within the Biological Survey Area

Special-Status Plant Species Not Expected to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1]	Habitat Requirements	Potential to Occur within the BSA
Arenaria paludicola	marsh sandwort	FE/SE/1B.1	Marshes and swamps (freshwater or brackish); sandy, openings/perennial stoloniferous herb/May–Aug/10–560	Not expected to occur. Suitable marsh or swamp habitat is not present.
Astragalus pycnostachyus var. *lanosissimus*	Ventura marsh milk-vetch	FE/SE/1B.1	Coastal dunes, Coastal scrub, Marshes and swamps (edges, coastal salt or brackish)/perennial herb/(June)Aug–Oct/3–115	Not expected to occur. While suitable coastal scrub habitat is present, this species rarely occurs on sandy bluffs as compared to within coastal salt marsh margins or coastal dunes (CDFW 2020). There is only one occurrence in the region[2] which is considered

Special-Status Plant Species Not Expected to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1]	Habitat Requirements	Potential to Occur within the BSA
				possibly extirpated (CDFW 2020).
Calochortus fimbriatus	late-flowered mariposa lily	None/None/1B.3	Chaparral, Cismontane woodland, Riparian woodland; often serpentinite/perennial bulbiferous herb/June–Aug/902–6,250	Not expected to occur. The site is outside of the species' known elevation range. Additionally, suitable habitat is not present.
Calochortus palmeri var. *palmeri*	Palmer's mariposa lily	None/None/1B.2	Chaparral, Lower montane coniferous forest, Meadows and seeps; mesic/perennial bulbiferous herb/Apr–July/2,325–7,840	Not expected to occur. The site is outside of the species' known elevation range. Additionally, suitable habitat is not present.
Chloropyron maritimum ssp. *maritimum*	salt marsh bird's-beak	FE/SE/1B.2	Coastal dunes, Marshes and swamps (coastal salt)/annual herb (hemiparasitic)/May–Oct(Nov)/0–100	Not expected to occur. Suitable dune, marsh, or swamp habitat is not present.
Delphinium umbraculorum	umbrella larkspur	None/None/1B.3	Chaparral, Cismontane woodland/perennial herb/Apr–June/1,310–5,245	Not expected to occur. The site is outside of the species' known elevation range. Additionally, suitable habitat is not present.
Fritillaria ojaiensis	Ojai fritillary	None/None/1B.2	Broadleafed upland forest (mesic), Chaparral, Cismontane woodland, Lower montane coniferous forest; rocky/perennial bulbiferous herb/Feb–May/738–3,270	Not expected to occur. The site is outside of the species' known elevation range. Additionally, suitable habitat is not present.
Lasthenia glabrata ssp. *coulteri*	Coulter's goldfields	None/None/1B.1	Marshes and swamps (coastal salt), Playas, Vernal pools/annual herb/Feb–June/3–4,000	Not expected to occur. Suitable vernal pool, playa, marsh, or swamp habitat is not present.

Special-Status Plant Species Not Expected to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1]	Habitat Requirements	Potential to Occur within the BSA
Layia heterotricha	pale-yellow layia	None/None/1B.1	Cismontane woodland, Coastal scrub, Pinyon and juniper woodland, Valley and foothill grassland; alkaline or clay/annual herb/Mar–June/984–5,590	Not expected to occur. The site is outside of the species' known elevation range. Additionally, only marginally suitable habitat is present.
Monardella hypoleuca ssp. *hypoleuca*	white-veined monardella	None/None/1B.3	Chaparral, Cismontane woodland/perennial herb/(Apr)May–Aug(Sep–Dec)/164–5,000	Not expected to occur. No suitable chaparral or woodland habitat present. Although this species is mapped along Rincon Creek all the way to the ocean just behind the project site, it is associated with the riparian habitat of the creek which is not present on site (CDFW 2020).
Nasturtium gambelii	Gambel's water cress	FE/ST/1B.1	Marshes and swamps (freshwater or brackish)/perennial rhizomatous herb/Apr–Oct/16–1,080	Not expected to occur. Suitable marsh or swamp habitat is not present.
Navarretia fossalis	spreading navarretia	FT/None/1B.1	Chenopod scrub, Marshes and swamps (assorted shallow freshwater), Playas, Vernal pools/annual herb/Apr–June/98–2,145	Not expected to occur. Although chenopod scrub habitat is present, vernal pools are absent within the project site. This species is not known to occur within the region[2] (CDFW 2020).
Navarretia ojaiensis	Ojai navarretia	None/None/1B.1	Chaparral (openings), Coastal scrub (openings), Valley and foothill grassland/annual herb/May–July/902–2,030	Not expected to occur. The site is outside of the species' known elevation range.

Special-Status Plant Species Not Expected to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1]	Habitat Requirements	Potential to Occur within the BSA
Navarretia peninsularis	Baja navarretia	None/None/1B.2	Chaparral (openings), Lower montane coniferous forest, Meadows and seeps, Pinyon and juniper woodland; mesic/annual herb/(May)June–Aug/4,920–7,545	Not expected to occur. The site is outside of the species' known elevation range. Additionally, suitable habitat is not present.
Nolina cismontana	chaparral nolina	None/None/1B.2	Chaparral, Coastal scrub; sandstone or gabbro/perennial evergreen shrub/(Mar)May–July/459–4,180	Not expected to occur. The site is outside of the species' known elevation range.
Orcuttia californica	California Orcutt grass	FE/SE/1B.1	Vernal pools/annual herb/Apr–Aug/49–2,165	Not expected to occur. Suitable vernal pool habitat is absent within the project site. Additionally, this species is not known to occur within the region[2] (CDFW 2020).
Sagittaria sanfordii	Sanford's arrowhead	None/None/1B.2	Marshes and swamps (assorted shallow freshwater)/perennial rhizomatous herb (emergent)/May–Oct(Nov)/0–2,130	Not expected to occur. Suitable marsh or swamp habitat is not present. Additionally, the only one occurrence in the region[2] is considered extirpated (CDFW 2020).
Sidalcea neomexicana	salt spring checkerbloom	None/None/2B.2	Chaparral, Coastal scrub, Lower montane coniferous forest, Mojavean desert scrub, Playas; alkaline, mesic/perennial herb/Mar–June/49–5,015	Low potential to occur. Suitable coastal scrub habitat is present, however mesic habitats such as springs or marshes are absent. The only occurrence in the region[2] was last confirmed in 1962 and is located in Oak View (CDFW 2020). This species was not detected during 2018, 2019, or 2021 special-status plant species surveys.

Special-Status Plant Species Not Expected to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1]	Habitat Requirements	Potential to Occur within the BSA
Streptanthus campestris	southern jewelflower	None/None/1B.3	Chaparral, Lower montane coniferous forest, Pinyon and juniper woodland; rocky/perennial herb/(Apr)May–July/2,950–7,545	Not expected to occur. The site is outside of the species' known elevation range. Additionally, suitable habitat is not present.
Thelypteris puberula var. *sonorensis*	Sonoran maiden fern	None/None/2B.2	Meadows and seeps (seeps and streams)/perennial rhizomatous herb/Jan–Sep/164–2,000	Not expected to occur. Suitable meadow or seep habitat is not present.

1 **Status Legend:**
FE: Federally listed as endangered
SE: State listed as endangered
CRPR 1A: Plants presumed extinct in California
CRPR 1B: Plants rare, threatened, or endangered in California and elsewhere
CRPR 2A: Plants rare, threatened, or endangered in California but common elsewhere
CRPR 2B: Plants rare, threatened, or endangered in California but more common elsewhere
CRPR 3: Plants about which more information is needed – a review list
CRPR 4: Plants of limited distribution – a watch list
.1 Seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat)
.2 Fairly endangered in California (20% to 80% of occurrences threatened)
.3 Not very endangered in California (less than 20% of occurrences threatened or no current threats known).

2 **Region:** "Region" refers to species recorded in the USGS 7.5-minute White Ledge Peak quadrangle, as well as the surrounding coastal quadrangles including Carpinteria, Pitas Point, Ventura, and Matilija (CDFW 2020; CNPS 2020).

ACRONYMS AND ABBREVIATIONS ACR-1

1 EXECUTIVE SUMMARY 1-1

1.1 Project Location and Project Site 1-1

1.2 Project Description 1-2

1.2.1 Project Objectives 1-2

1.2.2 Discretionary Actions 1-3

1.3 Areas of Controversy 1-3

1.4 Issues to Be Resolved by the City Planning Commission 1-3

1.5 Project Alternatives 1-4

1.5.1 No Project/No Build Alternative (Alternative 1) 1-4

1.5.2 Maximize Existing Benchwork/Topography Alternative (Alternative 2) 1-4

1.5.3 Steeper Slopes/Reduced Earthwork Alternative (Alternative 3) 1-4

1.5.4 Freeway Adjacent Trail Avoiding Bluff Face Alternative (Alternative 4) 1-5

2 INTRODUCTION AND PROJECT DESCRIPTION 2-1

2.1 Environmental Procedures 2-1

2.1.1 California Environmental Quality Act Compliance 2-1

2.1.2 Notice of Preparation and Scoping 2-1

2.1.3 Overview of the EIR Process 2-2

2.2 Intended Uses of the EIR 2-2

2.3 Organization and Content of the EIR 2-3

2.3.1 Mitigation Monitoring and Reporting Program 2-3

2.4 Project Background and Purpose 2-4

2.4.1 Background 2-4

2.4.2 Purpose and Need 2-5

2.4.3 Objectives 2-7

2.5 Location 2-8

2.6 Surrounding Land Uses and Environmental Setting 2-8

2.7 Project Description 2-9

2.7.1 Earthwork 2-10

2.7.2 Bridge Detail 2-12

2.7.3 Drainage 2-13

2.7.4 Trail/Path Features 2-15

2.7.5 Construction 2-16

2.7.6 Operation 2-17

2.7.7 Acquisition of Right-of-Ways 2-17

2.8 Discretionary Actions 2-18

3 ENVIRONMENTAL ANALYSIS 3-1

3.1 Aesthetics 3.1-1
3.1.1 Existing Conditions 3.1-1
3.1.2 Relevant Plans, Policies, and Ordinances 3.1-2
3.1.3 Thresholds of Significance 3.1-6
3.1.4 Impact Analysis 3.1-6
3.1.5 Mitigation 3.1-10
3.1.6 Level of Significance After Mitigation 3.1-10

3.2 Air Quality 3.2-1
3.2.1 Existing Conditions 3.2-1
3.2.2 Relevant Plans, Policies, and Ordinances 3.2-10
3.2.3 Thresholds of Significance 3.2-17
3.2.4 Impact Analysis 3.2-19
3.2.5 Mitigation 3.2-26
3.2.6 Level of Significance After Mitigation 3.2-26

3.3 Biological Resources 3.3-1
3.3.1 Existing Conditions 3.3-1
3.3.2 Relevant Plans, Policies, and Ordinances 3.3-26
3.3.3 Thresholds of Significance 3.3-31
3.3.4 Impact Analysis 3.3-32
3.3.5 Mitigation 3.3-40
3.3.6 Level of Significance After Mitigation 3.3-44

3.4 Cultural Resources 3.4-1
3.4.1 Existing Conditions 3.4-1
3.4.2 Relevant Plans, Policies, and Ordinances 3.4-8
3.4.3 Thresholds of Significance 3.4-14
3.4.4 Impact Analysis 3.4-14
3.4.5 Mitigation 3.4-16
3.4.6 Level of Significance After Mitigation 3.4-18

3.5 Geology and Soils 3.5-1
3.5.1 Existing Conditions 3.5-1
3.5.2 Relevant Plans, Policies, and Ordinances 3.5-5
3.5.3 Thresholds of Significance 3.5-9
3.5.4 Impact Analysis 3.5-10
3.5.5 Mitigation 3.5-13
3.5.6 Level of Significance After Mitigation 3.5-14

3.6 Greenhouse Gas Emissions 3.6-1
3.6.1 Existing Conditions 3.6-1
3.6.2 Relevant Plans, Policies, and Ordinances 3.6-8
3.6.3 Thresholds of Significance 3.6-24
3.6.4 Impact Analysis 3.6-26

3.6.5 Mitigation 3.6-29
3.6.6 Level of Significance After Mitigation 3.6-29
3.7 Hazards and Hazardous Materials 3.7-1
3.7.1 Existing Conditions 3.7-1
3.7.2 Relevant Plans, Policies, and Ordinances 3.7-2
3.7.3 Thresholds of Significance 3.7-8
3.7.4 Impact Analysis 3.7-8
3.7.5 Mitigation 3.7-10
3.7.6 Level of Significance After Mitigation 3.7-11
3.8 Hydrology and Water Quality 3.8-1
3.8.1 Existing Conditions 3.8-1
3.8.2 Relevant Plans, Policies, and Ordinances 3.8-3
3.8.3 Thresholds of Significance 3.8-6
3.8.4 Impact Analysis 3.8-8
3.8.5 Mitigation 3.8-14
3.8.6 Level of Significance After Mitigation 3.8-17
3.9 Land Use and Planning 3.9-1
3.9.1 Existing Conditions 3.9-1
3.9.2 Relevant Plans, Policies, and Ordinances 3.9-1
3.9.3 Thresholds of Significance 3.9-5
3.9.4 Impact Analysis 3.9-5
3.9.5 Mitigation Measures 3.9-6
3.9.6 Level of Significance After Mitigation 3.9-6
3.10 Noise and Vibration 3.10-1
3.10.1 Existing Conditions 3.10-1
3.10.2 Relevant Plans, Policies, and Ordinances 3.10-4
3.10.3 Thresholds of Significance 3.10-7
3.10.4 Impact Analysis 3.10-8
3.10.5 Mitigation 3.10-12
3.10.6 Level of Significance After Mitigation 3.10-13
3.11 Recreation 3.11-1
3.11.1 Existing Conditions 3.11-1
3.11.2 Relevant Plans, Policies, and Ordinances 3.11-4
3.11.3 Thresholds of Significance 3.11-7
3.11.4 Impact Analysis 3.11-7
3.11.5 Mitigation 3.11-10
3.11.6 Level of Significance After Mitigation 3.11-10
3.12 Transportation 3.12-1
3.12.1 Existing Conditions 3.12-1
3.12.2 Relevant Plans, Policies, and Ordinances 3.12-2
3.12.3 Thresholds of Significance 3.12-4

3.12.4 Impact Analysis 3.12-6
3.12.5 Level of Significance Prior to Mitigation 3.12-8
3.13 Tribal Cultural Resources 3.13-1
3.13.1 Existing Conditions 3.13-1
3.13.2 Relevant Plans, Policies, and Ordinances 3.13-5
3.13.3 Thresholds of Significance 3.13-10
3.13.4 Impact Analysis 3.13-11
3.13.5 Mitigation 3.13-11
3.13.6 Level of Significance After Mitigation 3.13-12
3.14 Utilities and Services Systems 3.14-1
3.14.1 Existing Conditions 3.14-1
3.14.2 Relevant Plans, Policies, and Ordinances 3.14-1
3.14.3 Thresholds of Significance 3.14-6
3.14.4 Impact Analysis 3.14-7
3.14.5 Mitigation 3.14-8
3.14.6 Level of Significance After Mitigation 3.14-8

4 EFFECTS FOUND NOT TO BE SIGNIFICANT 4-1

4.1 Agriculture and Forestry Resources 4.1-1
4.1.1 Existing Conditions 4.1-1
4.1.2 Relevant Plans, Policies, and Ordinances 4.1-1
4.1.3 Thresholds of Significance 4.1-4
4.1.4 Impact Analysis 4.1-5
4.1.5 Level of Significance Prior to Mitigation 4.1-6
4.1.6 Conclusion 4.1-6
4.2 Energy 4.2-1
4.2.1 Existing Conditions 4.2-1
4.2.2 Relevant Plans, Policies, and Ordinances 4.2-2
4.2.3 Thresholds of Significance 4.2-11
4.2.4 Impact Analysis 4.2-11
4.2.5 Level of Significance Prior to Mitigation 4.2-16
4.2.6 Conclusion 4.2-16
4.3 Mineral Resources 4.3-1
4.3.1 Existing Conditions 4.3-1
4.3.2 Relevant Plans, Policies, and Ordinances 4.3-1
4.3.3 Thresholds of Significance 4.3-4
4.3.4 Impact Analysis 4.3-4
4.3.5 Level of Significance Prior to Mitigation 4.3-5
4.3.6 Conclusion 4.3-5
4.4 Population and Housing 4.4-1
4.4.1 Existing Conditions 4.4-1

4.4.2 Relevant Plans, Policies, and Ordinances 4.4-1
4.4.3 Thresholds of Significance 4.4-2
4.4.4 Impact Analysis 4.4-3
4.4.5 Level of Significance Prior to Mitigation 4.4-3
4.4.6 Conclusion 4.4-3
4.5 Public Services 4.5-1
4.5.1 Existing Conditions 4.5-1
4.5.2 Relevant Plans, Policies, and Ordinances 4.5-2
4.5.3 Thresholds of Significance 4.5-6
4.5.4 Impact Analysis 4.5-6
4.5.5 Level of Significance Prior to Mitigation 4.5-8
4.5.6 Conclusion 4.5-8
4.6 Wildfire 4.6-1
4.6.1 Existing Conditions 4.6-1
4.6.2 Relevant Plans, Policies, and Ordinances 4.6-1
4.6.3 Thresholds of Significance 4.6-7
4.6.4 Impact Analysis 4.6-7
4.6.5 Level of Significance Prior to Mitigation 4.6-8
4.6.6 Conclusion 4.6-8

5 OTHER CEQA CONSIDERATIONS 5-1
5.1 Growth-Inducing Impacts 5-1
5.1.1 Growth Inducement Due to Population Growth 5-1
5.1.2 Growth Inducement Due to Economic Growth 5-2
5.1.3 Growth Inducement Due to Additional Housing 5-2
5.1.4 Growth Inducement Due to Removal of Obstacles 5-2
5.2 Significant Irreversible Changes 5-2
5.3 Significant and Unavoidable Impacts 5-3

6 ALTERNATIVES 6-1
6.1 Introduction 6-1
6.2 Project Objectives 6-1
6.3 Significant Impacts 6-2
6.4 Alternatives Considered but Rejected 6-2
6.4.1 Alternative Location 6-2
6.5 Project Alternatives Under Further Consideration 6-3
6.6 Alternatives Impact Summary 6-3
6.6.1 No Project/No Build Alternative (Alternative 1) 6-3
6.6.2 Maximize Existing Benchwork/Topography Alternative (Alternative 2) 6-7
6.6.3 Steeper Slopes/Reduced Earthwork Alternative (Alternative 3) 6-12
6.6.4 Freeway Adjacent Trail Avoiding Bluff Face Alternative (Alternative 4) 6-17
6.7 Environmentally Superior Alternative 6-23

1 Executive Summary

This Environmental Impact Report (EIR) is an informational document intended for the use by the City of Carpinteria (City), other public agencies, and members of the general public in evaluating the potential environmental effects of the proposed Carpinteria Rincon Trail Project (project).

California Environmental Quality Act (CEQA) Section 21002 requires that an EIR identify the significant effects of a project on the environment and provide measures or alternatives that can mitigate or avoid these effects. This Draft EIR evaluates the environmental effects associated with development of the project and discusses the manner in which the project's significant effects can be reduced or avoided through the implementation of mitigation measures or feasible alternatives to the proposed project. In accordance with Section 15130 of the CEQA Guidelines, this EIR also includes an examination of the effects of cumulative development.

This summary provides a brief synopsis of (1) the proposed project, (2) results of the environmental analysis contained within this environmental document, (3) alternatives to the proposed project that were considered, and (4) major areas of controversy and issues to be resolved by decision makers. This summary does not contain the extensive background and analysis found throughout the individual chapters within the EIR. Therefore, the reader should review the entire document to fully understand the proposed project and its environmental consequences.

1.1 Project Location and Project Site

The project is located on lands within the jurisdiction of the City and the County of Santa Barbara (Figure 2-1, Project Location). Carpinteria is a quaint seaside town located about 12 miles east of Santa Barbara; the project site is near the intersection of Highway 150 and U.S. Highway 101, at the eastern end of Carpinteria and near the Ventura County line.

The proposed trail would provide a dedicated connection from Carpinteria Avenue to Rincon Beach County Park. The trail would begin near the eastern terminus of Carpinteria Avenue, and would proceed eastward along the existing benched slope adjacent to U.S. Highway 101. However, to achieve compliance with pathway surface slope limitations under the Americans with Disability Act (ADA), the existing benched slope would be regraded. The trail would then cross the Union Pacific Railroad (UPRR) alignment on a proposed new bridge. South of the UPRR alignment, the trail would be aligned along another existing benched slope/bluff face adjacent to the Pacific Ocean; again, to achieve compliance with ADA standards, the existing benched slope would be regraded. Figure 2-2 illustrates the overall alignment of the proposed Carpinteria Rincon Trail. The trail would terminate at the western terminus of the Rincon Beach County Park parking lot.

U.S. Highway 101 is located to the north of the proposed trail alignment, the Pacific Ocean is located to the south below the Carpinteria bluffs; the UPRR rail corridor bisects the central portion of the trail alignment. Currently undeveloped bluff open space designated for visitor-serving commercial use (City of Carpinteria 2003) is located adjacent to the western end of the trail on Carpinteria Avenue, with the Rincon Beach County Park and Rincon Point residential community located adjacent the eastern terminus of the trail. Surrounding land uses are shown in Figure 2-2. Figure 2-2 also illustrates jurisdictional boundaries for the City of Carpinteria, County of Santa Barbara, Ventura County, and Caltrans right-of-way relative to the trail alignment.

The majority of the proposed trail route is located on old terraced road and rail cuts. Most of the area's natural landforms have been mechanically manipulated over the years as a result of road, highway and railroad construction activities dating back to at least the late 1800s. A small unsanctioned trail exists in some areas of the proposed trail, including the portion of the proposed trail from the railroad crossing to the Rincon Beach County

Park parking lot. At both ends of the trail are pre-existing parking areas; Rincon Beach County Park has a paved lot and at Carpinteria Avenue there is an existing dirt lot, which would continue to provide informal parking for the proposed project. On-street parking near the eastern terminus of Carpinteria Avenue is also present and can serve the proposed project. The southerly shoulder of Carpinteria Avenue from SR 150 to the terminus is approximately 600 feet in length, which could accommodate approximately 24 passenger cars or light trucks.

1.2 Project Description

The proposed project consists of a 16-foot-wide (10-foot-wide path with a 3-foot-wide paved shoulder along both sides) and approximately 2,800-foot-long shared-use trail that would provide safe access for bicyclists and pedestrians traveling from Carpinteria Avenue in the City of Carpinteria to Rincon Beach County Park in Santa Barbara County at the Ventura County line. A bridge is also proposed over the UPRR alignment to accommodate the trail. Figure 2-4 illustrates the proposed trail alignment.

The initial approximately 850 feet of the trail alignment (starting from the eastern Carpinteria Avenue terminus and heading east) is within the City of Carpinteria jurisdiction. The remaining approximately 1,950 feet of the trail alignment, including the bridge crossing over the railroad corridor, is located within the County of Santa Barbara jurisdiction.

A safety fence would also be proposed to prevent users from encountering the slope below the trail. The proposed fencing would be approximately 3.5 feet in height, and consisting either of three-rail post and rail with a concrete base, chain link or other design of similar dimensions consistent with trail fencing in the community. A 6-foot-wide swale would also be provided along the path where cut slopes are present to capture and convey stormwater.

1.2.1 Project Objectives

The proposed trail was identified by the City to meet critical safety and public access needs. Objectives of the proposed project include:

- Improve pedestrian and bicyclist safety, as well as vehicular safety, by significantly reducing unsafe and/or illegal use of the railway corridor and the U.S. Highway 101 shoulder.
- Enhance regional mobility for cyclists and pedestrians, while enhancing support of regional initiatives to promote alternative transportation modes between Carpinteria, Santa Barbara County and Ventura County, by providing a continuous bike and pedestrian path connecting Santa Barbara County to Ventura County.
- Reduce air pollution from vehicle-related air quality emissions and traffic congestion on local and regional transportation systems by promoting pedestrian and bicycle access to coastal resources and recreation opportunities via a scenic multi-use trail, as an alternative to use of motorized vehicles to access and experience such coastal resources.
- Improve the local coastal bluff environment through improved water quality of surface water run-off through stabilization of bluff slope faces that are currently eroding into the Pacific Ocean, and enhancement of sensitive coastal bluff scrub habitats in the project area. Also, avoid deposits of petroleum fuels or lubricants associated with typical motor vehicle use for transportation in close proximity to the ocean, preventing such pollutants from stormwater run-off entering the adjacent marine environment.
- Complete a critical missing link in the California Coastal Trail consistent with the goals of Senate Bill 908, including provision of a continuous trail as close to the ocean as possible, with connections to the shoreline at appropriate intervals and sufficient access to encourage public use. The California Coastal Trail is intended to offer scenic coastal vistas, wildlife viewing areas, recreational or interpretive facilities, and

other points of interest, and is recognized in regions throughout the state as a key resource or opportunity for these coastal-oriented experiences.

- Provide a coastal-oriented pathway that supports the broadest use by the public through a design that complies with standards established via the Americans with Disabilities Act (ADA).
- Provide new scenic coastal access and coastal tourism opportunities in the City of Carpinteria, Santa Barbara County, and Ventura County.

1.2.2 Discretionary Actions

A discretionary action is an action taken by an agency that calls for the exercise of judgment in deciding whether to approve or how to carry out a project. The proposed project would require consideration of the following discretionary actions by the City and by the County:

- City of Carpinteria: A conditional use permit (CUP) and coastal development permit (CDP) for the portion of the trail within the City of Carpinteria.
- County of Santa Barbara: A development plan permit (DVP), CUP and CDP for the portion of the trail within the County of Santa Barbara.

1.3 Areas of Controversy

Pursuant to Section 15082 of the CEQA Guidelines, the City circulated a Notice of Preparation (NOP) dated October 30, 2020, to begin a 30-day public scoping period, to interested agencies, organizations, and individual parties. The NOP was also sent to the State Clearinghouse at the California Office of Planning and Research. The State Clearinghouse assigned a state identification number (SCH No. 2020100582) to this EIR.

The NOP is intended to encourage interagency communication regarding the proposed action so that agencies, organizations, and individuals are afforded an opportunity to respond with specific comments and/or questions regarding the scope and content of the EIR. A public scoping meeting was held on November 17, 2020, to gather additional public input.

Comments received during the NOP public scoping period were considered during the preparation of this EIR. The NOP and comments are included in Appendix A to this EIR. In response to the NOP and public scoping meeting, 76 comment letters were received. Comments covered a variety of topics, including aesthetics, biology, cultural resources, geology, hydrology/water quality, land use/policy, noise, public services, recreation, and transportation.

1.4 Issues to Be Resolved by the City Planning Commission

The issues to be resolved by the decision-making body are whether to approve the proposed project and whether the potential significant impacts of the project with respect to aesthetics, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, and tribal cultural resources have been fully mitigated below a level of significance, or if additional measures are required. Lastly, the City would determine whether any alternative might meet the key objectives of the project while reducing its environmental impact.

1.5 Project Alternatives

Pursuant to the CEQA, Guidelines, EIRs are required to "describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives" (14 CCR 15126.6[a]). This EIR "must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation" (14 CCR 15126.6[a]). The consideration of alternatives is required even if the alternatives "would impede to some degree the attainment of the project objectives, or would be more costly" (14 CCR 15126.6[b]).

1.5.1 No Project/No Build Alternative (Alternative 1)

CEQA Guidelines Section 15126.6 requires the inclusion of a No Project/No Build Alternative (Alternative 1) to be analyzed. Under Alternative 1, no development would occur on the project site. Accordingly, the site characteristics of this alternative would be equivalent to the existing conditions for each category analyzed in Chapter 3, Environmental Analysis, of this EIR.

1.5.2 Maximize Existing Benchwork/Topography Alternative (Alternative 2)

The Maximize Existing Benchwork/Topography Alternative (Alternative 2) would involve development of the originally proposed trail, as described and analyzed in the 2015 Mitigated Negative Declaration (MND). Per the 2015 MND, development under Alternative 2 would consist of a 12-foot wide and approximately 4,000-foot-long pedestrian and bicycle shared use trail, that would also extend from the eastern end of Carpinteria Avenue, in the City of Carpinteria (City), to the Rincon Beach County Park in Santa Barbara County (see Figure 6-1, Proposed Alternatives), but following a different alignment than the proposed project. The trail alignment under Alternative 2 was configured to largely follow existing topographic benches that were originally created (and since abandoned) for previous railroad and highway alignments within the project site. Using the existing benches for the alignment was assumed to minimize the need for topographic modification and earthwork volumes. Under Alternative 2, the northern portion of the trail, from the eastern terminus of Carpinteria Avenue to the Union Pacific Railroad (UPRR) corridor, which crosses the middle of the site, traverses an engineered slope, cut during construction of the U.S. Highway 101. The trail proposed under Alternative 2 would cross the UPRR tracks in an area that consists of engineered slopes cut during construction of the UPRR. On the southern side of the UPRR alignment, new grading not associated with an existing bench was proposed, accompanied by extensive retaining walls, to connect the trail to an existing informal trail on an existing cut bench extending westward from Rincon Beach County Park that was abandoned by the UPRR in the late 1960s. The Alternative 2 trail route would be relatively flat in this area.

1.5.3 Steeper Slopes/Reduced Earthwork Alternative (Alternative 3)

Under the proposed project, to achieve compliance with pathway surface slope limitations under the Americans with Disability Act (ADA), the existing benched slope would be regraded along the entire trail alignment. On some portions of the trail, the proposed project also includes creation of a second earthwork bench on the new slope above the trail to reduce erosion potential. The Steeper Slopes/Reduced Earthwork Alternative (Alternative 3) would remove one of the earthwork benches that was originally proposed on the slope above the trail alignment, for a

portion of the trail length. The cross sections proposed under Alternative 3 are shown in Illustration 6-1, Steeper Slopes/Reduced Earthwork Alternative (Alternative 3) Trail Cross Section. Alternative 3 would result in 15,000 less cubic yards of earthwork, compared to the proposed project. Under Alternative 3, the proposed alignment would be the same as the proposed project. Similar to the proposed project, a bridge would be provided to provide safe crossing for trail users over the UPRR. However, the cross section of the trail south of the UPRR crossing, on the eastern portion of the trail alignment, would be different. More specifically, Alternative 3 would not provide benches above the trail (to control drainage and rockfall).

1.5.4 Freeway Adjacent Trail Avoiding Bluff Face Alternative (Alternative 4)

Under the Freeway Adjacent Trail Avoiding Bluff Face Alternative (Alternative 4), the proposed trail alignment would be the same as the proposed project in the area north of UPRR and within the UPRR crossing. However, south of the UPRR crossing, the proposed alignment would be shifted to the north to remain on the north side of the ridge, and adjacent to the U.S. Highway 101 corridor, compared to the proposed project which locates this segment on the slopes on the south side of the same ridge, and facing the Pacific Ocean. Further, the trail proposed under Alternative 4 would extend further to the southeast, past the Rincon Beach County Park, and terminate at Bates Road (see Figure 6-1). The proposed UPRR crossing would not change under Alternative 4 compared to the proposed project. Under Alternative 4, most of the storm water down drains proposed along the southern side of the UPRR trail crossing (see Illustration 2-6, Major Storm Drainage Components of the Project, in Chapter 2, Introduction & Project Description), would not be constructed.

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Aesthetics			
Would the project have a substantial adverse effect on a scenic vista?	Potentially Significant	**MM-AES-1: Board of Architectural Review.** The Owner/Applicant shall obtain City Architectural Review Board (ARB) and County Board of Architectural Review (BAR) approval for project design. All project elements (e.g., design, scale, character, colors, materials, and landscaping shall be compatible with vicinity development and shall conform in all respects to ARB/BAR approval. ***Plan Requirements and Timing:*** The Owner/Applicant shall submit architectural drawings of the project including photo renditions from the beach of the storm drains proposed along the bluff face for review and shall obtain final City ARB and County BAR approval prior to issuance of the Development Plan, Conditional Use Permit and Coastal Development Permit. Grading plans, if required, shall be submitted to the City's Planning Department concurrent with or prior to ARB/BAR plan filing with the Carpinteria Community Development Department or County Planning and Development. ***Monitoring***: The Owner/Applicant shall demonstrate to Community Development Department staff and Planning & Development Department compliance monitoring staff that the project has been built consistent with approved ARB/BAR design and landscape plans prior to Final Building Inspection Clearance.	Less than Significant
Would the project substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	Potentially Significant	**MM-AES-1** (see above)	Less than Significant
In non-urbanized areas, would the project substantially degrade the existing visual	Potentially Significant	**MM-AES-1** (see above)	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?			
Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	Less than Significant	None required	Less than Significant
Would the project have a cumulative effect on aesthetic resources?	Less than Significant	None required	Less than Significant
Agriculture and Forestry Resources			
Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	No Impact	None required	No Impact
Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?	No Impact	None required	No Impact
Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	No Impact	None required	No Impact

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Would the project result in the loss of forest land or conversion of forest land to non-forest use?	No Impact	None required	No Impact
Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	No Impact	None required	No Impact
Would the project have a cumulative effect on agriculture and forestry resources?	No Impact	None required	No Impact
Air Quality			
Would the project conflict with or obstruct implementation of the applicable air quality plan?	Less than Significant	None required	Less than Significant
Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	Less than Significant	None required	Less than Significant
Would the project expose sensitive receptors to substantial pollutant concentrations?	Less than Significant	None required	Less than Significant
Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	Less than Significant	None required	Less than Significant
Would the project have a cumulative effect on air quality resources?	Less than Significant	None required	Less than Significant
Biological Resources			
Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or	Potentially Significant	**MM-BIO-1: Workers Environmental Awareness Program (WEAP).** The City shall fund an approved biologist to prepare and implement a worker education and awareness program (WEAP) specific	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?		to the project. The program shall be presented to all individuals involved in the construction of the project. The program shall include information focused on sensitive vegetation communities, sensitive wildlife and plant species, and common wildlife species and their habitats and shall include, but not be limited to, the following: • Description of sensitive vegetation communities. • Workers shall be provided with photographs of sensitive biological resources including sensitive wildlife and plant species. • Workers shall be informed verbally and in writing of the various project tasks that require biological surveys and monitoring for resource protection. • Workers shall be provided with a photograph or description of the markers for active bird nests, trees, or other mitigation areas, so that they shall know these are not to be disturbed without a biological monitor present. • Workers shall be informed not to litter. All trash and litter shall be picked up and removed from the construction sites at the end of each day. • Workers shall be informed to obey a speed limit of 15 miles per hour while traveling on the project site to avoid collisions with wildlife. • Workers shall avoid driving over or otherwise disturbing areas outside the designated construction areas. ***Plan Requirements and Timing:*** The applicant shall submit the WEAP to the City of Carpinteria (City) and County of Santa Barbara (County) for review and approval prior to implementation. All workers, contractors, and visitors shall attend the WEAP prior	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		to entering the project site and performing any work. The applicant shall provide copies of the training attendance sheets to City of Carpinteria and County staff as a record of compliance with this measure on a monthly basis. The WEAP shall be reviewed and approved by the City of Carpinteria and County prior to Zoning Clearance approval. Implementation of the WEAP training shall occur prior to the start of construction and as new crew members are added to the project. ***Monitoring:*** The City of Carpinteria and County permit compliance staff will ensure compliance with the WEAP throughout construction by review of attendance sheets and hardhats, inspection of the site, and interviewing workers, as appropriate. **MM-BIO-2: Fencing.** To prevent inadvertent impacts on adjacent sensitive vegetation communities including County ESH and City ESHA, native vegetation, special-status species, and common wildlife species and their habitats, construction limits will be fenced with highly visible fencing and staked. Wildlife-safe highly visible construction fencing shall be installed to identify the limits of grading/disturbance, which would reduce potential human trampling outside of the construction limits and minimize the potential spread of non-native weeds or invasive plant species. Wildlife-safe construction fencing and flagging shall remain in place during construction and replaced as needed. ***Plan Requirements and Timing:*** The detailed fencing plan, showing the location of required fencing shall be reviewed and approved by City of Carpinteria and County staff prior to Zoning Clearance approval. This	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		condition shall be printed on all project plans. The detailed fencing plan, showing the location of fencing shall be submitted to City of Carpinteria and County staff for review and approval prior to Zoning Clearance approval. The fence shall be installed prior to the start of ground disturbing activities. ***Monitoring:*** The City of Carpinteria and County staff will inspect the project plans and site, to ensure compliance with this measure as appropriate. **MM-BIO-3: Pre-construction California Legless Lizard Survey and Relocation**. Prior to initiation of construction, capture and relocation efforts for California legless lizards shall be conducted. Trapping shall be conducted by a qualified biologist and shall include the following steps: 1. Prior to initiation of capture and relocation, a suitable receptor site shall be located. This site shall include areas with loose, moist soils occurring in scrub habitat with high coverage of deerweed (*Lotus scoparius*) or California goldenbush, in arroyo willow (*Salix lasiolepis*) thickets or in other suitable scrub or woodland habitat. 2. Capture and relocation shall take place no more than five days prior to the initiation of construction. 3. These surveys shall be performed by lightly raking loose soil, sand and leaf litter with a wooden rake for a sufficient period to determine that no legless lizards are present, or all legless lizards have been captured.	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		4. Any lizards found shall be placed in a receptacle with sand and a wet towel and relocated to the previously designated receptor site. ***Plan Requirements and Timing***: Prior to initiation of construction, capture and relocation efforts for California legless lizards shall be conducted where appropriate. Trapping shall be conducted by a qualified biologist. ***Monitoring***: The City of Carpinteria and County staff shall ensure the pre-construction survey and relocation efforts, if required, are completed prior to commencement of any earth-moving activities. **MM-BIO-4: Pre-construction Woodrat Survey and Relocation**. Prior to initiation of construction, capture and relocation efforts for woodrat shall be conducted. Trapping shall be conducted by a qualified biologist and shall include the following steps: 1. Prior to initiation of capture and relocation, a suitable receptor site shall be located. This site shall be within similar habitat and an adequate distance away from any locations that might be subject to increased human disturbance, such as adjacent to a walking path. 2. These pre-construction surveys shall be performed searching all coastal sage scrub or coastal bluff scrub within the disturbance area for middens or other sign of the species. 3. Any middens and woodrats found shall be live-trapped and relocated to the pre-determined receptor site. The midden shall be dismantled and the materials placed at the relocation site.	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		Plan Requirements and Timing: Prior to initiation of construction, capture and relocation efforts for woodrat shall be conducted where appropriate. Trapping shall be conducted by a qualified biologist. ***Monitoring***: The City of Carpinteria and County staff shall ensure the pre-construction survey and relocation efforts, if required, are completed prior to commencement of any earth-moving activities.	
Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	Potentially Significant	**MM-BIO-1** through **MM-BIO-3** (see above) **MM-BIO-5: Habitat Mitigation and Monitoring Plan.** Prior to approval of a coastal development permit, the City shall contract with a qualified biologist to develop a Habitat Mitigation and Monitoring Reporting Plan (Plan) to mitigate for impacts to County ESH/City ESHA vegetation communities. The Plan shall outline efforts to restore or enhance coastal sage scrub and coastal bluff scrub communities, and, therefore, preserve or provide wildlife habitat, in areas temporarily impacted by construction of the trail and within similar habitats adjacent to the impacted biological resources. The Plan may focus on the following: • In-kind, on-site restoration of areas where coastal sage scrub or coastal bluff scrub has been removed; • Enhancement of temporarily impacted areas on site currently occupied by ornamental, disturbed or developed areas; • Restoration of areas occupied by non-native habitats or native habitats with large components of non-native vegetation, within similar habitats adjacent to the impacted biological resources.	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		Under the Plan, a total of 3.55 acres of County ESH/City ESHA native vegetation communities temporarily impacted by vegetation clearance shall be restored on site in kind at 1:1. A total of 0.76 acres of County ESH/City ESHA native vegetation communities permanently impacted shall be mitigated on site in kind at 3:1. As mitigation potential within the project area may be insufficient for mitigating 0.76 acres of permanent impacts to County ESH/City ESHA native vegetation communities at 3:1, any additional mitigation required shall be carried out on areas within adjacent land controlled by the City or County,. Off-site mitigation for permanent impacts shall be implemented in-kind at 3:1. A qualified biologist/botanist shall develop the Plan, which shall provide specific measures to restore or enhance habitat to replace the loss of coastal sage scrub and coastal bluff scrub communities. This Plan shall be focused on adaptive management principles, and shall identify detailed enhancement areas and strategies based on the parameters outlined below, with long-term timing and monitoring requirements. The Plan shall: 1. Provide an up-to-date inventory of on-site native vegetation resources. 2. Define attainable and measurable goals and objectives to achieve through implementation of the Plan. Goals and objections shall focus on replacement of coastal sage scrub, coastal bluff scrub and rare plants removed during construction. 3. Provide site selection and justification.	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		4. Detail a restoration work plan including methodologies, restoration schedule, plant materials (seed and container plant) sourcing – locally genetic stock, and implementation strategies. 5. Provide a detailed maintenance plan to include removal of invasive non-native species. 6. Define performance standards. 7. Provide a monitoring plan to include methods and analysis of results. Also, include goal success or failure criteria, and an adaptive management plan and suggestions for failed restoration efforts. ***Plan Requirements and Timing:*** Prior to issuance of a grading permit, the City of Carpinteria shall contract with a qualified biologist to develop a Plan. The Plan shall outline efforts to restore or enhance coastal sage scrub and coastal bluff scrub communities in areas temporarily and permanently impacted by construction of the project. ***Monitoring***: The City of Carpinteria and County staff shall ensure development of the Plan and adherence to Plan measures are completed prior to commencement of any earth-moving activities. City and County staff shall periodically conduct site inspections to ensure compliance on site. Restored areas shall be monitored for five years following planting. Annual reports and the final report shall be submitted to the City and County.	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	No Impact	None required	No Impact
Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	Potentially Significant	**MM-BIO-1,** and **MM-BIO-2** (see above) **MM-BIO-6: Pre-construction Nesting Bird Surveys.** Within 30 days prior to any vegetation clearing or ground disturbance associated with construction or grading that would occur during the nesting/breeding season of native bird species potentially nesting on the site (typically mid-February through August in the project region, or as determined by a qualified biologist), the City shall have weekly surveys conducted by a qualified biologist to determine if active nests of special-status bird species, or of any bird species protected by the Migratory Bird Treaty Act or the California Fish and Game Code, are present in the disturbance zone or within 300 feet (500 feet for raptors) of the area to be disturbed. The surveys shall occur on a weekly basis, with the last survey being conducted no more than seven days prior to initiation of disturbance work. If ground disturbance is delayed, then additional pre-disturbance surveys shall be conducted such that no more than seven days will have elapsed between the survey and ground disturbance activities. The City or contractor shall provide the biologist with plans detailing the extent of proposed ground disturbance prior to the survey effort.	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		If active nests are found, including any nests for Cooper's hawk, clearing and construction within 300 feet of the nest (500 feet for raptors) shall be postponed or halted, at the discretion of the biologist, until the nest is vacated and juveniles have fledged, as determined by the biologist, and there is no evidence of a second attempt at nesting. Limits of construction to avoid an active nest shall be established in the field with highly visible construction fencing, and construction personnel shall be instructed on the sensitivity of nest areas. The results of the surveys, including graphics showing the locations of any nests detected, and any avoidance measures recommended, shall be submitted to the City and County within 14 days of completion of the pre-construction surveys to document compliance with applicable state and federal laws pertaining to the protection of native birds. ***Plan Requirements and Timing***: Pre-construction nesting bird surveys shall be completed within 30 days prior to any vegetation clearing or ground disturbance associated with construction or grading during the bird nesting season (typically mid-February to August). The surveys shall occur on a weekly basis, with the last survey being conducted no more than seven days prior to initiation of disturbance work. ***Monitoring***: The City of Carpinteria and County staff shall ensure the pre-construction nesting bird surveys and any avoidance requirements are completed prior to commencement of any earth-moving activities.	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	Potentially Significant	**MM-BIO-1, MM-BIO-2** and **MM-BIO-5** (see above)	Less than Significant
Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	No Impact	None required	No Impact
Would the project have a cumulative effect on biological resources?	Potentially Significant	**MM-BIO-1** through **MM-BIO-6** (see above)	Less than Significant
Cultural Resources			
Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	Less than Significant	None required	Less than Significant
Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	Potentially Significant	**MM-CR-1: Cultural Resource Treatment and Inadvertent Discovery Plan.** Potential impacts to cultural resources shall be minimized through development of protocols for practical adherence of mitigation measures CR-2 and CR-3 prior to and after ground disturbing construction activities associated with the proposed project. These protocols shall be outlined in a Cultural Resource Treatment Plan (CRTP). The CRTP shall be developed by a City-qualified archaeologist, meeting the Secretary of the Interior's Professional Qualification standards, prior to the implementation of ground disturbing activities and include wording of each mitigation measure CR-2-4, specific and detailed explanation for implementation of each mitigation measure and contact protocol. The CRTP shall be provided to all agency personnel, consulting tribes,	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		contractors and archaeological personnel. The existence and necessity for adherence to the CRTP shall be noted on plans, handbooks, or the like associated with tasks that may incur ground disturbance either intentionally or inadvertently. **Plan Requirements and Timing**: Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall contract with a County-qualified/City-approved archaeologist to develop the required CRTP in accordance with the above criteria. **Monitoring:** City of Carpinteria/County of Santa Barbara staff shall review and authorize the CRTP prior to the commencement of ground disturbance activities to ensure that the CRTP adheres to the criteria established in CR-1. **MM-CR-2: Workers Environmental Awareness Program (WEAP) Training**. All personnel participating in tasks that may incur ground disturbance either intentionally or inadvertently shall be briefed regarding unanticipated discoveries prior to the start of said activities. A basic presentation shall be prepared by a City-qualified archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards to inform all personnel working on the project about the archaeological sensitivity of proposed project areas. The purpose of the WEAP training is to provide specific details on the kinds of archaeological materials that may be identified during project activities and explain the importance of and legal basis for the protection of cultural resources. Each personnel shall also be instructed on the proper procedures to follow in the event that cultural resources or human remains are	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		encountered. These procedures include work curtailment or redirection, and the immediate contact of the site supervisor, qualified archaeologist and if human remains are encountered, the County coroner. **Plan Requirements and Timing**: Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall contract with a County-qualified/City-approved archaeologist to develop and conduct the required WEAP Training in accordance with the above criteria. **Monitoring:** City of Carpinteria/County of Santa Barbara staff shall ensure the required WEAP training has been conducted by attending the WEAP Training and documenting attendance of required personnel by means of a sign in sheet completed by all attendees of the WEAP Training. **MM-CR-3: Initial ground disturbing activities shall be monitored by a County-qualified/City-approved archaeologist in accordance with the following specifications:** <u>Temporary Impact Areas</u> (equipment staging and materials storage outside trail alignment) - a County-qualified/City-approved archaeologist shall monitor transport and placement activities until such time that it is reasonable to ascertain that no additional prehistoric archaeological/cultural resources are located within areas of temporary disturbance of the proposed project site. <u>Permanent Impact Areas not including bridge piling installation</u> (all areas of the trail alignment excepting the bridge approach areas on both sides of the	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		UPRR alignment) – a County-qualified /City-approved archaeologist shall monitor project implementation during the initial grading and excavation activities until such time as sufficient subsurface soil has been uncovered/excavated to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area. Bridge piling installation – a County-qualified/City-approved archaeologist shall monitor the installation of bridge pilings within intact soils and/or any soils deeper than 10 feet below current ground surface to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area. The monitor shall immediately inform equipment operators in the event archaeological resources are encountered, and shall be empowered to immediately halt construction activity in the area of the discovery until assessment can be completed, and materials recovered as appropriate (refer to CR-2 for additional detail). Monitoring reports shall be provided to the City of Carpinteria/County of Santa Barbara on a monthly basis during construction, with a final monitoring report produced at the conclusion of construction activities and provided to both the City and County. ***Plan Requirements and Timing***: Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall contract with a County-qualified/City-approved archaeologist to monitor initial ground disturbance activities in accordance with the above criteria. ***Monitoring***: City of	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		Carpinteria/County of Santa Barbara staff shall ensure the contracted archaeologist provides monitoring of initial ground disturbance activities in accordance with the above criteria through receipt of field documentation describing each day of monitoring, construction activity occurring during the monitoring, and observed soil profile conditions related to the potential for presence of archaeological resources. **MM-CR-4: In the event cultural resources are encountered, construction shall be redirected to another area of the project while data/resource assessment and recovery is accomplished.** Grading/construction shall be immediately suspended in the immediate area (no less than 50 feet from the area of the discovery) where cultural resources are encountered and temporarily redirected to another portion of the project area to allow the archaeologist to assess the nature, extent and significance of any discoveries and develop appropriate management recommendations for archaeological resource treatment consistent with Santa Barbara County Guidelines for the Implementation of California Environmental Quality Act of 1970 (as amended May 25, 2010). It is anticipated that recovery of artifacts would occur where project elements (such as pilings) would conflict with in situ artifact locations, and such artifacts would be properly archived in accordance with the project CEQA, City of Carpinteria and Santa Barbara County guidelines and the CRTP protocol. Identified remedial action for the discovery shall be completed prior to allowing construction to re-	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		commence in the area, no less than 50 feet from the area of the discovery. The project sponsors shall be responsible for funding the assessment of archaeological resources encountered during construction, and for the proper archiving or preservation of such resources. A Phase 3 Archaeological Resources Assessment and Data Recovery Report shall be prepared to document any archaeological resources encountered during construction. ***Plan Requirements and Timing***: Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall contract with a County-qualified/City-approved archaeologist to provide archaeological assessment and recovery of any archaeological resources encountered during project construction, in accordance with the above criteria. ***Monitoring***: City of Carpinteria/County of Santa Barbara staff shall ensure the contracted archaeologist assess the nature, extent and significance of any archaeological discoveries occurring during project construction and develop appropriate management recommendations for archaeological resource treatment in accordance with the project CEQA, City of Carpinteria and Santa Barbara County guidelines and the CRTP protocol.. The contracted archaeologist shall assess the nature, extent and significance of any archaeological discoveries occurring during project construction and develop appropriate management recommendations for archaeological resource treatment.	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Would the project disturb any human remains, including those interred outside of dedicated cemeteries?	Less than Significant	None required	Less than Significant
Would the project have a cumulative effect on cultural resources?	Potentially Significant	**MM-CR-1** through **MM-CR-4**	Less than Significant
Energy			
Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	Less than Significant	None required	Less than Significant
Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	Less than Significant	None required	Less than Significant
Would the project have a cumulative effect on energy resources?	Less than Significant	None required	Less than Significant
Geology and Soils			
Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: a. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42? b. Strong seismic ground shaking?	Potentially Significant	**MM-GEO-1: Seismicity.** The pedestrian bridge shall adhere to the recommendation identified in Appendix E to this Environmental Impact Report to withstand a peak ground acceleration (PGA) at the site of 0.8g generated by an earthquake of moment magnitude Mw=7.4. ***Plan Requirements and Timing:*** Prior to issuance of a grading or building permit, the City of Carpinteria/County of Santa Barbara shall verify the engineering plans include this bridge design specification. ***Monitoring***: City of Carpinteria/County of Santa Barbara public works staff or construction inspector retained for the project shall inspect bridge construction to verify conformance with this specification.	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
c. Seismic related ground failure including liquefaction? d. Landslides?		**MM-GEO-2: Differential Settlement of Pedestrian Bridge Foundations.** Bridge foundation construction shall adhere to the recommendation identified in Appendix E to this Environmental Impact Report, which specifies a deep foundation employing cast-in-drilled hole (CIDH) piles. Based on the anticipated loadings, Caltrans Standard Plan 24" CIDH Concrete Piles with 200 kips design capacity are recommended in the geotechnical report. Should hard cemented bedrock be encountered during the installation of the CIDH piles, coring may be necessary. ***Plan Requirements and Timing:*** Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall verify the engineering plans include this bridge foundation specification. ***Monitoring***: City of Carpinteria/County of Santa Barbara public works staff or construction inspector retained for the project shall inspect foundation construction to verify conformance with this specification. **MM-GEO-3: Soil Erosion/Slope Stability.** Slope construction shall adhere to the recommendations in the geotechnical report, summarized below. 1. All new fills placed along the trail alignment shall be placed as engineered geotextile-reinforced soils with subsurface/back drains. Manufactured slope profiles shall be no steeper than as specified in the Bengal 2019 geotechnical report (Appendix E), or any updated version thereof which has been prepared to address final trail design. 2. Install adequate surface drainage facilities to collect and dispose of surface runoff properly, consistent with the drainage system designs included in 30%	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		Project Plans for Rincon Multi-Use Trail (Appendix E), or as updated to address final trail design. 3. Hydro-seed the exposed newly cut and fill surfaces. Periodic watering and re-application of hydro-seed shall occur as necessary until vegetation on slope surfaces has been successfully established. These measures, in conjunction with the slope flattening and load reduction resulting from the proposed slope cutbacks, should substantially reduce the hazards associated with both slope erosion and local/surficial slope instability under both static and seismic loading conditions. ***Plan Requirements and Timing:*** Prior to issuance of a grading permit, the City of Carpinteria/County of Santa Barbara shall verify the engineering plans include the above specifications. ***Monitoring***: City of Carpinteria/County of Santa Barbara public works staff or construction inspector retained for the project shall inspect slope and drainage system construction to verify conformance with these specifications.	
Would the project result in substantial soil erosion or the loss of topsoil?	Potentially Significant	**MM-GEO-3** (see above)	
Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	Potentially Significant	**MM-GEO-3** (see above)	
Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	Less than Significant	None required	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	No impact	None required	No impact
Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	Less than Significant	None required	Less than Significant
Would the project have a cumulative effect on geology and soils resources?	Potentially Significant	**MM-GEO-1 to MM-GEO-3** (see above)	Less than Significant
Greenhouse Gas Emissions			
Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	Less than Significant	None required. However, **MM-BIO-3** (see above) would further reduce emissions related to sequestrated carbon.	Less than Significant
Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	Less than Significant	None required. However, **MM-BIO-3** (see above) would further reduce emissions related to sequestrated carbon.	Less than Significant
Would the project have a cumulative effect on greenhouse gas emissions?	Less than Significant	None required	Less than Significant
Hazards and Hazardous Materials			
Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	No Impact	None required	No Impact
Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	Potentially Significant	**MM-WAT-2** (see Hydrology and Water Quality, below)	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	No Impact	None required	No Impact
Would the project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	Potentially Significant	**MM-HAZ-1: Aerially Deposited Lead (ADL).** Surface soils within the trail alignment segment north of the UPRR corridor shall be tested for potential ADL presence to determine if such soils may be used as fill, or must be disposed in a properly licensed landfill. Using the risk based screening levels developed by California Office of Environmental Health Hazard Assessment (OEHHA), excavated soils with a lead concentration less than or equal to 80 mg/kg total lead (analyzed by USEPA Method 6010 or 6020) would be acceptable for reuse without restrictions, including as fill material within the Rincon Trail project. Excavated soils that are considered a California hazardous waste (total lead concentration greater than or equal to 1,000 mg/kg or a soluble lead concentration greater than or equal to 5 milligrams per liter [mg/L] as determined by the California Waste Extraction Test [CAWet]) or are a RCRA hazardous waste and must be disposed of in a Class I hazardous waste landfill. Excavated soils with lead concentrations below 1,000 mg/kg but above 80 mg/kg total lead may be eligible for reuse with specific restrictions to reduce or eliminate exposure, with prior written approval from DTSC, or may be disposed of at an appropriately permitted landfill. ***Plan Requirements***: ADL testing requirements and soil re-use restrictions according to identified ADL concentration shall be shown on grading and	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		building plans. Since excess soil material would be generated through proposed grading activities, soils containing greater than 80 mg/kg total lead shall not be used as fill material for the project but shall be exported off site. Soil containing total lead greater than 1,000 mg/kg shall be disposed in a Class I hazardous waste landfill. ***Timing***: Condition shall be adhered to throughout all grading and construction activities. ***Monitoring***: City of Carpinteria and County staff shall ensure measures are on plans. City and County Grading Inspectors shall spot check and ensure compliance on site.	
For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	No Impact	None required	No Impact
Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	No Impact	None required	No Impact
Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	No Impact	None required	No Impact
Would the project have a cumulative effect on hazards or hazardous materials?	Potentially Significant	**MM-HAZ-1** and **MM-WAT-1**	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Hydrology and Water Quality			
Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	Potentially Significant	**MM-WAT-1 : Obtain Coverage Under Construction General Permit.** The project shall obtain coverage under a Construction General Permit via the State Water Resources Control Board (SWRCB) (Water Quality Order 99-08-DWQ). ***Plan Requirements***: The requirement to obtain coverage from the SWRCB under a Construction General Permit shall be indicated on grading plans. ***Timing***: Evidence of coverage under a Construction General Permit shall be provided to the City of Carpinteria Public Works Department and County of Santa Barbara Public Works Division prior to the initiation of grading. ***Monitoring***: City and County Public Works staff shall confirm evidence of the Construction General Permit issuance prior to issuance of grading permits. **MM-WAT-2: Stormwater Pollution Prevention Plan.** The construction contractor shall prepare a Stormwater Pollution Prevention Plan that includes Best Management Practices (BMPs) to be implemented and monitored prior to and during construction. The following BMPs shall be incorporated into the SWPPP to minimize potential construction-related water quality impacts: 1. Disturbed areas shall be stabilized or re-vegetated prior to the start of the rainy season. The work area shall be flagged to identify its limits. Vegetation shall not be removed or intentionally damaged beyond these limits. 2. Construction materials shall be placed in designated areas where they could not enter	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		water bodies or storm drains due to spillage or erosion. 3. Waste and debris generated during construction shall be stored in designated waste collection areas and containers away from watercourses and shall be disposed of regularly. 4. During construction, washing of concrete trucks, paint, equipment, or similar activities shall occur only in areas where polluted water and materials can be contained for subsequent removal from the site. Wash water shall not be discharged to the storm drains, street, drainage ditches, creeks, or wetlands. The concrete washout area shall be isolated from water bodies, and wash water and waste shall be removed from the project site. The location of the washout area shall be clearly noted at the construction site with signs. 5. All fueling of heavy equipment shall occur in a designated area removed from water bodies and other drainages, such that any spillage would not enter surface waters. The designated refueling area shall include a drain pan or drop cloth and absorbent materials to clean up spills. The location of the fueling area shall be clearly noted at the construction site with signs. 6. Vehicles and equipment shall be maintained properly to prevent leakage of hydrocarbons and coolant and shall be examined for leaks on a daily basis. All maintenance shall occur in a designated off-site area. The designated area shall include a drain pan or drop cloth and absorbent materials to clean up spills.	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		7. Any accidental spill of hydrocarbons or coolant that may occur on the construction site shall be cleaned up immediately. Absorbent materials shall be maintained on the construction site for this purpose. 8. Special considerations for work during the rainy season: stockpiled soils should be covered at the end of the work day, and concrete pouring shall be avoided within 15 days of a forecasted rain event to allow full curing, due to its toxic nature until it has fully cured. ***Plan Requirements***: A Stormwater Pollution Prevention Plan (SWPPP) shall be prepared and implemented prior to construction and shall include the above elements. The SWPPP shall be submitted to City and County Public Works for review and approval prior to the issuance of grading permits for the project. ***Timing***: The stormwater features and BMPs shall be installed and operational prior to initiation of grading. ***Monitoring***: City and County Public Works staff shall site inspect for installation and maintenance in accordance with the approved plan and periodically thereafter to ensure proper maintenance over the duration of construction activities. **MM-WAT-3: Erosion and Sediment Control Plan.** Best available erosion and sediment control measures shall be implemented and maintained during grading and construction. Best available erosion and sediment control measures may include, but are not limited to use of sediment basins, gravel bags, silt fences, geo-bags or gravel and geotextile fabric berms, erosion control blankets, coir rolls, jute net	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		and straw bales. Construction access points shall be stabilized using gravel beds, rumble plates or other measures to prevent sediment from being tracked onto adjacent roadways. Any sediment or other materials tracked off site shall be removed the same day as they are tracked using dry cleaning methods. ***Plan Requirements and Timing***: An erosion and sediment control plan shall be submitted to and approved by City and County Public Works prior to issuance of a grading permit. The plan shall be designed and implemented to address erosion and sediment control during all phases of development of the site. ***Monitoring***: City and County Public Works shall perform site inspections throughout construction. **MM-WAT-4: Planting of Vegetation.** As soon as practicable following the completion of trail construction, the contractor shall install native plantings for biological restoration and hydro-seed slope areas with an appropriate native plant seed mix, in order to provide long-term stabilization of soils disturbed during construction . Periodic watering and re-application of hydro-seed shall occur as necessary until vegetation on slope surfaces has been successfully established. ***Plan Requirements and Timing***: Landscaping plans including biological restoration areas and hydro-seeding of manufactured slope areas submitted to Community Development Department/Planning & Development (CDD/P&D) for review prior to approval of a coastal development permit. ***Monitoring***: CDD/P&D shall site inspect vegetation plantings and	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		hydro-seed application before issuing final clearance and acceptance of the trail project. **MM-WAT-5: Periodic Inspection and Maintenance of Storm Drain Components.** Staff from City and County Parks/Public Works departments shall perform an annual inspection of stormwater components annually, prior to the on-set of the rainy season (November 1) to ensure all components are in good repair and are not blocked by debris or sediment. Any materials found to be obstructing flow in the drainage system shall be removed prior to November 1 each year. The exposed vertical portion of each of the corrugated metal pipe drains shall be examined annually for signs of corrosion, damage or openings in the drain pipe wall. Corrosion visible on the exterior pipe wall shall be treated and sealed promptly, any holes through the pipe wall shall be patched, or the damaged/affected segment shall be replaced or modified. ***Plan Requirements and Timing***: The applicant shall include these inspection and maintenance requirements in the final drainage system design plans. The plans shall be submitted to Community Development Department/Planning & Development (CDD/P&D) and City and County Public Works for review prior to approval of a grading permit. ***Monitoring***: A memo with the annual inspection notes and corrective maintenance performed shall be prepared and submitted to the City and County Public Works Departments. **MM-WAT-6:** To minimize pollutants impacting the ocean, storm drain filters/inserts shall be installed	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		in the project area storm drain inlets. The filters/inserts shall be maintained in working order. **Plan Requirements:** Prior to approval of Grading or Building Permits, the applicant shall submit plans identifying the type and location of filters/inserts to Community Development Department/Planning & Development (CDD/P&D) and City and County Public Works for review and approval. The location of such filters/inserts shall be noted on grading and building plans Filters/inserts shall be installed prior to final clearance and shall be cleaned using approved methods at least twice a year, once immediately prior to November 1 (before the start of the rainy season) and once in January. **Monitoring:** CDD/P&D and City and County Public Works shall site inspect periodically throughout the construction phase to ensure proper installation. Records of maintenance shall be maintained by City/County and shall be submitted to CDD/P&D and City and County Public Works on an annual basis prior to the start of the rainy season and for five years thereafter. After the fifth year, the records shall be maintained by the City/County. CDD/P&D and Public Works shall review the maintenance records and site inspect as needed following completion of construction to ensure periodic cleanout	

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	Less than Significant	None required	Less than Significant
Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: a. result in substantial erosion or siltation on or off site; b. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site; c. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or d. impede or redirect flood flows?	Less than Significant	**MM-WAT-1** (see above) **MM-WAT-2** (see above) **MM-WAT-3** (see above) **MM-WAT-5** (see above)	Less than Significant
In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?	No Impact	None required	No Impact
Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	No Impact	None required	No Impact
Would the project have a cumulative effect on hydrology or water quality resources?	Potentially Significant	**MM-WAT-1** through **MM-WAT-5** (see above)	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Land Use and Planning			
Would the project physically divide an established community?	No Impact	None required	No Impact
Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	Potentially Significant	**MM-AES-1; MM-BIO-1** through **MM-BIO-6** ; **MM-CR-1** through **MM-CR-4; MM-GEO-1 through MM-GEO-3; MM-HAZ-1; MM-WAT-1** through **MM-WAT-6; MM-NOI-1** through **MM-NOI-2; MM-TCR-1** (see above)	Less than Significant
Would the project have a cumulative effect on land use resources?	Potentially Significant	**MM-AES-1; MM-BIO-1** through **MM-BIO-6** ; **MM-CR-1** through **MM-CR-4; MM-GEO-1 through MM-GEO-3; MM-HAZ-1; MM-WAT-1** through **MM-WAT-6; MM-NOI-1** through **MM-NOI-2; MM-TCR-1** (see above)	Less than Significant
Mineral Resources			
Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	No Impact	None required	No Impact
Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	No Impact	None required	No Impact
Would the project have a cumulative effect on mineral resources?	No Impact	None required	No Impact
Noise			
Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise	Potentially Significant	**MM-NOI-1: Construction Hours.** Construction activity for site preparation and for future development shall be limited to the hours between 8:00 a.m. and 5:00 p.m., Monday through Friday. No construction shall occur on State holidays (e.g. Thanksgiving, Labor Day) or weekends. Construction equipment	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
ordinance, or applicable standards of other agencies?		maintenance shall be limited to the same hours. Non-noise generating construction activities are not subject to these restrictions. ***Plan Requirements*:** Two signs stating these restrictions shall be posted on-site at each end of the proposed trail. ***Timing***: Signs shall be in place prior to the beginning of and throughout all grading and construction activities. ***Monitoring***: City and County Grading Inspectors shall spot check and respond to complaints. **MM-NOI-2: Construction Equipment**. All construction equipment with engines must have original manufacturer's approved muffling devices. All stationary equipment shall be physically buffered from nearby sensitive receptors. ***Plan Requirements***: Plans shall indicate the requirement of OEM muffled equipment. ***Timing***: This condition applies when any engine driven equipment is in use at the project site during construction. ***Monitoring***: City and County Grading Inspectors shall spot check and respond to complaints**.**	
Would the project result in generation of excessive groundborne vibration or groundborne noise levels?	Less than Significant	None required	Less than Significant
For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	No Impact	None required	No Impact

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Would the project have a cumulative effect on noise resources?	No Impact	None required	No Impact
Population and Housing			
Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	No Impact	None required	No Impact
Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	No Impact	None required	No Impact
Would the project have a cumulative effect on housing and/or population resources?	No Impact	None required	No Impact
Public Services			
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:			
Fire protection?	Less than Significant	None required	Less than Significant
Police protection?	Less than Significant	None required	Less than Significant
Schools?	No Impact	None required	No Impact
Parks?	Less than Significant	None required	Less than Significant
Other public facilities?	No Impact	None required	No Impact
Would the project have a cumulative effect on public services resources?	No Impact	None required	No Impact

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Recreation			
Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	Less than Significant	None required	Less than Significant
Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	Less than Significant	None required	Less than Significant
Would the project have a cumulative effect on recreation resources?	Less than Significant	None required	Less than Significant
Transportation			
Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	Less than Significant	None required	Less than Significant
Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	Less than Significant	None required	Less than Significant
Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	Less than Significant	None required	Less than Significant
Would the project result in inadequate emergency access?	Less than Significant	None required	Less than Significant
Would the project have a cumulative effect on transportation resources?	Less than Significant	None required	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Tribal Cultural Resources			
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)? b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	Potentially Significant	**MM-CR-1** through **MM-CR-4** (see above) **MM-TCR-1: Initial ground disturbing activities shall be monitored by a Native American observer in accordance with the following specifications:** Temporary Impact Areas (equipment staging and materials storage outside trail alignment) - a Native American observer, ancestrally affiliated with the area, shall monitor transport and placement activities until such time that it is reasonable to ascertain that no additional prehistoric archaeological/cultural resources are located within areas of temporary disturbance of the proposed project site. Permanent Impact Areas not including bridge piling installation (all areas of the trail alignment excepting the bridge approach areas on both sides of the UPRR alignment) – a Native American observer, ancestrally affiliated with the area, shall monitor project implementation during the initial grading and excavation activities until such time as sufficient subsurface soil has been uncovered/excavated to ascertain that no additional prehistoric archaeological/cultural resources are located on the proposed project improvement area. Bridge piling installation – a Native American observer, ancestrally affiliated with the area, shall monitor the installation of bridge pilings within intact soils and/or any soils deeper than 10 feet below current ground surface to ascertain that no additional prehistoric archaeological/cultural	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
		resources are located on the proposed project improvement area. The monitor/observer shall immediately inform equipment operators in the event archaeological resources are encountered, and shall be empowered to immediately halt construction activity in the area of the discovery until assessment can be completed, and materials recovered as appropriate (refer to CR-2 for additional detail). Monitor reports shall be provided to the City of Carpinteria/County of Santa Barbara on a monthly basis during construction, with a final monitoring report produced at the conclusion of construction activities and provided to the City and County. ***Plan Requirements and Timing***: Prior to issuance of a grading permit, the City of Carpinteria shall contract with a Native American observer, ancestrally affiliated with the area, to monitor initial ground disturbance activities in accordance with the above criteria. ***Monitoring***: City of Carpinteria/County of Santa Barbara staff shall ensure the Native American observer, ancestrally affiliated with the area, provide monitoring of initial ground disturbance activities in accordance with the above criteria through receipt of field documentation describing each day of monitoring, construction activity occurring during the monitoring, and observed soil profile conditions related to the potential for presence of archaeological resources.	
Would the project have a cumulative effect on tribal cultural resources?	Potentially Significant	**MM-CUL-1** through **MM-CUL-4** (see above) **MM-TCR-1** (see above)	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Utilities and Service Systems			
Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	Potentially Significant	**MM-WAT-1, MM-WAT-2, MM-WAT-3,** and **MM-WAT-4** (see above)	Less than Significant
Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	Less than Significant	None required	Less than Significant
Would the project result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	Less than Significant	None required	Less than Significant
Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	Less than Significant	None required	Less than Significant
Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	Less than Significant	None required	Less than Significant
Would the project have a cumulative effect on utilities and/or service systems resources?	Potentially Significant	**MM-WAT-1, MM-WAT-2, MM-WAT-3,** and **MM-WAT-4** (see above)	Less than Significant

Table 1-1. Summary of Project Impacts

Environmental Topic	Impact?	Mitigation Measure(s)	Level of Significance After Mitigation
Wildfire			
Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?	No Impact	None required	No Impact
Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	No Impact	None required	No Impact
Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	No Impact	None required	No Impact
Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	No Impact	None required	No Impact
Would the project have a cumulative effect on wildfire?	No Impact	None required	No Impact

2 Introduction and Project Description

This chapter of the Environmental Impact Report (EIR) describes the purpose, scope and legislative authority of the EIR, the intent of the California Environmental Quality Act (CEQA) and other pertinent environmental rules and regulations, and the environmental review process. The section also includes the structure, required contents, and relationship of the EIR to other potential responsible or trustee agencies. The section closes with the detailed project description, including purpose and objectives of the proposed Carpinteria Rincon Trail Project (project).

2.1 Environmental Procedures

2.1.1 California Environmental Quality Act Compliance

The California Public Resources Code (Section 21000 et seq.) requires the preparation and certification of an EIR for any project that a lead agency determines may have a significant effect on the environment. This EIR has been prepared in compliance with all criteria, standards, and procedures of the CEQA Guidelines (14 CCR Section 15000 et seq.).

2.1.2 Notice of Preparation and Scoping

CEQA establishes mechanisms whereby the public and decision makers can be informed about the nature of a proposed project, and the extent and types of impacts that the project and its alternatives would have on the environment, should the project or alternatives be implemented. Pursuant to Section 15082 of the CEQA Guidelines, the City circulated a Notice of Preparation (NOP) dated October 30, 2020 to begin a 30-day public scoping period, to interested agencies, organizations, and parties. The NOP was also sent to the State Clearinghouse at the California Office of Planning and Research. The State Clearinghouse assigned a state identification number (SCH No. 2020100582) to this EIR.

The NOP is intended to encourage interagency communication regarding the proposed action so that agencies, organizations, and individuals are afforded an opportunity to respond with specific comments and/or questions regarding the scope and content of the EIR. A public scoping meeting was held on November 17, 2020, to gather additional public input.

Comments received during the NOP public scoping period were considered during the preparation of this EIR. The NOP and comments are included in Appendix A to this EIR. In response to the NOP and public scoping meeting, 76 comment letters were received. Comments covered a variety of topics, including aesthetics, biology, cultural resources, geology, hydrology/water quality, land use/policy, noise, public services, recreation, and transportation.

Based on the scope of the proposed project as described in the NOP, the following issues were determined to be potentially significant and are addressed in Chapter 3, Environmental Analysis, of this EIR:

- Aesthetics
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Emissions
- Hydrology and Water Quality

- Land Use and Planning
- Noise
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems

In addition, the following issues were determined to be not significant and are addressed in Chapter 4, Effects Found Not to be Significant, of this EIR:

- Agricultural and Forestry Resources
- Energy
- Mineral Resources
- Population and Housing
- Public Services
- Wildfire

2.1.3 Overview of the EIR Process

This EIR will be made available to members of the public, public agencies, and interested parties for a 45-day public comment period in accordance with Section 15105 of the CEQA Guidelines. Public comment of the EIR is intended to focus "on the sufficiency of the document in identifying and analyzing the possible impacts on the environment and ways in which the significant effects of the project might be avoided or mitigated" (14 CCR 15204). The Notice of Completion of the EIR will be filed with the State Clearinghouse as required by Section 15085 of the CEQA Guidelines. In addition, the Notice of Availability of the EIR will be distributed pursuant to Section 15087 of the CEQA Guidelines. Interested parties may provide comments on the EIR in written form. This EIR and all related technical appendices are available for review upon request during the 45-day public comment period. Due to COVID 19 shelter-in-place restrictions, all documents are available online at the City's website (https://carpinteria.ca.us/public-works/engineering-division/rincon-multi-use-trail/).

Once the 45-day public comment period has concluded, the City will review all public comments on the EIR, provide written responses to comments, and authorize revisions to the EIR text, if necessary. The final Mitigation Monitoring and Reporting Program (MMRP) will be incorporated into the Final EIR. Mitigation measures contained in the EIR consider future monitoring requirements and are written in sufficient detail to address impacts of the proposed project, referencing the appropriate implementing permits and plans. If one or more significant environmental impacts are determined, written findings for each of those significant effects, accompanied by an overriding justification and rationale for each finding in the form of a statement of overriding considerations will also be included in the Final EIR, if necessary. The Final EIR includes all comment letters received, final written response to comments, a Final EIR preface, if applicable, edits made to the EIR as a result of public review/comment, and findings of fact and statement of overriding considerations, if necessary.

2.2 Intended Uses of the EIR

According to Section 21002.1(a) of the Public Resources Code (CEQA), "[t]he purpose of an environmental impact report is to identify the significant effects of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided." This EIR provides relevant information concerning the potential environmental effects associated with construction and operation of the proposed project and identifies and evaluates potentially significant effects that may result from implementation of the proposed project. It is intended for use by decision makers and the public.

As the designated lead agency, the City has assumed responsibility for preparing this EIR. When deciding whether to approve the proposed project, the City will use the information provided in this EIR to consider potential impacts to the physical environment associated with the proposed project. The City will consider all written comments received on the EIR during the 45-day public comment period in making its decision to certify the EIR as complete and in compliance with CEQA and in making its determination whether to approve or deny the project. In the final review of the document, environmental considerations, and economic and social factors will be weighed to determine the most appropriate course of action.

After certification of the Final EIR, agencies with permitting authority over all or portions of the project, such as the County of Santa Barbara, will use the Final EIR as the basis for their evaluation of environmental effects related to the project and approval or denial of other applicable permits or authorizations.

2.3 Organization and Content of the EIR

This EIR is organized to provide a tiered project-level analysis of the potentially significant environmental impacts, mitigation measures, and alternatives for the proposed project. To describe the direct, indirect, and cumulative impacts, mitigation measures, and alternatives for the proposed project, this EIR is organized as follows:

- Chapter 1, Executive Summary, outlines the conclusions of the environmental analysis and a summary of the project as compared to the alternatives analyzed in the EIR. This section also includes a table summarizing all environmental impacts identified in this EIR along with the associated mitigation measures proposed to reduce or avoid each impact.
- Chapter 2, Introduction & Project Description, serves as a foreword to this EIR, introducing the project background and objectives, applicable environmental review procedures, and format of the EIR; describes the project location and physical environmental setting; and provides a thorough description of the proposed project and required discretionary approvals.
- Chapter 3, Environmental Analysis, provides an analysis of the potentially significant environmental impacts identified, and proposed mitigation measures to reduce or avoid any potentially significant impacts.
- Chapter 4, Effects Found Not to be Significant, address impacts that were determined to not be significant during the scoping process.
- Chapter 5, Other CEQA Considerations, discusses the project's potential Growth-Inducing Impacts, Significant and Irreversible Impacts, and Significant and Unavoidable Impacts.
- Chapter 6, Alternatives, analyzes a range of reasonable alternatives to the proposed project that would lessen or avoid significant environmental effects of the proposed project.
- Chapter 7, List of Preparers, provides a list of persons that contributed to the preparation of this EIR.
- Chapter 8, References, provides a compiled list of references cited in each section of the EIR.

2.3.1 Mitigation Monitoring and Reporting Program

The City will prepare a MMRP prior to project approval. The MMRP will include all mitigation measures outlined in the EIR, the responsible entity for implementation, implementation timing (prior to construction, during construction, post-construction), and any follow-up reporting requirements (such as submittal of materials to regulatory agencies). The City, as the designated lead agency, is responsible for enforcing and verifying that each mitigation measure is implemented as required.

2.4 Project Background and Purpose

2.4.1 Background

The City of Carpinteria is situated along the California coast where the Santa Ynez Mountains meet the Pacific Ocean. California State Highway 150 (Highway 150), U.S. Highway 101, and the coastal railroad all intersect in the southeastern entrance to the Carpinteria Valley. The transportation infrastructure improvements at this location have not included planning for or installation of a needed Class I bicycle route or pedestrian trail linking the urban area of the City of Carpinteria with the coastal resources of the County and State Beach Parks at Rincon Point as well as a connection to the newly opened bike path to Mussel Shoals. The proposed Carpinteria Rincon Trail will provide an important and desirable connection in this area and also serve as a link in the larger California Coastal Trail.

A Mitigated Negative Declaration (MND) was prepared for a proposed Carpinteria Rincon Trail in 2015. The 2015 MND analyzed a multi-use (shared-use) trail extending from the eastern terminus of Carpinteria Avenue to Rincon Beach County Park, 12–feet in width and approximately 4,000 feet in length. The design of the proposed trail analyzed in the 2015 MND would have necessitated approximately 1,000 feet of retaining wall, with a maximum height of 14 feet. Several look-out points, a stormwater cistern, and pathway lighting at sharp horizontal grade changes and within the parking areas for the trail were also proposed. Further investigation into the original design revealed that its constructability as originally designed was questionable due to unstable geologic conditions and critical US Highway 101 storm drain infrastructure in the vicinity of the original trail alignment's long switchback turn within the UPRR alignment. Further study also suggested that the entire trail alignment could not be designed to achieve an Americans with Disabilities Act of 1990 (ADA) compliant slope. Therefore, a Subsequent MND was prepared in 2019, which analyzed a simplification of the originally proposed design, including elimination of the long switch-back section within the alignment for the UPRR railway, elimination of parking lot improvements at the western trail terminus at Carpinteria Avenue, and elimination of the storm water cistern and any trail lighting. The Draft Subsequent MND was circulated for public comment, and a hearing was held by the Carpinteria Planning Commission to consider certification of the document. The Planning Commission voted to certify the Subsequent MND, and that decision was appealed to the City Council. Although the appeal of the Planning Commission's certification of the Subsequent MND was never heard by the City Council, the City Council decided to move forward with the preparation of this Focused EIR as the appropriate CEQA environmental review document in order to allow for a more in-depth analysis of key issue areas identified during consideration of the Subsequent MND.

Access between the City of Carpinteria and Rincon Beach County Park has primarily been provided by U.S. Highway 101, though the distance between the two destinations is less than one mile. The use of U.S. Highway 101 requires a bicyclist or pedestrian to travel along the highway shoulder. Many bicyclists and pedestrians use the railroad corridor as an alternative route, as evidenced by the unsanctioned trails that are present along the bluff face and along the railroad tracks connecting the City of Carpinteria with Rincon Beach County Park. Use of the unsanctioned trails in and along the railroad corridor, however, presents a public access and safety concern.

The proposed Carpinteria Rincon Trail would extend from the eastern end of Carpinteria Avenue, in the City of Carpinteria, to Rincon Beach County Park, in unincorporated Santa Barbara County. The new, shared-use trail would provide a strategic addition to Carpinteria's Coastal Vista Trail that upon completion, will connect Padaro Lane to the west and Rincon Beach County Park to the east. In addition to providing critical improvements in public safety, the completion of this trail segment would provide improved public coastal access and recreational opportunities, and enhancement of non-vehicular travel alternatives to the region's significant coastal resources. Completion of

the trail will also fill in a long-standing gap in the statewide California Coastal Trail. The trail further is a requirement of the Conditional Use Permit and Coastal Development Permit No. 09-1522-CUP/CDP granted to the California Department of Transportation (Caltrans) to construct the Linden Avenue and Casitas Pass Road Interchanges and Via Real Extension Project in order to promote regional alternative transportation objectives and to enhance recreation opportunities within the coastal zone and access to coastal resources. Regional vicinity and project site location are presented in Figures 2-1 and 2-2.

2.4.2 Purpose and Need

2.4.2.1 Purpose Statement

The fundamental purpose of the Carpinteria Rincon Trail is to establish a scenic, coastal trail offering a non-motorized ADA accessible recreational and alternative transportation trail option between the Carpinteria Bluffs and Rincon Beach County Park, consistent with the intent of the California Coastal Trail and as required by the California Department of Transportation's conditions of approval for the Linden Avenue and Casitas Pass Road Interchanges project (Conditional Use Permit and Coastal Development Permit No. 09-1522-CUP/CDP). In addition, the Carpinteria Rincon Trail shall be designed to achieve the purposes and objectives described further below.

2.4.2.2 Public Safety

Due to the lack of a direct, non-vehicular access corridor, the most traveled route to hike or bike to Rincon Beach County Park from the City of Carpinteria is along the railroad corridor, which presents a known safety risk. The railroad corridor in the City of Carpinteria is a major north-south rail route with freight and passenger trains running frequently each day. The continuous rail tracks that the Union Pacific Railroad (UPRR) recently installed are quieter than previous segmented rail track; thereby increasing safety hazards as rapidly approaching trains may not be audible. The geography of the area also constrains visual line of sight along the rail corridor such that it can be difficult to see oncoming trains far in advance. Despite these safety concerns, it is common to see individuals and groups walking and biking along the tracks from the City to Rincon Beach County Park or points in between. Many trail users are carrying surfboards and day packs, making them vulnerable to the speed of oncoming trains. Soaring recreationalists (such as parasailers and paragliders) also fly over and sometimes land on, or utilize the rail corridor to return to the launch point located on the bluff promontory above the railroad corridor. From 2015 to 2019, the Federal Railroad Administration Office of Safety records indicate that there were 25 rail incidents in Santa Barbara County, including 18 deaths and 7 injuries (FRA 2020). According to a grand jury report on rail incidents within Santa Barbara County, one railway fatality occurred within Carpinteria in the period from 2015 through 2018 (Santa Barbara County Grand Jury 2019).

2.4.2.3 Local Environmental Enhancement

Bicycling and walking are cost effective, energy efficient and provide an alternative means of travel to the use of motorized vehicles. The City of Carpinteria's mild Mediterranean climate coupled with its scenic coastal bluffs provide a favorable environment for bicycling and walking year-round. Bicycles also provide easy mobility for residents and tourists, and the proposed trail would offer a new direct, safe and efficient access route to Rincon Beach County Park, as well as a connection between Ventura and Santa Barbara counties.

Near the east end of the Coastal Vista Trail is the Carpinteria Bluffs Nature Preserve, which provides visitors with a unique overlook along one of the last remaining undeveloped coastal regions along the South Coast. In addition,

the 21 acre parcel adjacent to the eastern terminus of Carpinteria Avenue (formerly known as Carpinteria Bluffs Area III) has recently been purchased by the Land Trust for Santa Barbara County and subsequently deeded to the City of Carpinteria to be preserved in perpetuity as a public open space preserve (Rincon Bluffs Preserve) that will provide additional passive recreation and scenic enjoyment opportunities. Commonly seen from the bluffs are white-tailed kites, turkey vultures, red-tailed hawks, American kestrels, brush bunnies, bottlenose and common dolphins, California sea lions, Pacific harbor seals, California brown pelicans, western gulls, and migrating gray whales (City of Carpinteria 2009). Views of the Northern Channel Islands and Channel Islands National Marine Sanctuary are also afforded. The proposed trail provides an extension to the Carpinteria Bluffs trail system, allowing hikers and bicyclists to continue along the coastal bluffs into neighboring coastal resource areas of interest.

2.4.2.4 Recreational Opportunities

The City of Carpinteria is a popular year-round tourist attraction, with close to two million visitors a year (City of Carpinteria 2009). The City's beach is recognized as one of the safest and cleanest beaches in Santa Barbara County. Northeast of the City beach is the Carpinteria Salt Marsh Nature Park, which is one of the few remaining healthy coastal wetland systems in California, and a well-used hiking area. East of the City beach is Carpinteria State Beach Park, one of California's most popular camping and recreation areas.

Within the State Beach Park, Carpinteria Creek flows out to the ocean. This creek is currently the focus of a successful steelhead restoration effort. East of the State Beach, the coastal bluffs begin where the Casitas Pier is located. Part of the coastal bluff is also located within the Carpinteria Bluffs Nature Preserve and the newly created Rincon Bluffs Preserve. Located just east of the Casitas Pier is the Pacific harbor seal sanctuary, a natural haul out and pupping rookery where over 500 of these pinnipeds have been observed on shore at once (City of Carpinteria 2009).

Just east of the City of Carpinteria, Rincon Beach County Park exists and offers picnic areas, beach access, and parking areas for beach-goers and cyclists using the regional coastal bike path that connects to the City of Ventura. Rincon Beach County Park is operated by the County of Santa Barbara. Visitors to the City of Carpinteria, including campers at the State Beach, often travel to the Rincon Beach County Park for recreational activities and to view the world-famous Rincon surf break. The ocean bluffs along the eastern portion of the City and extending into the Rincon Beach County Park area also produce updrafts from ocean related winds, which create soaring opportunities generally above the top of the ocean bluffs alignment for paragliders and other soaring recreationalists. Offshore, the Channel Islands National Marine Sanctuary and Channel Islands National Park provide additional recreation opportunities. The City aims to complete the Carpinteria Coastal Vista Trail for the recreational use of the surrounding communities and to provide public access and connections to these natural places.

The proposed Carpinteria Rincon Trail would close a gap in the California Coastal Trail at a critical location. The function of the Carpinteria Rincon Trail as the local segment of the California Coastal Trail means the proposal must also align with the goals established for the California Coastal Trail. Some of the introductory information in the Senate Bill 908 Report (Completing the California Coastal Trail) is informative, and includes the stated goals for the trail, importantly the following:

1. Provide a continuous trail as close to the ocean as possible, with connections to the shoreline at appropriate intervals and sufficient transportation access to encourage public use.
5. Design the CA Coastal Trail to provide a valuable experience for the user by protecting the natural environmental and cultural resources while providing public access to beaches, scenic vistas, wildlife viewing areas, recreational or interpretive facilities, and other points of interest.

6. Create linkages to other trail systems and to units of the State Park system, and use the Coastal Trail system to increase accessibility to coastal resources from urban population centers.

   (Source: http://californiacoastaltrail.info/cms/pages/trail/done.html)

The proposed Carpinteria Rincon Trail would link the Carpinteria Bluffs and Rincon Beach County Park, and would also extend the Pacific Coast Bikeway, thereby improving recreation opportunities along the South Coast. Eventually, upon completion of other segments, the Carpinteria Coastal Vista Trail will connect to Carpinteria State Beach Park and the Carpinteria Salt Marsh Preserve and on to Padaro Lane, west of the City. The Pacific Coast Bikeway currently extends east to Seaside and eventually to Ventura's Seaside Wilderness Park and Emma Wood State Park. From Emma Wood State Park, cyclists and pedestrians can join the California Coastal Trail to the Ventura County Fairgrounds and the City of Ventura waterfront. Figure 2-3, Existing Trail Network, presents the proposed Carpinteria Rincon Trail segment in the context of the Carpinteria Coastal Vista Trail.

2.4.3 Objectives

The proposed trail was identified by the City to meet critical safety and public access needs. Objectives of the proposed project include:

- Improve pedestrian and bicyclist safety, as well as vehicular safety, by significantly reducing unsafe and/or illegal use of the railway corridor and the U.S. Highway 101 shoulder.
- Enhance regional mobility for cyclists and pedestrians, while enhancing support of regional initiatives to promote alternative transportation modes between Carpinteria, Santa Barbara County and Ventura County, by providing a continuous bike and pedestrian path connecting Santa Barbara County to Ventura County.
- Reduce air pollution from vehicle-related air quality emissions and traffic congestion on local and regional transportation systems by promoting pedestrian and bicycle access to coastal resources and recreation opportunities via a scenic multi-use trail, as an alternative to use of motorized vehicles to access and experience such coastal resources.
- Improve the local coastal bluff environment through improved water quality of surface water runoff through stabilization of bluff slope faces that are currently eroding into the Pacific Ocean, and enhancement of sensitive coastal bluff scrub habitats in the project area. Also, avoid deposits of petroleum fuels or lubricants associated with typical motor vehicle use for transportation in close proximity to the ocean, preventing such pollutants from stormwater runoff entering the adjacent marine environment.
- Complete a critical missing link in the California Coastal Trail consistent with the goals of Senate Bill 908, including provision of a continuous trail as close to the ocean as possible, with connections to the shoreline at appropriate intervals and sufficient access to encourage public use. The California Coastal Trail is intended to offer scenic coastal vistas, wildlife viewing areas, recreational or interpretive facilities, and other points of interest, and is recognized in regions throughout the state as a key resource or opportunity for these coastal-oriented experiences.
- Provide a coastal-oriented pathway that supports the broadest use by the public through a design that complies with standards established via the Americans with Disabilities Act (ADA).
- Provide new scenic coastal access and coastal tourism opportunities in the City of Carpinteria, Santa Barbara County, and Ventura County.

2.5 Location

The project is located on lands within the jurisdiction of the City of Carpinteria and the County of Santa Barbara (Figure 2-1). Carpinteria is a quaint seaside town located about 12 miles east of Santa Barbara near the intersection of Highway 150 and U.S. Highway 101, near the Ventura County line.

The proposed trail would provide a dedicated connection from Carpinteria Avenue to the Ventura County line through Rincon Beach County Park. The trail would begin near the eastern terminus of Carpinteria Avenue, and would proceed eastward along the existing benched slope adjacent to U.S. Highway 101. However, to achieve compliance with pathway surface slope limitations under the Americans with Disability Act (ADA), the existing benched slope would be regraded.

The proposed trail design includes a clear-span bridge over the UPRR alignment. The bridge would be approximately 160-feet-long, with a width of between 14-feet and 16-feet (clear width, measured inside the bridge rails).

At the south end of the UPRR bridge, the trail would continue eastward along a benched slope on the ocean-facing side of the bluff. The benched slope would be graded to be in compliance with ADA pathway slope requirements, and to provide long-term stability for the trail in accordance with engineering safety standards. Figure 2-2 illustrates the overall alignment of the proposed Carpinteria Rincon Trail. The proposed route is grade and horizontally separated from the U.S. Highway 101 freeway and the railroad corridor.

2.6 Surrounding Land Uses and Environmental Setting

Carpinteria and its surrounding area contain important natural resources, including outstanding beaches, the Carpinteria Salt Marsh Preserve, Carpinteria Reef, a Pacific harbor seal sanctuary, and coastal bluff, foothill and creek habitats supporting numerous plant communities and wildlife species.

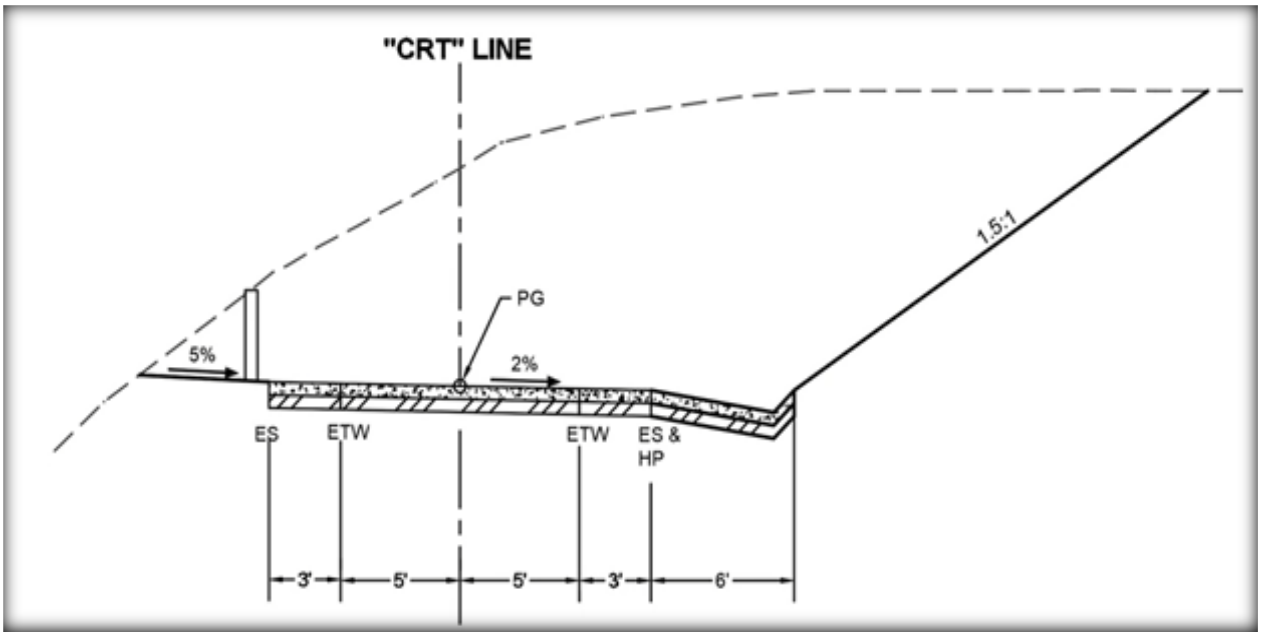
U.S. Highway 101 is located to the north of the proposed trail alignment, the Pacific Ocean is located to the south below the Carpinteria bluffs; the UPRR rail corridor bisects the central portion of the trail alignment. Currently undeveloped bluff open space designated for visitor-serving commercial use (City of Carpinteria 2003) is located adjacent to the western end of the trail on Carpinteria Avenue, with the Rincon Beach County Park and Rincon Point residential community located adjacent the eastern terminus of the trail. Surrounding land uses are shown in Figure 2-2. Figure 2-2 also illustrates jurisdictional boundaries for the City of Carpinteria, County of Santa Barbara, Ventura County, and Caltrans right-of-way relative to the trail alignment.

The majority of the proposed trail route is located along and above U.S. Highway 101, and the alignment is completely within terrain that has been previously modified for transportation projects, which are now represented by old terraced road and rail cuts. Most of the area's natural landforms have been mechanically manipulated over the years as a result of road, highway and railroad construction activities dating back to at least the late 1800s. A small unsanctioned trail exists in some areas of the proposed trail, including the portion of the proposed trail from the railroad crossing to the Rincon Beach County Park parking lot. At both ends of the trail are pre-existing parking areas; Rincon Beach County Park has a paved lot and at Carpinteria Avenue there is an existing dirt lot, which would continue to provide informal parking for the proposed project.

The first portion of the trail, from the eastern terminus of Carpinteria Avenue to the UPRR corridor, traverses an engineered slope, cut during construction of U.S. Highway 101. The trail would cross the UPRR tracks in an area that

consists of engineered slopes cut during construction of the current railroad corridor. The second portion of the trail, from the UPRR crossing to the westernmost end of Rincon Beach County Park, is currently occupied by an existing informal trail on an existing cut bench that was abandoned by the railroad in the late 1960's. This informal trail is mostly flat in this area and its surface is mostly dirt; however, some original asphalt paving associated with the previous rail use remains in some areas. The top of the bluff formation in this area was also used for the previous alignment of State Route 2 (precursor to the current U.S. Highway 101 alignment) and abandoned in the 1960s. Remnants of the abandoned road alignment are still visible along the top of the bluff formation and overhang the existing informal trail. A few abandoned and current underground utilities and infrastructure exist in or nearby the proposed route, including but not limited to fiber optic lines, a sewer main, and storm drain infrastructure.

2.7 Project Description



The proposed project consists of a 16-foot wide (10-foot wide path with a 3-foot wide paved shoulder along both sides) and approximately 2,800-foot long shared-use trail that would provide safe access for bicyclists and pedestrians traveling from Carpinteria Avenue in the City of Carpinteria to Rincon Beach County Park in Santa Barbara County at the Ventura County line. Figure 2-4, Site Plan, illustrates the proposed trail alignment.

The initial approximately 850 feet of the trail alignment (starting from the eastern Carpinteria Avenue terminus and heading east) is within the City of Carpinteria jurisdiction. The remaining approximately 1,950 feet of the trail alignment, including the bridge crossing over the railroad corridor, is located within the County of Santa Barbara.

The Rincon Trail is planned to function as the local section of the California Coastal Trail, connecting on the south end to the recently completed bicycle and pedestrian path constructed with the Caltrans HOV project from Carpinteria to the Mobil Pier in Ventura County. On the north, the Rincon Trail would currently connect with Carpinteria Avenue, which provides continuous bicycle and pedestrian travel from the eastern to western end of Carpinteria City limits. From Carpinteria Avenue an alternate route exists for cyclists and pedestrians south along Linden Avenue to 4th Street eastward through Carpinteria State Beach, and connecting with the Carpinteria Bluffs Trail, which is nearly continuous to the location of the Rincon Trail western trail head. The City is in the process of acquiring an easement over two parcels that would complete the Carpinteria Bluffs Trail from the Carpinteria State Beach to the Rincon Trail. In the near term, the City will also be completing additional trail and public parking improvements in conjunction with the recent acquisition of the Rincon Bluffs Preserve property, which is located immediately adjacent to the western terminus of the proposed Rincon Trail. The Rincon Bluffs Preserve improvements will serve to further enhance public recreational and alternative transit options in the area.

A cross-section illustrating the proposed trail configuration is provided below (following page). Note that the "travel" area of the path is intended to be 10 feet in width, but a paved 3-foot shoulder is provided along both sides (which allows additional space for pedestrians or cyclists to pass other trail users or navigate when opposite direction travelers are present). The paved 3-foot shoulder also improves access for emergency service and maintenance vehicles.

A safety fence is also illustrated (on the left) to prevent users from encountering the slope below the trail. The proposed fencing would be approximately 3.5 feet in height and consisting either of three-rail post and rail with a concrete base, chain link or other design of similar dimensions consistent with trail fencing in the community. A 6-foot wide swale would also be provided along the path where cut slopes are present to capture and convey stormwater, as shown in Illustration 2-1.

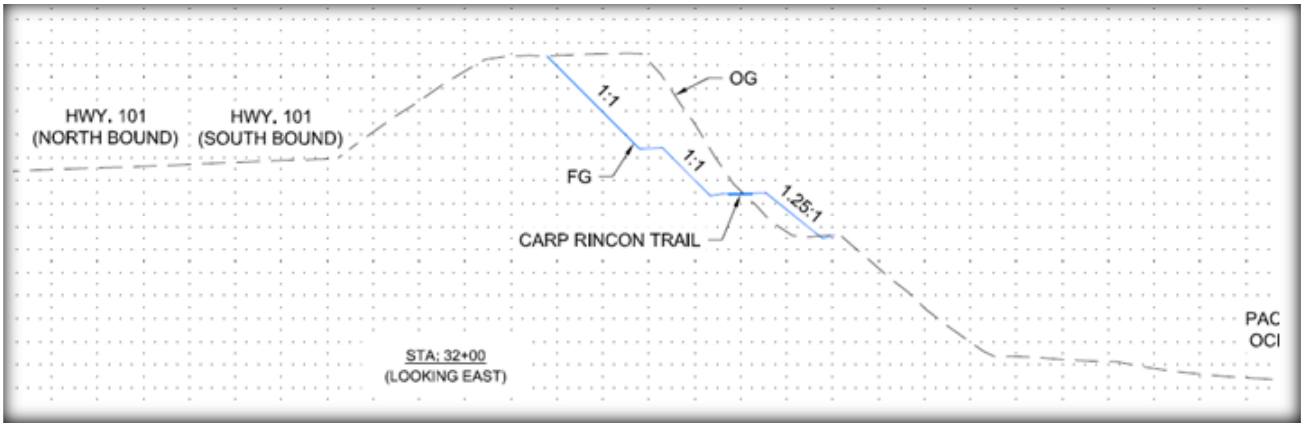
2.7.1 Earthwork

The trail design has been engineered to incorporate pathway travel slopes that are consistent with ADA standards. The design also avoids an area with deep landslides, south and west of the crossing point over the UPRR alignment, which were identified in geotechnical testing. The majority of project earthwork will occur on existing engineered slopes that were constructed as part of past road, highway and railroad projects; these manufactured slope faces in many instances are steeper than natural conditions, leading to increased erosion potential, which the project intends to correct though re-contouring to reduce slope angles. Construction of the proposed path design would involve a total of 107,386 cubic yards of cut, a total of 14,860 cubic yards of fill, and the export of a total of 92,526 cubic yards of earth material. The re-contouring of existing engineered topography along the path alignment to achieve more stable conditions is described in more detail below.

2.7.1.1 Pathway Slope Profiles Adjacent to U.S. Highway 101 (North of UPRR Alignment)

Cut slopes above the trail would have a slope ratio of 1.25:1, fill slopes (which would be present only adjacent to the bridge over the UPRR corridor) are proposed to have slope ratios between 2:1 and 4:1. The earthwork would alter the elevation of the bench on which the trail would be aligned, but would not alter the top elevation of the

existing hill/ridge as it remains from previous earthwork modification in this section of the alignment. Illustration 2-2 presents the existing versus proposed slope profile for earthwork modifications above and below the trail.



SOURCE: Bengal Engineering

Illustration 2-2 Pathway Grading Profile Adjacent to U.S. Highway 101

Note in Illustration 2-2 that the proposed cut-slopes are similar in profile to those created during the U.S. Highway 101 construction. Some portions of the trail along the north side of the UPRR alignment would not have the upper bench shown above, where Carpinteria Avenue is in close proximity to U.S. Highway 101.

2.7.1.2 Pathway Slope Profiles South of UPRR Alignment

For the portion of the path on the ocean side of the UPRR alignment, the regraded slopes for the trail "bench" would employ cut slopes with a ratio of 1:1 above the trail, while a ratio of 1.25:1 would be employed for the "reinforced" fill slopes below the trail. The earthwork would alter the elevation of the bench on which the trail would be aligned, but would not alter the top elevation of the hill/ridge. Illustration 2-3 presents an example of the existing versus proposed slope profile for earthwork modifications above and below the trail.

SOURCE: Bengal Engineering

Illustration 2-3 Pathway Grading Profile South of UPRR Alignment

Note in Illustration 2-3 that the proposed cut-slopes are less-steep than those constructed for the railroad alignment in this area (illustrated as "OG" above) in order to provide an adequate margin of safety for the long-term stability of the slopes. Note there is also a proposed bench above the trail that would intercept rainwater and also prevent rock fall on the path below. The bench would also provide maintenance access for the manufactured slopes and path.

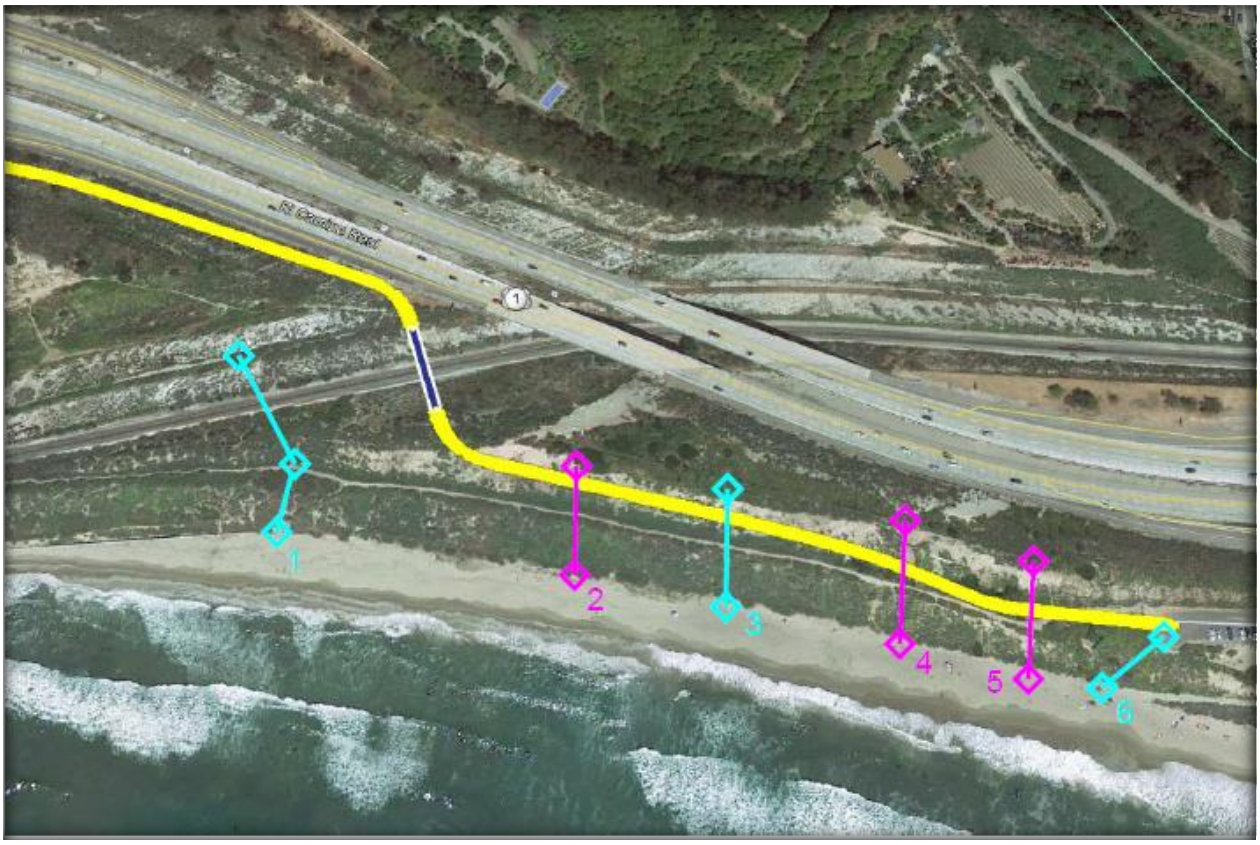
2.7.2 Bridge Detail

The bridge design includes a clear-span bridge over the UPRR alignment. The bridge would be approximately 160-feet-long, with a width of between 14-feet and 16-feet (clear width, measured inside the bridge rails). The bridge would be supported on foundations using deep piles. The bridge would be a factory-built steel structure, painted to protect it from corrosion because of the proximity to the ocean. The bridge would be delivered substantially complete, likely in 2 sections. After the two "halves" of the bridge are bolted together this unit would be lifted into place, likely using two cranes, one situated on either side of the UPRR tracks. Once the "factory made" portion of the bridge is in place, a concrete bridge deck would be cast-in-place, and the wing walls and abutment back walls would be completed. Illustration 2-4 provides an example of a similar scale pre-fabricated steel bike path bridge. Note the bridge for the Carpinteria Rincon Trail will have some similar characteristics, except that UPRR requires high "safety fences" for the full length of the bridge to protect the trains from potential objects thrown from the bridge platform.

SOURCE: Bengal Engineering

Illustration 2-4 Representative Steel Framed Bike Path Bridge

The approximate location of the Carpinteria Rincon Trail bridge over the UPRR alignment (the magenta colored line) is shown in Illustration 2-5. The relative elevation of the bridge can be compared to the U.S. Highway 101 bridge over the UPRR corridor (just above the elevation of the pictured train).



SOURCE: Bengal Engineering

Illustration 2-5 Approximate Profile and Location for Rincon Trail Bridge

2.7.3 Drainage

The proposed trail project includes an integrated storm drainage system to ensure stormwater runoff from the recontoured bluff face and the trail surface is conveyed to the ocean efficiently, avoiding potential erosion of slopes along the trail alignment. Along the portion of the trail north of the UPRR alignment, a concrete swale (v-ditch) would convey water along the trail edge, where it would be released into an existing surface drainage swale now serving U.S. Highway 101. This swale connects to an existing storm drain that crosses underneath the UPRR alignment, and then descends to the beach level. This storm drain is labelled as "1" in Illustration 2-6. No improvements are proposed to storm drain 1, and the trail storm drain volumes contributed to this storm drain would be negligible compared to existing flows already contributed from portions of U.S. Highway 101.

SOURCE: Bengal Engineering

Illustration 2-6 Major Storm Drainage Components of the Project

On the south side of the UPRR alignment, a concrete drainage swale would also carry surface runoff from the recontoured bluff face and trail, conveying such drainage along the side of the trail until it reaches one of the storm drain inlets lower in elevation. A total of 5 vertical storm drains would convey this stormwater from the trail to the beach elevation, for the trail segment south of the UPRR alignment (refer to Illustration 2-6). Drains No. 3 and No. 6 (shown in light blue in Illustration 2-6) are existing and would be re-used, including rehabilitation of existing piping; drains No. 2, No. 4, and No. 5 (shown in magenta in Illustration 2-6) would be newly developed for the project.

The new vertical storm drains would be installed during earth work for the trail and adjacent slopes, and would be buried to cross beneath the trail and then descend on the slope face to outlet at the beach elevation. Buried portions of the storm drain would be constructed of high-density plastic, transitioning to galvanized steel for the aboveground portions.

The majority of the length of the proposed trail is outside of the City of Carpinteria's and Santa Barbara County's respective 2013 Statewide Phase II Small Municipal Separate Storm Sewer (MS4) General Permit (2013 General Permit) boundaries, and thus the majority of the project is exempt from the Post Construction Requirements (PCRs) of the 2013 General Permit. Because the project is not regulated by the 2013 General Permit and PCRs therein, the project may not fully avoid potential water quality impacts unless it achieves compliance with active construction and post-construction requirements of the Statewide Construction General Permit (CGP). The proposed Rincon Trail drainage facilities are focused on the efficient collection and delivery of stormwater runoff from the trail surface to the ocean, no stormwater treatment components are included.

2.7.4 Trail/Path Features

The trail would be constructed of concrete to ensure longevity and low maintenance, including a concrete surface on the proposed bridge structure over the UPRR alignment. The trail width would be wide enough for bicyclists and hikers to easily ride and walk side-by-side, and pass others headed in the opposite direction. The 16-foot trail would also accommodate emergency and maintenance vehicle access to the project area. The bridge over the UPRR alignment would provide safe crossing for trail users over the railway and reduce the risk of accidents or fatalities associated with unsanctioned rail crossings. Additionally, the project would feature native plantings designed to transition to natural communities and restored native plant areas along the trail alignment. Vegetation and landscaping would consist of native trees and low-lying, native shrubs and groundcover. Native vegetation that would be removed along the immediate side of the trail for grading and improvements would be restored, and additional plantings to offset permanent removal of native vegetation beneath the trail alignment would be accomplished. Existing plant species in the project area that would have the potential to be restored include quail bush (*Atriplex lentiformis*), California sagebrush (*Artemisia californica*), California bush sunflower (*Encelia californica*) and lemonade berry (*Rhus integrifolia*).

Security fencing and/or railings would be provided along portions of the trail for safety and route guidance, and would also inhibit users from deviating off the designated path to ensure protection of adjacent native restoration plantings. The proposed fencing would be either three-rail post and rail with a concrete base, chain link or other design of similar dimensions consistent with trail fencing in the community, approximately 42 inches in height. A fence may be required along one or both sides of the trail depending on the characteristics of that segment's location, such as adjacency to bluff or slope features. As mentioned above, the bridge crossing would include chain link fence and a safety rail along both sides of the trail that lead up to the bridge.

Vehicle parking at the trailhead on the western end would be provided via an existing dirt lot adjacent to the Carpinteria Avenue terminus; no improvements to the informal dirt parking lot are proposed. The southern shoulder of Carpinteria Avenue, from SR 150 to the existing cul-de-sac terminus, provides parking for approximately 24 vehicles, and would be a short walk from the proposed western trail head. Signage would be installed to delineate parking and direct users toward the trail. Visitors traveling both northbound and southbound on U.S. Highway 101 would access Carpinteria Avenue from exit 84 for Highway 150 towards Ojai/Lake Casitas. Carpinteria Avenue is paved for approximately one-tenth of a mile past the existing dirt parking lot. The Rincon Beach County Park parking lot is also accessible from U.S. Highway 101 to the east. Exit 83 for Bates Road off of Highway 101 provides access to Rincon Point Road. Parking facilities and other park amenities are currently provided at Rincon Beach County Park; as such, no additional amenities are proposed in that location. A public parking lot within the eastern portion of the newly acquired Rincon Bluffs Preserve (a separate, future project in the same vicinity) would also serve both the open space preserve and the Rincon Trail once completed.

A sign providing a map of the trail and trail rules (including on-leash requirements for dogs) would be placed near the existing dirt parking lot at the western end of the trail. Additional wayfinding signs would be provided along the trail and up to four interpretive nature signs to illustrate surrounding biology, local geography and history of the area would also be provided.

Fire hydrants are currently provided at Rincon Beach County Park; no additional fire hydrants would be provided along the proposed trail. In the event of a wildfire, Carpinteria-Summerland Fire Protection District crews could access the trail from the west via Carpinteria Avenue or from the east via Rincon Beach County Park parking lot. Restrooms are also available at Rincon Beach County Park, which would serve users of the proposed trail as no additional restrooms would be provided along the trail. Restrooms are also contemplated as part of the future improvements to the Rincon Bluffs Preserve.

2.7.5 Construction

The shared-use trail would be 16 feet in paved width, including 10-feet for the travel lanes and a three-foot paved shoulder along each side (which would be available as additional travel way for navigating around pedestrians or cyclists that are within the main travel lanes). During construction of the trail, an additional one to four feet of area may be potentially impacted during grading for a total impact width of up to 20 feet depending on the trail location. However, virtually the entire trail length would be located on abandoned road or railway cuts or existing terraces that have been disturbed previously rather than on natural landforms and slopes.

To prepare the site for trail construction, the trail bench and slopes above and below the trail alignment would be rough graded to meet the proposed finished grade surface. The first stage would involve separate crews performing earthwork on the north side and south side of the UPRR alignment; the northern crew would use the Carpinteria Avenue extension for access, while the southern crew would access the earthwork areas from the Rincon Beach County Park parking area. Storm drain construction would be integrated with the rough grading activities. The second stage would involve bridge construction. Construction would begin with the bridge foundations, using deep piles. The bridge would be a factory-built steel structure. The bridge would be delivered substantially complete but in two sections. After the two "halves" of the bridge are bolted together this unit would be lifted into place using two cranes, one situated on either side of the UPRR tracks. Once this "factory made" portion of the bridge is in place, the concrete bridge deck will be cast-in-place, and the wing walls and abutment back walls will be completed. After the bridge is in place, finish grading of the path will occur. Next, the path surfacing, consisting of aggregate base under concrete paving would be completed. The final major stage would include the landscaping installation, habitat restoration activities, and erosion protection. Other final touches would include fencing, signing, and the path striping

Cut material on site would be utilized for the necessary fill material, as feasible. Excess cut volume would be exported from the site by haul trucks and transferred to the closest available receiver site. The quality of the excess graded material is anticipated to be suitable for fill material, which could be utilized by local on-going and future construction projects; several landowners in close proximity to the project site have also expressed interest in receiving soil. However, if at the time of project construction there are no local receiver sites for fill material, the project graded material would be transported to the closest transfer station or transported directly to the regional landfill.

It is anticipated that construction of the proposed project would commence in March 2022 and reach completion by March 2024, for a total construction window of approximately two years. The trail would be constructed using common earthwork equipment such as a dozer, excavator, dump truck, and roller. Removal of vegetation located within or adjacent to the proposed trail route would be conducted using a crawler tractor or similar small loader or backhoe. A haul truck would transport removed vegetation to the Marborg Construction and Demolition Recycling Center, located at 119 N. Quarantina Street in Santa Barbara, California or other green waste collection facility; construction waste would also be delivered to Marborg or another similar recycling facility in Ventura County.

Temporary fencing would be installed where necessary and would be removed after construction activity in the area is complete. Permanent safety rails and fencing would consist of wood and cement for the post and rail fences and steel for the chain link fences and would be installed using small tractors, such as a skid steer, and other hand tools. A small excavator would also be used to construct the proposed concrete v-trench that would guide runoff water to the proposed storm drain system. Paving of the proposed trail would take approximately one to three weeks and would require use of medium-sized tractors and trucks.

The proposed bridge structure would be fabricated off site. The bridge would be delivered by truck and installed using cranes, also delivered by truck. Additional smaller pieces of equipment, including welders and concrete saws, may also be utilized to link the bridge to the trail ramps. Construction of the overhead bridge would not interfere with railroad use in accordance with UPRR requirements, and may occur at night if required by UPRR to avoid daily train operations.

Signs would be installed after completion of the trail and bridge. Signs would be installed using a jackhammer and hand tools. Landscaping along the proposed trail would also occur after completion of trail construction. Revegetation of native plants and planting of the new slope faces would be achieved by hydroseeding using hydroseed trucks. Container plants would also be incorporated in the landscape palette. To ensure successful establishment of plantings, the planted vegetation would be watered weekly or bi-monthly depending on the season during the first two years of project operation through use of a water truck.

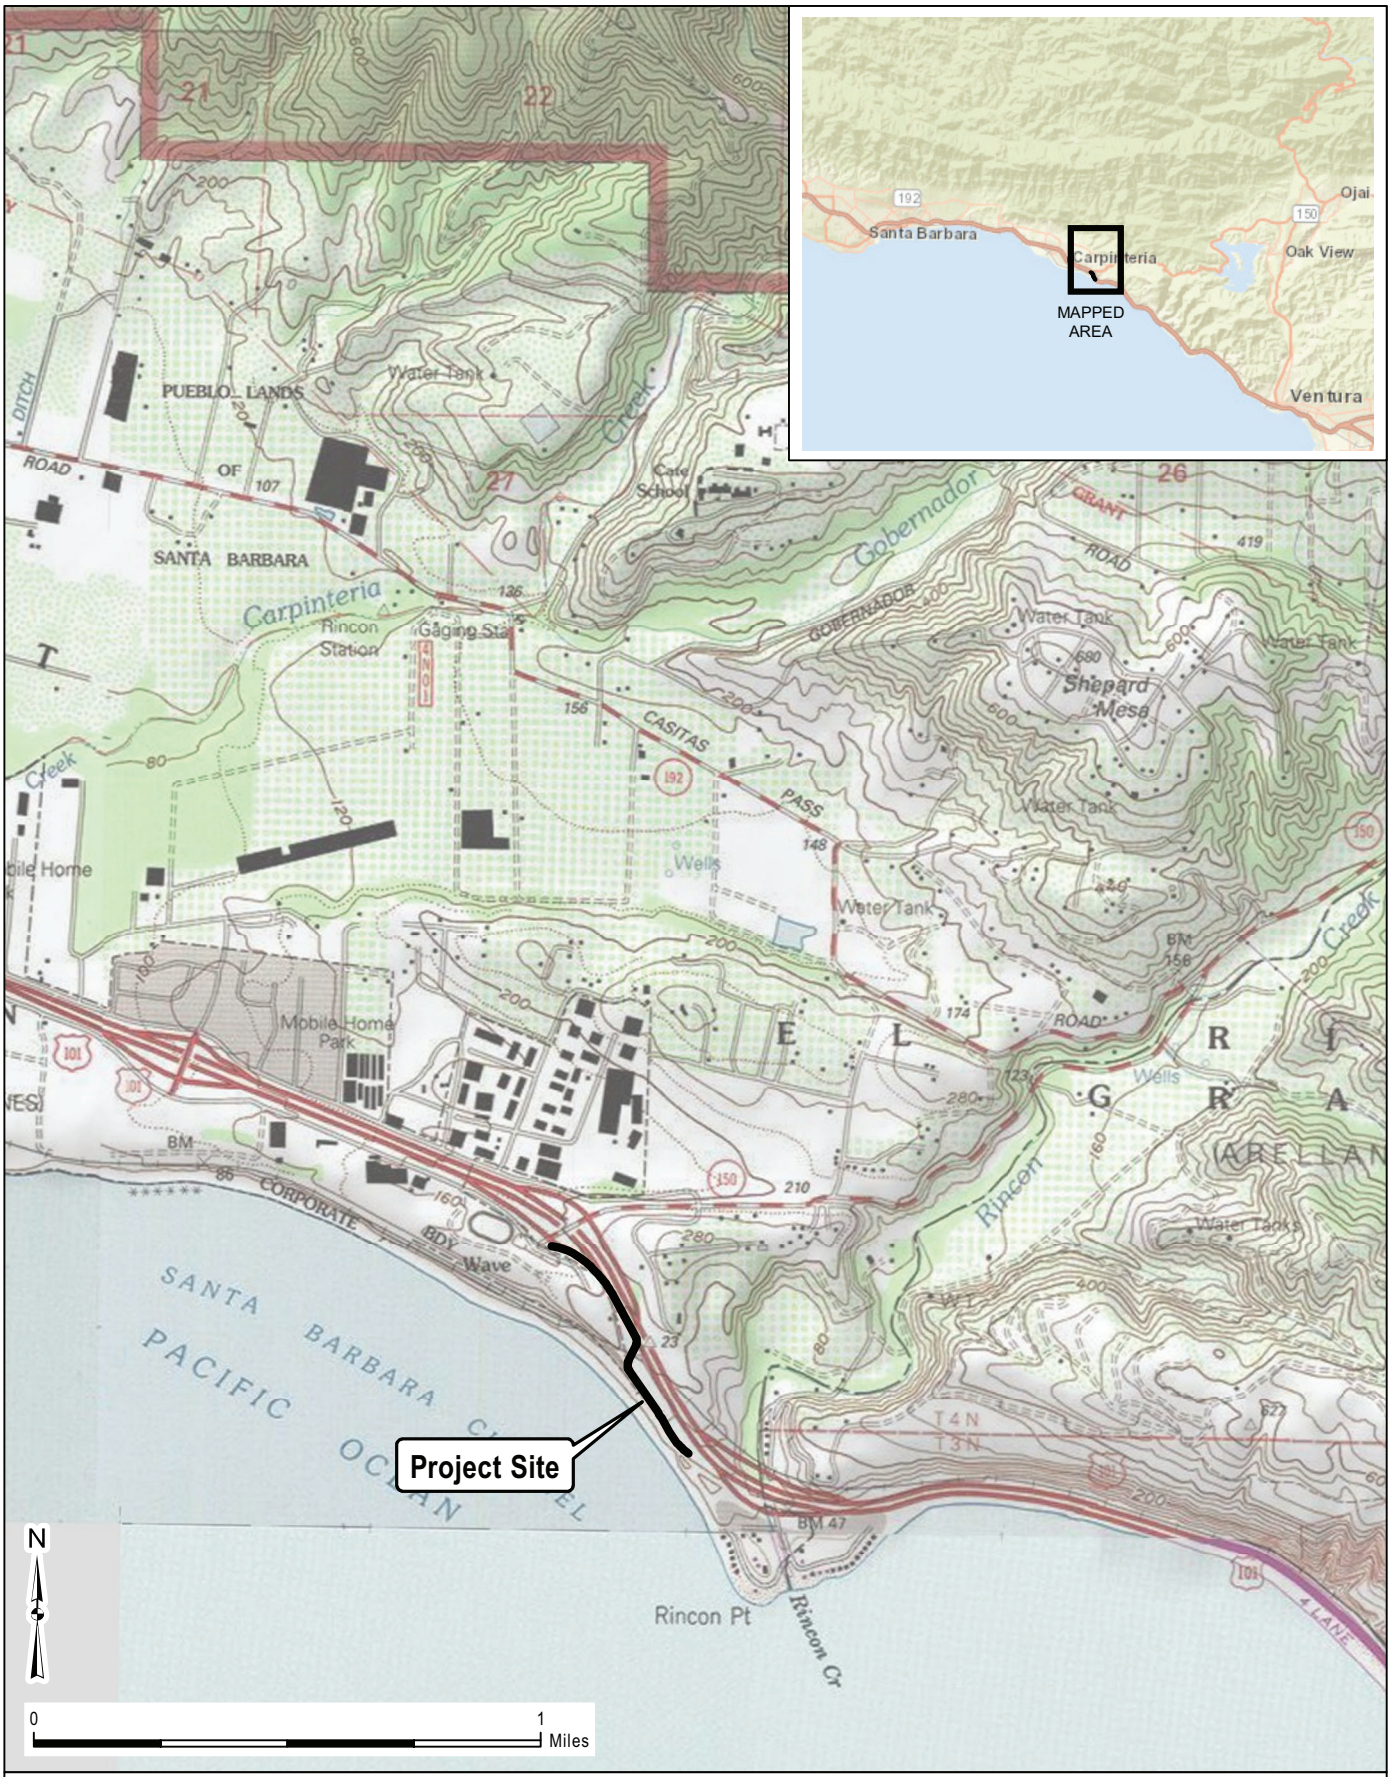
2.7.6 Operation

The proposed trail would accommodate multiple users including bicyclists and pedestrians. With the exception of "power-driven mobility devices" for persons with disabilities and maintenance or emergency vehicles, motorized vehicles would be prohibited on the proposed trail.

As with the majority of public trails in the City, access to the trail would be provided 24 hours a day, seven days a week. Trail closure would occur, however, during unsafe or emergency conditions, such as the unlikely event of a landslide or for some maintenance operations. No additional staffing for maintenance would be needed; instead, any trail maintenance needs would be accommodated by existing City of Carpinteria or County of Santa Barbara work crews on their respective portions of the trail.

Trash and recycling cans would be provided in the existing dirt parking lot at the western trail terminus. Waste collection services would be provided by E. J. Harrison and Sons or other local service provider and would occur weekly. As on-leash dogs would be allowed on the proposed trail, a dog waste bag dispenser and waste receptacle would be provided at the western end of the trail near the proposed parking lot. The dispenser would be similar to those currently provided by the City of Carpinteria's dog waste disposal bag program. Trash and recycling cans, and dog waste bag dispensers are currently available in Rincon Beach County Park and would serve trail users.

2.7.7 Acquisition of Right-of-Ways



The proposed trail route crosses several parcels of land owned by public agencies. The trail parking lot location on Carpinteria Avenue is owned by the City of Carpinteria; trail implementation would require no easements for this portion. Heading east, the next portion of the trail, which courses down a hill parallel to the highway, is owned by the State of California as part of the U.S. Highway 101 right-of-way. For this portion of the route Caltrans will transfer in fee title these two parcels to accommodate placement of the trail and bridge structure on this property.[1] From there, the proposed trail route crosses two parcels of land owned by UPRR (APN 001-010-032 and APN 001-220-092); an encroachment permit and approval from the California Public Utilities Commission (CPUC) are in process for construction and maintenance of the bridge structure within the UPRR parcels. The trail then connects to a parcel of land owned by the County of Santa Barbara as part of Rincon Beach County Park; trail implementation would also require no easements for this portion.

[1] The process for transferring ownership interest in real property from Caltrans to another public entity typically entails several months, and is subject to approval by the California Transportation Commission. Transfer of the two parcels would be completed prior to any construction commencing on the trail and in compliance with CEQA.

2.8 Discretionary Actions

A discretionary action is an action taken by an agency that calls for the exercise of judgment in deciding whether to approve or how to carry out a project. The proposed project would require consideration of the following discretionary actions by the City and by the County:

- City of Carpinteria: A conditional use permit (CUP) and coastal development permit (CDP) for the portion of the trail within the City of Carpinteria.
- County of Santa Barbara: A development plan permit (DVP), CUP and CDP for the portion of the trail within the County of Santa Barbara.

3 Environmental Analysis

The following sections analyze the potential environmental impacts that may occur as a result of implementation of the proposed Carpinteria Rincon Trail Project (project). Each issue analysis section includes a description of existing conditions, the criteria for the determination of impact significance, evaluation of potential project impacts including mitigation measures (if applicable), and a conclusion of significance after mitigation for impacts identified as requiring mitigation (if applicable).

The environmental issues addressed in this chapter include the following:

- Aesthetics
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Emissions
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems

INTENTIONALLY LEFT BLANK

3.1 Aesthetics

This section describes the existing visual conditions of the proposed Carpinteria Rincon Trail Project (project) site and vicinity, identifies associated regulatory requirements, evaluates potential impacts, and identifies mitigation measures related to implementation of the project.

3.1.1 Existing Conditions

3.1.1.1 Existing On-Site Conditions

The project site is currently mostly undeveloped and includes seven vegetation communities and areas that are developed or otherwise unvegetated. Five of the seven vegetation communities found are native scrub communities that qualify as coastal sage scrub or coastal bluff scrub. Long stretches of the proposed shared-use trail are dominated by native scrub vegetation. Between Rincon Beach County Park, located directly to the southeast of the project alignment site, and the Union Pacific Railroad (UPRR) pedestrian bridge crossing, which traverses the middle of the project alignment, native quail bush (*Atriplex lentiformis*) dominates much of the project alignment. Additional native vegetation borders the parking lot in the Rincon Beach County Park and occupies portions of the proposed trail alignment. Between the eastern terminus of Carpinteria Avenue, located to the northwest of the proposed alignment, and the UPRR crossing, California sagebrush (*Artemisia californica*), coyote brush (*Baccharis pilularis*) and quail bush are the dominant plants.

3.1.1.2 Surrounding Land Uses

The project site is located within the City of Carpinteria (City), and within the County of Santa Barbara (County). The City's coastal location affords visual and recreational opportunities not readily available to inland communities. In addition, the City and surrounding area are situated against the Santa Ynez Mountain range that further contributes to the aesthetic appeal of the community. The creeks that are formed out of the hills, as well as the wetlands that they feed are valuable as visual resources, as well as functioning as recreational and open space areas. Carpinteria's streams, beaches, open spaces, foothills, agricultural lands, urbanized areas, landscapes and landforms all contribute to scenic views.

The City's bluffs provide visitors with a unique overlook along one of the few remaining undeveloped coastal bluffs of the South Coast of Santa Barbara County. Commonly seen from the bluffs are white-tailed kites, turkey vultures, red-tailed hawks, American kestrels, brush bunnies, bottlenose and common dolphins, California sea lions, Pacific harbor seals, California brown pelicans, western gulls, and migrating gray whales (City of Carpinteria 2009). Views of the Channel Islands National Marine Sanctuary and the Northern Channel Islands are also afforded from the proposed trail alignment.

The majority of the proposed trail alignment is located along abandoned roadways, or old terraced road and railroad cuts, and most of the area has been mechanically manipulated over the years. The informal existing trail extending north from Rincon Beach County Park has been graded flat and is currently mostly dirt, with original asphalt associated with the previous rail use remaining in some areas. Figure 3.1-1 provides photographs of the entire trail alignment illustrating existing visual conditions within and adjacent to the alignment.

3.1.1.3 Scenic Vistas and Resources

The City's General Plan and Local Coastal Plan designates the Carpinteria Bluffs as both scenic vistas and resources, for providing outstanding views of the Pacific Ocean and Channel Islands (City of Carpinteria 2003). In addition, the proposed project alignment, is located within a Scenic Corridor Overlay Designation for the County (County of Santa Barbara 2009), which is intended to give additional protection to areas where there are views from a major coastal road to the Pacific Ocean.

3.1.1.4 Scenic Highways

Currently there are no officially designated scenic highways in the City or within the project area located within the County (Caltrans 2020a). Designation of "Official Scenic Highways" is governed by Article 2.5 of the California Streets and Highways Code and pertains to State Highway Routes. Section 263.1 and 263.6 of the California Streets and Highways Code identifies Highway 150, which extends east from the northernmost portion of the proposed trail alignment, and US Highway 101, located directly to the east of the site, as eligible for designation as state scenic highways (Caltrans 2020a; City of Carpinteria 2003; County of Santa Barbara 2009). Lastly, as discussed under Section 3.1.1.3, Scenic Vistas and Resources, US Highway 101 adjacent to the project is located within the Scenic Corridor Overlay Designation for the County (County of Santa Barbara 2009), which is intended to provide development restrictions to avoid the blockage of important scenic views afforded from a highway or major roadway corridor.

3.1.2 Relevant Plans, Policies, and Ordinances

3.1.2.1 Federal

There are no federal regulations related to aesthetics relevant to the proposed project.

3.1.2.2 State

California Coastal Act

Facilities proposed within the state's coastal zone are subject to the visual resources policies of the Coastal Act, as described in the Public Resources Code (PRC) Division 20, California Coastal Act, Article 6, Development (2018) and summarized below. Each municipality within the jurisdiction of the California Coastal Commission is required to have a certified local coastal plan (LCP) in place that guides development in coastal zones to ensure compliance with Sections 30251.

Section 30251 Scenic and Visual Qualities

The scenic and visual qualities of coastal areas shall be considered and protected as a resource of public importance. Permitted development shall be sited and designed to protect views to and along the ocean and scenic coastal areas, to minimize the alteration of natural land forms, to be visually compatible with the character of surrounding areas, and, where feasible, to restore and enhance visual quality in visually degraded areas. New development in highly scenic areas such as those designated in the California Coastline Preservation and Recreation Plan prepared by the Department of Parks and Recreation and by local government shall be subordinate to the character of its setting.

California State Scenic Highway Program

The California Scenic Highway Program was created in 1963 with the intent "to protect and enhance the natural scenic beauty of California highways and adjacent corridors, through special conservation treatment." The state laws that govern the Scenic Highway Program are Sections 260 through 263 of the Streets and Highways Code. A highway may be designated scenic based on the natural landscape visible by travelers, the scenic quality of the landscape, and the extent to which development intrudes upon the views of the highway. The Scenic Highway Program includes both officially designated scenic highways and highways that are eligible for designation. It is the responsibility of local jurisdictions to apply for scenic highway approval, which requires the adoption of a Corridor Protection Program (Caltrans 2020b). In addition, once a scenic highway is designated, the local jurisdiction is responsible for regulating development within the scenic highway corridor. As discussed under Section 3.1.1.4, Scenic Highways, there are no officially designated scenic highways in the City or within the project area located within the County (Caltrans 2020a). However, Highway 150, which extends east from the northernmost portion of the alignment, and US Highway 101, located directly to the east of the site, are eligible for designation as state scenic highways (Caltrans 2020a; City of Carpinteria 2003).

3.1.2.3 Local

City of Carpinteria General Plan/Local Coastal Land Use Plan

City objectives and policies related to visual resources and aesthetics are provided in the Open Space, Recreation & Conservation Element, and Community Design Element of the City's General Plan/Local Coastal Land Use Plan. Applicable objectives and policies are as follows:

Objective OSC-13 Preserve Carpinteria's visual resources.

Policy OSC-13a Preserve broad, unobstructed views from the nearest public street to the ocean, including but not limited to Linden Avenue, Bailard Avenue, Carpinteria Avenue, and U.S. Highway 101. In addition, design and site new development on or adjacent to bluffs, beaches, streams, or the Salt Mash to prevent adverse impacts on these visual resources. New development shall be subject to the following measures:

Height and siting restrictions to avoid obstruction of existing views of visual resources from the nearest public areas.

In additional to the bluff setback required for safety, additional bluff setbacks may be required for oceanfront structures to minimize or avoid impacts on public views from the beach. Blufftop structures shall be set back from the bluff edge sufficiently far to ensure that the structure does not infringe on views from the beach except in areas where existing structures already impact public views from the beach.

Special landscaping requirements to mitigate visual impacts.

Policy OSC-13c Other than permitted development, discourage activities which could damage or destroy open space areas, including off-road vehicle use and unauthorized collecting of natural objects.

Policy OSC-13e Promote the safety of the community through the use of open space lands.

Policy OSC-13f Where appropriate, use open space lands as buffers for noise and visual nuisances and as transitions between incompatible uses.

Policy OSC-13g Require new development to protect scenic resources by utilizing natural landforms and native vegetation for screening structures, access roads, building foundations, and cut and fill slopes in project design which otherwise complies with visual resources protection policies.

Policy OSC-13h Plans for development shall minimize cut and sill operations. Plans that do not minimize cut and fill shall be denied.

Policy OSC-13i Design all new development to fit the site topography, soils, geology, hydrology, and other existing conditions and be oriented so that grading and other site preparations is kept to an absolute minimum. Preserve all-natural landforms, natural drainage systems, and native vegetation. Require all areas on the site not suited to development, as evidenced by competent soils, geology and hydrology investigations and reports remain as open space.

Policy OSC-13j Establish a "night-sky" ordinance that provides standards for the reduction of direct and ambient light in the night sky.

Objective CD-13 Ensure that lighting of new development is sensitive to the character and natural resources of the City and minimizes photo pollution to the maximum extent feasible.

Policy CD-13b Lighting shall be low intensity and located and designed so as to minimize direct view of light sources and diffusers and to minimize halo and spillover effects.

Additionally, the northern portion of the proposed project site falls within Bluffs Area 3 of Subarea 6, also known as the Bluffs, of the City's Community Design Subareas. The following objectives and policies for Subarea 6 are relevant to the proposed project and its potential aesthetic impacts:

Objective CDS6-1 Maintain the Carpinteria Bluffs Access, Recreation & Open Space Master Program as the coordinated plan for the Carpinteria Bluffs area that will allow development of uses identified in the Land Use Plan herein, so as to complement one another and preserve and enhance the site's coastal environment. The plan should be maintained so as to include information adequate to define the environmental resources and hazards within the Carpinteria Bluffs, and to delineate precise and appropriate policies for their management.

Policy CDS6-a Provide a clear direction for the future development of the Carpinteria Bluffs that:

1. Protects unique and sensitive environmental resources within the Bluffs.
2. Is compatible with the small-town character of Carpinteria, enhances the community's image, and contributes to a pleasant visual experience for travelers entering Carpinteria on U.S. 101 from the south.
3. Provides appropriate development opportunities for landowners within the Carpinteria Bluffs.

Objective CDS6-2 Ensure that development is controlled to avoid impacts to significant viewsheds, vistas, and view corridors.

Policy CDS6-b Development on the Bluffs shall not obstruct existing view corridors of the ocean and bluff top edge. In addition, views of the ocean and mountains for

users of the Carpinteria Bluffs Nature Park and coastal trail(s), for bluffs area property owners and visitors, and for passing motorists, shall be maintained.

Implementation Policy 59 Development that is located on or adjacent to bluffs, beaches, or streams shall be designed and sited to prevent adverse impacts on the visual quality of these resources.

Implementation Policy 60 New development shall maintain existing topographic variations of the Carpinteria Bluffs, such as the ridgeline in Bluffs I and the terracing of Bluffs III. Development of Bluffs I should be designed to respect the viewshed from the bluff trail looking north toward the mountains and from the Bluffs Nature Park looking west. Location and design of buildings shall respect the topography and follow topographic forms whenever possible, visible variations in the ground plane are to be retained, avoiding a flat, mass graded appearance. These variations in the ground plane are also to be reflected in variations in the roof lines of individual buildings.

Policy 65 As a part of development project plan submittals for the bluffs, tools such as physical or computer models, perspectives, or photographs, shall be included in order to demonstrate compliance with these measures and more generally the protection of Bluffs visual resources.

County of Santa Barbara Coastal Land Use Plan

The County of Santa Barbara's Coastal Land Use Plan guides planning and development in the coastal areas of the county, and is intended to protect coastal resources while still allowing for development. Where there is conflict between the Coastal Land Use Plan and the Comprehensive Plan, the Coastal Land Use Plan takes precedence. Applicable policies of the Coastal Land Use Plan include:

Policy 4-1 Areas within the coastal zone which are now required to obtain approval from the County Board of Architectural Review, because of the requirements of the "D"- Design Supervision Combining Regulations or because they are within the boundaries of Ordinance #453, shall continue to be subject to design review. In addition, developments in all areas designated on the land use plan maps as Commercial, Industrial, or Planned Development and residential structures on bluff top lots shall be required to obtain plan approval from the County Board of Architectural Review.

Policy 4-3: In areas designated as rural on the land use plan maps, the height, scale, and design of structures shall be compatible with the character of the surrounding natural environment, except where technical requirements dictate otherwise. Structures shall be subordinate in appearance to natural landforms; shall be designed to follow the natural contours of the landscape; and shall be sited so as not to intrude into the skyline as seen from public viewing places.

3.1.3 Thresholds of Significance

The significance criteria used to evaluate the project impacts to aesthetics are based on Appendix G of the CEQA Guidelines. According to Appendix G of the CEQA Guidelines, a significant impact related to aesthetics would occur if the project would:

a) Have a substantial adverse effect on a scenic vista.
b) Substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway.
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings. (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, conflict with applicable zoning and other regulations governing scenic quality.
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.
e) Result in cumulatively considerable impacts with regard to aesthetic and visual considerations.

3.1.4 Impact Analysis

a) Would the project have a substantial adverse effect on a scenic vista?

As discussed under Section 3.1.1.4, the City's General Plan and Local Coastal Plan designates the Carpinteria Bluffs as scenic vistas, for providing outstanding views of the Pacific Ocean and Channel Islands (City of Carpinteria 2003). In addition, the proposed trail alignment, is located within a Scenic Corridor Overlay Designation for the County, which is intended to give additional protection to areas where there are views from a major coastal road to the ocean (County of Santa Barbara 2009). However, the proposed trail is designed to take advantage of the area's scenic views and is set into the existing major ridge element present in this vicinity. The project would provide pedestrians and bicyclists traveling along the trail expansive views of the Santa Ynez mountain range backdrop (from trail sections north of the UPRR alignment), and of the Pacific Ocean, the local coastline and the Northern Channel Islands in the Santa Barbara Channel (from trail segments south of the UPRR alignment). Fencing along the trail would be only the maximum height necessary to provide safety (anticipated to be no more than three feet six inches), would be visually permeable (anticipated to be composed of a post and three rail fence with vinyl-clad chain link backing, that has often been used in local recreation areas to restrict access as necessary), and would use materials and colors that would blend with the natural environment. In addition, the proposed trail would be required to comply with County Policy, which requires that all development in these areas shall be reviewed by the County Board of Architectural Review. Nonetheless, due to the project's location within a scenic vista, impacts to a scenic vista would be potentially significant. In order to ensure compliance with this policy requirement for all segments of the trail, implementation of **Mitigation Measure (MM) AES-1** would be required (see Section 3.1.5, Mitigation, for details), and would reduce potentially significant impacts to **less than significant with mitigation.**

b) Would the project substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?

As discussed in Section 3.1.1.4, currently there are no officially designated scenic highways in the City of Carpinteria or within the project area located within the County (Caltrans 2020a). However, both Highway 150, which extends east from the northernmost portion of the alignment, and US Highway 101, located directly to the

east of the site, are eligible for designation as state scenic highways (Caltrans 2020a; City of Carpinteria 2003; County of Santa Barbara 2009). In addition, the trail alignment and adjacent US Highway 101 are located within a Scenic Corridor Overlay Designation for the County. The Scenic Corridor Overlay designation is a special tool, which is intended to give additional protection to areas where there are views from a highway or major road to important visual resources, including mountains, ocean, and unspoiled open spaces. US Highway 101, which parallels the ocean throughout much of the South Coast, affords many thousands of traveler's scenic mountain and ocean vistas. Lastly, there are no historic buildings within the project area and the proposed project would not remove trees that contribute to the overall aesthetic character of the project area.

Motorists traveling along US Highway 101 northbound have brief (a few seconds) glimpses of blue water views of the Pacific Ocean between the terraced and vegetated hillsides flanking the UPRR corridor. The ocean bluffs dominate this view toward the south, while mountains are visible in the distance to the north. Travelers headed southbound would need to glance over their shoulder to capture the same brief glimpses of the ocean between the hillsides along the UPRR Corridor. The proposed shared use trail would be visible to travelers in both directions as it would initially traverse the highway side of the terraced hill above the US Highway 101 southbound shoulder before turning northwest along the existing cut to connect with the proposed pedestrian bridge.

With implementation of the proposed project this southward view from US Highway 101, which currently contains steeper vegetated slopes and minimal visible development (namely a chain link fence, and highway lights and signage), would contain human-scale activity, including pedestrians and bicyclists as well as brief views of the concrete pathway and safety fencing, as well as the more notable pedestrian bridge spanning the UPRR corridor as indicated in the conceptual visual simulation presented in Figure 3.1-2. More specifically, Photos 2, 3, and 4, shown on Figure 3.1-2, illustrate the UPRR bridge feature, including perspectives looking toward the ocean and toward US Highway 101. Although the deck of the bridge would be at the same height as the US Highway 101 bridge over the UPRR corridor, the open metal truss structure would span the middle-ground view. However, these views are considered short duration and as shown in Figure 3.1-2, the new trail and bridge would not substantially modify or block any significant vistas or blue water ocean views. In addition, to the extent feasible, fencing and other man-made elements along the trail would be composed of materials and/or painted colors that would blend with the natural environment. The trail has been designed to be subordinate to the natural context and environment surrounding it and to enhance the scenic views and resources available in the area. Nonetheless, because the proposed project would result in alterations of a highly scenic resource, impacts to scenic resources would be potentially significant**.** County Policy requires that all development in View Corridor Overlay designation areas shall be reviewed by the County Board of Architectural Review. In order to ensure compliance with this policy requirement for all segments of the trail, **MM-AES-1** would be required and would reduce impacts to **less than significant with mitigation**.

c) In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

The CEQA Guidelines define "urbanized area" as an incorporated city that meets either of the following criteria:

(1) Has a population of at least 100,000 persons.

(2) Has a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons.

The City has a population of 13,385 (U.S. Census Bureau 2020) and is surrounded by unincorporated Santa Barbara and Ventura County areas. Therefore, the project site is considered non-urbanized for CEQA purposes and this section analyzes whether or not the project would substantially degrade the existing visual character or quality of public views of the site and its surroundings.

As discussed above, the proposed trail would be visible from public areas such as US Highway 101 and would be partially visible from the public beach located directly west of the proposed trail. Although the proposed trail would be designed to be subordinate to the natural context and environment surrounding it, the view southward from US Highway 101, which currently contains steeper vegetated slopes and minimal visible development (namely a chain link fence, and highway lights and signage), would be transformed to contain human-scale activity, including pedestrians and bicyclists as well as brief views of the concrete pathway and safety fencing, as well as the more notable pedestrian bridge spanning the UPRR corridor as indicated in the conceptual visual simulation presented in Figure 3.1-2. In addition, under the proposed project, approximately 0.75 acres of the vegetation communities located within the proposed trail alignment would be permanently removed, while an additional 9.01 acres would be temporarily disturbed during construction. Additional plants occurring within the proposed trail alignment could also be accidentally destroyed during construction or damaged from runoff and erosion caused by construction.

In general, it should be noted the proposed trail alignment is situated on slopes that were previously graded to accommodate the construction of either US Highway 101 or the Union Pacific Railroad. Figure 3.1-2 provides low altitude aerial photograph exhibits of the entire trail alignment. As illustrated in the Figure 3.1-2, the existing slopes along the trail alignment have the common characteristic appearance of a manufactured slope, where the slope face is relatively planar and at a uniform slope angle, rather than a more undulating form normally present in natural slopes. With regard to the proposed trail design, the western portion of the trail (beginning at the eastern terminus of Carpinteria Avenue and extending to the UPRR alignment), would involve creation of an 18-foot wide bench for the trail, and re-grading of the existing slope above the trail to produce a shallower (more stable) slope. A second bench above the trail elevation would also be created on the eastern portion of this segment, to reduce erosion over the slope face of this segment with higher relative slope elevation (i.e., longer vertical face). Refer to Appendix G for earthwork cross-sections/profiles illustrating the slope re-working. The top elevation of this ridge would not be affected by the re-grading, and the overall area would continue to have the same general appearance as the existing condition (i.e., a manufactured slope along a road cut).

Under the proposed trail alignment, the location for the railroad crossing bridge would be located in close proximity to US Highway 101, consolidating bridge structures in one area, thereby lowering the noticeability of this new structure. Refer to Figures 3.1-2 for renderings of the bridge crossing shown from several different perspectives.

The eastern portion of the proposed trail would involve regrading of the slope above the former UPRR track alignment, to include a fill slope below the new trail bench, and a cut slope with mid-elevation bench above the trail bench (Refer to Appendix G for earthwork cross-sections/profiles illustrating the slope re-working). Again, the top elevation of the ridge within this segment of the trail alignment would not be modified and the overall area would continue to have the same general appearance as the existing condition (i.e., a manufactured slope along the original cut made for the railroad alignment).

The project also involves the construction of new vertical storm drains. As discussed in Section 2.7.3, the proposed storm drains would be installed during earth work for the trail and adjacent slopes, and would be buried to cross beneath the trail and then descend on the slope face to outlet at the beach elevation. Buried portions of the storm drain would be constructed of high-density plastic, transitioning to galvanized steel for the aboveground portions.

Due to the size of the proposed above ground components, the visibility of the above ground storm drain system would be minimal and would not substantially degrade the existing visual character or quality of public views of the site and its surroundings.

Temporary adverse effects during construction due to the loss of mature vegetation would occur over a limited time period, given new landscaping and restoration of native plants are proposed as part of the project. The project would enhance area aesthetics via native landscape installations along the perimeter of the trail and ongoing landscape maintenance. Where feasible, the project would remove the invasive weeds along the proposed trail alignment that could suppress native plants. Native plants, once established, would live without need for supplemental water, helping to ensure their ongoing success. The reduction of slope angle (making the slope gentler) would slow water runoff, improve soil water retention, and support more extensive vegetation cover on the sloped areas, compared to existing conditions. Nonetheless, the project would have a potentially significant adverse impact on visual character or quality of the site and its surroundings because of the removal of mature vegetation and addition of new human-scale development. Therefore, impacts would be potentially significant. **MM-AES-1**, which requires County Board of Architectural Review, and **MM-BIO-5**, which requires restoration or enhancement of coastal sage scrub and coastal bluff scrub communities in areas temporarily impacted by construction of the trail or adjacent area, would be required. Impacts would be **less than significant with mitigation incorporated.**

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Materials used in the construction of the proposed trail, including metal railings for the bridge structure, would be finished in non-reflective coatings. No lighting is incorporated in the proposed trail design. Therefore, the project would not create a new source of substantial light or glare which would adversely affect day or nighttime views in the area. Impacts would be **less than significant.**

e) Would the project result in cumulatively considerable impacts with regard to aesthetic and visual considerations?

Future development throughout the Carpinteria Valley has the potential to convert open space and natural landforms into built environment including structures, parking areas, roadways, etc., thereby adversely impacting the visual quality of scenic resources in the City of Carpinteria and County of Santa Barbara. With respect to the visual quality within the US Highway 101 corridor in the Carpinteria Valley, Caltrans concluded that proposed improvements under the South Coast 101 High Occupancy Vehicle project would result in substantial visual changes throughout much of the highway corridor due to loss of vegetation, increased paving and potential soundwalls, and because of the inherent alteration of scale, increase of hard surface, and loss of vegetative character, visual impacts would be significant and unavoidable (Caltrans 2014).The proposed project would not result in the blockage of available views to the ocean from US Highway 101, would incrementally change the character of the manufactured slopes upon which it would be placed, and is subject to architectural review and required restoration of existing vegetation. As such, limited visual impacts of the proposed project would be mitigated to less than significant levels, and the project would not have a considerable contribution to identified cumulatively significant visual impacts in the project region.

3.1.5 Mitigation

The project would require the implementation of **MM-AES-1** to reduce impacts to scenic vistas, scenic resources, and visual character or quality of public views of the site and its surroundings.

MM-AES-1 **Board of Architectural Review.** The Owner/Applicant shall obtain City Architectural Review Board (ARB) and County Board of Architectural Review (BAR) approval for project design. All project elements (e.g., design, scale, character, colors, materials, and landscaping shall be compatible with vicinity development and shall conform in all respects to ARB/BAR approval. ***Plan Requirements and Timing:*** The Owner/Applicant shall submit architectural drawings of the project including photo renditions from the beach of the storm drains proposed along the bluff face for review and shall obtain final City ARB and County BAR approval prior to issuance of the Development Plan, Conditional Use Permit and Coastal Development Permit. Grading plans, if required, shall be submitted to the City's Planning Department concurrent with or prior to ARB/BAR plan filing with the Carpinteria Community Development Department or County Planning and Development. ***Monitoring***: The Owner/Applicant shall demonstrate to Community Development Department staff and Planning & Development Department compliance monitoring staff that the project has been built consistent with approved ARB/BAR design and landscape plans prior to Final Building Inspection Clearance.

The project would require the implementation of **MM-BIO-5** to reduce impacts to visual character or quality of public views of the site and its surroundings.

MM-BIO-3 See Section 3.3.5.

3.1.6 Level of Significance After Mitigation

After implementation of **MM-AES-1** and **MM-BIO-3** impacts to aesthetics would be less than significant.

3.2 Air Quality

This section describes the existing air quality conditions of the proposed Carpinteria Rincon Trail Project (project) site and vicinity, identifies associated regulatory requirements, and evaluates potential impacts related to implementation of the project.

3.2.1 Existing Conditions

3.2.1.1 Climate and Topography

The weather of the Santa Barbara region, as in most of Southern California, is influenced by the Pacific Ocean and its semi-permanent high-pressure systems that result in dry, warm summers and mild, occasionally wet winters. The average temperature ranges (in degrees Fahrenheit) from the mid-40s to the mid-70s. Most of the region's precipitation falls from November to April, with infrequent (approximately 10%) precipitation during the summer. The average seasonal precipitation along the coast is approximately 10 inches; the amount increases with elevation as moist air is lifted over the mountains (WRCC 2020).

The topography in the Santa Barbara region varies greatly, from beaches on the south to mountains and valleys in the north; along with local meteorology, it influences the dispersal and movement of pollutants in the basin. The mountains to the north prohibit dispersal of pollutants in that direction and help trap them in inversion layers.

The interaction of ocean, land, and the Pacific High Pressure Zone maintains clear skies for much of the year and influences the direction of prevailing winds. Local terrain is often the dominant factor inland, and winds in inland mountainous areas tend to blow through the valleys during the day and down the hills and valleys at night.

3.2.1.2 Criteria Air Pollutants

Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards (criteria) for outdoor concentrations to protect public health. The federal and state standards have been set, with an adequate margin of safety, at levels above which concentrations could be harmful to human health and welfare. These standards are designed to protect the most sensitive persons from illness or discomfort. Pollutants of concern include O_3, NO_2, CO, sulfur dioxide (SO_2), particulate matter with an aerodynamic diameter less than or equal to 10 microns (PM_{10}), particulate matter with an aerodynamic diameter less than or equal to 2.5 microns ($PM_{2.5}$), and lead. These pollutants, as well as toxic air contaminants (TACs), are discussed in the following paragraphs.[1] In California, sulfates, vinyl chloride, hydrogen sulfide, and visibility-reducing particles are also regulated as criteria air pollutants.

Ozone. O_3 is a strong-smelling, pale blue, reactive, toxic chemical gas consisting of three oxygen atoms. It is a secondary pollutant formed in the atmosphere by a photochemical process involving the sun's energy and O_3 precursors. These precursors are mainly NO_x and volatile organic compounds (VOCs). The maximum effects of precursor emissions on O_3 concentrations usually occur several hours after they are emitted and many miles from the source. Meteorology and terrain play major roles in O_3 formation, and ideal conditions occur during summer and early autumn on days with low wind speeds or stagnant air, warm temperatures, and cloudless skies. O_3 exists

[1] The descriptions of each of the criteria air pollutants and associated health effects are based on the EPA's (2016a) Criteria Air Pollutants and the CARB (2016a) Glossary of Air Pollutant Terms.

in the upper atmosphere O_3 layer (stratospheric ozone) and at the Earth's surface in the troposphere (ozone).[2] The O_3 that the U.S. Environmental Protection Agency (EPA) and the California Air Resources Board (CARB) regulate as a criteria air pollutant is produced close to the ground level, where people live, exercise, and breathe. Ground-level O_3 is a harmful air pollutant that causes numerous adverse health effects and is, thus, considered "bad" O_3. Stratospheric, or "good," O_3 occurs naturally in the upper atmosphere, where it reduces the amount of ultraviolet light (i.e., solar radiation) entering the Earth's atmosphere. Without the protection of the beneficial stratospheric O_3 layer, plant and animal life would be seriously harmed.

O_3 in the troposphere causes numerous adverse health effects; short-term exposures (lasting for a few hours) to O_3 at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes (EPA 2013). These health problems are particularly acute in sensitive receptors such as the sick, the elderly, and young children.

Nitrogen Dioxide and Oxides of Nitrogen. NO_2 is a brownish, highly reactive gas that is present in all urban atmospheres. The major mechanism for the formation of NO_2 in the atmosphere is the oxidation of the primary air pollutant nitric oxide, which is a colorless, odorless gas. NO_2 can irritate the lungs, cause bronchitis and pneumonia, and lower resistance to respiratory infections (EPA 2016b).

NO_x plays a major role, together with VOCs, in the atmospheric reactions that produce O_3. NO_x is formed from fuel combustion under high temperature or pressure. In addition, NO_x is an important precursor to acid rain and may affect both terrestrial and aquatic ecosystems. The two major emissions sources of NO_x are transportation and stationary fuel combustion sources, such as electric utility and industrial boilers.

Carbon Monoxide. CO is a colorless, odorless gas formed by the incomplete combustion of hydrocarbon, or fossil fuels. CO is emitted almost exclusively from motor vehicles, power plants, refineries, industrial boilers, ships, aircraft, and trains. In urban areas, automobile exhaust accounts for the majority of CO emissions. CO is a nonreactive air pollutant that dissipates relatively quickly; therefore, ambient CO concentrations generally follow the spatial and temporal distributions of vehicular traffic. CO concentrations are influenced by local meteorological conditions—primarily wind speed, topography, and atmospheric stability. CO from motor vehicle exhaust can become locally concentrated when surface-based temperature inversions are combined with calm atmospheric conditions, which is a typical situation at dusk in urban areas from November to February. The highest levels of CO typically occur during the colder months of the year, when inversion conditions are more frequent.

In terms of adverse health effects, CO competes with oxygen, often replacing it in the blood, reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can include dizziness, fatigue, and impairment of central nervous system functions.

Sulfur Dioxide. SO_2 is a colorless, pungent gas formed primarily from incomplete combustion of sulfur-containing fossil fuels. The main sources of SO_2 are coal and oil used in power plants and industries; as such, the highest levels of SO_2 are generally found near large industrial complexes. In recent years, SO_2 concentrations have been reduced by the increasingly stringent controls placed on stationary source emissions of SO_2 and limits on the sulfur content of fuels.

[2] The troposphere is the layer of the Earth's atmosphere nearest to the surface of the Earth. The troposphere extends outward about five miles at the poles and about 10 miles at the equator.

SO_2 is an irritant gas that attacks the throat and lungs and can cause acute respiratory symptoms and diminished ventilator function in children. When combined with particulate matter, SO_2 can injure lung tissue and reduce visibility and the level of sunlight. SO_2 can also yellow plant leaves and erode iron and steel.

Particulate Matter. Particulate matter pollution consists of very small liquid and solid particles floating in the air, which can include smoke, soot, dust, salts, acids, and metals. Particulate matter can form when gases emitted from industries and motor vehicles undergo chemical reactions in the atmosphere. $PM_{2.5}$ and PM_{10} represent fractions of particulate matter. Coarse particulate matter (PM_{10}) consists of particulate matter that is 10 microns or less in diameter (about 1/7 the thickness of a human hair). Major sources of PM_{10} include crushing or grinding operations; dust stirred up by vehicles traveling on roads; wood-burning stoves and fireplaces; dust from construction, landfills, and agriculture; wildfires and brush/waste burning; industrial sources; windblown dust from open lands; and atmospheric chemical and photochemical reactions. Fine particulate matter ($PM_{2.5}$) consists of particulate matter that is 2.5 microns or less in diameter (roughly 1/28 the diameter of a human hair). $PM_{2.5}$ results from fuel combustion (e.g., from motor vehicles and power generation and industrial facilities), residential fireplaces, and woodstoves. In addition, $PM_{2.5}$ can be formed in the atmosphere from gases such as sulfur oxides (SO_x), NO_x, and VOCs.

$PM_{2.5}$ and PM_{10} pose a greater health risk than larger-size particles. When inhaled, these tiny particles can penetrate the human respiratory system's natural defenses and damage the respiratory tract. $PM_{2.5}$ and PM_{10} can increase the number and severity of asthma attacks, cause or aggravate bronchitis and other lung diseases, and reduce the body's ability to fight infections. Very small particles of substances such as lead, sulfates, and nitrates can cause lung damage directly or be absorbed into the blood stream, causing damage elsewhere in the body. Additionally, these substances can transport adsorbed gases such as chlorides or ammonium into the lungs, also causing injury. Whereas PM_{10} tends to collect in the upper portion of the respiratory system, $PM_{2.5}$ is so tiny that it can penetrate deeper into the lungs and damage lung tissue. Suspended particulates also damage and discolor surfaces on which they settle and produce haze and reduce regional visibility.

People with influenza, people with chronic respiratory and cardiovascular diseases, and the elderly may suffer worsening illness and premature death as a result of breathing particulate matter. People with bronchitis can expect aggravated symptoms from breathing in particulate matter. Children may experience a decline in lung function due to breathing in PM_{10} and $PM_{2.5}$ (EPA 2009).

Lead. Lead in the atmosphere occurs as particulate matter. Sources of lead include leaded gasoline; the manufacturing of batteries, paints, ink, ceramics, and ammunition; and secondary lead smelters. Prior to 1978, mobile emissions were the primary source of atmospheric lead. Between 1978 and 1987, the phaseout of leaded gasoline reduced the overall inventory of airborne lead by nearly 95%. With the phaseout of leaded gasoline, secondary lead smelters, battery recycling, and manufacturing facilities are becoming lead-emissions sources of greater concern.

Prolonged exposure to atmospheric lead poses a serious threat to human health. Health effects associated with exposure to lead include gastrointestinal disturbances, anemia, kidney disease, and in severe cases, neuromuscular and neurological dysfunction. Of particular concern are low-level lead exposures during infancy and childhood. Such exposures are associated with decrements in neurobehavioral performance, including intelligence quotient performance, psychomotor performance, reaction time, and growth. Children are highly susceptible to the effects of lead.

Volatile Organic Compounds. Hydrocarbons are organic gases that are formed from hydrogen and carbon and sometimes other elements. Hydrocarbons that contribute to formation of O_3 are referred to and regulated as VOCs (also referred to as reactive organic gases). Combustion engine exhaust, oil refineries, and fossil-fueled power

plants are the primary sources of hydrocarbons. Other sources of hydrocarbons include evaporation from petroleum fuels, solvents, dry cleaning solutions, and paint.

The primary health effects of VOCs result from the formation of O_3 and its related health effects. High levels of VOCs in the atmosphere can interfere with oxygen intake by reducing the amount of available oxygen through displacement. Carcinogenic forms of hydrocarbons, such as benzene, are considered TACs. There are no separate health standards for VOCs as a group.

Sulfates. Sulfates are the fully oxidized form of sulfur, which typically occur in combination with metals or hydrogen ions. Sulfates are produced from reactions of SO_2 in the atmosphere. Sulfates can result in respiratory impairment and reduced visibility.

Vinyl Chloride. Vinyl chloride is a colorless gas with a mild, sweet odor that has been detected near landfills, sewage plants, and hazardous waste sites, due to the microbial breakdown of chlorinated solvents. Short-term exposure to high levels of vinyl chloride in the air can cause nervous system effects such as dizziness, drowsiness, and headaches. Long-term exposure through inhalation can cause liver damage, including liver cancer.

Hydrogen Sulfide. Hydrogen sulfide is a colorless and flammable gas that has a characteristic odor of rotten eggs. Sources of hydrogen sulfide include geothermal power plants, petroleum refineries, sewers, and sewage treatment plants. Exposure to hydrogen sulfide can result in nuisance odors, as well as headaches and breathing difficulties at higher concentrations.

Visibility-Reducing Particles. Visibility-reducing particles are any particles in the air that obstruct the range of visibility. Effects of reduced visibility can include obscuring the viewshed of natural scenery, reducing airport safety, and discouraging tourism. Sources of visibility-reducing particles are the same as for $PM_{2.5}$, described above.

3.2.1.3 Non-Criteria Air Pollutants

Toxic Air Contaminants. A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute and/or chronic non-cancer health effects. A toxic substance released into the air is considered a TAC. TACs are identified by federal and state agencies based on a review of available scientific evidence. In the State of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management and reduction was designed to protect residents from the health effects of toxic substances in the air. In addition, the California Air Toxics "Hot Spots" Information and Assessment Act, Assembly Bill (AB) 2588, was enacted by the legislature in 1987 to address public concern over the release of TACs into the atmosphere. The law requires facilities emitting toxic substances to provide local air pollution control districts with information that will allow an assessment of the air toxics problem, identification of air toxics emissions sources, location of resulting hotspots, notification of the public exposed to significant risk, and development of effective strategies to reduce potential risks to the public over five years.

Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources, such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources, such as automobiles; and area sources, such as landfills. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

Diesel Particulate Matter. Diesel particulate matter (DPM) is part of a complex mixture that makes up diesel exhaust. Diesel exhaust is composed of two phases, gas and particle, both of which contribute to health risks. More than 90% of DPM is less than one micrometer in diameter (about 1/70th the diameter of a human hair) and, thus, is a subset of $PM_{2.5}$ (CARB 2016a). DPM is typically composed of carbon particles ("soot," also called black carbon) and numerous organic compounds, including over 40 known cancer-causing organic substances. Examples of these chemicals include polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene (CARB 2016a). CARB classified "particulate emissions from diesel-fueled engines" (i.e., DPM) (17 CCR 93000) as a TAC in August 1998. DPM is emitted from a broad range of diesel engines, including on-road diesel engines from trucks, buses, and cars; and off-road diesel engines from locomotives, marine vessels, and heavy-duty construction equipment, among others. Approximately 70% of all airborne cancer risk in California is associated with DPM (CARB 2000). To reduce the cancer risk associated with DPM, CARB adopted a diesel risk reduction plan in 2000 (CARB 2000). Because it is part of $PM_{2.5}$, DPM also contributes to the same non-cancer health effects as $PM_{2.5}$ exposure. These effects include premature death; hospitalizations and emergency department visits for exacerbated chronic heart and lung disease, including asthma; increased respiratory symptoms; and decreased lung function in children. Several studies suggest that exposure to DPM may also facilitate development of new allergies (CARB 2016b). Those most vulnerable to non-cancer health effects are children whose lungs are still developing and the elderly who often have chronic health problems.

Odorous Compounds. Odors are generally regarded as an annoyance rather than a health hazard. Manifestations of a person's reaction to odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache). The ability to detect odors varies considerably among the population and, overall, is quite subjective. People may have different reactions to the same odor. An odor that is offensive to one person may be perfectly acceptable to another (e.g., coffee roaster). An unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. In a phenomenon known as odor fatigue, a person can become desensitized to almost any odor, and recognition may only occur with an alteration in the intensity. The occurrence and severity of odor impacts depend on the nature, frequency, and intensity of the source; wind speed and direction; and the sensitivity of receptors.

Valley Fever. Coccidioidomycosis, more commonly known as "Valley Fever," is an infection caused by inhalation of the spores of the *Coccidioides immitis* fungus, which grows in the soils of the southwestern United States. The fungus is very prevalent in the soils of California's San Joaquin Valley, particularly in Kern County. Kern County is considered a highly endemic county (i.e., more than 20 cases annually of Valley Fever per 100,000 people) based on the incidence rates reported through 2019 (California Department of Public Health 2019). The ecologic factors that appear to be most conducive to survival and replication of the spores are high summer temperatures, mild winters, sparse rainfall, and alkaline, sandy soils.

Santa Barbara County is not considered a highly endemic region for Valley Fever as the latest report from the California Department of Public Health listed Santa Barbara County as having 16.5 cases per 100,000 people (California Department of Public Health 2019). Furthermore, according to a Santa Barbara County Department of Public Health study, most of Valley Fever patients lived in North (85%) or Central (9%) Santa Barbara County with only 7% living in South County (Santa Barbara County Public Health Department 2018). Of the cases living in South County, half of them had traveled to areas outside of South County where cases of Valley Fever more commonly occur.

3.2.1.4 Sensitive Receptors

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. People most likely to be affected by air pollution include children, the elderly, athletes, and people with cardiovascular and chronic respiratory diseases. Facilities and structures where these air pollution-sensitive people live or spend considerable amounts of time are known as sensitive receptors. Land uses where air pollution-sensitive individuals are most likely to spend time include schools and schoolyards, playgrounds, daycare centers, nursing homes, hospitals, and residential communities (sensitive sites or sensitive land uses) (CARB 2005). The Santa Barbara County Air Pollution Control District (SBCAPCD) defines a sensitive receptor as a school, daycare facility, hospital, residence, or care facility (SBCAPCD 2020). The closest sensitive receptors to the project site are residences of the Rincon Point community. The closest residence to the proposed trail is located approximately 180 feet away (55 meters) at the eastern end of the trail.

3.2.1.5 Regional and Local Air Quality Conditions

South Central Coast Air Basin (SCCAB) Attainment Designation

Pursuant to the 1990 federal Clean Air Act Amendments, the EPA classifies air basins (or portions thereof) as "attainment" or "nonattainment" for each criteria air pollutant, based on whether the National Ambient Air Quality Standards (NAAQS) have been achieved. Generally, if the recorded concentrations of a pollutant are lower than the standard, the area is classified as "attainment" for that pollutant. If an area exceeds the standard, the area is classified as "nonattainment" for that pollutant. As previously discussed, these standards are set by the EPA or CARB for the maximum level of a given air pollutant that can exist in the outdoor air without unacceptable effects on human health or the public welfare. If there is not enough data available to determine whether the standard is exceeded in an area, the area is designated as "unclassified" or "unclassifiable." The designation of "unclassifiable/attainment" means that the area meets the standard or is expected to be meet the standard despite a lack of monitoring data. Areas that achieve the standards after a nonattainment designation are redesignated as maintenance areas and must have approved Maintenance Plans to ensure continued attainment of the standards. The California Clean Air Act, like its federal counterpart, called for the designation of areas as "attainment" or "nonattainment," but based on California Ambient Air Quality Standards (CAAQS) rather than the NAAQS.

The criteria pollutants of primary concern that are considered in this analysis are O_3, NO_2, CO, SO_2, PM_{10}, and $PM_{2.5}$. Although there are no ambient standards for VOCs or NO_x, they are important as precursors to O_3.The SCCAB is currently designated nonattainment for PM_{10} under the CAAQS. It is designated attainment for the CAAQS for O_3, CO, PM_{10}, NO_2, SO_2, lead, and sulfates. The SCCAB is designated attainment for all NAAQS.

Table 3.2-1 summarizes the SCCAB's federal and state attainment designations for each of the criteria pollutants.

Table 3.2-1. SCCAB Attainment Classification

Pollutant	Federal Designation[a,b]	State Designation[c]
O_3 (1-hour)	Attainment[d]	Attainment
O_3 (8-hour)	Unclassifiable/Attainment	Attainment
CO	Attainment (Maintenance)	Attainment
PM_{10}	Attainment	Nonattainment
$PM_{2.5}$	Unclassifiable/Attainment	Unclassified
NO_2	Unclassifiable/Attainment	Attainment

Table 3.2-1. SCCAB Attainment Classification

Pollutant	Federal Designation[a,b]	State Designation[c]
SO_2	Unclassified	Attainment
Lead[e]	Unclassifiable/Attainment	Attainment
Sulfates	(no federal standard)	Attainment
Hydrogen Sulfide	(no federal standard)	Attainment
Visibility-Reducing Particles	(no federal standard)	Unclassified
Vinyl chloride[e]	No federal standard	No designation

Notes:

[a] EPA 2016c.

[b] At the time of designation, if the available data does not support a designation of attainment or nonattainment, the area is designated as unclassifiable.

[c] CARB 2016b.

[d] The federal 1-hour standard of 0.12 ppm was in effect from 1979 through June 15, 2005. The revoked standard is referenced here because it was employed for such a long period and because this benchmark is addressed in SIPs.

[e] CARB has identified lead and vinyl chloride as toxic air contaminants with no threshold level of exposure for adverse health effects determined.

Local Ambient Air Quality

CARB, air districts, and other agencies monitor ambient air quality at approximately 250 air quality monitoring stations across the state. The Santa Barbara County Air Pollution Control District (SBCAPCD) monitors local ambient air quality at the project site. Air quality monitoring stations usually measure pollutant concentrations 10 feet above ground level; therefore, air quality is often referred to in terms of ground-level concentrations. The most recent background ambient air quality data from 2017 to 2019 are presented in Table 3.2-2. The Carpinteria monitoring station, located at Gobernador Canyon Rd., is the nearest air quality monitoring station to the project site, located approximately 2.1 miles northeast from the project site. The data collected at this station are considered representative of the air quality experienced in the project vicinity. Air quality data for O_3 and NO_2 from the Carpinteria monitoring station are provided in Table 3.2-2. Because CO, SO_2, PM_{10}, and $PM_{2.5}$ are not monitored at the Carpinteria monitoring station, CO measurements were taken from the Las Flores Canyon monitoring station located in El Capitan, California, approximately 33.5 miles west of the project site; SO_2 measurements were taken from the Isla Vista monitoring station located at the University of California, Santa Barbara, approximately 23.4 miles west of the project site; and PM_{10} and $PM_{2.5}$ measurements were taken from the Santa Barbara monitoring station located at 700 East Canon Perdido, Santa Barbara, approximately 12.8 miles north-west of the project site. The number of days exceeding the ambient air quality standards are also shown in Table 3.2-2.

Table 3.2-2. Local Ambient Air Quality Data

Monitoring Station	Unit	Averaging Time	Agency/ Method	Ambient Air Quality Standard	Measured Concentration by Year			Exceedances by Year		
					2017	*2018*	*2019*	*2017*	*2018*	*2019*

Sources: CARB 2020; EPA 2020.

Notes: — = not available; µg/m³ = micrograms per cubic meter; ND = insufficient data available to determine the value; ppm = parts per million

Data taken from CARB iADAM (http://www.arb.ca.gov/adam) and EPA AirData (https://www.epa.gov/outdoor-air-quality-data) represent the highest concentrations experienced over a given year.

Exceedances of national and California standards are only shown for O_3 and particulate matter. Daily exceedances for particulate matter are estimated days because PM_{10} and $PM_{2.5}$ are not monitored daily. All other criteria pollutants did not exceed national or California standards during the years shown. There is no national standard for 1-hour O_3, annual PM_{10}, or 24-hour SO_2, nor is there a California 24-hour standard for $PM_{2.5}$.

[a] Measurements of PM_{10} and $PM_{2.5}$ are usually collected every 6 days and every 1 to 3 days, respectively. Number of days exceeding the standards is a mathematical estimate of the number of days concentrations would have been greater than the level of the standard had each day been monitored. The numbers in parentheses are the measured number of samples that exceeded the standard.

3.2.2 Relevant Plans, Policies, and Ordinances

3.2.2.1 Federal

3.2.2.1.1 Criteria Pollutants

The federal Clean Air Act (CAA), passed in 1970 and last amended in 1990, forms the basis for the national air pollution control effort. The EPA is responsible for implementing most aspects of the CAA, including the setting of the National Ambient Air Quality Standards (NAAQS) for major air pollutants, hazardous air pollutant standards, approval of state attainment plans, motor vehicle emission standards, stationary source emission standards and permits, acid rain control measures, stratospheric O_3 protection, and enforcement provisions.

Under the CAA, NAAQS are established for the following criteria pollutants: O_3, CO, NO_2, SO_2, PM_{10}, $PM_{2.5}$, and lead. The NAAQS describe acceptable air quality conditions designed to protect the health and welfare of the citizens of the nation. The CAA requires the EPA to reassess the NAAQS at least every five years to determine whether adopted standards are adequate to protect public health based on current scientific evidence. States with areas that exceed the NAAQS must prepare a State Implementation Plan (SIP) that demonstrates how those areas will attain the standards within mandated time frames.

3.2.2.1.2 Hazardous Air Pollutants

The 1977 federal CAA amendments required the EPA to identify national emission standards for hazardous air pollutants to protect public health and welfare. Hazardous air pollutants include certain VOCs, pesticides, herbicides, and radionuclides that present a tangible hazard, based on scientific studies of exposure to humans and other mammals. Under the 1990 CAA amendments, which expanded the control program for hazardous air pollutants, 189 substances and chemical families were identified as hazardous air pollutants.

3.2.2.2 State

3.2.2.2.1 Criteria Air Pollutants

The federal CAA delegates the regulation of air pollution control and the enforcement of the NAAQS to the states. In California, the task of air quality management and regulation has been legislatively granted to the California Air Resources Board (CARB), with subsidiary responsibilities assigned to air quality management districts and air pollution control districts at the regional and county levels. CARB, which became part of the California Environmental Protection Agency in 1991, is responsible for ensuring implementation of the California Clean Air Act of 1988, responding to the CAA and regulating emissions from motor vehicles and consumer products.

CARB has established California Ambient Air Quality Standards (CAAQS), which are generally more restrictive than the NAAQS. The CAAQS describe adverse conditions; that is, pollution levels must be below these standards before a basin can attain the standard. Air quality is considered “in attainment” if pollutant levels are continuously below the CAAQS and violate the standards no more than once each year. The CAAQS for O_3, CO, SO_2 (1-hour and 24-hour), NO_2, PM_{10}, $PM_{2.5}$, and visibility-reducing particles are values that are not to be exceeded. All others are not to be equaled or exceeded. The NAAQS and CAAQS are presented in Table 3.2-3.

Table 3.2-3. Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[a]	National Standards[b]	
		Concentration[c]	*Primary*[c,d]	*Secondary*[c,e]
O_3	1 hour	0.09 ppm (180 μg/m³)	—	Same as Primary Standard[f]
	8 hours	0.070 ppm (137 μg/m³)	0.070 ppm (137 μg/m³)[f]	
NO_2[g]	1 hour	0.18 ppm (339 μg/m³)	0.100 ppm (188 μg/m³)	Same as Primary Standard
	Annual Arithmetic Mean	0.030 ppm (57 μg/m³)	0.053 ppm (100 μg/m³)	
CO	1 hour	20 ppm (23 mg/m³)	35 ppm (40 mg/m³)	None
	8 hours	9.0 ppm (10 mg/m³)	9 ppm (10 mg/m³)	
SO_2[h]	1 hour	0.25 ppm (655 μg/m³)	0.075 ppm (196 μg/m³)	—
	3 hours	—	—	0.5 ppm (1,300 μg/m³)
	24 hours	0.04 ppm (105 μg/m³)	0.14 ppm (for certain areas)[g]	—
	Annual	—	0.030 ppm (for certain areas)[g]	—
PM_{10}[i]	24 hours	50 μg/m³	150 μg/m³	Same as Primary Standard
	Annual Arithmetic Mean	20 μg/m³	—	
$PM_{2.5}$[i]	24 hours	—	35 μg/m³	Same as Primary Standard
	Annual Arithmetic Mean	12 μg/m³	12.0 μg/m³	15.0 μg/m³
Lead[j,k]	30-day Average	1.5 μg/m³	—	—
	Calendar Quarter	—	1.5 μg/m³ (for certain areas)[k]	Same as Primary Standard
	Rolling 3-Month Average	—	0.15 μg/m³	
Hydrogen sulfide	1 hour	0.03 ppm (42 μg/m³)	—	—
Vinyl chloride[j]	24 hours	0.01 ppm (26 μg/m³)	—	—
Sulfates	24 hours	25 μg/m³	—	—
Visibility reducing particles	8 hour (10:00 a.m. to 6:00 p.m. PST)	Insufficient amount to produce an extinction coefficient of 0.23 per kilometer due to the number of particles when the relative humidity is less than 70%	—	—

Source: CARB 2016b; EPA 2016d.

Notes: O_3 = ozone; ppm = parts per million by volume; μg/m³ = micrograms per cubic meter; NO_2 = nitrogen dioxide; CO = carbon monoxide; mg/m³= milligrams per cubic meter; SO_2 = sulfur dioxide; PM_{10} = particulate matter with an aerodynamic diameter less than or equal to 10 microns; $PM_{2.5}$ = particulate matter with an aerodynamic diameter less than or equal to 2.5 microns.

[a] California standards for O_3, CO, SO_2 (1-hour and 24-hour), NO_2, suspended particulate matter (PM_{10}, $PM_{2.5}$), and visibility-reducing particles are values that are not to be exceeded. All others are not to be equaled or exceeded. California Ambient Air Quality Standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

[b] National standards (other than O_3, NO_2, SO_2, particulate matter, and those based on annual averages or annual arithmetic mean) are not to be exceeded more than once per year. The O_3 standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m³ is equal to or less than one. For $PM_{2.5}$, the 24-hour standard is attained when 98% of the daily concentrations, averaged over 3 years, are equal to or less than the standard.

[c] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based on a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[d] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety, to protect the public health.

[e] National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[f] On October 1, 2015, the national 8-hour O_3 primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[g] To attain the national 1-hour standard, the three-year average of the annual 98th percentile of the one-hour daily maximum concentrations at each site must not exceed 100 parts per billion (ppb). Note that the national 1-hour standard is in units of ppb. California standards are in units of ppm. To directly compare the national 1-hour standard to the California standards, the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

[h] On June 2, 2010, a new 1-hour SO_2 standard was established, and the existing 24-hour and annual primary standards were revoked. To attain the national 1-hour standard, the three-year average of the annual 99th percentile of the one-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment of the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

[l] On December 14, 2012, the national annual $PM_{2.5}$ primary standard was lowered from 15 µg/m³ to 12 µg/m³. The existing national 24-hour $PM_{2.5}$ standards (primary and secondary) were retained at 35 µg/m³, as was the annual secondary standard of 15 µg/m³. The existing 24-hour PM_{10} standards (primary and secondary) of 150 µg/m³ were also retained. The form of the annual primary and secondary standards is the annual mean averaged over three years.

[j] California Air Resources Board has identified lead and vinyl chloride as toxic air contaminants with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[k] The national standard for lead was revised on October 15, 2008, to a rolling three-month average. The 1978 lead standard (1.5 µg/m³ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

3.2.2.2.2 Toxic Air Contaminants

A TAC is defined by California law as an air pollutant that may cause or contribute to an increase in mortality or an increase in serious illness, or which may pose a present or potential hazard to human health. Federal laws use the hazardous air pollutants to refer to the same types of compounds that are referred to as TACs under state law. California regulates TACs primarily through the Tanner Air Toxics Act (AB 1807) and the Air Toxics Hot Spots Information and Assessment Act of 1987 (AB 2588).

AB 1807 sets forth a formal procedure for CARB to designate substances as TACs. This includes research, public participation, and scientific peer review before CARB can designate a substance as a TAC. Pursuant to AB 2588, existing facilities that emit air pollutants above specified levels were required to (1) prepare a TAC emission inventory plan and report; (2) prepare a risk assessment if TAC emissions were significant; (3) notify the public of significant risk levels; and (4) if health impacts were above specified levels, prepare and implement risk reduction measures.

The following regulatory measures pertain to the reduction of DPM and criteria pollutant emissions from off-road equipment and diesel-fueled vehicles.

Idling of Commercial Heavy Duty Trucks (13 CCR 2485)

In July 2004, CARB adopted an Airborne Toxic Control Measure (ATCM) to control emissions from idling trucks. The ATCM prohibits idling for more than five minutes for all commercial trucks with a gross vehicle weight rating over 10,000 pounds. The ATCM contains an exception that allows trucks to idle while queuing or involved in operational activities.

In-Use Off-Road Diesel-Fueled Fleets (13 CCR 2449 et seq.)

In July 2007, CARB adopted an ATCM for in-use off-road diesel vehicles. This regulation requires that specific fleet average requirements are met for NO_x emissions and for particulate matter emissions. Where average requirements cannot be met, best available control technology requirements apply. The regulation also includes several recordkeeping and reporting requirements.

In response to AB 8 2X, the regulations were revised in July 2009 (effective December 3, 2009) to allow a partial postponement of the compliance schedule in 2011 and 2012 for existing fleets. On December 17, 2010, CARB adopted additional revisions to further delay the deadlines reflecting reductions in diesel emissions due to the poor economy and overestimates of diesel emissions in California. The revisions delayed the first compliance date until no earlier than January 1, 2014, for large fleets, with final compliance by January 1, 2023. The compliance dates for medium fleets were delayed until an initial date of January 1, 2017, and final compliance date of January 1, 2023. The compliance dates for small fleets were delayed until an initial date of January 1, 2019, and final compliance date of January 1, 2028. Correspondingly, the fleet average targets were made more stringent in future compliance years. The revisions also accelerated the phaseout of older equipment with newer equipment added to existing large and medium fleets over time, requiring the addition of Tier 2 or higher engines starting on March 1, 2011, with some exceptions: Tier 2 or higher engines on January 1, 2013, without exception; and Tier 3 or higher engines on January 1, 2018 (January 1, 2023, for small fleets).

On October 28, 2011 (effective December 14, 2011), the Executive Officer approved amendments to the regulation. The amendments included revisions to the applicability section and additions and revisions to the definition. The initial date for requiring the addition of Tier 2 or higher engines for large and medium fleets, with some exceptions, was revised to January 1, 2012. New provisions also allow for the removal of emission control devices for safety or visibility purposes. The regulation also was amended to combine the particulate matter and NO_x fleet average targets under one, instead of two, sections. The amended fleet average targets are based on the fleet's NO_x fleet average, and the previous section regarding particulate matter performance requirements was deleted completely. The best available control technology requirements, if a fleet cannot comply with the fleet average requirements, were restructured and clarified. Other amendments to the regulations included minor administrative changes to the regulatory text.

In-Use On-Road Diesel-Fueled Vehicles (13 CCR 2025)

On December 12, 2008, CARB adopted an ATCM to reduce NO_x and particulate matter emissions from most in-use on-road diesel trucks and buses with a gross vehicle weight rating greater than 14,000 pounds. The original ATCM regulation required fleets of on-road trucks to limit their NO_x and particulate matter emissions through a combination of exhaust retrofit equipment and new vehicles. The regulation limited particulate matter emissions for most fleets by 2011, and limited NO_x emissions for most fleets by 2013. The regulation did not require any vehicle to be replaced before 2012 and never required all vehicles in a fleet be replaced.

In December 2009, the CARB Governing Board directed staff to evaluate amendments that would provide additional flexibility for fleets adversely affected by the struggling California economy. On December 17, 2010, CARB revised this ATCM to delay its implementation along with limited relaxation of its requirements. Starting on January 1, 2015, lighter trucks with a gross vehicle weight rating of 14,001 to 26,000 pounds with 20-year-old or older engines need to be replaced with newer trucks (2010 model year emissions equivalent as defined in the regulation). Trucks with a gross vehicle weight rating greater than 26,000 pounds with 1995 model year or older engines needed to be replaced as of January 1, 2015. Trucks with 1996 to 2006 model year engines must install a Level 3 (85% control) diesel particulate filter starting on January 1, 2012, to January 1, 2014, depending on the model year, and then must be replaced after eight years. Trucks with 2007 to 2009 model year engines have no requirements until 2023, at which time they must be replaced with 2010 model year emissions-equivalent engines, as defined in the regulation. Trucks with 2010 model year engines would meet the final compliance requirements. The ATCM provides a phase-in option under which a fleet operator would equip a percentage of trucks in the fleet with diesel particulate filters, starting at 30% as of January 1, 2012, with 100% by January 1, 2016. Under each option, delayed compliance is granted to fleet operators who have or will comply with requirements before the required deadlines.

On September 19, 2011 (effective December 14, 2011), the Executive Officer approved amendments to the regulations, including revisions to the compliance schedule for vehicles with a gross vehicle weight rating of 26,000 pounds or less to clarify that *all* vehicles must be equipped with 2010 model year emissions equivalent engines by 2023. The amendments included revised and additional credits for fleets that have downsized; implement early particulate matter retrofits; incorporate hybrid vehicles, alternative-fueled vehicles, and vehicles with heavy-duty pilot ignition engines; and implement early addition of newer vehicles. The amendments included provisions for additional flexibility, such as for low-usage construction trucks, and revisions to previous exemptions, delays, and extensions. Other amendments to the regulations included minor administrative changes to the regulatory text, such as recordkeeping and reporting requirements related to other revisions.

California Health and Safety Code Section 41700

Section 41700 of the California Health and Safety Code states that a person shall not discharge from any source whatsoever quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or that endanger the comfort, repose, health, or safety of any of those persons or the public, or that cause, or have a natural tendency to cause, injury or damage to business or property. This section also applies to sources of objectionable odors.

3.2.2.3 Local

San Barbara County Air Pollution Control District

While CARB is responsible for the regulation of mobile emission sources within the state, local air quality management districts and air pollution control districts are responsible for enforcing standards and regulating stationary sources. The project Site is located within the SCCAB and is subject to the guidelines and regulations of the SBCAPCD. The SBCAPCD operates monitoring stations in the County, develops rules and regulations for stationary sources and equipment, prepares emissions inventory and air quality management planning documents, and conducts source testing and inspections.

In Santa Barbara County, O_3 and particulate matter are the pollutants of main concern, since exceedances of state ambient air quality standards for those pollutants are experienced here in most years. For this reason, the SCCAB has been designated as a nonattainment area for the state PM_{10} standard. Santa Barbara County was designated

unclassifiable/attainment for the 2015 revised federal 8-hour ozone standard on April 30, 2018 and attainment for the state O_3 standard. The County is also unclassifiable/attainment for the federal $PM_{2.5}$ standard and unclassified for the state $PM_{2.5}$ standard. However, the County is currently in nonattainment for the state PM_{10} standard.

Clean Air Plans

Since 1992, Santa Barbara County has adopted or amended rules implementing over twenty five control measures controlling stationary source emissions. This has resulted in substantial amounts of reductions in ozone precursor pollutants (nitrogen oxides and reactive organic compounds). Prior to 1999, the County exceeded the national 1-hour O_3 standard, and in response to Clean Air Act requirements, the SBCAPCD prepared plans designed to bring the County into attainment of this standard. The SBCAPCD submitted a plan (maintenance plan) to CARB in November 2001 that demonstrated how the County would maintain the national 1-hour O_3 standard through the year 2015. This 2001 Clean Air Plan was approved by both CARB and the EPA. The 2001 Clean Air Plan also included a schedule to revise the plan in 3 years, as required by the California Clean Air Act, which would show how the County would work toward meeting the state 1-hour O_3 standard.

The 2004 Clean Air Plan was prepared to address the California Clean Air Act mandates under Health and Safety Code sections 40924 and 40925 that require areas update their Clean Air Plans to attain the state 1-hour O_3 standard every 3 years. The 2004 Clean Air Plan was a 3-year update to the 2001 Clean Air Plan. Similarly, the 2007 Clean Air Plan provided a 3-year update to the SBCAPCD's 2004 Clean Air Plan. The 2007 Clean Air Plan was prepared to address both federal and state requirements; specifically, the federal requirements that pertain to maintenance provisions of the federal Clean Air Act, which apply to the County's current designation as an attainment area for the federal 8-hour O_3 standard.

The 2010 Clean Air Plan addressed local plans to attain the California 8-hour O_3 standard. The 2010 Clean Air Plan was a 3-year update required to show how the SBCAPCD planned to meet the state 8-hour O_3 standard. In addition to planning for attainment of the state O_3 standard, the 2010 Clean Air Plan contained two chapters that were provided for informational purposes and were not regulatory in nature: a climate protection chapter, with an inventory of carbon dioxide emissions in the County, and a transportation and land use planning chapter (SBCAPCD and SBCAG 2011).

The 2013 Clean Air Plan implemented "an all feasible measures" strategy to ensure continued progress towards attainment of the state ozone standards and this plan satisfied all state triennial planning requirements. In this Plan, the SBCAPCD proposed to carry forward proposed stationary source control measures from the 2010 Plan that were pending rule adoption except for two which had been reclassified as "further study" measures. However, the primary focus was on marine shipping emissions. Marine shipping ozone precursor emissions have and will continue to account for the largest percentage of the County's inventory, over 50%. While CARB's future on-road vehicle standards for almost zero or zero tailpipe emissions (e.g., Partial Zero Emission Vehicles and Zero Emission Vehicles) will result in substantial emission reductions, without strategies to gain emission reductions from marine shipping, very little additional progress can be made towards attainment of the state 8-hour ozone standard (SBCAPCD and SBCAG 2015).

The 2016 Ozone Plan was adopted by the SBCAPCD Board in October 2016. The 2016 Ozone Plan incorporated and built upon the prior Clean Air Plans and predominantly focused on meeting attainment with the state ozone standards, in addition to achieving the adopted federal ozone standards. The 2016 Ozone Plan focused on reducing ozone precursor emissions through predicting vehicle activity trends and implementation of transportation control measures, which would serve to reduce mobile-source emissions, the primary source of ROC and NO_x emissions in the County. The 2016 Ozone Plan, carried forward proposed stationary source control measures that were identified

in the 2013 Clean Air Plan. The 2016 Ozone plan also moved two stationary source control measures that were previously listed as "further study" measures to proposed control measures. One control measure that was scheduled for adoption in the 2013 Clean Air Plan had been moved to the "further study" list. Finally, the 2016 Ozone Plan continued to pursue programs that will achieve near-term NO_x reductions in the marine shipping sector (SBCAPCD 2016).

The most recent update is the 2019 Ozone Plan, which builds upon the 2016 Ozone Plan. This 2019 Plan addresses the state ozone standards only. This is because the District is designated "attainment" for the federal 8-hour ozone standard of 0.070 ppm, which was promulgated by the U.S. EPA in December 2015. The federal attainment designation for Santa Barbara County was finalized in April 2018. Each plan update includes an evaluation of feasible reduction measures for stationary sources and considers numerous factors such as technology advancements, efficiency measures, cost-effectiveness, and the successful implementation of measures at other California air districts. All of the control measures that were found to be feasible in prior plan updates have been implemented, and any additional measures that could be proposed yield relatively smaller emission reductions with higher associated costs. The 2019 Plan still carries forward the contingency measures and some of the "further study" measures from the 2016 Plan. There is a discussion on how the Assembly Bill 617 Rule Development Schedule interacts with the 2019 Plan (SBCAPCD 2019).

The Santa Barbara County Association of Governments (SBCAG) is responsible for the development and analysis of the 2013 Clean Air Plan's on-road mobile source emission estimates and Transportation Control Measures (TCMs). SBCAG also provides the SBCAPCD with socio-economic projections that form the basis for many of the stationary and area source growth forecasts for the 2016 Ozone Plan. The 2016 Ozone Plan relies on the land use and population projections provided in SBCAG's Regional Growth Forecast. The Regional Growth Forecast is generally consistent with the local plans; therefore, the 2016 Ozone Plan is generally consistent with local general plans.

SBCAPCD Rules and Regulations

As stated above, the SBCAPCD is responsible for planning, implementing, and enforcing federal and state ambient standards in the SCCAB. The following rules and regulations apply to all sources in the jurisdiction of SBCAPCD, and would apply to the proposed project:

- **Rule 302 (Visible Emissions).** Rule 302 prohibits emissions of visible air contaminants from any potential source of air contaminants. The rule prohibits air contaminants, other than water vapor, that are a certain level of darkness or opacity from being discharged for a combined period of more than 3 minutes in any 1 hour.
- **Rule 303 (Nuisance).** This rule could apply to fugitive dust emitted during proposed construction activities or odors during operation. This rule states that a person shall not discharge air contaminants from any source that can cause injury, detriment, nuisance, or annoyance to any considerable number of persons, or that can endanger the comfort, repose, health, or safety, of any such persons or their business or property.
- **Rule 311 (Sulfur Content of Fuels).** The purpose of this rule is to limit the sulfur content in gaseous fuels, diesel and other liquid fuels, and solid fuels for the purpose of both reducing the formation of SO_x and particulates during combustion.
- **Rule 345 (Control of Fugitive Dust from Construction and Demolition Activities).** Rule 345 establishes limits on the generation of visible fugitive dust emissions at demolition and construction sites. The rule includes measures for minimizing fugitive dust from on-site activities and from trucks moving on and off site.

City of Carpinteria

The City has adopted measures within the Open Space, Recreation & Conservation element of its General Plan/Coastal Land Use Plan to protect air quality (City of Carpinteria 2003). The following policies within that element are protective or air quality:

OSC-11a	Carefully review development that will significantly impact air quality.
OSC-11b	Promote the reduction of mobile source emissions related to vehicular traffic (e.g. promote alternative transportation, vanshare, buses).
OSC-11c	Promote use of solar heating and energy efficient building design to reduce stationary source emissions.
OSC-11d	Encourage the improvement of air quality in the Carpinteria Valley by implementing measures in the South Coast Air Quality Attainment Plan. For air quality enhancement, measures will include but not be limited to, measures to reduce dependence on the automobile and encourage the use of alternative modes of transportation such as buses, bicycles and walking.
OSC-11e	Encourage agricultural uses in the Plan Area to use the most energy efficient equipment available and to seek grants available to upgrade existing equipment such as boilers and diesel fueled machinery to equipment that has lower emissions and greater energy efficiency.

The following implementation policies also apply to air quality:

55	Incorporate the relevant policies and strategies from the Santa Barbara County Air Quality Attainment Plan (AQAP).
56	Cooperate in regional air quality plans, programs and enforcement measures.

3.2.3 Thresholds of Significance

The significance criteria used to evaluate the project impacts to air quality are based on Appendix G of the CEQA Guidelines. According to Appendix G of the CEQA Guidelines, a significant impact related to air quality would occur if the project would:

a) Conflict with or obstruct implementation of the applicable air quality plan.
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard.
c) Expose sensitive receptors to substantial pollutant concentrations.
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

3.2.3.1 County of Santa Barbara Environmental Thresholds

The County of Santa Barbara Environmental Thresholds and Guidelines Manual (County of Santa Barbara 2020) states that a significant adverse air quality impact may occur when air pollutant emissions associated with a project, individually or cumulatively:

- Interferes with progress toward the attainment of the ozone standard by releasing emissions which equal or exceed the established long-term quantitative thresholds for NO_x and ROC; or
- Equals or exceeds the state or federal ambient air quality standards for any criteria pollutant (as determined by modeling).

The evaluation of whether a project would conflict with or obstruct implementation of the applicable air quality plan is based on the consistency with land use and population forecasts. Consistency with an applicable air quality plan means that a project's direct and indirect emissions are accounted for in the air quality plan's emissions growth assumptions and the project is consistent with the policies developed in the air quality plan (SBCAPCD 2019). The relevant air quality plan to the proposed project is the 2019 Ozone Plan. The 2019 Ozone Plan relies on the land use and population projections provided by the SBCAG and CARB on-road emissions forecast in order to develop vehicle emission forecasts. In addition, the 2019 Ozone Plan utilizes SBCAG's Regional Growth Forecast to project population growth and associated air pollutant emissions within Santa Barbara County. Residential projects that exceed the amount of forecasted growth for the specific jurisdiction or sub-region would be considered inconsistent with the 2019 Ozone Plan.

The County's guidance also indicates that cumulative air quality impacts and consistency with the polices and measures in the Air Quality Supplement of the Comprehensive Plan, other general plans, and the Air Quality Attainment Plan should be determined for all projects (i.e., whether the project exceeds the Air Quality Attainment Plan emission projections or growth assumptions). Pursuant to the County's Threshold Manual, the following issues should also be discussed, but only if they are applicable to the project:

- Emissions which may affect sensitive receptors (e.g. children, elderly, or acutely ill);
- Toxic or hazardous air pollutants in amounts which may increase cancer risk for the affected population; or
- Odor or another air quality nuisance problem impacting a considerable number of people

Chapter 5 of the Santa Barbara County Environmental Thresholds and Guidelines Manual addresses the subject of air quality. The Long-term/Operational Emission Thresholds provide that a proposed project will not have a significant impact on air quality if operation of the project will:

- Emit (from all project sources, mobile and stationary), less than the daily trigger for offsets of any pollutant (Currently 55 pounds per day for NO_x and ROC, and 80 pounds for PM_{10});
- Emit less than 25 pounds per day of NO_x or reactive organic compounds from motor vehicle trips only;
- Not cause or contribute to a violation of California or National Ambient Air Quality Standards (except ozone);
- Not exceed the SBCAPCD's health risk public notification thresholds adopted by the SBCAPCD board; and
- Be consistent with the adopted federal and state Air Quality Plans.

As stated in the SBCAPCD's *Scope and Content of Air Quality Sections in Environmental Documents* (SBCAPCD 2017), no quantitative thresholds have been established for short-term impacts associated with construction

activities. However, the SBCAPCD uses 25 tons per year for ROC or NO_x as a guideline for determining the significance of construction impacts. Additionally, the County's grading ordinance requires standard dust control conditions for all projects involving grading activities. The Long-term/Operational Emission Thresholds listed above have been established to address mobile emissions (i.e., motor vehicle emissions) and stationary source emissions (i.e., station boilers, engines, paints, solvents, and chemical or industrial processing operations that release pollutants) (SBCAPCD 2017).

The County's Threshold Manual states that a project will have a significant air quality impact if it causes, by adding to the existing background CO levels, a CO "hot spot" where the California one-hour standard of 20 parts per million carbon monoxide is exceeded, which typically occurs at severely congested intersections. The County's project screening for CO impacts are the following:

1. If a project contributes less than 800 peak hour trips, then CO modeling is not required.
2. Project contributing more than 800 peak hour trips to an existing congested intersection at level of service (LOS) D or below, or will cause an intersection to reach LOS D or below, may be required to model for CO impacts. However, projects that will incorporate intersection modifications to ease traffic congestion, are not required to perform modeling to determine potential CO impacts.

3.2.4 Impact Analysis

a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

SBCAPCD and the Santa Barbara County Association of Governments (SBCAG) are responsible for developing and implementing the Clean Air Plan (SBCAPCD 2019) for attainment and maintenance of the ambient air quality standards in the basin. SBCAPCD further describes consistency with the Clean Air Plan for projects subject to these guidelines, which means that direct and indirect emissions associated with the project are accounted for in the Clean Air Plan's emissions growth assumptions, and the project is consistent with policies adopted in the Clean Air Plan. The 2019 Ozone Plan was adopted by the District Board on December 19, 2019 and is the most recent applicable air quality plan. The 2019 Ozone Plan is the 3 -year update required by the state to show how SBCAPCD plans to meet the state 8-hour O_3 standard (SBCAPCD 2019). However, after the 2019 Ozone Plan was adopted the County was designated as attainment for the state O_3 standards on July 1, 2020.

The 2019 Ozone Plan relies primarily on the land use and population projections provided by SBCAG and CARB on-road emissions forecasts as a basis for vehicle emissions for all County incorporated and unincorporated areas. The project site within the City of Carpinteria has a Carpinteria General Plan/Coastal Land Use Plan land use designation of Visitor-Serving Commercial (2003) and has been zoned for Resort Zone District use. The portion of the project within the County of Santa Barbara is designated as Other Open Land and Recreation and is zoned Transportation Corridor and Recreation (County of Santa Barbara 2021). The proposed trail is an apt use for the City's and County's vision for the properties within each jurisdiction. The proposed project would not conflict with any applicable land use plan, policy or regulation of an agency with jurisdiction over the project.

If a project proposes development that is greater than that anticipated in the local plan and SBCAG's growth projections, the project might be in conflict with the 2019 Ozone Plan and may contribute to a potentially significant cumulative impact on air quality. Based on the nature of the proposed project, implementation of the project would not result in growth-inducing development. As such, the proposed project would not contribute to the projected City of Carpinteria or Santa Barbara County populations as estimated in the Santa Barbara

County Association of Governments 2040 Regional Transportation Plan-Sustainable Communities Strategy Regional Growth Forecast. Accordingly, the project is considered to be consistent with the APCD 2019 Ozone Plan and impacts to air quality would be **less than significant**.

b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Cumulative air quality impacts are the effect of long-term emissions of the proposed project plus any existing emissions at the same location, as well as the effect of long-term emissions of reasonably foreseeable similar projects, on the projected regional air quality or localized air pollution in the County. As discussed in SBCAPCD's Scope and Content of Air Quality Sections in Environmental Documents (SBCAPCD 2017), the cumulative contribution of project emissions to regional level should be compared with existing programs and plans, including the most recent Clean Air Plan.

Emissions from construction were estimated using the California Emissions Estimator Model (CalEEMod) version 2016.3.2 (CAPCOA 2017). For the purposes of modeling, it was assumed that construction would commence in March 2022[3] and would be completed by approximately March 2024, which also accommodates periods where work would not occur due to potential weather-related conditions. The equipment mix anticipated for construction activity was based on the City of Carpinteria Parks and Recreation Department input for typical construction practices. The equipment mix is meant to represent a reasonably conservative estimate of construction activity. For the analysis, it was generally assumed that heavy construction equipment would be operating at the site for approximately eight hours per day, five days per week (22 days per month). To account for dust control measures in the calculations, it was assumed that the active sites would be watered at least two times daily, resulting in an approximately 55% reduction in dust generation to comply with SBCAPCD Rule 345.The analysis contained herein is based on the following subset area schedule assumptions (duration of phases is approximate):

- Site preparation: 2 months
- Grading: 11 months
- Trail Construction: 5 months
- Bridge Construction: 1 month
- Paving: 2 months
- Architectural Coating: 1 month

The majority of the phases listed above would occur concurrently and would not occur sequentially in isolation. The estimated construction duration was provided by the project applicant. Detailed construction equipment modeling assumptions are provided in Appendix B, Air Quality, Greenhouse Gas, and Energy Calculations.

The construction equipment mix used for estimating the construction emissions of the proposed project is based on information provided by the project applicant and is shown in Table 3.2-4.

[3] The analysis assumes a construction start date of March 2022, which represents the earliest date construction would initiate. Assuming the earliest start date for construction represents the worst-case scenario for criteria air pollutant emissions because equipment and vehicle emission factors for later years would be slightly less due to more stringent standards for in-use off-road equipment and heavy-duty trucks, as well as fleet turnover replacing older equipment and vehicles in later years.

Table 3.2-4. Construction Scenario Assumptions

Construction Phase	One-Way Vehicle Trips			Equipment		
	Average Daily Worker Trips	*Average Daily Vendor Truck Trips*	*Total Haul Truck Trips*	*Equipment Type*	*Quantity*	*Usage Hours*
Site Preparation	8	0	0	Graders	1	8
				Rubber Tired Dozers	1	7
				Tractors/Loaders/ Backhoes	1	8
Grading	8	0	11,764	Crawler Tractors	1	7
				Graders	1	6
				Tractors/Loaders/ Backhoes	1	7
Trail Construction	28	12	0	Crawler Tractors	1	7
				Tractors/Loaders/ Backhoes	1	6
Bridge Construction	28	12	0	Cranes	1	8
				Tractors/Loaders/ Backhoes	1	6
				Welders	3	8
Paving	6	0	0	Crawler Tractors	1	8
				Paving Equipment	1	8
Architectural Coating	6	0	0	Air Compressors	1	6

Note: See Appendix B for details.

For the analysis, it was assumed that heavy construction equipment would be operating five days per week (22 days per month) during proposed project construction. Construction worker and vendor trips were based on CalEEMod default assumptions and rounded up to the nearest whole number to account for whole round trips.

Proposed project construction would include 107,386 cubic yards of cut, a total of 14,860 cubic yards of fill, and the export of a total of 92,526 cubic yards of earth material during the grading phase. It is anticipated that earth movement would be primarily, if not completely, accomplished using off-road equipment (e.g., scrapers and excavators). Off-road travel was assumed to be 1,000 feet per trip for vendor and haul trucks.

A detailed depiction of the construction schedule—including information regarding phases and equipment used during each phase—is included in Appendix B of this Environmental Impact Report. The information contained in Appendix B was used as CalEEMod model inputs.

Construction Emissions

Construction of the proposed project would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment) and off-site sources (i.e., on-road haul trucks, vendor trucks, and worker vehicle trips). Construction emission can vary substantially from day to day, depending on the level of activity, the specific type of operation, and for dust, the prevailing weather conditions. Therefore, such emission levels can only be estimated, with a corresponding uncertainty in precise ambient air

quality impacts. Table 3.2-5 presents the estimated annual construction emissions generated during construction of the project. Details of the emission calculations are provided in Appendix B.

Table 3.2-5. Estimated Annual Construction Emissions

Year	ROC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Tons per Year					
2022	0.14	2.50	1.03	0.01	0.24	0.10
2023	0.07	0.85	0.53	0.00	0.17	0.05
Maximum Annual Emissions	**0.14**	**2.50**	**1.03**	**0.01**	**0.24**	**0.10**
SBCAPCD Threshold	*25*	*25*	*25*	*25*	*25*	*25*
Threshold Exceeded?	*No*	*No*	*No*	*No*	*No*	*No*

Source: Appendix B.
Notes: ROC = reactive organic compound; CO = carbon monoxide; NO_x = oxides of nitrogen; SO_x = sulfur oxides; PM_{10} = course particulate matter; $PM_{2.5}$ = fine particulate matter

As shown in Table 3.2-5, annual construction emissions would not exceed the SBCAPCD significance thresholds for ROC, NO_x, CO, SO_x, PM_{10}, or $PM_{2.5}$ emissions during construction. Therefore, construction of the proposed project would result in a **less than significant** impact.

Operational Emissions

The proposed project would consist of maintenance activities including landscape watering, vegetation control and other trail amenity care and repair, which would involve the temporary use of a light-duty truck that would generate nominal air pollutant emissions. There would be no energy use (electricity or natural gas) associated with the project. No lighting is incorporated into the project design.

Area Sources

CalEEMod was used to estimate operational emissions from area sources, including emissions from consumer product use, architectural coatings, and landscape maintenance equipment. Emissions associated with natural gas usage in space heating and water heating are calculated in the building energy use module of CalEEMod, as described in the following text.

VOC off-gassing emissions result from evaporation of solvents contained in surface coatings, such as in paints and primers used during building maintenance. CalEEMod calculates the VOC evaporative emissions from the application of surface coatings based on the VOC emission factor, the building square footage, the assumed fraction of surface area, and the reapplication rate. The model default reapplication rate of 10% of area per year is assumed. Consistent with CalEEMod defaults, it is assumed that the surface area for painting equals 2.7 times the floor square footage, with 75% assumed for interior coating and 25% assumed for exterior surface coating (CAPCOA 2017).

Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, rototillers, shredders/grinders, blowers, trimmers, chainsaws, and hedge trimmers. The emissions associated with landscape equipment use are estimated based on CalEEMod default values for emission factors (grams per square foot of building space per day) and number of summer days (when landscape maintenance would generally be performed) and winter days.

Mobile Sources

Following the completion of construction activities, the proposed project would generate criteria pollutant emissions from mobile sources (vehicular traffic) as a result of the periodic maintenance of the proposed project. It was assumed that one maintenance trip would occur per week, for 2 one-way trips. CalEEMod default data, including trip characteristics and emissions factors, were used for the model inputs. Project-related traffic was assumed to include a mixture of vehicles in accordance with the associated use, as modeled within the CalEEMod. Emission factors representing the vehicle mix and emissions for 2024 were used to estimate emissions associated with vehicular sources.

As discussed, pollutant emissions associated with long-term operations were quantified using CalEEMod. Project-generated area and mobile source emissions were estimated based on CalEEMod default user assumptions. Table 3.2-6 presents the daily maximum emissions associated with operation (Year 2024) of the proposed project. Details of the emission calculations are provided in Appendix B.

Table 3.2-6. Estimated Maximum Daily Operational Emissions

Emission Source	ROC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Pound per Day					
Area	0.01	0.00	0.00	0.00	0.00	0.00
Vehicular	0.00	0.01	0.03	0.00	0.01	0.00
Combined Total Emissions	**0.01**	**0.01**	**0.03**	**0.00**	**0.01**	**0.00**
Vehicle Source Emissions Threshold	*25*	*25*	—	—	*N/A*	—
Threshold Exceeded?	No	No			N/A	
Area + Vehicle Source Emissions Threshold	*240*	*240*			*80*	
Threshold Exceeded?	No	No			No	

Source: Appendix B.
Notes: ROC = reactive organic compound; CO = carbon monoxide; NO_x = oxides of nitrogen; SO_x = sulfur oxides; PM_{10} = course particulate matter; $PM_{2.5}$ = fine particulate matter

As shown in Table 3.2-6, the combined daily emissions would not exceed the SBCAPCD operational thresholds for ROC, NO_x, CO, SO_x, PM_{10}, and $PM_{2.5}$.

Due to the County's nonattainment status for the PM_{10} standard and its regional nature, if a project's emissions exceed the long-term emission thresholds, then the project's cumulative impacts will be considered significant. For projects that do not have significant PM_{10} emissions or localized pollutant impacts, if emissions have been taken into account in the most recent Clean Air Plan growth projections, regional cumulative impacts may be considered less than significant. When a project's emissions exceed the thresholds and are clearly not accounted for in the most recent Clean Air Plan growth projections, then the project is considered to have significant cumulative impacts that must be mitigated to a less than significant level.

In analyzing cumulative impacts from the proposed project, the assessment must specifically evaluate the project's contribution to the cumulative increase in pollutants for which the County is designated as nonattainment for the NAAQS or CAAQS. The County is currently in attainment of NAAQS and is in attainment for all CAAQS with the exception of the state standards for PM_{10}. Construction and operation of the proposed

project would generate emissions of ROCs and NO_x (O_3 precursors) and PM_{10}; however, the proposed project would not exceed SBCAPCD guidance for annual construction emissions or SBCAPCD thresholds for daily operational emissions. Because implementation of the proposed project would result in less than significant impacts associated with operation of the project, the project's contribution to the County's nonattainment status for the state PM_{10} standard would be less than cumulatively considerable. Because the proposed project would not result in significant PM_{10} emissions, and project-generated emissions have been taken into account in SBCAPCD's 2019 Ozone Plan growth projections, cumulative impacts would be **less than significant**.

c) Would the project expose sensitive receptors to substantial pollutant concentrations?

Carbon Monoxide Hotspots

A CO hot spot is a localized concentration of CO that is above the state or national 1-hour or 8-hour CO ambient air standards. Localized high levels of CO are associated with traffic congestion and idling or slow-loving vehicles. In accordance with the County Guidelines (as shown in Section 3.2.3.1), a potential hotspot may occur if a project contributes more than 800 peak hour trips to an existing intersection with a Level of Service (LOS) of D or worse (County of Santa Barbara 2020). The peak construction trips would generate up to 61 one-way trips per day (see Appendix B), six of which would be anticipated to occur during the peak hour. During operation, it was assumed that one maintenance vehicle would visit the site per week. With respect to trail users, keep in mind that the trail is intended to promote alternative transportation modes, and to reduce local vehicle trips to the Rincon Preserve and Rincon Beach County Park, by offering a pedestrian and cyclist link between these resources. While some visitors may drive to Rincon Preserve or Rincon Beach County Park specifically to use the new trail segment, such trips are expected to be very limited in comparison to existing visitors to either of these areas. The majority of trail users would be expected to walk from nearby areas or to cycle to and along the trail. Given there are approximately 190 parking spaces at Rincon Beach County Park, and future parking spaces for Rincon Preserve would not be anticipated to exceed 60, parking supply alone would practically limit peak hour trips for Rincon Beach, Rincon Trail, and Rincon Preserve to far below the 800 peak hour trip threshold. Therefore, the County's screening threshold for CO hotspots would not be exceeded during construction or operation. As such, impacts related to CO hotspots from the project would be **less than significant**.

Toxic Air Contaminants

"Incremental cancer risk" is the net increased likelihood that a person continuously exposed to concentrations of TAC's resulting from a project over a 9-, 30-, and 70-year exposure period would contract cancer based on the use of standard Office of Environmental Health Hazard Assessment (OEHHA) risk-assessment methodology (OEHHA 2015). In addition, some TACs have non-carcinogenic effects. TACs that would potentially be emitted during construction activities would be diesel particulate matter (DPM), emitted from heavy-duty construction equipment and heavy-duty trucks. Heavy-duty construction equipment and diesel trucks are subject to CARB ATCMs to reduce DPM emissions. According to the OEHHA, health risk assessments, which determine the exposure of sensitive receptors to toxic emissions, should be based on a 30-year exposure period for the maximally exposed individual resident; however, such assessments should be limited to the period/duration of activities associated with the project (OEHHA 2015). Therefore, for this project, the exposure period to consider would be 24 months, consistent with the duration of construction activity.

Because the project would involve construction activities in several areas across the site, the project would not require the extensive use of heavy-duty construction equipment or diesel trucks in any one location over the duration of the development, which would limit the exposure of any proximate individual sensitive receptor to

TACs. Furthermore, the closest sensitive receptors to the project site are residences of the Rincon Point community. The closest residence to the proposed trail is located approximately 180 feet (55 meters) from the truck haul route at the eastern end of the trail. Therefore, impacts to sensitive receptors would be **less than significant** during construction.

The VOC and NOx emissions, as described previously, would nominally contribute to regional O_3 concentrations and the associated health effects. In addition to O_3, NOx emissions would not contribute to potential exceedances of the NAAQS and CAAQS for NO_2. As shown in Table 3.2-2, the existing NO_2 concentrations in the area are well below the NAAQS and CAAQS standards. Thus, it is not expected that the proposed project's operational NOx emissions would result in exceedances of the NO_2 standards or contribute to the associated health effects. CO tends to be a localized impact associated with congested intersections. The associated CO emissions would not contribute to potential exceedances of the NAAQS and CAAQS for particulate matter, obstruct the SCCAB from coming into attainment for these pollutants, or contribute to significant health effects associated with the particulates. Therefore, the project would have a **less than significant** impact with respect to criteria air pollutant exposure for sensitive receptors.

d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Although SBCACPD has not adopted quantitative thresholds of significance for odor impacts, SBCAPCD recommends the development of an odor abatement plan for projects that may generate nuisance odors that may affect a substantial number of people.

Construction Odor Impacts

Potential sources that may emit odors during construction activities include diesel equipment and gasoline fumes. Odors from these sources would be localized and generally confined to the project site. The closest residence to the proposed trail is located approximately 180 feet (55 meters) at the eastern end of the trail. Such odors are temporary and generally occur at magnitudes that would not affect a substantial number of people. Furthermore, construction activity would not be centrally located or remain in one location for a substantial amount of time. Therefore, construction of the proposed project would not cause an odor nuisance, and impacts associated with odors during construction would be considered **less than significant**.

Operational Odor Impacts

Certain projects have the potential to cause significant odor impacts because of the nature of their operation and their location. Examples include fast-food restaurants, bakeries, and coffee roasting facilities (SBCAPCD 2017). The proposed project land use is not considered an odor-generating use. Trail maintenance activities involving the occasional use of a light-duty truck would not generate noticeable odor emissions above existing vehicles using Rincon Beach County Park or nearby US Highway 101. Odors associated with equipment and trail equipment and trail maintenance would be temporary and generally confined to the project alignment. Therefore, operation of the proposed project would not cause an odor nuisance, and impacts associated with odors during maintenance activities would be considered **less than significant**.

3.2.5 Mitigation

Impacts would be less than significant prior to mitigation. Therefore, no mitigation is required.

3.2.6 Level of Significance After Mitigation

The project would result in a less than significant impact prior to mitigation.

3.3 Biological Resources

This section describes the existing biological resources conditions of the proposed Carpinteria Rincon Trail Project (project) site and vicinity, identifies associated regulatory requirements, evaluates potential impacts, and proposes mitigation measures to reduce potential impacts to a less than significant level. The following discussion is based on review of existing databases; field surveys performed in 2011, 2018, 2019, and 2020; knowledge of the project vicinity from previous biological surveys, consultations with local expert; and information from the Carpinteria Rincon Trail Proposed Final Mitigated Negative Declaration (MND) (City of Carpinteria 2015) and the Carpinteria Rincon Trail Final Subsequent MND (City of Carpinteria 2019) certified January 6, 2020.

3.3.1 Existing Conditions

The project is located on lands within the jurisdiction of the City and the County of Santa Barbara (County) (Figure 2-1, Project Location). Carpinteria is a quaint seaside town located about 12 miles east of Santa Barbara near the intersection of Highway 150 and U.S. Highway 101, near the Ventura County line. The proposed trail alignment is located largely along an area of coastal bluff known as the Carpinteria Bluffs. As described in the City of Carpinteria General Plan/Local Coastal Land Use Plan & Environmental Impact Report (City of Carpinteria 2003), the Carpinteria Bluffs are among the last remaining coastal open space areas within the County and are a prime example of undisturbed California coastline. The Carpinteria Bluffs provide important public access to the coast for residents and visitors. The Carpinteria Bluffs are partially developed and further development or redevelopment of portions of the Carpinteria Bluffs are anticipated over time making the establishment of policies to protect the environment and character of the place of utmost importance.

The project site crosses several parcels of land owned by public agencies. The trail parking lot location on Carpinteria Avenue is owned by the City of Carpinteria. Heading east, the next portion of the proposed trail route is owned by the State of California as part of the U.S. Highway 101 right-of-way and from there the proposed trail route crosses two parcels of landed owned by Union Pacific Railroad (UPRR) (APN 001-010-032 and APN 001-220-092). The proposed trail route then connects to a parcel of land owned by the County as part of Rincon Beach County Park. A series of terraces interspersed with steep slopes along the proposed alignment route are evidence of extensive past grading for a former railroad bed and road cuts. Further evidence of extensive past grading is evident in the soils within the project site, as the vast majority of the site is composed of xerorthents, cut and fill areas, which are soils that are well drained, and are formed in material with a high content of gravel and cobbles derived from mixed rock sources (USDA 2020a). The remaining portion of the biological survey area contains a mapped section of beaches soils composed of sandy or stony alluvium along the coast, located along the bottom of the hill at the edge of the beach within Rincon Beach County Park (USDA 2020a).

The Union Pacific Railroad (UPRR) right-of-way provides an unvegetated corridor approximately 50 feet wide containing a single track that divides the project alignment near its center. The eastern terminus of the proposed trail alignment is within Rincon Beach County Park parking lot, consisting of both undeveloped terraces as well as a largely developed area where a paved parking lot and landscaping dominate. An existing unsanctioned trail extends between Rincon Beach County Park and the UPRR tracks extending west on the bluffs to the north of the UPRR tracks with spur trails providing beach access. The western portion of the alignment is situated west and south of U.S. Highway 101 and partly includes an unvegetated pull-out at the eastern terminus of Carpinteria Avenue as well as an area of disturbed ground adjacent to the pull-out and undeveloped open space south of U.S. Highway 101.

Despite past disturbances, long stretches of the proposed trail alignment are dominated by native scrub vegetation. In the eastern portion of the proposed trail alignment between the UPRR crossing and Rincon Beach County Park, the native shrub, quailbush (*Atriplex lentiformis*), is the dominant shrub throughout much of the area. Additional native vegetation borders the parking lot in Rincon Beach County Park and occupies portions of the proposed trail alignment. In the western portion of the proposed trail alignment between the eastern terminus of Carpinteria Avenue and the UPRR crossing, California sagebrush (*Artemisia californica*), coyote brush (*Baccharis pilularis*), and quailbush are the dominant plant species.

The project site region is identified by USGS White Ledge Peak 7.5 quadrangle as well as the four coastally influenced adjacent USGS 7.5-minute quadrangles (Ventura, Matilija, Pitas Point, Carpinteria).

3.3.1.1 Literature Review

Prior to the 2011 field visit conducted by Dudek, the California Natural Diversity Database (CNDDB) was queried for records of special-status plants and wildlife in the vicinity of the site. In addition, Carpinteria local botanist Larry Ballard was consulted for information on rare plants potentially occurring in the project vicinity, including those on the Rare Plants of Santa Barbara County list, issued by the Central Coast Center for Plant Conservation (CCCPC) (Wilken 2007). Additional field surveys were performed in 2018, 2019, and 2020. Prior to 2018, 2019, and 2020 field surveys, the location of documented special-status plant species near the project site and that have potential to occur on site were identified through a query of the CNDDB (CDFW 2018; CDFW 2020a) and the updated Rare Plants of Santa Barbara County (Wilken 2018). In summary the following were reviewed for this project:

- 2008-2009 Second Wet Season 90-Day Vernal Pool Branchiopod Survey Report, King Ventures Rincon Bluffs Carpinteria, California (Sage Institute Inc. 2009)
- Administrative Draft Environmental Impact Report Carpinteria Bluffs, Areas III Development Plan (INTERFACE Planning and Counseling Corporation 1981)
- Carpinteria Bluffs Areas 2 and 3 Biological Resource Analysis & Mapping (Firma 2008)
- Carpinteria Bluffs Biological Resources and Environmentally Sensitive Habitat (Condor Environmental Planning Services 1996)
- CDFW CNDDB (CDFW 2018; CDFW 2020a)
- CNPS Inventory of Rare and Endangered Plants (CNPS 2020)
- Draft Carpinteria Bluffs Area III Project Biological Resources Due Diligence Report (Dudek 2012a)
- Evaluation Report Carpinteria Bluffs Biological Resources and Environmentally Sensitive Habitat Areas (LSA Associates Inc. 1997)
- Initial Biological Assessment: Rincon Trail (VJS Biological Consulting 2008)
- List of potentially occurring listed species generated from a review of the USFWS's IPaC Trust Resources Report list of federal and threatened species (USFWS 2020a)
- Proposed Final Mitigated Negative Declaration Carpinteria Rincon Trail (City of Carpinteria 2015)
- Proposed Final Subsequent Mitigated Negative Declaration. Carpinteria Rincon Trail (City of Carpinteria 2019)
- Rare Plants of Santa Barbara County list (Wilken 2007, 2018)
- USGS National Hydrography Dataset (USGS 2020)
- USFWS Critical Habitat Mapper (USFWS 2020b)

- USFWS National Wetlands Inventory (USFWS 2020c)
- Wetland Delineation of Pool Features at Carpinteria Bluffs Areas III per the California Coastal Act, City of Carpinteria, California (Dudek 2012b)

The biological survey area includes the proposed trail alignment as well as the extent of proposed temporary impacts encompassing vegetated terraces and slopes above and below the proposed trail alignment as well as portions of the developed Rincon Beach County Park (see Figure 3.3-1).

3.3.1.2 Vegetation Communities and Wildlife Habitats

During 2018, Dudek biologists conducted vegetation community mapping within the biological survey area in the field using the List of Vegetation Alliances and Associations (Natural Communities List) (CDFW 2010), which is based on the *Manual of California Vegetation, Second Edition* (MCV2) (Sawyer et al. 2009), as shown in Table 3.3-1. The vegetation communities were updated to align with the California Natural Community List (CNCL) (CDFW 2020b), which incorporated changes based on taxonomic revisions related to dominant plants, reassignment of associations to new or different alliances, and revisions to the rarities rankings of some communities. If vegetation observed did not meet the membership rules of the vegetation communities in these sources, modifications were made to accommodate the lack of conformity of the observed communities (e.g., developed/disturbed land uses) using Oberbauer et al. (2008). Vegetation community mapping conducted in 2018 was confirmed and/or updated during the 2020 site visit.

The following minimum vegetation mapping units applied during vegetation mapping:

- 0.5–1.0 acre for inaccessible areas of the site due to steep terrain.
- acres for wetland (i.e., hydrophytic) vegetation in traditional wetland environments (i.e., OBL [obligate – plant species almost always in wetlands], FACW [facultative wetland – plant species usually occurring in wetlands but occasionally found in non-wetlands], but not all FAC [facultative – plant species equally likely to occur in wetlands and non-wetlands] species comprising a vegetation alliance will be mapped unless associated with a hydrologic unit – stream, depression, swale, etc.).
- all areas with sensitive vegetation communities were mapped (no minimum mapping unit identified for sensitive vegetation communities)

Table 3.3-1. Survey Dates, Times, Personnel, and Conditions for Biological Surveys

Survey Date	Time	Personnel	Survey Conditions	Survey Type
8/31/2011	0940-1253	Dave Compton	61°F–63°F, 70%–100% cloud cover, 1-8 mph winds	General Biological Survey
5/5/2018	0655-1040	Heather Moine	55°F–68°F, 50%–70% cloud cover, 1-2 mph winds	Special-Status Plant Species Survey
5/15/2018	0630-0755	Heather Moine	51°F–60°F, 0% cloud cover, 1-3 mph winds	Vegetation Mapping
7/21/2018	0700-0900	Heather Moine	63°F–64°F, 100% cloud cover, 1-2 mph winds	Special-Status Plant Species Survey
9/26/2018	1300-1510	Heather Moine	67°F–69°F, 50%–75% cloud cover, 2-3 mph winds	Special-Status Plant Species Survey, Vegetation Mapping
4/8/2019	1505-1825	Heather Moine	80°F–85°F, 10%–80% cloud cover, 2-3 mph winds	Special-Status Plant Species Survey

Table 3.3-1. Survey Dates, Times, Personnel, and Conditions for Biological Surveys

Survey Date	Time	Personnel	Survey Conditions	Survey Type
7/23/2019	1300-1605	Heather Moine	75°F–79°F, 0%–20% cloud cover, 4-5 mph winds	Special-Status Plant Species Survey
12/24/2020	1320-1505	Mackenzie Forgey	69°F–68°F, 90% cloud cover, 2-9 mph winds	General Biological Survey; Tree Assessment

Notes: °F = degrees Fahrenheit; mph = miles per hour.

The CNCL (CDFW 2020b) is a hierarchical classification system which classifies natural vegetation communities based on alliances, which contain associations, the most granular level of classification (CDFW 2020c). The CNCL includes a state rarity rank based on the NatureServe Standard Heritage Methodology (NatureServe 2020). The conservation status of a vegetation community is designated by a number from 1 to 5, preceded by a letter reflecting the appropriate geographic scale of the assessment (G = global, N = national, and S = subnational). For the purpose of this report the focus is the S rarity rank. The numbers have the following meaning (NatureServe 2020):

1 = critically imperiled
2 = imperiled
3 = vulnerable to extirpation or extinction
4 = apparently secure
5 = demonstrably widespread, abundant, and secure

For example, S1 would indicate that a vegetation community is critically imperiled within a particular state or province. A rank of S3 would indicate the vegetation community is vulnerable and at moderate risk within a particular state or province, although it may be more secure elsewhere (NatureServe 2020). The CNCL (CDFW 2020b) includes state-level rarity rankings (i.e., the subnational [S] rank) for vegetation communities. The CNCL is considered the authority for ranking the conservation status of vegetation communities in California. As described by CDFW 2020c, ranking is an ongoing process and some associations are considered sensitive, denoted by a "Y" in the "Sensitive" column of the list, while others lack association-specific global and state ranks. This "Y" in the sensitive column indicates rarity, although that alliance may not be rated S3 or below as well (CDFW 2020c). CDFW expects to provide association level ranks for all S3 or rarer entities in the future, including those associations that are considered sensitive despite lacking an S3 or rarer alliance ranking.

The overall condition and quality of habitat provided by each vegetation community including supporting wildlife species was assessed. Discussions include degrees of disturbance, biological productivity of supporting plant and/or wildlife populations, and the relative viability of the habitat resource are included for each vegetation community and land cover type.

County environmentally sensitive habitat (ESH) and City environmentally sensitive habitat areas (ESHA) were evaluated based on definitions in the County *Coastal Land Use Plan* (CLUP) (County of Santa Barbara 2019) and the *City of Carpinteria General Plan and Local Coastal Plan* (City of Carpinteria 2003). Although most undeveloped areas of the coastal zone, as well as many isolated pockets of open space within urban areas, provide a "habitat" for many species of animals and plants, the intent of the Coastal Act is preservation of significant habitat resources. Coastal Act environmentally sensitive habitat areas are defined as "any area in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which could be easily disturbed or degraded by human activities and developments" (Coastal Act, Section 30107.5). The

County CLUP (County of Santa Barbara 2019) identifies ESH based on such factors as intrinsic, scientific, and educational value and includes the following biological resource categories:

- Dunes
- Wetlands
- Native Grasslands
- Vernal Pools
- Butterfly Trees
- Marine Mammal Rookeries and Hauling Grounds
- White-tailed Kite Habitat
- Rocky Points and Intertidal Areas
- Subtidal Reefs
- Kelp Beds
- Seabird Nesting and Roosting Areas
- Native Plant Communities – examples: coastal sage scrub, chaparral, coastal bluff, closed cone pine forest, California native oak woodland (also individual oak trees), endangered and rare plant species as designated by CNPS, and other plants of special interest such as endemics
- Streams

The City of Carpinteria General Plan and Local Coastal Plan (City of Carpinteria 2003) ESHA includes a diversity and number of habitats and species not commonly found in urban areas and that warrant unique measures to ensure adequate protection. As such, the Carpinteria Bluffs have specifically been identified as an ESHA. The following list includes ESHA that have been identified as existing in Carpinteria:

- Wetlands
- Butterfly Habitat
- Marine Mammal Rookeries and Hauling Grounds
- Rocky Points and Intertidal Areas
- Subtidal Reef
- Kelp Beds
- Creeks and Riparian Habitat
- Significant Native Plant Communities such as coastal sage scrub, riparian scrub, coastal bluff scrub, and native oak woodlands
- Sensitive, rare, threatened or endangered species habitat

A total of 12 vegetation communities and land cover types were recorded within the biological survey area, including five native scrub communities and seven non-native communities and land cover types (Figure 3.3-1 and Table 3.3-2). All five of the native vegetation communities found are protected under the County CLUP (County of Santa Barbara 2019) and the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), identified as coastal sage scrub, coastal bluff scrub, and/or habitat for sensitive species, and are thus considered County ESH and City ESHA. Two of these five communities, California brittle bush scrub – ashy buckwheat scrub alliance and lemonade berry scrub alliance, are also sensitive by virtue of their state rank. These communities are described in

CNCL and MCV2. Eucalyptus, ice plant mats, and myoporum are non-native and do not have a state rank (state not applicable [SNA]). The other four communities and land cover types are not listed in CNCL or MCV2.

While two individual Monterey cypress (*Hesperocyparis macrocarpa*) trees were identified in separate locations within the project site, one within the temporary impact area along the western portion of the site and the other within the proposed alignment footprint in the eastern portion of the site (Figure 3.3-1), they were not mapped as separate vegetation communities because one tree is not considered a stand or woodland. The first Monterey cypress tree is located near the western terminus of the proposed trail alignment, between the alignment and the pull-out off Carpinteria Avenue, and has a diameter of approximately 10 inches measured 4 feet above the ground. The second Monterey cypress is located within the proposed trail alignment within an unsanctioned trail within Rincon Beach County Park and has a diameter of approximately 12 inches measured 4 feet from the ground. One additional Monterey cypress tree was identified in the northern portion of the project above the railroad right-of-way, which is located along the edge of the temporary impact area adjacent to disturbed habitat and was measured with an approximate 8-inch diameter measured from 4 feet above the ground. Two Monterey cypress trees are located within the developed portion of the Rincon Beach County Park, one of which is a very young sapling with a diameter under an inch and the other is a mature tree with a combined diameter measured 4 feet from the ground of 49 inches due to multiple stems. There are also trees associated with the Rincon Point housing development that abut Rincon Beach County Park and are located south and east of the temporary project impact area and include Monterey cypress trees.

Monterey cypress trees are not naturally occurring within the Carpinteria area and instead are documented as native in populations located in Monterey and Carmel, California (CNPS 2021); therefore, Monterey cypress trees are not considered sensitive vegetation communities or individual trees. However, Monterey cypress trees could be considered County ESH and/or City ESHA if used by sensitive wildlife species as further discussed in Section 3.3.1.4.

Two pine saplings that appeared to be newly planted with mulch placed around the trunks and stakes installed for tree stabilization, are located along the edge of the temporary impact area in the portion of the project above the railroad right-of-way, each under 4 inches diameter measured 4 feet from the ground. One of these newly installed pine saplings is a Norfolk Island pine (*Araucaria heterophylla*), and the other could not be identified to species due to the lack of cones present at the time of the survey but appears to be a native pine tree (*Pinus* sp.).

There are also trees associated with the Rincon Point housing development that abut Rincon Beach County Park and are located south and east of the biological survey area, and include a few non-riparian California sycamore (*Platanus racemosa*) trees and other ornamental tree species located approximately 50-feet from Rincon Creek.

The County CLUP (County of Santa Barbara 2019) does not include mapped ESH within the project site. The City of Carpinteria General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) includes mapped ESHA within the limits of the City north to but not including Carpinteria Avenue.

Table 3.3-2. Summary of Existing Vegetation Communities and Land Cover Types

Habitat Group	General Habitat	Vegetation Community (Alliance, Association)	Alliance-Association (State Sensitive)/County ESH/City ESHA	Acreage
Native Scrub Communities	Coastal Bluff Scrub	California Brittle Bush – Ashy Buckwheat Scrub Alliance, *Encelia california* Association	S3-Yes (Yes)/Yes/Yes	0.96
		Quailbush Scrub Alliance, *Atriplex lentiformis* Association	S4-No (No)/Yes/Yes	6.18
			Coastal Bluff Scrub Subtotal	*7.13*
	Coastal Scrub	California Sagebrush – (Purple Sage) Scrub Alliance, *Artemisia californica* Association	S5-S4 (No)/Yes/Yes	2.08
		Coyote Brush Scrub Alliance, *Baccharis pilularis* Association	S5-No (No)/Yes/Yes	1.18
		Lemonade Berry Scrub Alliance, *Rhus integrifolia* Association	S3-S3 (Yes)/Yes/Yes	0.31
			Coastal Scrub Subtotal	*3.57*
Non-native Communities and Land Cover Types	Non-native Communities	Eucalyptus – Tree of Heaven – Black Locust Groves Alliance, *Eucalyptus (globulus, camaldulensis)* Association	SNA-SNA (No)/No/No	0.21
		Ice Plant Mats Alliance, *Carpobrotus (edulis*) Association	SNA-SNA (No)/No/No	0.14
		Pepper Tree or Myoporum Groves Alliance, *Myoporum laetum/ Arundo donax* Association	SNR-SNA (No)/No/No	0.07
		Parks and Ornamental Plantings	NA (No)/No/No	0.10
		Ruderal	NA (No)/No/No	0.17
	Land Cover Types	Developed	NA (No)/No/No	1.08
		Disturbed Habitat	NA (No)/No/No	1.45
			Non-native Communities and Land Cover Types Subtotal	*3.22*
			Combined Total	***13.92***

Notes:
SNA – state not applicable. State status rank not applicable because the species or ecosystem is not a suitable target for conservation activities (NatureServe 2020).
SNR – state no rank (NatureServe 2020).
NA – not applicable. Not included in California Natural Communities List (CDFW 2020b).

Native Scrub Communities

California Brittle Bush – Ashy Buckwheat Scrub Alliance, *Encelia california* Association (S3-Sensitive [Sensitive], County ESH, City ESHA). This community includes California brittle bush and/or ashy buckwheat (*Eriogonum cinereum*) as the dominant or co-dominant shrub in the canopy. California brittle bush – ashy buckwheat scrub has an intermittent to continuous shrub canopy less than two meters (seven feet) in height with a variable herbaceous ground layer. The California brittle bush – ashy buckwheat scrub alliance occurs on sunny, steep south-facing slopes often rocky or eroded, with soils derived from sandstone, volcanic or shale substrates (Sawyer et al. 2009). Species associated with California brittle bush scrub on site include quailbush *(Atriplex lentiformis)*, California sagebrush, coyote brush, western prickly pear (*Opuntia littoralis*) and black mustard.

California brittle brush scrub occurs in limited patches within the project site, wildlife using this community is partly dictated by adjacent communities, which are generally other scrub communities. Brush rabbits (*Sylvilagus bachmani*) may occur within these areas, and some species of small mammals may occur here as well. The Coast Range western fence lizard (*Sceloporus occidentalis bocourti*) likely occur within this community and within adjacent communities. Songbirds with the potential to nest within this community include the mourning dove (*Zenaida macroura*), bushtit (*Psaltriparus minimus*), northern mockingbird (*Mimus polyglottos*), and song sparrow (*Melospiza melodia*).

California brittle brush scrub has a S3-Sensitive designation thus considered a sensitive vegetation community per CDFW (2020b). California brittle bush scrub is a state sensitive vegetation community, considered coastal bluff scrub per the County CLUP (County of Santa Barbara 2019), and supports sensitive plant species. Additionally, California brittle bush scrub is mapped as ESHA, considered coastal bluff scrub in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and supports sensitive plant species. Therefore, California brittle bush scrub is considered County ESH and City ESHA.

The *Encelia californica* association within the California brittle bush – ashy buckwheat scrub alliance was mapped in the project site. This association occurs in the proposed trail alignment in and near the County's Rincon Beach County Park (see Figure 3.3-1). Approximately 0.96 acres of this community, or 6.9% of the total biological survey area was identified.

Quailbush Scrub Alliance*, Atriplex lentiformis* Association (S4-Not Sensitive [Not Sensitive], County ESH, City ESHA). This vegetation community includes quailbush as a dominant species. Quailbush scrub has an open to intermittent scrub canopy less than five meters (16 feet) in height with a variable herbaceous layer (Sawyer et al. 2009). In the proposed trail alignment, species associated with this community include California brittle bush, lemonade berry and Australian saltbush (*Atriplex semibaccata*).

Quailbush scrub provides shelter for brush rabbits and probably for other medium-sized mammal species such as the raccoon (*Procyon lotor*) and striped skunk (*Mephitis mephitis*). California voles (*Microtus californicus*) may occur in this vegetation community. Common reptile species that occur here include the Coast Range western fence lizard and San Diego gophersnake (*Pituophis catenifer annectens*). Nesting songbirds occurring here include the mourning dove, bushtit, northern mockingbird, and song sparrow. Songbirds that may perch on shrubs within this community include the black phoebe (*Sayornis nigricans*).

Quailbush scrub has a S4-Not Sensitive designation thus is not considered a sensitive vegetation community per CDFW (2020b). Quailbush scrub is considered coastal bluff scrub per the County CLUP (County of Santa Barbara 2019) and mapped as ESHA and considered coastal bluff scrub in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and therefore considered County ESH and City ESHA. Additionally, this vegetation community supports sensitive plant species and has the potential to support the state species of special concern (SSC) California legless lizard and further warrants County ESH and City ESHA designations.

The *Atriplex lentiformis* association within the quailbush scrub alliance was mapped in the project site. It occurs extensively in the proposed trail alignment east of the UPRR and in patches west of the UPRR (see Figure 3.3-1). Approximately 6.18 acres of this community, or 44.3% of the total biological survey area was identified.

California Sagebrush – (Purple Sage) Scrub Alliance*, Artemisia californica* Association (S5-S4 [Not Sensitive], County ESH, City ESHA). This community includes California sagebrush (*Artemisia californica*) and/or purple sage (*Salvia leucophylla*) as the dominant or co-dominant shrub in the canopy. California sagebrush scrub has an

intermittent to continuous shrub canopy less than two meters (seven feet) in height with a variable herbaceous ground layer (Sawyer et al. 2009). Species associated with this community include California brittle bush (*Encelia californica*), coast goldenbush (*Isocoma menziesii*) and coyote brush (*Baccharis pilularis*). Black mustard (*Brassica nigra*) and other non-native species are found in this community on site.

Wildlife occupying California sagebrush scrub includes many species common to other scrub communities within the project site. Brush rabbits seek cover in these areas, and small mammals such as California voles likely occur here. Coast Range western fence lizards and San Diego gophersnakes are reptiles that occur in scrub habitats. Songbirds nesting here include the mourning dove, northern mockingbird, California towhee (*Melozone crissalis*), and song sparrow. White-crowned sparrows (*Zonotrichia leucophrys*) occur here in winter.

California sagebrush scrub has a S5-S4 designation thus is not considered a sensitive vegetation community per CDFW (2020b). California sagebrush scrub is considered coastal sage scrub per the County CLUP (County of Santa Barbara 2019) and mapped as ESHA and considered coastal sage scrub in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and therefore considered County ESH and City ESHA. Additionally, this vegetation community supports sensitive plant species and further warrants County ESH and City ESHA designations.

The *Artemisia californica* association within the California sagebrush – (purple sage) scrub alliance was mapped in the project site. This association occurs in the western portion of the project site, near Carpinteria Avenue and U.S. Highway 101, in a heavily engineered portion of the proposed trail alignment graded during highway construction (see Figure 3.3-1). A smaller patch occurs adjacent to the parking lot for Rincon Beach County Park. Approximately 2.08 acres of this community, or 14.9% of the total biological survey area was identified.

Coyote Brush Scrub Alliance, *Baccharis pilularis* Association (S5-Not Sensitive [Not Sensitive], County ESH, City ESHA). Coyote brush scrub communities include greater than 50% relative cover of coyote brush and coyote brush as the dominant or co-dominant shrub in the canopy. Coyote brush scrub has a variable shrub canopy less than three meters (10 feet) in height with a variable herbaceous ground layer (Sawyer et al. 2009). Species associated with this community in the proposed trail alignment include scattered California sagebrush, California brittle bush, myoporum (*Myoporum laetum*) and black mustard.

Wildlife occurring in coyote brush scrub is very similar to that occurring in quailbush scrub and includes brush rabbits, raccoon, striped skunk, California voles, Coast Range western fence lizard, San Diego gophersnake, mourning dove, bushtit, northern mockingbird, song sparrow and black phoebe.

Coyote brush scrub has a S5-Not Sensitive designation thus is not considered a sensitive vegetation community per CDFW (2020b). Coyote brush scrub is not considered coastal sage scrub or associated with other ESH habitats by definition per the County CLUP (County of Santa Barbara 2019); however, coyote brush scrub does support sensitive plant species and as such is designated County ESH. Additionally, coyote brush scrub is mapped as ESHA in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and also supports sensitive plant species and therefore considered City ESHA.

The *Baccharis pilularis* association within the coyote brush scrub alliance was mapped in the project site. It occurs in the proposed trail alignment mostly near the western terminus, but also in small patches in the vicinity of Rincon Beach County Park. The coyote brush scrub between UPRR and U.S. Highway 101 occurs in old road cuts (see Figure 3.3-1). Approximately 1.18 acres of this community, or 8.5% of the total biological survey area was identified.

Lemonade Berry Scrub Alliance*, Rhus integrifolia* Association (S3-S3 [Sensitive], County Not Sensitive, City Not Sensitive). This vegetation community includes lemonade berry (*Rhus integrifolia*) as either a dominant or co-dominant species. Lemonade berry scrub has a two-tiered, open to continuous shrub canopy less than five meters (16 feet) in height with an open herbaceous ground layer and sparse cover of emergent trees (Sawyer et al. 2009). Species associated with this community on site include coyote brush and myoporum.

Wildlife occurring in lemonade berry scrub is similar to that occurring in Coyote brush scrub and includes brush rabbits, raccoon, striped skunk, California voles, Coast Range western fence lizard, San Diego gophersnake, mourning dove, bushtit, northern mockingbird, song sparrow and black phoebe.

Lemonade berry scrub has a S3-S3 designation thus is considered a sensitive vegetation community per CDFW (2020b). Additionally, lemonade berry scrub is not considered coastal sage scrub or associated with other ESH habitats by definition per the County CLUP (County of Santa Barbara 2019); however, it does support sensitive plant species and is a state sensitive vegetation community thus is considered County ESH. Additionally, lemonade berry scrub is not considered coastal sage scrub or associated with other ESHA habitats by definition per the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003); however, it does support sensitive plant species and is a state sensitive vegetation community and thus is considered City ESHA.

The *Rhus integrifolia* association within the lemonade berry scrub alliance was mapped in the project site. This association occurs in two small patches west of the Rincon Beach County Park (see Figure 3.3-1). Approximately 0.31 acres of this community, or 2.2% of the total biological survey area was identified.

Non-Native Communities

Eucalyptus – Tree of Heaven – Black Locust Groves Semi-Natural Alliance, *Eucalyptus (globulus, camaldulensis)* Provisional Association (SNA-SNA [Not Sensitive], County Not Sensitive, City Not Sensitive). This alliance contains eucalyptus trees (*Eucalyptus* sp.), tree of heaven (*Ailanthus altissima),* or black locust (*Robinia pseudoacacia*) as the dominant species in the tree canopy. These groves have an open to continuous tree canopy less than 60 meters (197 feet) in height. Understory shrubs and herbaceous layers are sparse to intermittent, and the herbaceous layer is sparse to intermittent. Throughout California, this semi-natural groves alliance occurs as planted trees, groves, and windbreaks, naturalized on uplands or bottomlands and adjacent to stream courses, lakes, or levees (Sawyer et al. 2009).

The Eucalyptus – tree of heaven – black locust groves semi-natural alliance and specific *Eucalyptus* (*globulus, camaldulensis*) association is listed in MCV2 (Sawyer et al. 2009) and CNCL (CDFW 2020b), but is ranked SNA-SNA as it is composed of non-native species; it is not considered sensitive. Additionally, per the County CLUP (County of Santa Barbara 2019) eucalyptus trees are considered ESH if they are butterfly trees or provide habitat to sensitive species. Per the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) eucalyptus trees are considered ESHA if they provide habitat for butterfly habitat or sensitive, rare, threatened or endangered species habitat. Included below is a discussion of potential wildlife use of the eucalyptus trees.

Because of shade and possibly the allelopathic (toxic) properties of eucalyptus leaf litter, little other vegetation is present in this community, and relatively little wildlife is found here. But the relatively open ground under the canopy permits medium-sized mammals such as common raccoons and striped skunks to move easily through this community to access adjacent areas. Some bird species are adapted to this community. Yellow-rumped warblers (*Setophaga coronata*) feed on insects attracted to eucalyptus blossoms in the winter. Some birds of prey favor eucalyptus trees for nesting. Red-tailed hawks (*Buteo jamaicensis*), Cooper's hawks (*Accipiter cooperii*), and great horned owls (*Bubo virginianus*) also have the potential to nest in this community.

Monarch butterflies (*Danaus plexippus*) use eucalyptus trees for roosting in the region, but they are not known to use eucalyptus within the project site. The majority of eucalyptus trees within the project site are either singular and isolated, or do not form a large enough grove to provide adequate microclimate conditions and wind protection monarch butterflies require for overwintering sites. Several eucalyptus trees are located within the proposed trail alignment near its western terminus and U.S. Highway 101, and range in diameter from approximately 18 to 28 inches measured 4 feet from the ground. Additionally, a small stand of eucalyptus trees is present at the eastern terminus of the biological survey area, which are rooted next to the Rincon Beach County Park parking lot; however, there is low potential for monarchs to overwinter here as well due to the small relative size of this eucalyptus stand and vulnerability to strong winds and weather. There are also three eucalyptus trees present near the western terminus of the biological survey area, however they each grow individually and do not form a grove capable of supporting overwintering monarchs. There are also trees associated with the Rincon Point housing development that abut Rincon Beach County Park and are located south and east of the eastern portion of the biological survey area and include some eucalyptus trees. Monarch butterflies and monarch butterfly habitat are further discussed in Section 3.3.1.4.

The white-tailed kite is known to occur in the area (City of Carpinteria 2003). The City specifically cites the Carpinteria Bluffs as a location where this species occurs and is protected. However, no white-tailed kites were detected in the biological survey area, and the eucalyptus trees in and around the western portion of biological survey area are relatively small, and located in areas with high levels of human disturbance where kites are unlikely to nest. Marginally suitable woodland nesting habitat is present in the trees adjacent to the project site near Rincon Beach County Park, within the Rincon Point housing development. This species prefers open grassland or marshland habitats which are not present on site, and is found less commonly in agricultural areas or rights-of-way. This species is known to occur along the south coast, however most foraging and nesting activity in the County is restricted to more rural areas and in particular, the Goleta and Santa Maria Valleys (Lehman 2020).

The *Eucalyptus (globulus, camaldulensis)* provisional association within the eucalyptus - tree of heaven - black locust semi-natural alliance was mapped in the project site. Within the biological survey area this community is dominated by eucalyptus trees, which are sparse and do not create a windrow and do not provide habitat for sensitive species; and thus are not included as ESH per County of Santa Barbara (2009) or ESHA per City of Carpinteria (2003). Approximately 0.21 acres of this community, or 1.5% of the biological survey area was identified.

Ice Plant Mats Semi-Natural Alliance, *Carpobrotus (edulis)* Association (SNA-SNA [Not Sensitive], County Not Sensitive, City Not Sensitive). Ice plant mats contains hottentot fig (*Carpobrotus edulis*), sea fig (*Carpobrotus chilensis*), or other ice plant taxa as the dominant or co-dominant species in the herbaceous layer. These species invade coastal bluff scrub, dune mat, dune scrub, and coastal prairies and compete with native plants (Sawyer et al. 2009). Ice plant semi-natural alliance areas have an intermittent to continuous canopy within the herbaceous layer less than 0.5 meters (1.6 feet) in height.

Very few wildlife species occur in ice plant mats. California ground squirrels (*Spermophilus* [*Otospermophilus*] *beecheyi*) often inhabit this community. This community provides poor nesting habitat for birds. Common reptiles such as the western fence lizard likely occur here. This community is not generally valuable to special-status wildlife species.

The ice plant mats semi-natural alliance and specific *Carpobrotus (edulis)* association is listed in MCV2 (Sawyer et al. 2009) and CNCL (CDFW 2020b), but is ranked SNA-SNA as it is composed of non-native species; therefore, it is not considered sensitive. Additionally, ice plant mats vegetation community is not included on the list of ESH per the County CLUP (County of Santa Barbara 2019) or provide habitat for sensitive species. Ice plant mats are not mapped as ESHA, included as other ESHA habitats in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and do not provide habitat for sensitive species, and therefore not considered locally sensitive.

The *Carpobrotus (edulis)* association within the ice plant mats semi-natural alliance was mapped in the project site. Approximately 0.14 acres of this community, or 1.0% of the biological survey area was identified.

Pepper Tree or Myoporum Groves Semi-Natural Alliance*, Myoporum laetum/Arundo donax* Association (SNR-SNA [Not Sensitive], County Not Sensitive, City Not Sensitive). Pepper tree or myoporum groves consist of myoporum or pepper trees (*Schinus* spp.) as the dominant species in the tree canopy. Within the biological survey area, this community is dominated by myoporum. These groves have an open to continuous tree canopy less than 18 meters (59 feet) in height. Understory shrubs are infrequent or common and the herbaceous layer is simple to diverse lacking trees and shrubs. Throughout Central and Southern California, the pepper trees or myoporum groves semi-natural alliance occurs in coastal canyons, washes, slopes, riparian areas, and roadsides (Sawyer et al. 2009).

Several myoporum trees are located within the proposed trail alignment west of Rincon Beach County Park, and are largely multistemmed. Myoporum groves provide shelter for medium-sized mammal species such as the brush rabbit, common raccoon, and striped skunk. California voles may occur in this vegetation community. Common reptile species such as the western fence lizard likely occur. Nesting songbirds occurring here likely include the mourning dove, bushtit, and northern mockingbird. Wintering black phoebes are among birds that likely perch on myoporum. Some birds of prey, such the white-tailed kite and other raptors, may also perch in this community where it is adjacent to foraging habitat.

This semi-natural alliance and specific *Myoporum laetum/Arundo donax* association mapped on site are listed in MCV2 (Sawyer et al. 2009) and CNCL (CDFW 2020b), but is ranked SNA as it is composed of non-native species; thus, it is not considered sensitive. Additionally, myoporum is not included on the list of ESH per the County CLUP (County of Santa Barbara 2019) or provide habitat for sensitive species. Myoporum are not mapped as ESHA, included as other ESHA habitats in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and do not provide habitat for sensitive species, and therefore not considered locally sensitive.

The *Myoporum laetum/Arundo donax* association within the pepper tree or myoporum groves semi-natural alliance was mapped in the project site. Approximately 0.7 acres of this community, or 0.5% of the biological survey area was identified.

Parks and Ornamental Plantings (NA [Not sensitive], County Not Sensitive, City Not Sensitive). This community is not described in CNCL or MCV2 because it is not a naturally occurring community in California; thus, it is not considered sensitive. It includes landscaping plants as dominants. Additionally, parks and ornamental plantings is not included on the list of ESH per the County CLUP (County of Santa Barbara 2019) or provide habitat for sensitive species. Parks and ornamental plantings are not mapped as ESHA, included as other ESHA habitats in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and do not provide habitat for sensitive species, and therefore not considered locally sensitive.

The ornamental vegetation community in the proposed trail alignment is characterized by the dominance of landscaped plant species. Botta's pocket gopher (*Thomomys bottae*) and California ground squirrel are among common mammals found in this community. Western fence lizards are a common reptile found in parks and ornamental plantings. Common nesting birds such as Eurasian collared-dove (*Streptopelia decaocto*), California scrub-jay (*Aphelocoma californica*), American crow (*Corvus brachyrhynchos*), bushtit, and house finch (*Haemorhous mexicanus*) may be found here.

Parks and ornamental plantings occur within the eastern part of Rincon Beach County Park (see Figure 3.3-1). Approximately 0.10 acres of this community, or 0.7% of the biological survey area was identified.

Ruderal (NA [Not Sensitive], County Not Sensitive, City Not Sensitive). Ruderal is not described in CNCL or MCV2 because it is not a naturally occurring community in California; thus, it is not considered sensitive. Additionally, ruderal habitats are not included on the list of ESH per the County CLUP (County of Santa Barbara 2019) or provide habitat for sensitive species. Ruderal habitats are not mapped as ESHA, included as other ESHA habitats in the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003), and do not provide habitat for sensitive species, and therefore not considered locally sensitive.

Ruderal areas are characterized by limited native vegetation resulting in low function ecological processes. Plants in these areas are dominated by non-native species and there is not a dominant plant species or overall structure to the habitat. Ruderal areas provide little habitat or foraging potential for wildlife, due to the lack of significant cover by vegetation; however, there are often patchy areas of non-native plant species. Mammals may include common species, such as the California ground squirrel, but medium-sized mammals such as raccoons may use ruderal habitats as movement corridors. Among common reptiles that may use these areas is the western fence lizard. Seed-eating birds found here include the California towhee and white-crowned sparrow. Ruderal does not provide habitat for special-status wildlife species.

Mapped ruderal includes roadside areas and areas with disturbed non-native vegetation (see Figure 3.3-1). Approximately 0.17 acres of this community, or 1.3% of the biological survey area was identified.

Land Cover Types

Developed (NA [Not Sensitive], County Not Sensitive, City Not Sensitive). Within the biological survey area, developed areas are unvegetated areas such as pavement and development with impervious materials, it is not described in CNCL or MCV2, and does not provide habitat for sensitive species. Developed areas include the parking lot at Rincon Beach County Park and the wide turnout at the eastern terminus of Carpinteria Avenue (see Figure 3.3-1). Approximately 1.08 acres of developed area, or 7.7% of the biological survey area was identified.

Disturbed Habitat (NA [Not Sensitive], County Not Sensitive, City Not Sensitive). This land cover type, which is not described in CNCL or MCV2, includes invasive non-native and other disturbance-tolerant species as dominants, and does not support sensitive species. Species occurring within this community, including some natives, are those that are tolerant to disturbances such as grading or vegetation clearing. On-site, species appearing in disturbed areas include poison hemlock (*Conium maculatum*), black mustard, Hottentot fig, and horseweed (*Erigeron canadensis*). Approximately 1.45 acres of this land cover type, or 10.45% of the biological survey area was identified.

3.3.1.3 Special-Status Plant Species

During 2018 and 2019 Dudek biologists performed floristic surveys for special-status plant species, as shown in Table 3.3-1. All plant species encountered during the field surveys were identified to subspecies or variety, if possible. Species that could not be identified in the field were brought into the laboratory for further investigation. Scientific and common names for plant species with a California Rare Plant Rank (CRPR) follow the California Native Plant Society On-Line Inventory of Rare, Threatened, and Endangered Plants of California (CNPS 2020). For plant species without a California Rare Plant Rank, scientific names follow the Jepson Interchange for California Floristics; Index to California Plant Names (Jepson Flora Project 2020) and common names follow the California Natural Community List (CDFW 2020b) or the U.S. Department of Agriculture (USDA) Natural Resources Conservation Service Plants Database (USDA 2020b).

For the purpose of CEQA analysis, federal, state, CNPS CRPR 1A, 1B, 2A, and 2B plants, and locally rare plants (Wilken 2018) are considered special-status. CRPR 3 and 4 plants are CNPS designated rare, but not considered special-status as plant species but do add to the vegetation community value designated as County ESH and or City ESHA as CNPS CRPR 3 and 4 species.

In considering rarity beyond federal or state designations, the CNPS Inventory of Rare and Endangered Vascular Plants of California was the primary reference (CNPS 2020). Use of the CNPS inventory is helpful because it clearly defines levels of endangerment and rarity for all of the species addressed. The CNPS inventory divides its subject taxa into four ranks: CRPR 1 (which is further divided into 1A and 1B), CRPR 2 (which is further divided into 2A and 2B), CRPR 3, and CRPR 4. Plants with a CRPR of 1A are presumed extirpated or extinct because they have not been seen or collected in the wild in California for many years. Plants with a CRPR of 1B are rare throughout their range, with the majority of them endemic to California. Most of the plants that are ranked 1B have declined significantly over the last century. Plants with a CRPR of 2A are presumed extirpated because they have not been observed or documented in California for many years. Except for being common beyond the boundaries of California, plants with a CRPR of 2B would have been ranked 1B. Plants with a CRPR of 3 have not had sufficient information collected to assign them to one of the other ranks or to reject them. Nearly all of the plants constituting CRPR 3 are taxonomically problematic. Plants with a CRPR of 3 are plants about which more information is needed and 4 are of limited distribution or infrequent throughout a broader area in California, and their status should be monitored regularly. CRPR 3 plants lack necessary information to assign them to one of the other ranks or to reject them. Should the degree of endangerment or rarity of a CRPR 4 plant change, it would be transferred to a more appropriate rank.

CRPR plants are further defined as follows:

- .1 = seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat)
- .2 = moderately threatened in California (20%–80% occurrences threatened/moderate degree and immediacy of threat)
- .3 = not very threatened in California (<20% of occurrences threatened/low degree and immediacy of threat or no current threats known)

A total of 133 plant species were observed and identified during surveys. Of these, 57 (43%) are considered native and 76 (57%) are considered non-native to California, included as Appendix C1, Plant and Wildlife Species Compendium. The CNDDB (CDFW 2018; CDFW 2020a) and CNPS (CNPS 2020) queries returned 34 special-status plant species that have been documented within the USGS White Ledge Peak 7.5 quadrangle as well as the four coastally influenced adjacent USGS 7.5 minute quadrangles (Ventura, Matilija, Pitas Point, Carpinteria), hereafter referred to as the region. Only the four coastally influenced adjacent USGS 7.5-minute quadrangles were queried for sensitive biological resources instead of all adjacent quadrangle maps, since the habitats north of the foothills vary greatly from the project site and would not be representative of what species are likely to occur in coastal habitats. Dudek analyzed the resulting special-status plant species potential to occur based on known elevation or geographic range, suitable habitat, or the species has been extirpated from the region. Appendix C2, Plant and Wildlife Species Not Expected to Occur within the Biological Survey Area provides a list of the 20 special-status plant species that are not expected to occur based on site surveys, lack of suitable habitat, and the site being out of the species range. The special-status plant species in Appendix C2 are not analyzed in this report as no direct, indirect, or cumulative impacts are expected.

Based on Dudek's habitat suitability analysis including elevation and habitats, 11 of the special-status plant species had the potential to occur within the project site, and 3 special-status plant species were observed during 2018

and 2019 rare plant surveys. These 14 special-status plant species include aphanisma (*Aphanisma blitoides*), Miles' milk-vetch (*Astragalus didymocarpus* var. *milesianus*), Ventura marsh milk-vetch (*Astragalus pycnostachyus* var. *lanosissimus*), Coulter's saltbush (*Atriplex coulteri*), South Coast saltscale (*Atriplex pacifica*), southern tarplant (*Centromadia parryi* ssp. *australis*), Orcutt's pincushion (*Chaenactis glabriuscula* var. *orcuttiana*), mesa horkelia (*Horkelia cuneata* var. *puberula*), California satintail (*Imperata brevifolia*), Santa Barbara honeysuckle (*Lonicera subspicata* var. *subspicata*), cliff malacothrix (*Malacothrix saxatilis* var. *saxatilis*), aparejo grass (*Muhlenbergia utilis*), south coast branching phacelia (*Phacelia ramosissima* var. *austrolitoralis*), Nuttall's scrub oak (*Quercus dumosa*), salt spring checkerbloom (*Sidalcea neomexicana*), and woolly seablite (*Suaeda taxifolia*) (Table 3.3-3).

Table 3.3-3. Special-Status Plant Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[a]	Habitat Requirements	Potential to Occur within the BSA
Aphanisma blitoides	aphanisma	None/None/ 1B.2	Coastal bluff scrub, Coastal dunes, Coastal scrub; sandy or gravelly/annual herb/Feb–June/3–1,000 feet amsl	Low potential to occur. Suitable coastal scrub and coastal bluff scrub habitat is present, however the only CNDDB occurrence in the region was last confirmed in 1963 and located 1.5 miles west of the Ventura River (CDFW 2020a). This species was not detected during 2018 or 2019 special-status plant species surveys.
Astragalus didymocarpus var. *milesianus*	Miles' milk-vetch	None/None/ 1B.2	Coastal scrub (clay)/annual herb/Mar–June/66–295 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present, although clay soils are absent (USDA 2020a). There are only two CNDDB occurrences in the region the most recent of which was recorded in the 1970s in the Ojai area (CDFW 2020a). This species was not detected during 2018 or 2019 special-status plant species surveys.
Atriplex coulteri	Coulter's saltbush	None/None/ 1B.2	Coastal bluff scrub, Coastal dunes, Coastal scrub, Valley and foothill grassland; alkaline or clay/perennial herb/Mar–Oct/10–1,505 feet amsl	Low potential to occur. Suitable coastal bluff scrub and coastal scrub habitat is present, and the large quantities of quailbush on site indicate that suitable alkaline soils may be present. This species is known to occur along Carpinteria coastal bluffs, however this is from an occurrence last confirmed in 1927 (CDFW 2020a). This species was not detected during 2018 or 2019 special-status plant species surveys.

Table 3.3-3. Special-Status Plant Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[a]	Habitat Requirements	Potential to Occur within the BSA
Atriplex pacifica	South Coast saltscale	None/None/ 1B.2	Coastal bluff scrub, Coastal dunes, Coastal scrub, Playas/annual herb/Mar–Oct/0–460 feet amsl	Low potential to occur. Suitable coastal bluff scrub and coastal scrub habitat is present and the large quantities of quailbush on site indicate that suitable alkaline soils may be present. However, there is only one occurrence in the region which was last confirmed in 1972 about 1.5 miles west of the Ventura River (CDFW 2020a). This species was not detected during 2018 or 2019 special-status plant species surveys.
Centromadia parryi ssp. *australis*	southern tarplant	None/None/ 1B.1	Marshes and swamps (margins), Valley and foothill grassland (vernally mesic), Vernal pools/annual herb/May–Nov/0–1,570 feet amsl	Low potential to occur. Suitable habitat is present in the disturbed habitat and ruderal areas on site, as this species can occur in disturbed sites (CDFW 2020a). However, the only occurrence in the region was last confirmed in 1997 and is considered possibly extirpated (CDFW 2020a). This species was not detected during 2018 or 2019 special-status plant species surveys.
Chaenactis glabriuscula var. *orcuttiana*	Orcutt's pincushion	None/None/ 1B.1	Coastal bluff scrub (sandy), Coastal dunes/annual herb/Jan–Aug/0–330 feet amsl	Low potential to occur. Suitable coastal bluff scrub habitat is present. However, the only occurrence in the region was last confirmed in 1961 and is considered possibly extirpated (CDFW 2020a). This species was not detected during 2018 or 2019 special-status plant species surveys.
Horkelia cuneata var. *puberula*	mesa horkelia	None/None/ 1B.1	Chaparral (maritime), Cismontane woodland, Coastal scrub; sandy or gravelly/perennial herb/Feb–July(Sep)/230–2,655 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present, although the most recently confirmed occurrence in the region is from 1935 (CDFW 2020a). This species was not detected during 2018 or 2019 special-status plant species surveys.

Table 3.3-3. Special-Status Plant Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[a]	Habitat Requirements	Potential to Occur within the BSA
Imperata brevifolia	California satintail	None/None/ 2B.1	Chaparral, Coastal scrub, Mojavean desert scrub, Meadows and seeps (often alkali), Riparian scrub; mesic/perennial rhizomatous herb/Sep–May/0–3,985 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present, and the large quantities of quailbush on site indicate that suitable alkaline soils may be present. However, there are only two occurrences in the region, both of which are located behind the transverse ranges north the site, approximal 11 miles northeast of the project site (CDFW 2020a). This species was not detected during 2018 or 2019 special-status plant species surveys.
Lonicera subspicata var. *subspicata*	Santa Barbara honeysuckle	None/None/ 1B.2	Chaparral, Cismontane woodland, Coastal scrub/perennial evergreen shrub/May–Aug(Dec–Feb)/33–3,280 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present. However, all the occurrences in the region are located within the foothills and not directly along the coast (CDFW 2020a). This species was not detected during 2018 or 2019 special-status plant species surveys.
Malacothrix saxatilis var. *saxatilis*	cliff malacothrix	None/None/ 4.2[b]	Coastal bluff scrub, Coastal scrub/perennial rhizomatous herb/Mar–Sep/10–655 feet amsl	Present. Detected during 2018 or 2019 special-status plant species surveys.
Muhlenbergia utilis	aparejo grass	None/None/ 2B.2	Meadows and seeps, marshes and swamps, chaparral, coastal scrub, cismontane woodland; sometimes alkaline, sometimes serpentinite/perennial rhizomatous herb/Mar–Oct/82–7,625 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present, and the large quantities of quailbush on site indicate that suitable alkaline soils may be present. However, the only occurrence in the region was last confirmed in 1964 and was located west of Matilija Lake (CDFW 2020a).

Table 3.3-3. Special-Status Plant Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[a]	Habitat Requirements	Potential to Occur within the BSA
Phacelia ramosissima var. *austrolitoralis*	south coast branching phacelia	None/None/ 3.2[b]	Chaparral, Coastal dunes, Coastal scrub, Marshes and swamps (coastal salt); sandy, sometimes rocky/perennial herb/Mar–Aug/16–985 feet amsl	Present. Detected during 2018 or 2019 special-status plant species surveys.
Quercus dumosa	Nuttall's scrub oak	None/None/ 1B.1	Closed-cone coniferous forest, Chaparral, Coastal scrub; sandy, clay loam/perennial evergreen shrub/Feb–Apr(May–Aug)/49–1,310 feet amsl	Low potential to occur. Suitable coastal scrub habitat is present, although clay soils are absent (USDA 2020a). The closest occurrence in the region was last confirmed in 1929 and was described as occurring in Carpinteria, and the remaining occurrences in the region[2] are located within the foothills and not directly along the coast (CDFW 2020a). This species was not detected during 2018 or 2019 special-status plant species surveys.
Suaeda taxifolia	woolly seablite	None/None/ 4.2[b]	Coastal bluff scrub, Coastal dunes, Marshes and swamps (margins of coastal salt)/perennial evergreen shrub/Jan–Dec/0–165 feet amsl	Present. Detected during 2018 or 2019 special-status plant species surveys.

Notes: amsl = above mean sea level.

[a] **Status Legend:**
FE: Federally listed as endangered
SE: State listed as endangered
CRPR 1A: Plants presumed extinct in California
CRPR 1B: Plants rare, threatened, or endangered in California and elsewhere
CRPR 2A: Plants rare, threatened, or endangered in California but common elsewhere
CRPR 2B: Plants rare, threatened, or endangered in California but more common elsewhere
CRPR 3: Plants about which more information is needed – a review list
CRPR 4: Plants of limited distribution – a watch list
.1 Seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat)
.2 Fairly endangered in California (20% to 80% of occurrences threatened)
.3 Not very endangered in California (less than 20% of occurrences threatened or no current threats known).

[b] For the purpose of CEQA analysis, federal, state, and CNPS CRPR 1A, 1B, 2A, and 2B plants are considered special-status. CRPR 3 and 4 plants are not considered special-status as plant species but do add to the vegetation community value designated as County environmentally sensitive habitat and or City environmentally sensitive habitat areas as CNPS CRPR 3 and 4 species.

No federal, state, or CNPS CRPR 1 or 2 plant species were observed. Two CNPS CRPR 4.2 plant species, cliff malacothrix (*Malacothrix saxatilis* var. *saxatilis*) and woolly seablite (*Suaeda taxifolia*), and one CNPS CRPR 3.2 plant species, south coast branching phacelia (*Phacelia ramosissima* var. *austrolitoralis*) were detected within the biological survey area (see Figure 3.3-1). Cliff malacothrix, south coast branching phacelia, and woolly seablite are not included on the Rare Plants of Santa Barbara County list (Wilken 2018); therefore, these are not considered special-status plant species.

Cliff malacothrix (*Malacothrix saxatilis* var. *saxatilis*). This CNPS CRPR 4.2 species is a perennial herb that occurs in coastal bluff scrub and coastal scrub at 10 to 220 feet in elevation. It occurs along the coast from Orange County north to Santa Barbara County, and inland in Kern and San Bernardino Counties and blooms March through September. A total of 68,385 square feet and 834 individuals were documented (Figure 3.3-1) in the biological survey area.

South coast branching phacelia (*Phacelia ramosissima* var. *austrolitoralis*). This species is a perennial herb that is native to California and included as CNPS CRPR 3.2. It occurs in chaparral, coastal dunes, coastal scrub, marshes and swamps (coastal salt) in sandy sometimes rocky soils and blooms March through August. A total of 14 square feet and 2 individuals were documented (Figure 3.3-1) in the biological survey area.

Woolly seablite (*Suaeda taxifolia*). This CNPS CRPR 4.2 species is found in coastal bluff scrub, coastal dunes, and marshes and swamps at 0 to 165 feet elevation. It occurs along the coast from Orange County north to San Luis Obispo County, as well as on the Channel Islands and blooms January through December, year-round. In the project vicinity, this species is distributed in monotypic patches along the bluffs just west of Rincon Beach County Park, adjacent to the trail alignment (Figure 3.3-1). A total of 75,161 square feet and 617 individuals were documented in the biological survey area.

3.3.1.4 Special-Status Wildlife Species

Wildlife species were documented during the 2011 general biological survey and subsequent vegetation mapping, and special-status plant species surveys during 2018 and 2019. Additionally, a Dudek biologist documented wildlife observed during the general biological survey conducted in December 2020.

A total of 32 special-status wildlife species (25 birds, two invertebrates, three mammals, and two reptiles) were either directly observed or detected based on vocal cues or observation of sign, included as Appendix C1. The CNDDB (CDFW 2018, 2020a) and USFWS (USFWS 2020a) queries returned 41 special-status wildlife species that have been documented within the USGS White Ledge Peak 7.5 quadrangle as well as the four coastally influenced adjacent USGS 7.5 minute quadrangles (Ventura, Matilija, Pitas Point, Carpinteria), herein after referred to as the region. Only the four coastally influenced adjacent USGS 7.5-minute quadrangles were queried for sensitive biological resources instead all adjacent quadrangle maps, since the habitats north of the foothills vary greatly from the project site and would not be representative of what species are likely to occur in coastal habitats.

A variety of special-status wildlife have recorded occurrences in the region (i.e., the five 7.5-minute quadrangles queried) and were evaluated for their potential to occur on the project site, including but not limited to the Monarch butterfly (*Danaus plexippus*; Special Animal), tidewater goby (*Eucyclogobius newberryi*; federally endangered [FE]), southern steelhead (*Oncorhynchus mykiss irideus*; FE), California red-legged frog (*Rana draytonii*); federally threatened [FT]), California legless lizard (*Anniella sp.*; California Species of Special Concern [SSC]), two-striped garter snake (*Thamnophis hammondii*; SSC), white-tailed kite (*Elanus leucurus*; state fully protected [FP]); light-footed clapper rail (*Rallus longirostris levipes*; FE, state endangered [SE], FP), snowy plover (*Charadrius nivosus*;

FT) and Belding's savannah sparrow (*Passerculus sandwichensis beldingi*; SE). Appendix C2 provides a list of the 31 special-status wildlife species that are not expected to occur based on site surveys, lack of suitable habitat, and the site being out of the species range. The special-status wildlife species in Appendix C2 are not analyzed in this report as no direct, indirect, or cumulative impacts are expected.

Based on Dudek's knowledge of regional biological resources, distribution of local species, and species-specific habitat preferences, 8 of the special-status wildlife species queried had the potential to occur within the project site. These 8 special-status wildlife species include California legless lizard, Blainville's horned lizard (*Phrynosoma blainvillii*), coast patch-nosed snake (*Salvadora hexalepis virgultea*), white-tailed kite, western mastiff bat (*Eumops perotis californicus*), Townsend's big-eared bat (*Corynorhinus townsendii*), San Diego desert woodrat (*Neotoma lepida intermedia*), and the monarch butterfly and their overwintering population (Table 3.3-4).

Table 3.3-4. Special-Status Wildlife Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1] Fed/State/ County/City	Habitat Requirements	Potential to Occur within the BSA
Reptiles				
Anniella sp.	California legless lizard	None/SSC/None/None	Coastal dunes, stabilized dunes, beaches, dry washes, valley–foothill, chaparral, and scrubs; pine, oak, and riparian woodlands; associated with sparse vegetation and sandy or loose, loamy soils	Moderate potential to occur. Note that the species of legless lizard occurring in the region is not known (Papenfuss and Parham 2013). Suitable scrub habitat is present, although loose, loamy soils are less abundant within the site due to extensive past grading to form the slopes adjacent to U.S. Highway 101. A 1952 CNDDB occurrence was within the western portion of the project site (CDFW 2020a). The next closest occurrence is located approximately 2 miles northwest of the site at Carpinteria State Beach (CDFW 2020a).
Phrynosoma blainvillii	Blainville's horned lizard	None/SSC/None/None	Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley–foothill hardwood, conifer, riparian, pine–cypress, juniper, and annual grassland habitats	Low potential to occur. Suitable coastal scrub habitat is present, although there is only one CNDDB occurrence in the region, located approximately 10.5 miles northeast of the site near the Los Robles Diversion Canal (CDFW 2020a).

Table 3.3-4. Special-Status Wildlife Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1] Fed/State/ County/City	Habitat Requirements	Potential to Occur within the BSA
Salvadora hexalepis virgultea	coast patch-nosed snake	None/SSC/None/None	Brushy or shrubby vegetation; requires small mammal burrows for refuge and overwintering sites	Low potential to occur. Suitable coastal scrub shrubby habitat is present, although all three CNDDB occurrences in the region are located in the montane areas behind the site and not in coastal areas, the closest of which is located approximately 10.5. miles north of the site along E Camino Cielo (CDFW 2020a).
Birds				
Elanus leucurus (nesting)	white-tailed kite	None/FP/ESH/ESHA	Nests in woodland, riparian, and individual trees near open lands; forages opportunistically in grassland, meadows, scrubs, agriculture, emergent wetland, savanna, and disturbed lands	Low potential to nest. Marginally suitable woodland nesting habitat is present in the trees adjacent to the project site near Rincon Beach County Park, within the Rincon Point housing development. This species prefers open grassland or marshland habitats which are not present on site, and is found less commonly in agricultural areas or rights-of-way. This species is known to occur along the south coast, however most foraging and nesting activity in the County is restricted to more rural areas and in particular, the Goleta and Santa Maria Valleys (Lehman 2020).
Mammals				
Corynorhinus townsendii	Townsend's big-eared bat	None/SSC/None/None	Mesic habitats characterized by coniferous and deciduous forests and riparian habitat, but also xeric areas; roosts in limestone caves and lava tubes, human-made structures, and tunnels	Low potential to occur, not expected to roost. Marginally suitable coastal scrub foraging habitat is present, while suitable roosting habitat is absent on site. There is only one CNDDB occurrence in the region, last confirmed in 1941 at the Carpinteria Salt Marsh (CDFW 2020a).

Table 3.3-4. Special-Status Wildlife Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1] Fed/State/ County/City	Habitat Requirements	Potential to Occur within the BSA
Eumops perotis californicus	western mastiff bat	None/SSC/None/None	Chaparral, coastal and desert scrub, coniferous and deciduous forest and woodland; roosts in crevices in rocky canyons and cliffs where the canyon or cliff is vertical or nearly vertical, trees, and tunnels	Low potential to occur, not expected to roost. Suitable coastal scrub foraging habitat is present, while the slopes present on site are not large and far enough away from human disturbance to be suitable roosting habitat. There is only one CNDDB occurrence in the region, which is located approximately 10 miles east of the site near Weldon (CDFW 2020a).
Neotoma lepida intermedia	San Diego desert woodrat	None/SSC/None/None	Coastal scrub, desert scrub, chaparral, cacti, rocky areas	Moderate potential to occur. Suitable coastal scrub habitat is present, and this species is known to occur along the coast in the region, the closet occurrence of which was last confirmed in 1992 located approximately 2.75 miles southeast of the site just east of Punta Gorda (CDFW 2020a). Additionally, woodrat middens have been observed within the project site during various surveys.
Puma concolor (southern and central coast California evolutionary significant units)	mountain lion	None/SC/None/None	Dense undergrowth and cover in deserts, humid coast forests, arid hillsides, and scrub and oak woodlands.	Low potential to occur. Suitable habitat north and east of the project site across U.S. Highway 101 in the vicinity of State Route 150. This species is known to occur in more rural areas and may access areas east of the project site via Rincon Creek; however, project site access is constricted by U.S. Highway 101 and adjacent chain link fencing along the southbound lanes of the highway, the narrow and frequently used State Route 150, and the beach.

Table 3.3-4. Special-Status Wildlife Species Observed or with Potential to Occur within the Biological Survey Area

Scientific Name	Common Name	Regulatory Status[1] Fed/State/ County/City	Habitat Requirements	Potential to Occur within the BSA
Invertebrates				
Danaus plexippus	monarch	FC/None/ESH[2]/ESHA[2]	Follows a pattern of seasonal migration and the Rocky Mountain population migrates southwest to wintering grounds along the California coast from Mendocino to the Mexico border extending into Baja, California, Mexico. Overwintering populations utilize wind-protected tree groves (typically eucalyptus [*Eucalyptus* sp.], Monterey cypress [*Hesperocyparis macrocarpa*], sycamore [*Platanus racemosa*], and coast live oak [*Quercus agrifolia*]) with nectar sources and nearby water sources.	Low potential to roost. While there are a few trees located on the project site including Monterey cypress and eucalyptus trees, most are isolated individuals, and none assemble into a woodland large enough to provide protection and other elements required by overwintering monarch butterflies. There is low potential for monarch butterflies to overwinter adjacent to the project site, including the stand of eucalyptus and trees associated with residential development at Rincon Point near Rincon Creek; however, monarch individuals were not observed during surveys and winter roost sites have not been documented in these areas (Xerces Society 2020). There are numerous occurrences in the region, including a stand of eucalyptus trees north of the project site along Rincon Creek and Bates Road north of Highway 101, last confirmed in 2002 (CDFW 2020a).

[1] **Federal Designations:**

FC	Candidate for federal listing as threatened or endangered
(FD)	Federally delisted; monitored for five years
FE	Federally listed Endangered
FT	Federally listed as Threatened
FDL	Federally delisted
BCC	Bird of Conservation Concern

State Designations:

SC	Candidate for state listing as endangered
SSC	Species of Special Concern
FP	California Department of Fish and Game Protected and Fully Protected Species
SE	State listed as Endangered
ST	State listed as Threatened
SDL	State delisted
WL	Watch List

[2] Monarch overwintering sites are protected under County CLUP (County of Santa Barbara 2019) and the City General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) as County environmentally sensitive habitat and City environmentally sensitive habitat areas.

Two special-status wildlife species were determined to have a moderate potential to occur within the project site, including Northern California legless lizard (SSC) and San Diego desert woodrat (SSC).

California legless lizard. The California legless lizard is a state SSC and is a fossorial lizard that occupies suitable habitats such as coastal dune, valley and foothill grassland, chaparral, and coastal scrub from Contra Costa County south to the Mexico border. This species requires loose, friable soils for burrowing, and often requires moist substrates and environments (CDFW 2020a). This species has been recorded within the project site from a 1952 occurrence along the coastal bluffs near Rincon Road and Rincon Beach County Park (CDFW 2020a). Suitable habitat for this species occurs on site in the coastal scrub and coastal bluff scrub vegetation communities mapped over a large portion of the site

San Diego desert woodrat. The San Diego desert woodrat is a state SSC known to inhabit scrub habitats, such as coastal sage scrub. Its distribution tends to be on the west side of Coast Ranges from San Diego County north to at least San Luis Obispo County. The San Diego desert woodrat prefers moderate to dense canopies, and are particularly abundant in rock outcrops, rocky cliffs, and slopes (CDFW 2020a). Unlike dusky-footed woodrats, San Diego desert woodrats do not construct large stick nests. This species normally occupies openings in rocks, vegetation (such as openings among patches of cactus), and even debris, and sometimes small stick nests are built within an opening or crevice. Suitable habitat for this species occurs on site in the coastal scrub and coastal bluff scrub vegetation communities mapped over a large portion of the site. Woodrat middens have been observed during surveys on site.

White-tailed kite. The white-tailed kite, a state fully protected species, is known to occur in the area (City of Carpinteria 2003), and in addition to protections by the state, the white-tailed kite receives protection under the Santa Barbara County Coastal Land Use Plan (County of Santa Barbara 2019) and the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003). The City specifically cites the Carpinteria Bluffs as a location where this species occurs and is protected. However, no white-tailed kites were detected in the biological survey area, and the scrub vegetation that predominates there is unsuitable for foraging by this species, which hunts in habitats dominated by grasses and forbs. Trees in and around the site are relatively small, and located in areas with high levels of human disturbance where kites are unlikely to nest. Marginally suitable woodland nesting habitat is present in the trees adjacent to the project site near Rincon Beach County Park, within the Rincon Point housing development. This species prefers open grassland or marshland habitats which are not present on site, and is found less commonly in agricultural areas or rights-of-way. This species is known to occur along the south coast, however most foraging and nesting activity in the County is restricted to more rural areas and in particular, the Goleta and Santa Maria Valleys (Lehman 2020).

Monarch butterflies and overwintering sites. Monarch butterflies are currently a federal candidate species, while their overwintering sites are also protected under Santa Barbara County Coastal Land Use Plan (County of Santa Barbara 2019) and the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) policies. The monarch butterfly follows a pattern of seasonal migration. The summer grounds of the species are found in New England, the Great Lakes region, the northern Rocky Mountains, and some portions of the Arid West (Pelton et al. 2016). The New England and Great Lakes populations generally migrate southwest to wintering grounds in the Sierra Madre mountain range of Mexico, while the Rocky Mountains population generally migrates southwest to wintering grounds along the California coast.

Monarchs require specific conditions for suitable wintering sites, and wintering sites in California are associated with wind-protected groves of large trees (primarily eucalyptus or pine) with nectar and water sources nearby, dappled sunlight, high humidity, and an absence of freezing temperatures or high wind, generally near the coast

(Pelton et al. 2016). The majority of trees within the biological survey area are either singular and isolated, or do not form a large enough grove to provide adequate microclimate conditions and wind protection monarch butterflies require for overwintering sites. There is a small portion of eucalyptus trees within the eastern portion of the biological survey area, however there is low potential for monarchs for overwinter here as well due to the small relative size of this eucalyptus stand and vulnerability to strong winds and weather. There are also three eucalyptus trees present at near the western terminus of the biological survey area, however they each grow individually and do not form a grove capable of supporting overwintering monarchs. Additionally, the eucalyptus trees present along the hills behind the biological survey on private property, specifically the eucalyptus trees around the residential development off Bates Ranch Road as well as the eucalyptus trees that extend beyond the terminus of Camino Carreta, appear to be planted windrows and do not form large protected groves that have the microclimate characteristics monarchs require for overwintering.

Monarch butterflies are known to occur near the biological survey area along Bates Road just north of U.S. Highway 101 in a eucalyptus stand associated with Rincon Creek (CNDDB Occurrence No. 268; Xerces Site No. 2803) (CDFW 2020a). Additionally, this site was known to have been surveyed for overwintering monarch populations in 2017 during the Xerces Society New Year's Count, of which none were detected (Xerces Society 2020).

3.3.1.5 Critical Habitat

There is no USFWS designated critical habitat for any plant species or wildlife species within or adjacent to the project site (USFWS 2020b).

3.3.1.6 Wildlife Movement Corridors

The project site is located adjacent to the Pacific Ocean and does not connect important habitat areas used by large or small wildlife species. In addition, U.S. Highway 101 and adjacent chain link fencing along the southbound lanes of the highway provide impediments to wildlife movement between the bluffs and more inland areas. Additionally, development and restricted access from more open space areas to the north impede wildlife movement in accessing the project site. Large-sized mammal species such as mountain lion and California black bears (*Ursus americanus californiensis*) may utilize areas to the east of the biological survey area including Rincon Creek and the channelized portion under U.S. Highway 101 to access beach areas; however, the surrounding areas where Rincon Creek daylights is developed with residential homes and parking lot improvements, resulting in a high urban wildlife interface. Medium-sized mammal species such as the striped skunk (*Mephitis mephitis*) or northern raccoon (*Procyon lotor*) may move locally along the coast. The UPRR and associated right-of-way provides an unvegetated corridor approximately 50 feet wide containing a single track that divides the project alignment near its center. The UPRR tracks are at a much lower elevation than the adjacent bluffs creating an anthropogenic valley and break in continuous topography along the bluffs. The project includes a span bridge which connects the two bluffs and ultimately will not change the overall topography for wildlife to approach or cross the tracks. Additionally, minor changes to wind and weather patterns in a very local setting are not an impediment to birds moving long distance, particularly since the overall height of the slope should remain at the same elevation.

To evaluate the change in wind uplift patterns above the bluff face from the proposed regrading for the project, Dudek commissioned an Airflow Analysis for the Proposed Regrading of the Rincon Bluffs study (Airflow Study) by an expert in fluid dynamics; the Airflow Study is included as Appendix I of this Environmental Impact Report. Several different approaches were used, based upon published literature including wind tunnel experiments and direct field measurements of the amplification effects of a slope or vertical face on horizontal wind vectors perpendicular to

the slope face. In the published literature reviewed for this Airflow Study, certain investigators compared the average slope angle of the entire slope or bluff face to determine the wind amplification effect, while others compared the angle of just the upper portion of the slope. The analysis of the effects of the proposed regrading of the bluff face for the project concluded that the proposed regrading could reduce the vertical airflow velocity by 10% to 30% relative to current conditions; for altitudes relevant to paragliding and soaring activities, the reduction is expected to be closer to 30% (Appendix I). Based on available experimental results, the introduction of an upper bench above the trail is expected to provide a small increase in turbulence (of the order of 5%) at an altitude of 30 feet above the front of the bluffs, becoming negligible by an altitude of approximately 75 feet (Appendix I). Migratory avian species travel hundreds to thousands of miles at various elevations during which they can be exposed to a variety of weather systems within days or weeks of each other and have behavioral plasticity in response to microscale through mesoscale conditions including extremely adverse weather (Sahmoun-Baranes 2017). The anticipated changes in velocity and turbulence would occur within a short linear distance relative to the distance traveled for a migrating avian species, and avian species regularly adjust to changing weather conditions. Additionally, the velocity and turbulence changes would be focused at altitudes near the bluff top and would not extend the whole altitude range for migrating birds.

3.3.1.7 Aquatic Resources

While a delineation of jurisdictional aquatic resources was not performed; no evidence of aquatic features was observed within the biological survey area during field surveys. Additionally, there are no USGS National Hydrography Dataset (USGS 2020) or USFWS National Wetlands Inventory (USFWS 2020b) mapped aquatic resources within the project site. On the adjacent Carpinteria Bluffs III site, to the south and west of the western most portion of the project site, multiple seasonal pools and ephemeral pools have been documented (Sage Institute Inc. 2009; Dudek 2012a, 2012b). As part of the Wetland Determination of Pool Features at Carpinteria Bluffs Area II per the California Coastal Act (Dudek 2012b), jurisdictional determinations for coastal wetlands were made for documented seasonal pools and ephemeral features. No documented coastal wetlands occur within the project site; however, coastal wetlands (Dudek 2012b) are approximately 123 feet from project temporary impacts and 125 feet from project permanent impacts. The closest mapped riverine or stream/river feature is associated with the Rincon Creek outlet located approximately 50 feet from the eastern portion of the biological survey area.

3.3.2 Relevant Plans, Policies, and Ordinances

3.3.2.1 Federal

Clean Water Act, Section 404

The Clean Water Act (CWA) establishes the basic structure for regulating discharges of pollutants into waters of the United States, and regulating quality standards for surface waters. Under the CWA, the U.S. Environmental Protection Agency (USEPA) has implemented pollution control programs such as setting wastewater standards for industry and developing national water quality criteria recommendations for pollutants in surface waters.

The CWA made it unlawful to discharge any pollutant from a point source into navigable waters, unless a permit was obtained. USEPA's National Pollutant Discharge Elimination System (NPDES) permit program controls discharges. Point sources are discrete conveyances such as pipes or human-made ditches. Individual homes that are connected to a municipal system, use a septic system, or do not have a surface discharge do not need an

NPDES permit; however, industrial, municipal, and other facilities must obtain permits if their discharges go directly to surface waters.

Under Section 404 of the Clean Water Act, the U.S. Army Corps of Engineers (USACE) has authority to regulate activities that could discharge fill of material into wetlands or other "waters of the United States." Perennial and intermittent creeks are considered waters of the United States if they are hydrologically connected to other jurisdictional waters (typically a navigable water). USACE also implements the federal policy embodied in Executive Order 11990, which is intended to result in no net loss of wetland value or acres. In achieving the goals of the Clean Water Act, USACE seeks to avoid adverse impacts and offset unavoidable adverse impacts on existing aquatic resources. Any fill of wetlands that are hydrologically connected to jurisdictional waters would require a permit from USACE prior to the start of work. Typically, when a project involves impacts to waters of the United States, the goal of no net loss of wetland acres or values is met through avoidance and minimization to the extent practicable, followed by compensatory mitigation involving creation or enhancement of similar habitats.

Federal Endangered Species Act

Under the federal Endangered Species Act of 1973 (ESA), the Secretary of the Interior and the Secretary of Commerce jointly have the authority to list a species as threatened or endangered (16 USC 1533[c]). Pursuant to the requirements of the ESA, an agency reviewing a project within its jurisdiction must determine whether any federally listed threatened or endangered species may be present in the planning area, and determine whether the project would have a potentially significant impact on such species. In addition, the agency is required to determine whether the project is likely to jeopardize the continued existence of any species proposed to be listed under the ESA or result in the destruction or adverse modification of critical habitat proposed to be designated for such species (16 USC 1536[3][4]). The U.S. Fish and Wildlife Service (USFWS) and the National Oceanic and Atmospheric Administration National Marine Fisheries Service are responsible for implementation of the ESA.

USFWS also publishes a list of candidate species. Species on this list receive special attention from federal agencies during environmental review, although they are not protected otherwise under the ESA. The candidate species are those for which USFWS has sufficient biological information to support a proposal to list them as endangered or threatened.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act prohibits the take of any migratory bird or any part, nest, or eggs of any such bird. Under the Migratory Bird Treaty Act, "take" is defined as "pursue, hunt, shoot, wound, kill trap, capture, or collect, or any attempt to carry out these activities" (16 USC 703 et seq.). Additionally, Executive Order 13186, Responsibilities of Federal Agencies to Protect Migratory Birds, requires that any project with federal involvement address impacts of federal actions on migratory birds with the purpose of promoting conservation of migratory bird populations (66 FR 3853–3856). Executive Order 13186 requires federal agencies to work with USFWS to develop a memorandum of understanding. USFWS reviews actions that might affect these species. Currently, birds are considered to be nesting under the Migratory Bird Treaty Act only when there are eggs or chicks that are dependent on the nest.

3.3.2.2 State

California Endangered Species Act

The California ESA establishes state policy to conserve, protect, restore, and enhance threatened or endangered species and their habitats. Under the California ESA, CDFW is responsible for maintaining a list of threatened species and endangered species (California Fish and Game Code, Section 2070). CDFW also maintains a list of candidate species, which are species that CDFW has formally noticed as under review for addition to the threatened or endangered species list. CDFW also maintains lists of California species of special concern, which serve as watch lists. Pursuant to the requirements of the California ESA, an agency reviewing a proposed project within its jurisdiction must determine whether any state-listed endangered or threatened species may be present in the area, and determine whether the proposed project would have a potentially significant impact on such species. CDFW encourages informal consultation on any proposed project that may impact a candidate species.

California Fish and Game Code

Under the California Fish and Game Code, CDFW provides protection from take for a variety of species, including fully protected species. "Fully protected" is a legal protective designation administered by CDFW and intended to conserve wildlife species that risk extinction within California. Lists have been created for birds, mammals, fish, amphibians, and reptiles.

Birds of prey are protected in California under California Fish and Game Code Section 3503.5. Section 3503.5 states that it is "unlawful to take, possess, or destroy any birds in the orders Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto." Construction disturbance during the breeding season could result in the incidental loss of fertile eggs or nestlings, or otherwise lead to nest abandonment. Disturbance that causes nest abandonment and/or loss of reproductive effort is considered "taking" by CDFW. Section 3511 prohibits take or possession of a fully protected species. In addition, Section 3513 states "It is unlawful to take or possess any migratory nongame bird as designated in the Migratory Bird Treaty Act or any part of such migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the Migratory [Bird] Treaty Act." Any loss of fertile eggs or nesting raptors, or any activities resulting in nest abandonment would constitute a significant impact. Non-raptor native birds receive similar protection under California Fish and Game Code Section 3503. Project impacts to these species would not be considered significant unless the species are known to, or have a high potential to, nest in the area or rely on it for primary foraging.

The Native Plant Protection Act of 1977 (California Fish and Game Code, Section 1900 et seq.) gives CDFW authority to designate state endangered, threatened, and rare plants, and provides specific protection measures for identified populations.

CDFW also protects streams, water bodies, and riparian corridors through the Streambed Alteration Agreement process under Sections 1601–1606 of the California Fish and Game Code. The California Fish and Game Code stipulates that it is "unlawful to substantially divert or obstruct the natural flow or substantially change the bed, channel or bank of any river, stream or lake" without notifying CDFW, incorporating necessary mitigation, and obtaining a Streambed Alteration Agreement. Through policy, CDFW asserts jurisdiction to the top of banks of all streams, including intermittent and ephemeral streams, extending laterally to the upland edge of adjacent riparian vegetation. CDFW uses the Cowardin system for wetland identification and classification, which typically results in a larger jurisdictional area than federal jurisdiction under the Clean Water Act. Under this system, wetlands must

have one or more of the following three attributes: (1) at least periodically, the land supports predominantly hydrophytes; (2) the substrate is predominantly undrained hydric soil; and (3) the substrate is nonsoil and is saturated with water or covered by shallow water at some time during the growing season of each year.

3.3.2.3 Local

City of Carpinteria General Plan/Local Coastal Land Use Plan

The City's General Plan/Local Coastal Land Use Plan includes the following objectives and policies relevant to the proposed project and biological resources:

- OSC-1 Protect, Preserve and Enhance Local Natural Resources and Habitats
  - Policy OSC-1a. Protect ESHAs from development and maintain them as natural open space or passive recreational areas.
  - Policy OSC-1b. Prohibit activities, including development, that could damage or destroy ESHA.
  - Policy OSC-1c. Establish and support preservation and restoration programs for ESHA, including but not limited to Carpinteria Creek, Carpinteria Bluffs, Carpinteria Salt Marsh, seal rookery, Carpinteria reef, Pismo clam beds and the intertidal zones along the shoreline.
  - Policy OSC-1d. Property including ESHA should be designated with a zoning category that allows for the protection of, and access to, the resource area, such as Open Space/Recreation or Public Facility zoning. Any development on property including ESHA should be designed and conducted to protect the resources. Within environmentally sensitive habitat only uses dependent upon those resources shall be allowed and the resources shall be protected against any disruption.
  - Policy OSC-1f. Protect and restore degraded wetlands, butterfly habitat, native plant communities, and sensitive, rare, threatened or endangered species habitat on City-owned land to the maximum extent feasible.
- OSC-3 Preserve and Restore Wetlands Such as the Carpinteria Salt Marsh
  - Policy OSC-3a. Wetland delineations shall be based on the definitions contained in Section 13577 (b) of Title 14 of the California Code of Regulations
  - Policy OSC-3b. The upland limit of a wetland is defined as
    - the boundary between land with predominantly hydrophytic cover and land with predominantly mesophytic or xerophytic cover;
    - the boundary between soil that is predominantly hydric and soil that is predominantly non-hydric;
    - in the case of wetlands without vegetation or soils, the boundary between land that is flooded or saturated at some time during years of normal precipitation, and land that is not.
    - If questions exist, the limit shall be determined by a habitat survey made by a qualified biologist in consultation with the California Department of Fish and Game.
  - Policy OSC-3c. Development adjacent to the required buffer around wetlands should not result in adverse impacts including but not limited to sediment runoff, chemical and fertilizer contamination, noise, light pollution and other disturbances.
- OSC-7 Conserve Native Plant Communities.
  - Policy OSC-7b. When sites are graded or developed, areas with significant amounts of native vegetation shall be preserved. Structures shall be sited and designed to minimize the impact of grading, paving

construction of roads, runoff and erosion on native vegetation. Sensitive resources that exhibit any level of disturbance shall be maintained, and if feasible, restored. New development shall include measures to restore any disturbed or degraded habitat on the project site. Cut and fill slopes and all areas disturbed by construction activities shall be landscaped or revegetated at the completion of grading. Plantings shall be of native, drought-tolerant plant species consistent with the existing native vegetation on the site. Invasive plant species that tend to supplant native species shall be prohibited.

Santa Barbara County Article II Coastal Zoning Ordinance

Pursuant to PRC Section 30500 of the California Coastal Act of 1976, Santa Barbara County was required to prepare an LCP for portions of the unincorporated areas of Santa Barbara County within the coastal zone. Sections of the Santa Barbara County Article II Zoning Ordinance that may be relevant to the proposed project include Section 35-140, Tree Removal. Section 35-140 regulates the removal of qualifying trees within the coastal zone, and requires Coastal Development Permit (CDP) approval prior to removal of any qualifying tree. A qualifying tree is defined as a tree which is six inches or more in diameter measured four feet above the ground and six feet or more in height and which is 1) located in a County street right-of-way; or 2) located within 50 feet of any major or minor stream except when such trees are removed for agricultural purposes; or 3) oak trees; or 4) used as a habitat by the monarch butterflies. However, a CDP to remove trees in the coastal zone shall only be issued for reasons such as: the trees are dead; the trees prevent the construction of a project for which a CDP has been issued and project redesign is not feasible; the trees are diseased and pose a danger to healthy trees in the immediate vicinity; or the trees are so weakened by age, disease, storm, fire, excavation, removal of adjacent trees, or any injury so as to cause imminent danger to persons or property.

Santa Barbara County Coastal Land Use Plan

The Santa Barbara County Coastal Land Use Plan was partially certified by the Coastal Commission on March 17, 1981, adopted in 1982, and republished June 2019, as the Local Coastal Program for unincorporated Santa Barbara County. It details the rules and regulations of land use within Santa Barbara County's coastal areas. The following policies would apply to the proposed project. Policy 9-37 consists of the same guidelines discussed above in the Santa Barbara County Article II Zoning Ordinance Section 35-97.19, Development Standards for Stream Habitats. Policy 9-38 consists of the same guidelines discussed above in the Santa Barbara County Article II Zoning Ordinance Section 35-97.19.

- Policy 9-36: When sites are graded or developed, areas with significant amounts of native vegetation shall be preserved. All development shall be sited, designed, and constructed to minimize impacts of grading, paving, construction of roads or structures, runoff, and erosion on native vegetation. In particular, grading and paving shall not adversely affect root zone aeration and stability of native trees.
- Policy 9-37: The minimum buffer strip for major streams in rural areas, as defined by the land use plan, shall be presumptively 100 feet, and for streams in urban areas, 50 feet. These minimum buffers may be adjusted upward or downward on a case-by-case basis. The buffer shall be established based on an investigation of the following factors and after consultation with the Department of Fish and Game and Regional Water Quality Control Board in order to protect the biological productivity and water quality of streams:
  1) Soil type and stability of stream corridors;
  2) How surface water filters into the ground;
  3) Slope of the land on either side of the stream; and
  4) Location of the 100-year flood plain boundary.

Riparian vegetation shall be protected and shall be included in the buffer. Where riparian vegetation has previously been removed, except for channelization, the buffer shall allow for the reestablishment of riparian vegetation to its prior extent to the greatest degree possible. Riparian vegetation shall be protected and shall be included in the buffer. Where riparian vegetation has previously been removed, except for channelization, the buffer shall allow for the reestablishment of riparian vegetation to its prior extent to the greatest degree possible.

- Policy 9-38: No structures shall be located within the stream corridor except: public trails, dams for necessary water supply projects, flood control projects where no other method for protecting existing structures in the flood plain is feasible and where such protection is necessary for public safety or to protect existing development; and other development where the primary function is for the improvement of fish and wildlife habitat. Culverts, fences, pipelines, and bridges (when support structures are located outside the critical habitat) may be permitted when no alternative route/location is feasible. All development shall incorporate the best mitigation measures feasible.

3.3.3 Thresholds of Significance

The County provides types of impacts to biological resources that may be considered significant if the project substantially alters biological resources in the following ways (County of Santa Barbara 2008):

1. Substantially reduce or eliminate species diversity or abundance
2. Substantially reduce or eliminate quantity or quality of nesting areas
3. Substantially limit reproductive capacity through losses of individuals or habitat
4. Substantially fragment, eliminate, or otherwise disrupt foraging areas and/or access to food sources
5. Substantially limit or fragment range and movement (geographic distribution or animals and/or seed dispersal routes)
6. Substantially interfere with natural processes, such as fire or flooding, upon which the habitat depends.

Furthermore, the size, type, and timing of impacts should be considered in assessing the significance of project impacts on biological resources (County of Santa Barbara 2008).

The significance criteria used to evaluate the project impacts to biological resources are based on Appendix G of the CEQA Guidelines. According to Appendix G of the CEQA Guidelines, a significant impact related to biological resources would occur if the project would:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

g) Result in cumulatively considerable impacts to biological resources.

3.3.4 Impact Analysis

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

For the purpose of CEQA analysis, federal, state, CNPS CRPR 1A, 1B, 2A, and 2B plants, and locally rare plants (Wilken 2018) are considered special-status plant species. CRPR 3 and 4 plants, which are CNPS "rare", but not considered special-status yet these plant species do add to the vegetation community value designated as County ESH and or City ESHA as CNPS CRPR 3 and 4 species. No federal, state, or CNPS CRPR 1 or 2 species, or locally rare (Wilken 2018) species were observed. Two CNPS CRPR 4.2 plant species, cliff malacothrix and woolly seablite, and one CNPS CRPR 3.2 plant species, south coast branching phacelia, were detected within the biological survey area. Cliff malacothrix, south coast branching phacelia, and woolly seablite are not included on the Rare Plants of Santa Barbara County list (Wilken 2018) and therefore, are not considered special-status plant species. No special-status plant species were observed; thus, impacts to special-status plant species would be less than significant.

Habitat was documented for two special-status wildlife species, either within or adjacent to the trail alignment: California legless lizard and San Diego desert woodrat. Habitat for the California legless lizard was found in the proposed trail alignment immediately south of the UPRR crossing. California legless lizard individuals could suffer injury or mortality because of grading and other construction activities associated with the project. Therefore, impacts to California legless lizard would be potentially significant absent mitigation. Habitat for the woodrat is located throughout the scrub dominated portions of the site. Woodrat individuals could suffer injury or mortality because of grading and other construction activities. Therefore, impacts to woodrat would be potentially significant absent mitigation. Impacts to these species' habitats would be reduced to **less than significant with implementation of Mitigation Measure (MM) BIO-1 through MM-BIO-4**.

White-tailed kite is known to occur along the south coast, however most foraging and nesting activity in the County is restricted to more rural areas and in particular, the Goleta and Santa Maria Valleys (Lehman 2020). The City specifically cites the Carpinteria Bluffs as a location where white-tailed kites occur and their habitat is protected. However, no white-tailed kites were detected in the biological survey area, and the scrub vegetation that predominates there is unsuitable for foraging by this species, which hunts in habitats dominated by grasses and forbs. This species prefers open grassland or marshland habitats which are not present on site, and is found less commonly in agricultural areas or rights-of-way. Trees in and around the project site are relatively small, and located in areas with high levels of human disturbance where white-tailed kites are unlikely to nest. Marginally suitable woodland nesting habitat is present in the trees adjacent to the project site near Rincon Beach County Park and within the Rincon Point housing development; however, proposed project impacts are greater than 500 feet from these habitats. The trees within the vicinity of Rincon Beach County Park are not planned to be directly impacted. Therefore, impacts to white-tailed kites would be **less than significant.**

Monarchs require specific conditions for suitable wintering sites, and wintering sites in California are associated with wind-protected groves of large trees (primarily eucalyptus or pine) with nectar and water sources nearby, dappled sunlight, high humidity, and an absence of freezing temperatures or high wind, generally near the coast (Pelton et al. 2016). The majority of trees within the project site are either singular and isolated, or do not form a large enough grove to provide adequate microclimate conditions and wind protection monarch butterflies require for overwintering sites. There are three eucalyptus trees present near the western terminus of the project site, however they each grow individually and do not form a grove capable of supporting overwintering monarchs. There is a small portion of eucalyptus trees within the eastern portion of the biological survey area, however there is low potential for monarchs for overwinter here as well due to the small relative size of this eucalyptus stand and vulnerability to strong winds and weather. The easternmost proposed project impacts are over 1,000 feet from these eucalyptus trees. Additionally, the eucalyptus trees present along the hills behind the project site on private property, specifically the eucalyptus trees around the residential development off Bates Ranch Road as well as the eucalyptus trees that extend beyond the terminus of Camino Carreta, appear to be planted windrows and do not form large protected groves that have the microclimate characteristics monarchs require for overwintering.

Monarch butterflies are known to occur near the project site along Bates Road just north of U.S. Highway 101 in a eucalyptus stand associated with Rincon Creek (CNDDB Occurrence No. 268; Xerces Site No. 2803) (CDFW 2020a). Additionally, this site was known to have been surveyed for overwintering monarch populations in 2017 during the Xerces Society New Year's Count, of which none were detected (Xerces Society 2020). While this population is not within 100 feet of the project site, it could be affected by project implementation due to changed weather patterns. However, no impacts to this monarch overwintering site is anticipated since the overall height of the slope within Rincon Beach County Park south of Highway 101 will not be reduced, as work includes proposed terraces to stabilize the hill but will not decrease its overall height, and therefore no changes to the wind conditions at the overwintering site are expected. Additionally, this overwintering site is largely protected by the hill below the single residential development at 637 Bates Road, and any possible changes to weather and wind patterns due to project implementation would not affect the protective contour this hill independently provides. Therefore, monarch butterflies are not anticipated to be affected since there is low potential for the project site to support overwintering populations, and because known overwintering populations in the vicinity would not be adversely affected due to project implementation. Therefore, impacts to monarch butterfly individuals and monarch butterfly overwintering sites would be **less than significant.**

Several trees, including eucalyptus, Monterey cypress, pine, are located within the proposed trail alignment near its western terminus and U.S. Highway 101. These trees are relatively small and located in areas with high levels of human disturbance including U.S. Highway 101 vehicular traffic and pedestrian use of Carpinteria Avenue and adjacent areas. These isolated and singular trees lack dense foliage and are located in areas vulnerable to strong winds and weather. Several myoporum trees are located within the proposed trail alignment and are largely multistemmed. The myoporum located directly adjacent to the unsanctioned trail experiences high levels of human disturbance. Due to the locations of these trees in areas with high levels of human disturbance, relatively small size of these trees, isolated nature of the trees, and vulnerability to strong winds and weather, raptors are unlikely to nest in these trees. Therefore, removal of these trees would not substantially reduce or eliminate quantity or quality of raptor nesting areas and impacts would be **less than significant.**

Additionally, a stand of trees is present at the eastern terminus of the biological survey area, which are rooted next to the Rincon Beach County Park parking lot. The eastern most proposed project impacts are over 1,000 feet from this stand of trees. The trees within the vicinity of Rincon Beach County Park are not planned to be directly impacted. Therefore, project impacts to raptor nesting trees would not substantially reduce or eliminate quantity or quality of nesting areas and impacts to nesting trees would be **less than significant.**

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

As discussed in Section 3.1.1.2, five native scrub communities ([California brittle bush – ashy buckwheat scrub alliance, *Encelia californica* association], [quailbush scrub alliance, *Atriplex lentiformis* association], [coastal sage scrub: California sagebrush – (purple sage) scrub alliance, *Artemisia californica* association], [coyote brush scrub alliance, *Baccharis pilularis* association], and [lemonade berry scrub alliance, *Rhus integrifolia* association]) are found in the proposed trail alignment and adjacent areas. These five native scrub communities are designated sensitive by CDFW, County ESH by definition (coastal bluff scrub or coastal sage scrub habitat) or supporting sensitive species, and/or City ESHA by definition (coastal bluff scrub or coastal sage scrub habitat), mapped as ESHA by the City, or supporting sensitive species, as described in Table 3.3-5.

Communities impacted by the proposed project are shown in Table 3.3-5, below, and include California brittle bush – ashy buckwheat scrub alliance, *Encelia californica* association (0.38 acres temporary impacts, 0.04 acres permanent impacts) and quailbush scrub alliance, *Atriplex lentiformis* association (1.31 acres temporary impacts, 0.41 acres permanent impacts) as well as coastal sage scrub: California sagebrush – (purple sage) scrub alliance, *Artemisia californica* association (1.15 acres temporary impacts, 0.14 acres permanent impacts), coyote brush scrub alliance, *Baccharis pilularis* association (0.57 acres temporary impacts, 0.14 acres permanent impacts), and lemonade berry scrub alliance, *Rhus integrifolia* association (0.14 acres temporary impacts, 0.03 acres permanent impacts).

Table 3.3-5. Temporary and Permanent Impacts to Sensitive Native Vegetation Communities

Vegetation Community Alliance, Association	Alliance-Association (State Sensitive)/ County ESH/ City ESHA	Temporary Impacts (acres)	Permanent Impacts (acres)	Total Impacts (acres)
Coastal Bluff Scrub				
California Brittle Bush – Ashy Buckwheat Scrub Alliance, *Encelia californica* Association	S3-Yes (Yes)/Yes/Yes	0.38	0.04	0.42
Quailbush Scrub Alliance, *Atriplex lentiformis* Association	S4-No (No)/Yes/Yes	1.31	0.41	1.73
Coastal Bluff Scrub Subtotal		*1.69*	*0.46*	*2.15*
Coastal Scrub				
California Sagebrush – (Purple Sage) Scrub Alliance, *Artemisia californica* Association	S5-S4 (No)/Yes/Yes	1.15	0.14	1.29
Coyote Brush Scrub Alliance, *Baccharis pilularis* Association	S5-No (No)/Yes/Yes	0.57	0.14	0.71
Lemonade Berry Scrub Alliance, *Rhus integrifolia* Association	S3-S3 (Yes)/Yes/Yes	0.14	0.03	0.17
Coastal Scrub Subtotal		*1.86*	*0.30*	*2.17*
Combined Total		**3.55**	**0.76**	**4.32**

As shown in Table 3.3-5, approximately 3.55 acres of CDFW sensitive, County ESH, and/or City ESHA habitats would be temporarily impacted due to construction. An additional 0.76 acres of CDFW sensitive, County ESH, and/or City ESHA habitats would be permanently impacted due to construction. These native plant communities are considered CDFW sensitive, County ESH, and/or City ESHA and protected under County CLUP (County of Santa Barbara 2019) and the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) policies. Therefore, the proposed project would result in a substantial adverse effect on a sensitive natural community, and impacts would be potentially significant.

County CLUP (County of Santa Barbara 2019) and the City of Carpinteria General Plan and Local Coastal Plan (City of Carpinteria 2003) policies require County ESH and City ESHA avoidance. With implementation of **MM-BIO-1**, **MM-BIO-2**, and **MM-BIO-5**, impacts would be reduced to **less than significant with mitigation.**

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

As discussed in Section 3.1.1.8, above, no jurisdictional aquatic resources were detected at the biological survey area during the field survey. Therefore, no direct impacts to jurisdictional aquatic resources would occur. On the adjacent Carpinteria Bluffs III site, to the south and west of the western most portion of the project site, multiple seasonal pools and ephemeral pools have been documented (Sage Institute Inc. 2009; Dudek 2012a, 2012b). As part of the Wetland Determination of Pool Features at Carpinteria Bluffs Area II per the California Coastal Act (Dudek 2012b), jurisdictional determinations for coastal wetlands were made for documented seasonal pools and ephemeral features. These coastal wetlands (Dudek 2012b) are approximately 123 feet from project temporary impacts and 125 feet from project permanent impacts. The closest mapped riverine or stream/river feature is associated with the Rincon Creek outlet located approximately 50 feet from the eastern portion of the biological survey area and over 1,000 feet from the eastern terminus of proposed impacts. The existing developed areas near this portion of Rincon Creek included the Rincon Beach County Park asphalt parking lot and associated developments of a standard curb, vegetation, paved Rincon Point Lane, and additional vegetation.

The City of Carpinteria General Plan and Local Coastal Plan (City of Carpinteria 2003) includes implementation policies associated with wetlands which state, "*Maintain a minimum 100-foot setback/buffer strip in a natural condition along the upland limits of all wetlands. No structures other than those required to support light recreational, scientific and educational uses shall be permitted within the setback, where such structures are consistent with all other wetland development policies and where all feasible measures have been taken to prevent adverse impacts. The minimum setback may be adjusted upward to account for site-specific conditions affecting avoidance of adverse impacts.*"

Project impacts, both temporary and permanent, are greater than 100 feet from known coastal wetlands near the western terminus of the project and greater than 1,000 feet from Rincon Creek near the eastern terminus of the project. Therefore, the project would not have a substantial adverse effect on coastal wetlands including creeks and **no impact** would occur.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

As discussed in Section 3.1.1.7, the proposed trail alignment is located adjacent to the Pacific Ocean and does not connect important habitat areas used by large or small terrestrial wildlife species. In addition, U.S. Highway 101 and the chain link fence adjacent to the southbound lanes of the highway provide impediments to movement of larger and medium-sized wildlife. Additionally, development and restricted access from more open space areas to the north impede wildlife movement in accessing the project site. Large-sized mammal species such as mountain lion and California black bears (*Ursus americanus californiensis*) may utilize areas to the east of the biological survey area including Rincon Creek and the channelized portion under U.S. Highway 101 to access beach areas; however, the surrounding areas where Rincon Creek daylights is developed with residential homes and parking lot improvements, resulting in a high urban wildlife interface. Medium-sized mammal species such as the striped skunk (*Mephitis mephitis*) or northern raccoon *(Procyon lotor)* may occasionally use the opening provided by the trail to move locally along the coast. The trail may provide some hazard to common, smaller terrestrial species such as the western fence lizard *(Sceloporus occidentalis)*, common side-blotched lizard *(Uta stansburiana)* and California pocket mouse *(Chaetodipus californicus),* but the trail and associated fencing will not present a physical barrier to their movement.

Concerning avian species, minor changes to wind and weather patterns in a very local setting are not an impediment to birds moving long distance, particularly since the overall height of the slope should remain at the same elevation. As identified in the Airflow Study (Appendix I), the analysis of the effects of the proposed regrading of the bluff face for the project concluded that the proposed regrading could reduce the vertical airflow velocity by 10% to 30% relative to current conditions; for altitudes relevant to paragliding and soaring activities, the reduction is expected to be closer to 30%. Based on available experimental results, the introduction of an upper bench above the trail is expected to provide a small increase in turbulence (of the order of 5%) at an altitude of 30 feet above the front of the bluffs, becoming negligible by an altitude of approximately 75 feet. Migrating avian species may experience reduced airflow velocity by approximately 30% and an increase in turbulence (of the order of 5%) at an altitude of 30 feet above the front of the bluffs. Migratory avian species travel hundreds to thousands of miles at various elevations during which they can be exposed to a variety of weather systems within days or weeks of each other and have behavioral plasticity in response to microscale through mesoscale conditions including extremely adverse weather (Sahmoun-Baranes 2017). The anticipated changes in velocity and turbulence would occur within a short linear distance relative to the distance traveled for a migrating avian species, and avian species regularly adjust to changing weather conditions. Additionally, the velocity and turbulence changes would be focused at altitudes near the bluff top and would not extend the whole altitude range for migrating birds. Therefore, changes in topography associated with regrading would not substantially impact migratory avian species and impacts would be **less than significant.**

In addition, as discussed under Threshold a, above, 22 species of native birds were detected on site, including several with the potential to nest there. Nests, eggs and nestlings of all native bird species are protected by the Migratory Bird Treaty Act and the California Fish and Game Code. Vegetation clearing and grading, if occurring during the nesting season (typically mid-February to August), have the potential to destroy nests, eggs and nestlings, which could violate these regulations. Therefore, the project impacts to nesting birds from project disturbances would be potentially significant. With implementation of **MM-BIO-1**, **MM-BIO-2**, and **MM-BIO-6**, project impacts would be reduced to **less than significant with mitigation**.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

As discussed in Section 3.1.1.4, three Monterey cypress trees (*Hesperocyparis macrocarpa*), a species native to California but not to the project region, exist on or near the proposed alignment, or within the temporary impact area. This includes a single tree near the western terminus of the project site near the pull-out off Carpinteria Ave., a single tree at the edge of the temporary disturbance area near disturbed habitat in the western half of the project, and a single tree adjacent to the myoporum grove along an unsanctioned trail within Rincon Beach County Park. Additionally, two newly planted pine saplings (*Pinus* sp.) exist near the edge of the temporary disturbance area in the western portion of the project, both of which were under 3 inches diameter measured 4 feet from the ground and were installed with supportive stakes and mulch. Several eucalyptus (*Eucalyptus* sp.) are adjacent to the western portions of the proposed trail, located within the City, as well as exist near the eastern terminus of the biological survey area overhanging the Rincon Beach County Park parking lot. All of the trees described above are not native or naturally occurring in the region, therefore they should not be considered native trees under Policy 9.36 of the Santa Barbara County Coastal Land Use Plan (County of Santa Barbara 2019).

Furthermore, the only trees on site that meet the definition for qualifying trees under the Santa Barbara County Article II Coastal Zoning Ordinance, are the few eucalyptus trees located at the eastern terminus of the biological survey area, the canopies of which spread across the Rincon Beach County Park parking lot. These few trees are large enough and are located within 50 feet of Rincon Creek satisfying the definition for a qualifying tree. Note that Rincon Creek is outside the biological survey area and greater than 1,000 feet from proposed project impacts. The trees associated with Rincon Creek and trees south of the Rincon Beach County Park parking lot are not proposed to be impacted or altered in any way, and thus the project would not conflict with the Coastal Zoning Ordinance. None of the other trees on site meet the definition of a qualifying trees under the Santa Barbara County Article II Coastal Zoning Ordinance as they are not located in a County street right-of-way, located within 50 feet of any major or minor stream, oak trees or used as a habitat by the monarch butterflies. In addition, none of the trees identified on site are not a part of any windbreak on the Carpinteria Bluffs, which are protected under the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003). Therefore, the project does not conflict with any local tree preservation policy and impacts to trees would be **less than significant.**

White-tailed kite is known to occur along the south coast, however, most foraging and nesting activity in the County is restricted to more rural areas and in particular, the Goleta and Santa Maria Valleys (Lehman 2020). The City specifically cites the Carpinteria Bluffs as a location where white-tailed kites occur and their habitat is protected. However, no white-tailed kites were detected in the biological survey area, and the scrub vegetation that predominates there is unsuitable for foraging by this species, which hunts in habitats dominated by grasses and forbs. This species prefers open grassland or marshland habitats which are not present on site, and is found less commonly in agricultural areas or rights-of-way. Trees in and around the project site are relatively small, and located in areas with high levels of human disturbance where white-tailed kites are unlikely to nest. Marginally suitable woodland nesting habitat is present in the trees adjacent to the project site near Rincon Beach County Park and within the Rincon Point housing development; however, proposed project impacts are greater than 500 feet from these habitats. The trees within the vicinity of Rincon Beach County Park are not planned to be directly impacted. Therefore, impacts to white-tailed kites would be **less than significant.**

Monarchs require specific conditions for suitable wintering sites, and wintering sites in California are associated with wind-protected groves of large trees (primarily eucalyptus or pine) with nectar and water sources nearby, dappled sunlight, high humidity, and an absence of freezing temperatures or high wind, generally near the coast (Pelton et al. 2016). The majority of trees within the project site are either singular and isolated, or do not form a

large enough grove to provide adequate microclimate conditions and wind protection monarch butterflies require for overwintering sites. There are three eucalyptus trees present near the western terminus of the project site, however they each grow individually and do not form a grove capable of supporting overwintering monarchs. There is a small portion of eucalyptus trees within the eastern portion of the biological survey area, however, there is low potential for monarchs to overwinter here as well due to the small relative size of this eucalyptus stand and vulnerability to strong winds and weather. The easternmost proposed project impacts are over 1,000 feet from these eucalyptus trees. Additionally, the eucalyptus trees present along the hills behind the project sit on private property, specifically the eucalyptus trees around the residential development off Bates Ranch Road as well as the eucalyptus trees that extend beyond the terminus of Camino Carreta, appear to be planted windrows and do not form large protected groves that have the microclimate characteristics monarchs require for overwintering.

Monarch butterflies are known to occur near the project site along Bates Road just north of U.S. Highway 101 in a eucalyptus stand associated with Rincon Creek (CNDDB Occurrence No. 268; Xerces Site No. 2803) (CDFW 2020a). Additionally, this site was known to have been surveyed for overwintering monarch populations in 2017 during the Xerces Society New Year's Count, of which none were detected (Xerces Society 2020). While this population is not within 100 feet of the project site, it could be affected by project implementation due to changed weather patterns. However, no impacts to this monarch overwintering site is anticipated since the overall height of the slope within Rincon Beach County Park south of U.S. Highway 101 will not be reduced, as work includes proposed terraces to stabilize the hill but will not decrease its overall height, and therefore no changes to the wind conditions at the overwintering site are expected. Additionally, this overwintering site is largely protected by the hill below the single residential development at 637 Bates Road, and any possible changes to weather and wind patterns due to project implementation would not affect the protective contour this hill independently provides. Therefore, monarch butterflies are not anticipated to be affected since there is low potential for the project site to support overwintering populations, and because known overwintering populations in the vicinity would not be adversely affected due to project implementation. Therefore, impacts to monarch butterfly individuals and monarch butterfly overwintering sites would be **less than significant.**

Several trees, including eucalyptus, Monterey cypress, and pine, are located within the proposed trail alignment near its western terminus and U.S. Highway 101. These trees are relatively small and located in areas with high levels of human disturbance including U.S. Highway 101 vehicular traffic and pedestrian use of Carpinteria Avenue and adjacent areas. These isolated and singular trees lack dense foliage and are located in areas vulnerable to strong winds and weather. Several myoporum trees are located within the proposed trail alignment and are largely multistemmed. The myoporum located directly adjacent to the unsanctioned trail experiences high levels of human disturbance. Due to the locations of these trees in areas with high levels of human disturbance, relatively small size of these trees, isolated nature of the trees, and vulnerability to strong winds and weather, raptors are unlikely to nest in these trees. Therefore, removal of these trees would not substantially reduce or eliminate quantity or quality of raptor nesting areas and impacts would be **less than significant.**

Additionally, a stand of trees is present at the eastern terminus of the biological survey area, which are rooted next to the Rincon Beach County Park parking lot. The easternmost proposed project impacts are over 1,000 feet from this stand of trees. The trees within the vicinity of Rincon Beach County Park are not planned to be directly impacted. Therefore, project impacts to raptor nesting trees would not substantially reduce or eliminate quantity or quality of nesting areas and impacts to nesting trees would be **less than significant.**

County environmentally sensitive habitat (ESH) and City environmentally sensitive habitat areas (ESHA) were evaluated based on definitions in the County *Coastal Land Use Plan* (CLUP) (County of Santa Barbara 2019) and the *City of Carpinteria General Plan and Local Coastal Plan* (City of Carpinteria 2003). As shown in Table 3.3-5,

approximately 3.55 acres of CDFW sensitive, County ESH, and/or City ESHA habitats would be temporarily impacted due to construction. An additional 0.76 acres of CDFW sensitive, County ESH, and/or City ESHA habitats would be permanently impacted due to construction. These native plant communities are considered CDFW sensitive, County ESH, and/or City ESHA and protected under County CLUP (County of Santa Barbara 2019) and the City's General Plan/Local Coastal Land Use Plan (City of Carpinteria 2003) policies. Therefore, the proposed project would result in a substantial adverse effect on a sensitive natural community, and impacts would be potentially significant. County CLUP (County of Santa Barbara 2019) and the City of Carpinteria General Plan and Local Coastal Plan (City of Carpinteria 2003) policies require County ESH and City ESHA avoidance. With implementation of **MM-BIO-1**, **MM-BIO-2**, and **MM-BIO-5**, impacts would be reduced to **less than significant with mitigation.**

As discussed in Section 3.1.1.8, above, no jurisdictional aquatic resources were detected in the biological survey area during the field survey. Therefore, no direct impacts to jurisdictional aquatic resources would occur. On the adjacent Carpinteria Bluffs III site, to the south and west of the western most portion of the project site, multiple seasonal pools and ephemeral pools have been documented (Sage Institute Inc. 2009; Dudek 2012a, 2012b). As part of the Wetland Determination of Pool Features at Carpinteria Bluffs Area II per the California Coastal Act (Dudek 2012b), jurisdictional determinations for coastal wetlands were made for documented seasonal pools and ephemeral features. These coastal wetlands (Dudek 2012b) are approximately 123 feet from project temporary impacts and 125 feet from project permanent impacts. The closest mapped riverine or stream/river feature is associated with the Rincon Creek outlet located approximately 50 feet from the eastern portion of the biological survey area and over 1,000 feet from the eastern terminus of proposed impacts. The existing developed areas near this portion of Rincon Creek included the Rincon Beach County Park asphalt parking lot and associated developments of a standard curb, vegetation, paved Rincon Point Lane, and additional vegetation.

The City of Carpinteria General Plan and Local Coastal Plan (City of Carpinteria 2003) includes implementation policies associated with wetlands which state, *Maintain a minimum 100-foot setback/buffer strip in a natural condition along the upland limits of all wetlands. No structures other than those required to support light recreational, scientific and educational uses shall be permitted within the setback, where such structures are consistent with all other wetland development policies and where all feasible measures have been taken to prevent adverse impacts. The minimum setback may be adjusted upward to account for site-specific conditions affecting avoidance of adverse impacts.*

Project impacts, both temporary and permanent, are greater than 100 feet from known coastal wetlands near the western terminus of the project and greater than 1,000 feet from Rincon Creek near the eastern terminus of the project. Therefore, the project would not have a substantial adverse effect on coastal wetlands including creeks and **no impact** would occur.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No habitat conservation plans apply to the project area (CDFW 2019). **No impact** would occur.

g) Would the project result in cumulatively considerable impacts to biological resources?

The surrounding land uses of the project site include transportation, open space, residential development, and recreational facilities. While the project site is primarily composed of undeveloped lands, they have been previously subject to extensive grading to form the terraces and slopes that abut U.S. Highway 101 to the north

and UPRR which bisects the site. The coastal bluffs west of the project site are moderately trafficked areas used for recreation, walking, and biking. In 2017, The Land Trust for Santa Barbara County partnered with the Citizens for the Carpinteria Bluffs, the City of Carpinteria, the County of Santa Barbara, and over a thousand community members to purchase, initiate restoration, and ensure long-term maintenance of the Carpinteria Bluffs III property (also referred to as Rincon Bluffs Preserve), the 21-acre property directly to the west of the project site. A conservation easement of the Carpinteria Bluffs III property/Rincon Bluffs Preserve has been recorded which provides permanent preservation and provides long-term conservation of the open space, scenery, habitat for native plants and animals, and coastal access and recreational opportunities. And within the eastern portion of the project site, the currently developed Rincon Beach County Park provides infrastructure for recreation and is highly utilized. Areas to the south are associated with undeveloped beach areas and the Pacific Ocean. As discussed in Section 3.1.1.7, the proposed trail alignment is located adjacent to the Pacific Ocean and does not connect important habitat areas used by large or small terrestrial wildlife species, and minor changes to wind and weather patterns in a very local setting are not an impediment to birds moving long distance, particularly since the overall height of the slope would remain at the same elevation. Mitigation measures have been identified to reduce potential impacts to special-status wildlife species and sensitive vegetation communities to less-than-significant levels. Therefore, cumulative impacts resulting from the proposed project, in combination with the reasonably foreseeable future projects in the area, would be less-than-significant.

3.3.5 Mitigation

MM-BIO-1 **Workers Environmental Awareness Program (WEAP).** The City shall fund an approved biologist to prepare and implement a worker education and awareness program (WEAP) specific to the project. The program shall be presented to all individuals involved in the construction of the project. The program shall include information focused on sensitive vegetation communities, sensitive wildlife and plant species, and common wildlife species and their habitats and shall include, but not be limited to, the following:

- Description of sensitive vegetation communities.
- Workers shall be provided with photographs of sensitive biological resources including sensitive wildlife and plant species.
- Workers shall be informed verbally and in writing of the various project tasks that require biological surveys and monitoring for resource protection.
- Workers shall be provided with a photograph or description of the markers for active bird nests, trees, or other mitigation areas, so that they shall know these are not to be disturbed without a biological monitor present.
- Workers shall be informed not to litter. All trash and litter shall be picked up and removed from the construction sites at the end of each day.
- Workers shall be informed to obey a speed limit of 15 miles per hour while traveling on the project site to avoid collisions with wildlife.
- Workers shall avoid driving over or otherwise disturbing areas outside the designated construction areas.

Plan Requirements and Timing: The applicant shall submit the WEAP to the City of Carpinteria (City) and County of Santa Barbara (County) for review and approval prior to implementation. All workers, contractors, and visitors shall attend the WEAP prior to entering the project site and performing any

work. The applicant shall provide copies of the training attendance sheets to City of Carpinteria and County staff as a record of compliance with this measure on a monthly basis. The WEAP shall be reviewed and approved by the City of Carpinteria and County prior to Zoning Clearance approval. Implementation of the WEAP training shall occur prior to the start of construction and as new crew members are added to the project.

Monitoring: The City of Carpinteria and County permit compliance staff will ensure compliance with the WEAP throughout construction by review of attendance sheets and hardhats, inspection of the site, and interviewing workers, as appropriate.

MM-BIO-2 **Fencing.** To prevent inadvertent impacts on adjacent sensitive vegetation communities including County ESH and City ESHA, native vegetation, special-status species, and common wildlife species and their habitats, construction limits will be fenced with highly visible fencing and staked. Wildlife-safe highly visible construction fencing shall be installed to identify the limits of grading/disturbance, which would reduce potential human trampling outside of the construction limits and minimize the potential spread of non-native weeds or invasive plant species. Wildlife-safe construction fencing and flagging shall remain in place during construction and replaced as needed.

Plan Requirements and Timing: The detailed fencing plan, showing the location of required fencing shall be reviewed and approved by City of Carpinteria and County staff prior to Zoning Clearance approval. This condition shall be printed on all project plans. The detailed fencing plan, showing the location of fencing shall be submitted to City of Carpinteria and County staff for review and approval prior to Zoning Clearance approval. The fence shall be installed prior to the start of ground disturbing activities.

Monitoring: The City of Carpinteria and County staff will inspect the project plans and site, to ensure compliance with this measure as appropriate.

MM-BIO-3 **Pre-construction California Legless Lizard Survey and Relocation**. Prior to initiation of construction, capture and relocation efforts for California legless lizards shall be conducted. Trapping shall be conducted by a qualified biologist and shall include the following steps:

1. Prior to initiation of capture and relocation, a suitable receptor site shall be located. This site shall include areas with loose, moist soils occurring in scrub habitat with high coverage of deerweed (*Lotus scoparius*) or California goldenbush, in arroyo willow (*Salix lasiolepis*) thickets or in other suitable scrub or woodland habitat.
2. Capture and relocation shall take place no more than five days prior to the initiation of construction.
3. These surveys shall be performed by lightly raking loose soil, sand and leaf litter with a wooden rake for a sufficient period to determine that no legless lizards are present, or all legless lizards have been captured.
4. Any lizards found shall be placed in a receptacle with sand and a wet towel and relocated to the previously designated receptor site.

Plan Requirements and Timing: Prior to initiation of construction, capture and relocation efforts for California legless lizards shall be conducted where appropriate. Trapping shall be conducted by a qualified biologist.

Monitoring: The City of Carpinteria and County staff shall ensure the pre-construction survey and relocation efforts, if required, are completed prior to commencement of any earth-moving activities.

MM-BIO-4 Pre-construction Woodrat Survey and Relocation. Prior to initiation of construction, capture and relocation efforts for woodrat shall be conducted. Trapping shall be conducted by a qualified biologist and shall include the following steps:

1. Prior to initiation of capture and relocation, a suitable receptor site shall be located. This site shall be within similar habitat and an adequate distance away from any locations that might be subject to increased human disturbance, such as adjacent to a walking path.
2. These pre-construction surveys shall be performed searching all coastal sage scrub or coastal bluff scrub within the disturbance area for middens or other sign of the species.
3. Any middens and woodrats found shall be live-trapped and relocated to the pre-determined receptor site. The midden shall be dismantled and the materials placed at the relocation site.

Plan Requirements and Timing: Prior to initiation of construction, capture and relocation efforts for woodrat shall be conducted where appropriate. Trapping shall be conducted by a qualified biologist.

Monitoring: The City of Carpinteria and County staff shall ensure the pre-construction survey and relocation efforts, if required, are completed prior to commencement of any earth-moving activities.

MM-BIO-5 Habitat Mitigation and Monitoring Plan. Prior to approval of a coastal development permit, the City shall contract with a qualified biologist to develop a Habitat Mitigation and Monitoring Reporting Plan (Plan) to mitigate for impacts to County ESH/City ESHA vegetation communities. The Plan shall outline efforts to restore or enhance coastal sage scrub and coastal bluff scrub communities, and, therefore, preserve or provide wildlife habitat, in areas temporarily impacted by construction of the trail and within similar habitats adjacent to the impacted biological resources. The Plan may focus on the following:

- In-kind, on-site restoration of areas where coastal sage scrub or coastal bluff scrub has been removed;
- Enhancement of temporarily impacted areas on site currently occupied by ornamental, disturbed or developed areas;
- Restoration of areas occupied by non-native habitats or native habitats with large components of non-native vegetation, within similar habitats adjacent to the impacted biological resources.

Under the Plan, a total of 3.55 acres of County ESH/City ESHA native vegetation communities temporarily impacted by vegetation clearance shall be restored on site in kind at 1:1. A total of 0.76 acres of County ESH/City ESHA native vegetation communities permanently impacted shall be mitigated on site in kind at 3:1. As mitigation potential within the project area may be insufficient for mitigating 0.76 acres permanent impacts to County ESH/City ESHA native vegetation communities at 3:1, any additional mitigation required shall be carried out on areas within adjacent

land controlled by the County or City, such as the Rincon Bluffs Preserve . Off-site mitigation for permanent impacts shall be implemented in-kind at 3:1.

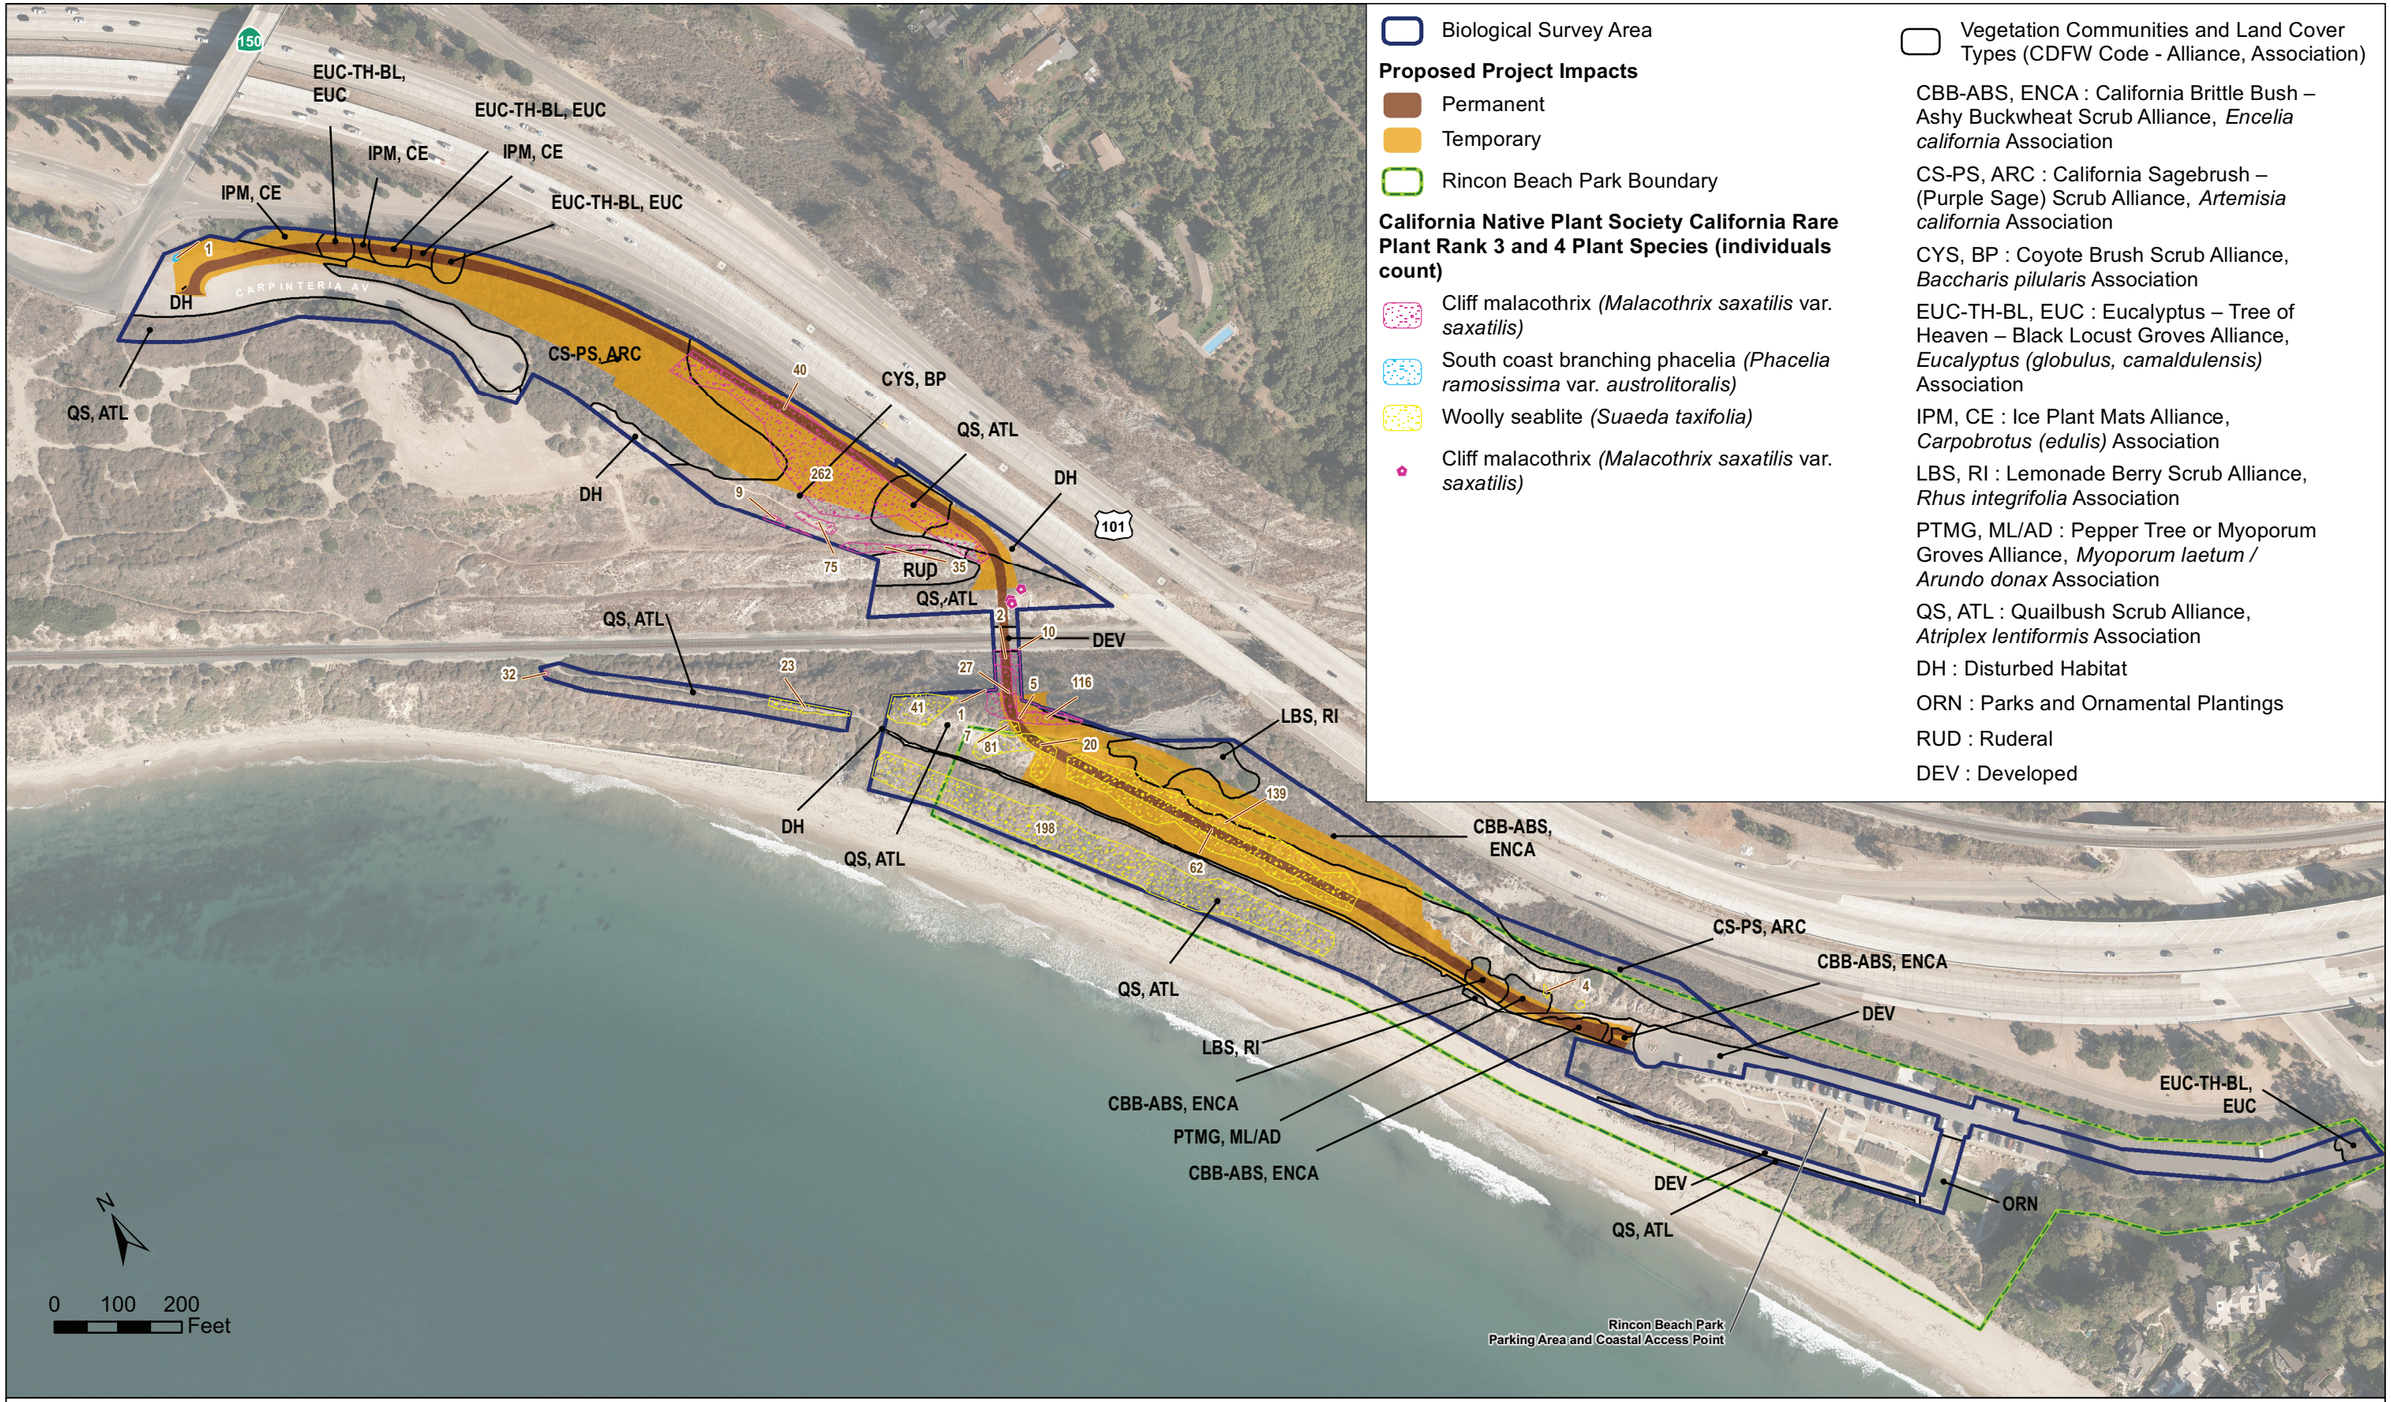
A qualified biologist/botanist shall develop the Plan, which shall provide specific measures to restore or enhance habitat to replace the loss of coastal sage scrub and coastal bluff scrub communities. This Plan shall be focused on adaptive management principles, and shall identify detailed enhancement areas and strategies based on the parameters outlined below, with long-term timing and monitoring requirements. The Plan shall:

1. Provide an up-to-date inventory of on-site native vegetation resources.
2. Define attainable and measurable goals and objectives to achieve through implementation of the Plan. Goals and objections shall focus on replacement of coastal sage scrub, coastal bluff scrub and rare plants removed during construction.
3. Provide site selection and justification.
4. Detail a restoration work plan including methodologies, restoration schedule, plant materials (seed and container plant) sourcing – locally genetic stock, and implementation strategies.
5. Provide a detailed maintenance plan to include removal of invasive non-native species.
6. Define performance standards.
7. Provide a monitoring plan to include methods and analysis of results. Also, include goal success or failure criteria, and an adaptive management plan and suggestions for failed restoration efforts.

Plan Requirements and Timing: Prior to issuance of a grading permit, the City of Carpinteria shall contract with a qualified biologist to develop a Plan. The Plan shall outline efforts to restore or enhance coastal sage scrub and coastal bluff scrub communities in areas temporarily and permanently impacted by construction of the project.

***Monitoring*:** The City of Carpinteria and County staff shall ensure development of the Plan and adherence to Plan measures are completed prior to commencement of any earth-moving activities. City and County staff shall periodically conduct site inspections to ensure compliance on site. Restored areas shall be monitored for five years following planting. Annual reports and the final report shall be submitted to the City and County.

MM-BIO-6 **Pre-construction Nesting Bird Surveys**. Within 30 days prior to any vegetation clearing or ground disturbance associated with construction or grading that would occur during the nesting/breeding season of native bird species potentially nesting on the site (typically mid-February through August in the project region, or as determined by a qualified biologist), the City shall have weekly surveys conducted by a qualified biologist to determine if active nests of special-status bird species, or of any bird species protected by the Migratory Bird Treaty Act or the California Fish and Game Code, are present in the disturbance zone or within 300 feet (500 feet for raptors) of the area to be disturbed. The surveys shall occur on a weekly basis, with the last survey being conducted no more than seven days prior to initiation of disturbance work. If ground disturbance is delayed, then additional pre-disturbance surveys shall be conducted such that no more than seven days will have elapsed between the survey and ground disturbance activities. The City or contractor shall provide the biologist with plans detailing the extent of proposed ground disturbance prior to the survey effort.



If active nests are found, including any nests for Cooper's hawk, clearing and construction within 300 feet of the nest (500 feet for raptors) shall be postponed or halted, at the discretion of the biologist, until the nest is vacated and juveniles have fledged, as determined by the biologist, and there is no evidence of a second attempt at nesting. Limits of construction to avoid an active nest shall be established in the field with highly visible construction fencing, and construction personnel shall be instructed on the sensitivity of nest areas. The results of the surveys, including graphics showing the locations of any nests detected, and any avoidance measures recommended, shall be submitted to the City and County within 14 days of completion of the pre-construction surveys to document compliance with applicable state and federal laws pertaining to the protection of native birds.

Plan Requirements and Timing: Pre-construction nesting bird surveys shall be completed within 30 days prior to any vegetation clearing or ground disturbance associated with construction or grading during the bird nesting season (typically mid-February to August). The surveys shall occur on a weekly basis, with the last survey being conducted no more than seven days prior to initiation of disturbance work.

Monitoring: The City of Carpinteria and County staff shall ensure the pre-construction nesting bird surveys and any avoidance requirements are completed prior to commencement of any earth-moving activities.

3.3.6 Level of Significance After Mitigation

Implementation of **MM-BIO-1, MM-BIO-2,** and **MM-BIO-3** would reduce impacts to California legless lizard to less than significant. Implementation of **MM-BIO-1, MM-BIO-2,** and **MM-BIO-4** would reduce impacts to San Diego desert woodrat to less than significant. After implementation of **MM-BIO-1**, **MM-BIO-2**, and **MM-BIO-5**, impacts to sensitive vegetation communities, including County ESH and City ESHA, would be less than significant**.** After implementation of **MM-BIO-1, MM-BIO-2,** and **MM-BIO-6**, impacts to nesting birds during the bird nesting season would be less than significant.

3.4 Cultural Resources

This section describes the existing cultural resources conditions of the proposed Carpinteria Rincon Trail Project (project) site and vicinity, identifies associated regulatory requirements, evaluates potential impacts, and identifies mitigation measures related to implementation of the project.

3.4.1 Existing Conditions

A Phase 1 cultural resources investigation for the originally proposed Carpinteria Rincon Trail was prepared by Dudek in March 2008. The cultural resources investigation included an archaeological site records and literature search at the Central Coast Information Center (CCIC), University of Santa Barbara, California and an intensive surface survey covering the entire project area. For the current revised trail design, Dudek performed a new Phase 1 Cultural Resources Survey in 2018 of the entire alignment to document existing conditions and in order to assess impacts of the updated trail alignment on cultural resources. The updated Phase 1 cultural resources investigation included an archaeological site records and literature search at the Central Coast Information Center (CCIC), University of Santa Barbara, California and an intensive surface survey of the revised trail alignment and area within earthwork limits and temporary impact areas delineated for the transportation and storage of construction equipment. As is customary for Phase 1 cultural resource surveys, the document is not circulated with the associated CEQA document. The updated Dudek Phase 1 survey is on-file with the City of Carpinteria, Community Development Department and with the County of Santa Barbara Planning & Development Department.

Although limited weathered shell was observed in disturbed contexts, no cultural resources were observed in situ, or within intact soils, during the intensive field survey under generally good to excellent ground surface visibility. However, the project site is not only located partially within an archaeological site (CA-SBA-1168), it is also surrounded, in every direction, by archaeological sites with the closest loci of CA-SBA-1/CA-VEN-62 located immediately adjacent to the southeastern extent of the proposed project site. Based on the presence of a portion of the proposed project site overlapping a small portion of the archaeological site CA-SBA-1168, the close proximity of multiple archaeological sites to the proposed project site, as well as the general archaeological sensitivity of the area surrounding the proposed project site, there is substantial evidence for potential unknown significant prehistoric and historic archaeological resources to exist within the project site. Technical Reports and supporting documentation are available in Confidential Appendix D. These confidential appendices are archived at the City and are only accessible to eligible individuals as defined under applicable regulations governing cultural resources confidentiality.

3.4.1.1 Prehistoric Setting

California has one of the best studied archaeological records in the world, and the Santa Barbara Channel is among the most studied regions of California. The basic regional culture historical patterns (i.e., what life was like at different points in time) have been articulated for many decades, and in spite of the ever increasing intensity of archaeological work in the region, our understanding (or at least our definition) of these general patterns has changed only slightly in part because our understanding of how to distinguish them has been compromised by conflicting data and interpretations; notable exceptions include our understanding of the earliest inhabitants, which keeps getting earlier and better defined (Erlandson et al. 2011; Erlandson, Rick, et al. 2007), and our perspectives on the late prehistoric evolution of socio-political complexity, which have matured and expanded rapidly since the late 1980s (e.g., Erlandson and Jones 2002; Arnold 2001, 2004).

The cultural history of the Santa Barbara Channel has seen many iterations, and much of our understanding of change through time is based on foundational research by Rogers (1929) and Warren (1968), both of whom conducted substantial primary research on the mainland coast. Higher resolution periodization was later established by King (1990) who used a combination of stylistic change in shell beads and absolute ages from radiocarbon dates. This bead-based chronology dovetails well with a more recent chronology based on lower-resolution changes in human behavior and material culture (Arnold 1992), and this has been further refined with a larger set of absolute age estimates pegged to a background of regional environmental change matched with more accurate radiocarbon calibration (Kennett 2005).[1] Note that the temporal span of each period in the sequence is approximate, and naming conventions for them vary across different authors; the cultural patterns (e.g., subsistence and settlement) and temporal markers (shell bead styles, for example) used to define them, also vary across temporal boundaries by region.

Paleoindian/Paleocoastal Period (The Earliest Inhabitants): 13,000 – 11,000 BP

Though the earliest appearance of people in the New World is a contentious issue with new data generating new ideas every few years about who they were and how they got here, the evidence from the California Bight is relatively straightforward: cultural deposits and human remains from a series of sites on Santa Rosa and San Miguel islands date from 13,000-11,500 years ago and suggest that people at the time were well-adapted to life on the sea but also had connections to people who lived much further east, deep in the American continent (Erlandson et al. 2011). While this isn't the earliest evidence of human activity in the New World (which, at most is somewhere between 16,000 and 15,000 years old), this early evidence from the West Coast gives credit to the idea that (at least some of) its earliest inhabitants were a marine-adapted people able to move skillfully and quickly between islands and near-shore environments across the southern landmass of the (now submerged) continent of Beringia, down the entire Pacific Coast of North America, and eventually to the southern tip of South America in only a few thousand years (Erlandson, Graham, et al. 2007; Fladmark 1979; Dixon 2001). Though these "Paleocoastal" sites from the islands are the earliest we know of, we may never find evidence for the earliest coastal inhabitants as the shorelines they lived on are now submerged under more than 50 m of water (Masters and Aiello 2007). Indeed, sites of this antiquity are unknown on the mainland, though the occasional isolated – and undated – fluted projectile point (for example from Gaviota State Park CA-SBA-1951) may be suggestive (Erlandson, Cooley, and Carrico 1987).

Early Holocene/Milling Stone Horizon: 11,000 – 5500 BP

Many scholars of North American archaeology separate the Paleoindian/Paleocoastal period from the succeeding Archaic period on the rough (and now debatable) observation that the earlier people were more focused on large game while the later people exploited a broader range of resources and required a different set of tools to do so. On a continent-wide scale, the Archaic therefore sits in the middle of a trajectory of increasing technological and social intensity, somewhere between big-game hunting and full-fledged farming; in California, this crude trajectory has little value as farming was never part of the pre-Columbian picture, yet use of the term "Archaic" persists (cf. Meighan 1959). Colloquially, it applies to everything from the Early Holocene to the end of the Middle-Late Period transition (ca. 11,000 – 1000 years ago), distinguished only by the late prehistoric intensification of economy, technology, population, and political complexity (though see Glassow 1992 for a slightly different interpretation).

[1] Note that all dates provided herein are rounded and drawn from the literature. We attempt to maintain consistency by using calendar, calibrated, years before present (cal BP) which are essentially the same as saying "years ago." However, most authors prior to the mid-1990s (e.g., Glassow 1996) typically report in uncalibrated radiocarbon years before present, uncorrected for marine reservoir offsets, therefore their cultural chronologies can differ from current age estimates for the same site (or cultural period) by 200 – 1500 years, depending on the age and material dated. This is a general problem for the interpretation of California culture history as even current authors use a mixture of differently reported dates. We've tried to account for this, as much as possible, herein, but it further suggests the need to maintain a large, fully vetted, and corrected radiocarbon database, preferably shared across multiple research teams and authors.

Here, the division between Paleoindian and Early Archaic is somewhat arbitrary, but follows current convention; likewise, we combine the earliest known settlements on the mainland coast in this period with those of the more well-documented Milling Stone Horizon because they exist in many of the same places, show evidence for the intensive use of shellfish, use many of the same tools (albeit in different proportions), and overlap in time.

One of the reasons these sites are so visible, stratified, and well-preserved is they contain the remains of shellfish, leading many to suggest that this early Holocene occupation of the region was heavily oriented towards the intensive and persistent exploitation of marine resources. The material remains (and perhaps adaptations) of these earliest Holocene[2] inhabitants of the mainland occasionally differ however, from their predecessors on the islands, but also from their successors on the mainland. However, some of these early sites also differ from the later coastal (and Coast Range interior) occupants as they do not contain millingstones, which become increasingly common after about 8500 years ago. However, it is important not to overstate the differences, as there are clearly sites dating to the early Holocene where groundstone dominates the formal lithic assemblage, both on the coast (Fitzgerald 2000) and deep into the interior (McGuire 1993). Contemporaneous variability in site types and artifact assemblages may point to variability in mobile foraging strategies, or reveal that very different groups exploited an otherwise sparsely inhabited coastal region at slightly different times. These alternatives demand interrogation, as do the relationships between the evidence for human activity on the coast and that of the California interior and the more distant Desert West (Koerper, Langenwalter, and Schroth 1991).

While the emergence of an adaptation tuned to marine resources seems beyond question (particularly if the first people to come to coastal California brought this ability with them from somewhere else), the emergence of a processing technology centered on the use of groundstone slabs and handstones (i.e., the hallmarks of the Milling Stone Horizon) has been the focus of investigation for decades (see Warren 1968; Basgall and True 1985). Like shell middens, grinding tools, especially in high frequencies, are highly visible in the archaeological record and at face value can bias (indeed have biased) interpretation of their relative economic importance (see Nelson and Lippmeier 1993). Recent efforts to understand the highly visible "Milling Stone" sites focus on patterns of groundstone manufacture and use. Following Basgall and True (1985), Hale (2001) analyzed groundstone (millingstones and handstones) and battered stone (scraper planes, cobble tools, etc.) tools from well-known Milling Stone sites across Southern California, including CA-SBA-142 (Glen Annie Canyon) on the Santa Barbara mainland, and found that Milling Stone sites were places that people visited repeatedly, over hundreds to thousands of years to conduct similar economic activities, perhaps for only short periods of time. The large numbers of reused or expedient groundstone tools at these sites speak to food processing. Indeed, regular use of milling tools for processing seeds and other plant foods, such as roots and tubers, does not preclude using them to process rodents, reptiles, and other animals (which might be more easily cooked or dried with less costly tools). Costs associated with acquiring and transporting raw materials suitable for milling, and investments in shaping them to accomplish specific tasks may be modest (depending on local geology), but significant enough to suggest they were essential for survival; investing in them would make them available for use in less essential tasks, like pulverizing non-essential foods or pigments, that might otherwise be processed in other ways. Therefore, while millingstones may have been used for many things, their prominence indexes their importance to a specific adaptive strategy, and archaeological research should be geared towards understanding that relationship.

Hale (2001) interprets Milling Stone sites as places of seasonal occupation for intensive processing, but not as sedentary villages as Wallace (1955) and others envision. Large, well-used assemblages in single locations (as is typical of the classic Milling Stone identity) result from recurrent seasonal visits to specific locations for food processing over multiple years. The milling equipment in these kinds of sites are typically made from locally abundant stone (encountered either in its raw form or as previously discarded tools). Therefore, analysis of tool shaping and maintenance as well as use-wear reveal much about the nature and intensity of occupation and activity.

[2] Note that the Holocene is set at the end of the Younger Dryas, ca. 11,500 years ago (+/-).

Hale (2001) also laments the rarity of other kinds of sites linked both temporally and socioeconomically to those of the Milling Stone period, as they would help to illustrate the full picture of the Archaic in California, and help us to move beyond simple definitions of it as a period marked by economic drudgery imposed by marginalizing climatic regimes (e.g., the Altithermal - see Antevs 1948). Herein lies an important research avenue: assembling well-dated archaeological site data across broad regions to better understand socioeconomic nuance during the Archaic and abandon the site-specific interpretation of the Milling Stone period that is itself an artifact of early archaeological research.

Generally speaking, adaptations attributed to the Archaic (including the Milling Stone phenomenon) involved small groups of people who moved regularly throughout the year to exploit a broad range of resources using a very flexible tool kit that could be made relatively easily or expediently and applied to a wide range of scenarios (Hale 2001; Fitzgerald and Jones 1999; Lantis 1938; Basgall and True 1985). Here, and elsewhere throughout the California Bight and central coast, the full suite of material attributes aligned with the classic Milling Stone horizon is found in a relatively small number of archaeological sites; together with evidence for somewhat different activities at other kinds of sites, presumably within the spatial catchment of annual, or even generational human activity, the Milling Stone pattern reveals a "highly successful strategy of mobility, flexibility, and emphasis on low-risk, moderate-return resources, such as small game, shellfish, and certain plants… (that) seems downright practical" for the environmental and cultural context of the age (Stevens 2013: 54).

The Early Period: 5500 – 2500 BP

The identity of the California "Early Period" in Santa Barbara (in both definition and timing) differs from that of other parts of California. The problem is really about the naming conventions assigned to trends (i.e., the "Periods") in the production and use of shell beads which vary around the state (Bennyhoff and Hughes 1987; Groza 2002; Groza et al. 2011) rather than local conditions or broader patterns of behavior.[3] Instead, here it helps to imagine the shift in quasi-adaptive terms, initially characterized by both Rogers (1929) and Greenwood (1972) as a "Hunting" people or period, marked quite notably by an increase in the abundance of projectile points and a decline in the relative abundance of millingstones. On the central coast, Jones and colleagues (Jones 1992; Jones and Codding 2019; Jones et al. 2007) put the division somewhere between 5500 and 5100 BP, though others (Glassow et al. 2007; Lebow and Moratto 2005) see this transition happening around the Northern California Bight at 7500-7000 BP; yet the use of millingstones continues here, and elsewhere in California, into the late Holocene (Erlandson 1997a, 1997b; Sutton, Schneider, and Yohe II 1993).
